GOVERNMENT OF INDIA

COMMISSION ON CENTRE-STATE RELATIONS

4th Floor, 'B' Wing,

Lok Nayak Bhavan, Khan Market
New Delhi : 110 003.

Dated : 16*th January*, 1984.

Dear Sir,

The Government of India constituted this Commission *vide* the Ministry of Home Affairs Notification No. IV/11017/I/83-CSR, dated the 9th June, 1983 with the following terms of reference :—

"2. The Commission will examine and review the working of the existing arrangements between the Union and States in regard to powers, functions and responsibilities in all spheres and recommend such changes or other measures as may be appropiate.

3. In examining and reviewing the working of the existing arrangements between the Union and States and making recommendations as to the changes and measures needed, the Commission will keep in view the social and economic developments that have taken place over the years and have due regard to the scheme and framework of the Constitution which the founding fathers have so sedulously designed to protect the inde endence and ensure the unity and integrity of the country which is of paramount importance for promoting the welfare of the people".

2. The scope of the enquiry to be conducted by the Commission and its parameters are thus governed by these terms of reference.

3. In order to collect basic information (an analytical study of which would have enabled the Commission to identify with greater precision and exactitude the difficulties, problems and issues that might have arisen in the working of the present arrangements between the Union and the States), the Commission had written to all the Ministries of the Government of India, the present and former Chief Ministers of the State Governments, and Lt. Governors/Administrators of Union Territories, requesting them to send their memoranda containing their views on the subject. Barring the brief, tentative replies of about 4 former Chief Ministers and a few others no memoranda have yet been received from the addressees, which might have enabled the Commission to formulate a more specific and comprehensive questionnaire. It is, therefore, not claimed that the questionnaire now being issued, is exhaustive. If necessary, the Commission may issue a supplementary questionnaire, later.

4. The questionnaire has been framed purely with the object of eliciting from all possible sources, views and suggestions on issues gleaned by the Commission from published literature. Those issues have yet to be studied in depth by the Commission, which has no preformed opinion or predilections in respect of them. It will, therefore, be not correct to read, by any stretch of imagination, into this questionnaire an indication or projection of the Commission's own views on any point relating thereto as, at this stage, it has not formulated thereon any view of its own.

5. If some issues which you consider important, do not find place in the questionnaire, you are at liberty to point out the same and add a supplementary note containing your comments in respect thereof.

6. To facilitate the stupendous task of collating and processing the replies to different questions contained in the questionnaire reply to each question may be given on a separate sheet of paper (preferably typewritten and in duplicate).

7. The task assigned to this Commission is of immense national importance. The Commission earnestly hopes that you will kindly extend your unstinted cooperation to it in this national endeavour.

Your replies to the questionnaire may be sent by the end of March, 1984 to the following address:—

Shri K. A. Ramasubramaniam,
Secretary,
Commission on Centre-State Relations,
4th Floor, 'B' Wing, Lok Nayak Bhavan,
Khan Market,
NEW DELHI : 110 003.

Thanking you,

Yours faithfully,
(R. S. SARKARIA)
Chairman

ENC. : Questionnaire,

QUESTIONNAIRE

PART I

INTRODUCTORY

Q.1.1 According to the Study Team of the Administrative Reforms Commission, the Constitution-makers followed up their declaration that "the soundest framework for our Constitution is a Federation with a strong Centre" with "firm consistency in the framing of the Constitution." Can our Constitution be called FEDERAL in the strict sence notwithstanding several unique features not found in other FEDERATIONS?

Q. 1.2 Accepting the "traditional" notion of Federalism, the Rajamannar Committee appointed by the then Tamil Nadu Government, urged for greater autonomy for the States by a redistribution of the legislative powers in the three lists of the Seventh Schedule; deletion, revision or substantial modification of certain provisions (such as Articles 251, 256, 257, 348, 349, 355, 356, 357, 365, etc.), which give the Union a supervisory role over the States; allotment of more tax-resources in List II to the States, abolition of appeals to the Supreme Court except in constitutional matters, etc.

Would you subscribe to this view?

Q. 1.3 It has been suggested that in large and heterogenous country like India, there is a need for subtantial decentralisation, territorial as well as functional, of powers and functions in normal times in the interest of efficiency and equity, although there has to be provision for considerable centralisation in times of emergency.

Do you agree?

What in your view, would be the optimum Constitutional provision from this standpoint?

Q. 1.4 Does a federation of the "traditional" type wherein the National and Regional governments are "coordinate and absolutely independent" within their respective jurisdiction set apart by its Constitution, exist as a functional entity as distinct from an abstract theory anywhere in the present-day world?

Q. 1.5 Some eminent persons having special knowledge, experience and understanding of the Indian polity and its functioning, have expressed the following views :

(a) The Constitution is basically sound and flexible enough to meet the challenge of the changing times;

(b) The difficulties, issues, tensions and problems which have arisen in Union-State relationships are not due to any substantial defect in the scheme and fundamental fabric of the Constitution, but because over the years these relationships have not been worked in conformity with the true spirit and intent of the Constitution;

(c) These difficulties, problems and issues can be resolved and distortions rectified without major constitutional amendments, by

(i) changing the executive procedures, practices and some regulatory laws, impinging upon certain spheres of Union-State relations;

(ii) evolving healthy conventions and procedures with the aid and advice of an effective consultative body (as envisaged by Article 263) composed of the representatives of the Union and the States.

Do you agree? If so, what are your suggestions in this regard?

Q. 1.6 Do you agree that the protection of the independence and ensurance of the Unity and Integrity of the country is of paramount importance? If so, what provisions in the Constitution, in your opinion, have been designed to achieve that end?

Q. 1.7 Are the constitutional provisions regarding the obligations of the Centre and the States in respect of the country as a whole and to one another, reasonable? In this connection, you may, among others, refer to Articles 256, 257, 354, to 357 and 365 of the Constitution.

Q. 1.8 Article 3 of the Constitution provides that Parliament may by law :

(a) form a new State by separation of territory from any State or by uniting two or more States or parts of States or by uniting any territory to a part of any State;

(b) increase the area of any State;

(c) diminish the area of any State;

(d) alter the boundaries of any State;

(e) alter the name of any State.

A view has been expressed that this Article requires reconsideration.

Do you agree with this view and, if so, what modification of this provision would you suggest?

PART II

LEGISLATIVE RELATIONS

Q. 2.1 A view has been expressed that there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and States, which ensures in normal times a substantial measure of legislative autonomy to the States; but over the years, the Union has, under the cover of a declaration of 'national interest' or 'public interest' encroached on the State legislative field. Can you give concrete instances, if any, of such encroachments?

Q. 2.2 What changes would you suggest—commensurate with the strength of the Centre and the unity and integrity of the country—in the distribution of

powers under the legislative lists of the Seventh Schedule and/or the contents thereof and other provisions of the Constitution?

Q. 2.3 Under the Government of India Act, 1935, the Instrument of Instructions contained a provision that whenever any legislation by the Centre was undertaken on a Concurrent subject, the Provincial Government had to be consulted before-hand.

Do you think the adoption of such a course would be desirable in the interest of ensuring better relations between the Union and the States?

Q. 2.4 Do you consider that declarations enabling Parliament to legislate on certain subjects within the exclusive competence of the States, in 'national interest', or 'public interest', should be of a perpetual nature or for particular durations subject to periodic review?

Q. 2.5 Have you any other change or reform to suggest with regard to Union-State relations in the legislative sphere?

PART III

ROLE OF THE GOVERNOR

Q. 3.1. What are your comments/views in regard to the role of the Governor in the context of Centre-State relations—

(a) as envisaged by the Constitution, and

(b) as practised by them during the last 34 years since the advent of the Constitution?

Q. 3.2 What, in your opinion, should be the role of the Governor in fostering healthy Union-State Relations?

Q. 3.3 What are your views/comments in regard to the performance of the functions/duties by the Governor in the matter of—

(a) making report to the President suggesting action under Article 356 (1),

(b) appointment of Chief Minister under Article 164, and

(c) Prorogation of the House/or dissolution of the Legislative Assembly under Article 174 (2) ?

Q. 3.4 What in your view was the intent and purpose of the Constitution-makers in providing in Article 200 for reservation of Bills by the Governor and, in Article 201, for the consideration of the President? Has the power of reservation by the Governor and consideration of State Bills by the President, been generally exercised in conformity with that intent, spirit and purpose of the provision? Please base your conclusion on concrete instances. Can you give instances if any, of cases where the Governor has withheld assent to a State Bill or reserved it for consideration by the President without any advice from his Council of Ministers?

Q. 3.5 A case study covering 170 Bills during the period 1956-65, conducted under the auspices of the Indian Law Institute reveals that "the Centre does try to dictate its policies to the States in giving Presidential assent, though the fact that the assent has actually been withheld only in a few cases, seems to indicate that, so far, the process of Presidential assent has not acted as a substantial threat to the autonomy of the States".

Do you agree with the above conclusion? In case whether the assent was eventually given, do you think there was undue delay ?

Q. 3.6 There is a view that the Governor is neither an agent of the Centre nor a mere ornamental head of the State but "a close link" between the Centre and the States. Does this represent the correct position? Have the Governors, in practice, generally acted impartially and fairly in accordance with the Constitution and healthy conventions in discharging their dual responsibility? Please support your answer with concrete instances, if any.

Q. 3.7 It has been suggested that to enable the Governor to perform his functions under the Constitution more efficiently and impartially, he should be guaranteed his full 5 year term and the procedure of his removal should be the same as prescribed in thecase of a Judge of the Supreme Court/High Court.

Do you agree ?

Q. 3.8 It has been suggested that the Governor should be empowered to summon the Legislative Assembly and himself check and verify in the House to decide the limited question whether the ruling party in the State has lost its majority in the Legislature.

Do you agree ?

Q. 3.9 Criticism is often levelled that in making his choice of the Chief Minister, in unstable party positions, after a Ministry in the State resigns on account of a no-confidence motion having been passed against it in the State Legislature, the Governor does not act fairly but in a manner calculated to advance the interests of a particular political party or group. In order to guard against the instability of the Ministries, the Constitution of the Federal Republic of Germany has introduced a device. Article 67 of the Basic Law lays down that the Bundestag (Federal Legislature) can express its lack of confidence in the Federal Chancellor only by electing a successor simultaneously, and then requesting the Federal President to dismiss the Chancellor. Do you think that if a similar provision is incorporated in our Constitution, it will prevent unnecessary friction between the Governor and the elected representative on the one hand, and reduce occasions for the above-mentioned criticism against the Governor, on the other? Have you any other suggestion?

Q. 3.10 The Administrative Reforms Commission recommended:

"Guidelines on the manner in which discretionary powers should be exercised by the Governors should be formulated by the Inter-State Council and on

acceptance by the Union issued in the name of the President. They should be placed before both Houses of Parliament."

What is your comment/view about the Constitutional validity/political propriety and pragmatic utility of issuing such guidelines?

PART IV
ADMINISTRATIVE RELATIONS

Q. 4.1 What are your views in regard to the pupose, function and use of Articles 256, 257 and 365 in the scheme and framework of our Constitution? Has there been a case where directions were issued under Article 256 or 257 and/or under both where, under the threat of invoking Article 365, any State was compelled to carry out such directions?

Q. 4.2 There is one view that Article 365 should be deleted. There is another view that since this is purely a consequential enabling clause (which has never actually been operated upon), it may remain as reserve provision.

Which view would you support and for what reasons?

Q. 4.3 The Administrative Reforms Commission in its report (1969) observed :

"The issue of direction (under Article 256 or Article 257) by the Centre to a State...............is an extreme step and should be taken only in cases of absolute necessity, where no other means of securing the objective are available. The assumption of governance by the President (under Article 356) is a drastic medicine prescribed in the Constitution as a last resort which cannot be administered as daily food as a matter of course".

On the above reasoning, the Commission recommended;

"Before issue of directions to a State under Article 256, the Centre should explore the possibilities of settling points of conflict by all other available means".

What is your reaction and comment with regard to the above-quoted recommendation of A.R.C.?

Q.4.4 The Constitution-makers with remarkable foresight anticipated the arising of situations "in which the Government of a State cannot be carried on, in accordance with the provisions of the Constitution" and provided *ex-necessitas* in Article 356 for use by the Union as ultimate weapon to remedy such a situation. Can you, after a survery of all or a substantial number of cases in which this Article was invoked, offer your considered views as to whether, genarally, this extraodinary, remedial power has been exercised properly?

If your answer is substantially or partly in the negative, please give reasons with reference to those cases in which, in your opinion, this power was misused contrary to the intent and purpose of this Article.

Q. 4.5 The Forty-Second Amendment Act, 1976 had substituted "one year" for the words "six months" in clause (4) of Article 356, with the result that the proclamation approved by Parliament under the preceding clause (3) unless revoked, ceases to operate on the expiration of a period of one year from the date of issue of the proclamation. The Forty-Fourth Amendment Act, 1978, restored the original period of "six months" in this clause, and also cut down the maximum total period for President's rule, mentioned in clause (5) from "three years" to "one year" except where the two extremely stringent conditions listed in sub-clause (a) and (b) co-exist. These changes were made as a safeguard against unnecessary extension of the Central rule beyond the period for which it was absolutely necessary to restore the normal functioning of the responsible Government in the State.

A view has been propounded with reference to certain situations that recently arose in a State and are likely to arise in some other States, that, where owing to the continued disturbed conditions, the break-down or failure of Constitutional machinery in a State cannot be repaired and normalcy restored within the time-limits specified in clauses (4) & (5) of Article 356, the said amendments, though intended to be a safeguard may turn into a handicap to the efficacious use of this power by the Union.

Do you agree with this view? If so, what other safeguard, if any, would you suggest in addition to, or in modification of clauses (4) and (5) which would while minimising the possibility of misuse of the power under Article 356, not inhabit its use as an ultimate weapon capable of effective action?

Q. 4.6 Under the present arrangements, many of the functions of the Union Government like census, elections, etc. are implemented by the State administration.

Are the present arrangements working satisfactorily?

Do you have any comments to offer in this regard?

Q. 4.7 At present, a number of Central agencies such as the Agricultural Prices Commission, Central Water Commission, Central Electricity Authority, Director-General of Technical Development, Monopolies and Restrictive Trade Practices Commission, Employees State Insurance Corporation, National Savings Organisation, Employees Provident Fund Organisation, Bureau of Industrial Costs and Prices, Food Corporation of India, etc. handle activities relating to subjects in the State and Concurrent lists of the Seventh Schedule to the Constitution. It has often been alleged that through these agencies the Union has made undue inroads into the States' autonomy.

Is this criticism justified?

If so what should be the proper role of such Central agencies in such matters?

Q. 4.8 A specific provision was made in Article 312 of the Constitution, with the unanimous support of the then provincial Governments, not only for regularising the two All-India Services, namely Indian Administrative Service and Indian Police Service which had been earlier created by an Executive Order, but also empowering Parliament to create, by law, one or more All-India Services common to the Union and the States, if they are

deemed essential in the national interest. The recruitment, discipline and control of these Services was to be tackled on a basis of uniformity and under the directions of the Central Government in order to foster stability and a broad national outlook which are essential for the efficiency and effectiveness of the Services and conducive to nati nal integration. Do you think that the All-India Services have fulfilled the expectations of the Constitution-makers ?

Some States have contended that they should be given greater control over the All-India Services.

What are your views ?

Q. 4.9 According to the Administrative Reforms Commission, the Union is competent by virtue of Article 355 to locate and use its Central Reserve Police and other armed forces in aid of civil power in any State, even *suo motu*. Some States, on the the other hand, have controverted this view and have opposed such Central intervention.

What are your views ?

Q. 4.10 In the Constitution, 'Newspapers, books and printing pressess' have been included in the Concurrent List (Entry 39, List III), while "........ broadcasting and other like forms of communication" have been included in the Union List (Entry 31, List I).

It was suggested during the Constituent Assembly debates that "broadcasting" should be included in the Concurrent List. Some States have also been urging that broadcasting and television facilities should be shared between the Union and States on a fair and reasonable basis as both have got equal need for access to these mass communication media for putting across their views to the people.

What are you views ?

Q.4.11 How far have the Zonal Councils set up under the States Reorganisation Act, 1956 served the purpose of collectively pursuing States' interests by cutting across party lines?

Q.4.12 Article 263 of the Constitution, which appears under the caption "Co-ordination between States", empowers the President to establish an Inter-State Council, if it appears to him that the public interests would be served by the establishment thereof. The Administrative Reforms Commission has also recommended the establishment of such a Council. .....

Do you think that setting up of such an institution would be desirable to iron out-inter-State and Union-State differences and issues and thereby to secure better cooperation between the States?

If so, what should be the functions and composition of such a Council ?

Should it be set up on a permanent basis, or as an experimental measure for a specified period of years ?

Should the Council have an independent Secretariat?

PART V

FINANCIAL RELATIONS

Q.5.1 The Constitution-makers expected that the revenue-gap between the resources and the fiscal needs of States to discharge their growing responsibilities, will be covered under a scheme of devolution partly by sharing with the States, proceeds of certain Central taxes and duties, and partly by grants-in-aid from the Union, under an arrangement "as automatic and free from interference as possible", while periodic changes will be made by the President on the recommendations of the Finance Commission, which we hope, will command the confidence of all".

After a review of the working of the mechanisms for devolution and examination of details of resources transferred by the Union to the States during the last 34 years, can it be said that the scheme of devolution envisaged by the Constitution-makers has worked well and come up to their expectations?

Q.5.2 The A.R.C. Study Team on Centre-State Relations has observed : "................... the outstanding feature of the financial relationship between the Centre and the States is that the former is always the Giver and the latter the Receiver...... The State resources on their own have not been enough even to meet all non-plan expenditure and there is thus heavy and increasing financial dependence on the Centre.

After a survey of the resource-transfers recommended by the several Finance Commissions subsequently, does the overall position stated by the A.R.C. Study Team, and quoted above, still hold good? If so, which of the following alternatives, or combinations thereof, do you think should be adopted and for what reasons ?

(a) Complete separation of the fiscal relations of the Union and the States, abolition of the scheme of transfer of resources and instead transferring more taxing needs to List II Seventh Schedule.

(b) Transfer of a few more elastic taxation heads to List II.

(c) All the taxing heads/taxing powers be transferred to the Union List to form a shareable pool, the respective shares of the Union and the States as a whole being specified in the Constitution itself. The amounts and the principles on which the States' share would be distributed amongst the various States, be determined by the Finance Commission.

(d) More Central taxes such as Corporation Tax, Customs Duty, Surcharge on Income Tax, etc., be brought into the shareable pool

(e) Financial resources, other than tax-revenues to the Union, be also distributed between the Centre and the States.

Q.5.3 The Directive Principles of State Policy spell out that the State shall endeavour, *inter-alia*, to provide social and economic justice and endeavour to eliminate inequalities amongst groups of people residing in different areas. Owing to historical reasons, the capacity of States to ensure through

their own resources, reduction of regional inequalities, and to attain social and economic justice varies widely.

A view has been expressed that regional imbalances can be reduced only by a strong Centre, having elastic sources of revenue and more discretionary powers to use the funds available with it for the development of poorer States. Giving more financial powers to States will only further tilt the balance in favour of richer States.

Do you agree? What are your views on the above observations?

Q.5.4 The options available to the Centre to attain the objective set forth in the preceding question are :

1. raising more revenue resources—

   (i) through taxation;

   (ii) through subventions from richer States to Central pool under some principles;

2. better control over expenditure, and

3. deficit financing.

The Central revenue account appears to show fairly large deficits during the past several years after making the necessary devolutions to the State Governments, as recommended by the Finance Commissions and by the Planning Commission.

Is deficit financing to cover this gap, in your view, in the national interest? If it is not, what suggestions would you take to bridge this revenue gap?

Q.5.5 It is stated that the present devolutions made through the channels of the Finance Commission and the Planning Commission do not appear to bridge the gap in resources between the poorer and richer States. Keeping this in view, please give your suggestions regarding the objective criteria that should be used for determining :

(a) the share of taxes,

(b) plan assistance, and

(c) non-plan assistance

for each State taking into account the tax efforts as well as efficiency and economy in management. Please also indicate what relative weightage should be given to each criterian.

Q.5.6 A view has been expressed that a 'special federal fund' for ensuring 'faster development in economically underdeveloped areas relative to other developed areas of the country, as provided for in the Yogolsav Constitution, should be established in India.

Do you think that our Finance and Planning Commissions are not adequate for the purpose?

Q.5.7 There appears to be certain imperatives in the allocation of taxation functions to the Union and the States. One cardinal principle is that a tax should be imposed by the authority which can best collect and administer it. The second is the imperative of Part XIII of the Constitution ensuring "freedom of trade, commerce and intercourse within the country". The third is the reduction of inequalities through use, *inter alia* of the taxation system as an instrument of economic policy.

In the light of these three principles, what Central taxation powers can reasonably, be transferred to the States?

Please elucidate end give reasons.

Q.5.8 It is held by some experts that major taxes like Corporation Tax, Income tax, Wealth Tax, Estate Duty, Customs Duty, Excise Duty, Sales Tax etc. have a profound bearing on the economy of the country as a whole and considerable damage may occur as a result of fragmentary approach to taxation. They advocate seperation between imposition of such taxes and distribution of the tax proceeds. For the former they recommended Central, levy of these taxes subject to control by a Council and Central and State Finance Ministers.

What are your views in this regard?

Q.5.9 It has been pointed out by some experts that devolution of revenue resources by the Finance Commission for non-plan expenditure once in five years and leaving it to the planning Commission to assess the financial requirements to sustain an expanded plan each year, is leading to serious difficulties. In their view, one organisation should deal with all financial transfers (plan and non-plan) on an assessment of capital and revenue resources which could be best handled by a permanent Finance Commission. The Planning Commission's role will be limited to functioning as an agency for overall investment, planning and decision-making in the interest of rational utilisation of scarce capital resources.

Do you agree with this approach? If so please elaborate?

Q.5.10 How far in your view, have the transfers, both statutory and discretionary, from the Union to the States, on the advice of successive Finance Commissions or otherwise, promoted efficiency and economy in expenditure, on the one hand, and narrowed down the disparities in public expenditure among the States, on the other?

Q.5.11 A view has been expressed that the present mechanism of transfer of resources has inbuilt propensities towards financial indiscipline and improvidance in terms of exaggerated revenue-deficit forecasts, adaption of populist measures resulting in revenue loss, incurring expenditure unmatched by available resources, etc.

Do you agree with this view, and if so, what correctives would you like to suggest ?

Q.5.12 The Seventh Finance Commission had suggested that the bulk of the resource-transfers should be done through tax-sharing and the role of grants-in-aid under Article 275, in the scheme of total revenue transfer should, as far as possible, be supplementary.

What is your comment with regard to this broad proposition?

Q.5.13 The Seventh Finance Commission has also laid down in order of priority, the following principles for grants-in-aid under Article 275 :—

(i) Grants-in-aid may, in the first place, be given to States to enable them to cover fiscal gaps, if any are left after devolution of taxes and duties so as to enable them to maintain the levels of existing services in the manner considered desirable by the Commission and built in their revenue forecasts.

(ii) Grants-in-aid may be made as correctives intended to narrow, as far as possible, disparities in the availability of various administrative and social services between the developed and the less developed States, the object being to endeavour to assure certain basic national minimum standards of such services in the country irrespective of State boundaries.

(iii) Grants-in-aid may also be given to individual States to enable them to meet special burdens on their finances because of their peculiar circumstances or matter of national concern.

What is your comment/view in regard to the principles enunciated above and the methodology of their application?

Q.5.14 It has been suggested that some of the Centre's other revenues, for example, the yield from the Special Bearer Bonds Scheme and the revenue accruing from raising administered prices of items like petroleum, coal, etc., should be brought within the divisible pool of resources. Are you aware of any other claims made on Central non-tax revenue to bring them within the divisible pool? Please give details. Are you satisfied about the logic of claiming that these revenues should properly come under the divisible pool of taxation? Please give detailed answers.

Q.5.15 The total savings available in the community have to be shared between the public and private sectors. Within the public sector, share mobilised by it has to be distributed between the Centre and the States and their respective public undertakings.

Do you think that the methods by which such distribution is effected, at present, are satisfactory?

Q.5.16 It has been stated that though the budgetary deficits of States have grown at a faster rate than that of the Centre because of the latter's increasing deficit the percentage of the Centre's revenue receipts being transferred to the States, has gradually been showing declining trend in spite of there being a substantial increase in these transfers in absolute terms. It has also been observed that the fiscal imbalance of the States is on the increase manifesting in their mounting indebtedness.

What are your comments in this regard?

Q.5.17 The Sixth Finance Commission was specifically asked to look into this problem of growing indebtedness of the States and suggest remedies. Do you agree that a periodical review of this nature should be also to handle any anomalies in the indebtedness of the State in future? The A.R.C. Study Team on Centre-State Relations, commenting on the over-increasing massive indebtedness of the States had observed that the States find it increasingly difficult to repay their debts, or even the interest charges in some cases, and that repayment of Central loans constitutes an increasingly large part of the total States' borrowings from the Centre.

What factors, in your opinion, have contributed to the above situation? What measures would you suggest to remedy it?

Q.5.18 It has been said that the States' capacity as well as freedom to borrow has been unduly restricted.

Do you agree? If so, what extent these restrictions can be relaxed without affecting the basic principles of sound finance?

Q.5.19 It has been alleged that on foreign borrowings the Centre charges from the States a higher rate of interest than what it pays to the foreign lender. If so, is this justified? Have you any comment to make on the present system of transferring foreign credit obtained for financing State Projects through the Centre to the States?

Q.5.20 A suggestion has been made that a Loans Council should be set up, on the pattern of the Australian Loans Council, which could fix the borrowing limits of different States and the Centre on the basis of principles to be approved by the National Development Council. The Reserve Bank of India at present, coordinates the market borrowings not only of the Centre and the States but also of the Private Sector.

In your view, would the Loans Council be a better institution than the Reserve Bank of India for this purpose. In the alternative, have you any suggestion to make about improving the working of the Reserve Bank of India in this context?

Q.5.21 Ways and Means Limits enjoyed by the State Governments with the Reserve Bank of India were doubled with effect from July, 1982. The annual report of the R.B.I. for 1982-83 notes that the continued existence of large overdrafts even after doubling the entitlement of Ways and Means advances points to the "unhappy position" of the States' Finances.

What, in your opinion, are the factors contributing to this situation and what remedies would you suggest?

Q.5.22 A view has been expressed that the States are not exploiting adequately their own sources of revenue.

Do your agree? If so, what suggestions would you give in this regard?

Q.5.23 A view has also been expressed that the Centre is not assessing and collecting all revenues that it can and should do. In this connection, it is also cited that (a) in spite of reaching commanding heights as intended, the public sector has not yielded the expected returns on capital investment, and (b) there is substantial leakage in Central taxation.

Do you agree? If so, what suggestions have you to make to remedy the situation?

Q.5.24 Do you think it will be a healthy convention conducive to the stability of State finances to require the Union to ascertain the views of the State Governments and give them due consideration, before moving a Bill to levy or vary the rate-structure of abolish any oI the duties and taxes enumerated in Articles 268 and 269?

Q.5.25 Some states have suggested that Article 269 of the Constitution should be better exploited to augment the resources of the States.

What are your views in this regard?

Q.5.26 A tax on Railway Passenger Fares was first levied by the Union Government in 1957 under Article269(d) Ior the benefit of the States. The Act was repealed in 1961 and in lieu thereof, a grant of Rs. 23·12 crores is now being given to the States. It has been pointed out that had the tax continued to operate, the ravenue on the basis of the greatly increased current passenger-fare earnings of Railways would have been much higher. On this reasoning, it is urged that this grant in lieu of the passenger fares tax should be revised and enhanced in proportion to the increase in the collection of railway fare.

What is your view in regard to this issue raised by the States?

Q.5.27 There are four Union Territories with Legislatures. A complaint has been made that although under Income-tax and Union Excise Duties shares are allocated to Union Territories taken together, the Government of India individually gives to them only grants-in-aid, thus depriving them of a share in the buoancy in Central taxes.

Is this grievance justified? If so, what measures would you suggest to ensure appropriate shares of taxes to such Union Territories also?

Q.5.28 What are your views on the working of the present arrangements in regard to provision of Central assistance to States for dealing with natural calamities? What suggestions would you make to ensure that relief assistance is put to optimum use.

Q.5.29 A proposal has been made for the creation of three new All-India institutions involving the participation of both the Union and the States but without taking away the ultimate residuary role of the Union Government :—

(1) There should be a National Loan Corporation (N.L.C.) supported by a consortium of nationalised banks which will be exclusively and specifically incharge of both loan-raising and loan-utilisation for productive, economically viable projects.

(2) There should be a National Credit Council(NCC) on which the States should have some representation. It should be entrusted with the task of assessing credit resources and growth possibilities without evoking adverse inflationary effects. The Council should also determine the share which the States as a whole can get but not exceeding 40 per cent, and also formulate the broad category of purpose for which the States could use their share in their plan frame work.

(3) There should be a National Economic Council (NEC) on which the States should be given some representation. This Council will not only have the function of seeing that commercial and industrial policy and economic management serve the National interest as a whole, but also take into account the differential interests of States in regard to Industrial licensing export and import licensing, subsidies, incentives, employment, etc. The National Loans Corporation and the National Credit Council should also be represented on this Council.

The annual reports of all these three bodies should be placed before Parliament for discussion and suggestions as well as before the State Legislatures for information.

What are your views with regard to these suggestions?

Q.5.30 A view has been expressed that who collects the funds and how the collected funds should be distributed are not very relevant because all funds flow from the public. What is more important is that the funds are spent prudently and the benefits to back largely to the people.

Do you agree?

Q.5.31 (a) There is criticism that the expenditure of the Union is not being organised in the best interest of the nation's growth and instead there are trends for incurrence of infructuous, unnecessary and uneconomic expenditure. A demand has been voiced in several quarters that the expenditure of the Union should be scrutinised so that such trends may be contained and additional resources found for helping the States, particularly the poorer ones.

Do you agree that such a periodical assessment is necessary?

(b) It has also been asserted that the States which complain of meagre developmental resources are indulging more and more in unnecessary expenditure mainly of a populist nature and not strictly on economic reasons, thereby depleting the already insufficient resources available for developmental purposes.

Do you agree?

(c) For both the above reasons, a suggestion has been made that there should be a permanent National Expenditure Commission to assess the nature and quality of expenditure and the need for revenue resources for both the Centre and the States, to enable them to discharge their respective obligations reasonably and satisfactorily.

Do you agree or have you any other suggestion? Please elaborate.

Q.5.32 Under Article 150 in Part V of the Constitution the accounts of the Union and the States are to be kept "in such form as the President may on the advice of the Comptroller and Auditor General of India prescribe". Likewise, under Article

151 of the Constitution the reports of the Comptroller and Auditor General of India relating to the accounts of the Union, shall be submitted to the President and those relating to the accounts of a State shall be submitted to the Governor of the States, both of whom shall cause them to be laid before the Parliament and the Legislature of the State, respectively.

What operational problems, and implications thereof, do you observe in the proper and timely preparation, examination and scrutiny of the accounts as having a bearing on Centre-State relations?

Q.5.33 The present system of audit relies very heavily on 'voucher audit' whereas the desirability of 'evaluation audit' is well established. To what extent, in your view, the objective of efficiency and promptness in audit can be pursued along with any meaningful progress in 'evaluation-audit'? Please give a specific suggestions, if any, in this regard.

Q.5.34 The Comptroller and Auditor General is a Constitutional functionary to perform such duties and exercise such powers in relation to the accounts of the Union and the States as may be given to him by Parliament by law. Shri Ashok Chanda, Chairman of the Third Finance Commission, had pointed out that the Comptroller and Auditor General was not doing all that was possible to keep a check on the accounts of the Union and the States. Under Article 149 of the Constitution, the Parliament enacted a Law in 1971 (amended in 1976), defining the duties, powers, etc. of the Comptroller and Auditor General.

In your view, does this answer the criticism made by Shri Ashok Chanda? Has Parliament under this Act conferred sufficient powers and enjoined adequate duties on the Comptroller and Auditor General to enable him to keep an effective watch on the expenditure of the Union and the States?

Q.5.35 The Comptroller and Auditor General is responsible only to the President and the Governor of the State for submission of his reports which are presented to Parliament and the State Legislature, respectively. It is then for Parliament and State Legislatures to exercise such checks that they feel necessary to ensure financial propriety.

Are you satisfied that the reports of the Comptroller and Auditor General presented to Parliament and State Legislatures are comprehensive enough and reasonably accurate to enable them to take firm views in the matter. If not, what improvements, if any, would you suggest about the reporting?

Q.5.36 The Public Accounts Committee of the Parliament and the Public Accounts Committee of State Legislatures along with the Committee on Public Undertakings examine the reports of the Comptroller and Auditor General and further probe into issues that they think are important. In this exercise, the Comptroller and Auditor General helps them. Is this, your view, a sufficient check to answer the voiced complaint of insufficient expenditure control at the Centre and in the States?

Q.5.37 The Estimates Committees of the Parliament and of the State Legislatures go into the wider aspects of policies and programmes than those covered in the reports of the Comptroller and Auditor General to the Parliament and the State Legislates, and advise the Government on the improvements necessary. Would you agree that in the light of the need for a scrutiny of expenditure of the Union and of the States, this Committee can act as a watchdog to give useful legislative and administrative advice to the administration?

Q.5.38 If you think that an Expenditure Commission is needed for assessing the propriety of expenditure of the Union and the States, is not such a Constitutional authority already provided in the Comptroller and Auditor General of India?

Q.5.39 Some State Governments are of the view that while there can be no objection to monitoring the accounts of the utilisation after the expenditure has been made the clearance of the plans of action formulated by the States by the administrative Ministry concerned at the Centre is an irritant and a source of considerable delay. The State Governments, which are the beneficiaries under the schemes should be authorised to decide the validity of the expenditure under the approval scheme without the intervention of an external agency.

What is your comment in regard to the above view? By what other means can the Centre ensure that funds meant for a specific purpose are, in fact, utilised for that purpose?

PART VI

ECONOMIC AND SOCIAL PLANNING

Q.6.1 "Economic and Social Planning", an Entry in the Concurrent List of Seventh Schedule of the Constitution, recognises the vital role which the Centre might play in consultation with the States in the matter of undertaking planning in a national perspective, to meet national needs, subscribing to national priorities and in coordinating the various plans sectoral and territorial. The A.R.C. Study Teams and other Studies conducted by experts have noted, among others, three shortcomings in planning relationship.

(1) As a national endeavour, the plans to not secure the commitment of the States by involving them earnestly in the primary task of determining goals and perspectives after a full and frank consideration of all the basic issues, the measure of consultation with the States effected through the National Development Council being inadequate and the consultation procedures at the meetings of the Chief Ministers and the Central Ministers being superficial and hurried.

(2) The Union Ministers tend do insist on the incorporation of the schemes framed by them, and the departmental groups establish a 'client relationship' with the Central Working Group and tend to accept the schemes framed by the Central Group without proper scrutiny.

(3) There is too detailed involvement of the Centre with programmes legitimately falling wholly within State jurisdictions.

What remedial measures and procedural changes would you suggest to remove or, at any rate, to minimise the shortcomings listed above, and for what reasons?

Q.6.2 A view has been expressed that a National Development Council, consisting of all the Chief Ministers of the States presided over by the Prime Minister, and experts in various fields as Members be set up on a statutory basis. It should have powers to discuss and approve the recommendations of the Planning Commission with regard to economic development. When once the development plans are approved by the Council, the States should be free to implement them, in accordance with the approved pattern and adequate financial resources should be provided to the States. The Council should have the opportunity of expressing its opinion on matters of national importance.

What is your opinion in regard to the above proposal?

Q.6.3 The resolution setting up the Planning Commission states that the Commission would act "in close understanding and consultation with the Ministries of the Central Government and the Government of the States". Do the present composition and procedures of the Commission allow for such close understanding and consultation with the State Governments? If not, what improvements would you suggest?

Q.6.4 Three views have been expressed about the composition of the Planning Commission—

(i) The Commission should include sufficient number of Ministers who can authoritatively define for the experts on it, the preferences and objectives of the Government and then persuade the Centre and State Governments to accept and implement the Plan.

(ii) It should be a high-grade advisory of economists, technologists and management experts.

(iii) It should be enlarged to include representatives of all the States and made an independent body, free from all pressures of Union Cabinet which generally reflects the opinion/policy of the ruling party at the Centre.

Which of these three views would you support and for what reasons?

Q.6.5 It has also been suggested that the Planning Commission should be not a department of the Government of India but should be made an autonomous body under the National Development Council for everseeing Planning, investment and decision-making at the national level.

What are your views with regard to the above suggestion?

Q.6.6 Do you agree that there is need to consider and incorporate national priorities in the State Plans? If you do, please consider the criticism that the Planning Commission has been examining in too great a detail the States' finances and Plans to ensure this objective, thereby raising allegation of undesirable erosion of States' autonomy. In this context, what modifications of the procedures in the Planning Commission for scrutiny of the State Plans, to ensure national priorities, should, in your view, be introduced?

Q.6.7 What are the merits and demerits of the present system of channelising Central assistance by way of loans and grants through the Planning Commission to the States?

Q.6.8 Do you agree with the view that the present system of arriving at the States' Plan size by adding to their assessed resources independently, predetermined quantum of Central Plan assistance on the basis of the Modified Gadgil Formula, IATP, etc. (which may not provide for all the plan needs of States), operates harshly against the economically weaker States? If so what changes, if any, would you suggest in this regard?

Q.6.9 How far the Criteria evolved by the National Development Council for allocating Central Plan assistance to States equitable? How far has the present system of allocation of Central assistance contributed to the attainment of the planning objectives of balanced regional development and removal of poverty? Please also comment on the present system of determining special Central assistance for Tribal and Hill Areas' Sub-Plans, etc. and the mechanism of earmarking of State Plan outlays in aggregate and for certain priority sectors.

Q.6.10 A view has been expressed that the large number of Centrally Sponsored Schemes (through some of which substantial amounts of Central assistance on matching basis are channelised to the States), tend to distort State Plan priorities as they induce the State Governments to opt for them.

Do you agree with this view and would you like to suggest any change in this regard? If so, please specify.

Q.6.11 Do you think that the monitoring and evaluation machinery established in the Planning Commission as well as within each State to watch the implementation of the plans is adequate? If not, what improvements would you suggest for ensuring that the Central and State funds invested in the development plans yield the desired results?

Q.6.12 Do you think that decentralised planning would help in introducing a spirit of "cooperative federalism" in our planning system, and if so, would you briefly outline the steps which should be taken in that system to ensure proper cooperation between the States and the Centre at the stages of Plan preparation and Plan implementation?

Q.6.13 Since the recommendation of the Administrative Reforms Commission on constituting Planning Boards in each State, many of the State Governments have taken steps to strengthen their planning machinery.

To what extent, in your opinion, the enhanced planning capabilities of States are playing an effective role in plan formulation, implementation and review? What further improvements, if any, would you suggest in this direction? As State Planning Boards gain in experience, should the National Plan become progressively more indicative and less imperative?

925 ISCS/98—2A

PART VII

MISCELLANEOUS

Industries

Q.7.1 By virtue of its powers under Entry 52. List I, Parliament, by making the necessary declaration in terms of this Entry enacted the Industries (Development and Regulation) Act, 1951. The Act gives powers to the Central Government to compel registration of the existing industrial undertakings and not to establish any new industrial undertakings, mentioned in the First Schedule to the Act, except under, and in accordance with, a licence issued in that behalf by the Central Government.

The First Schedule to the Act, as originally enacted, included only a few industries which were of vital public interest and of national importance. But the Act has been repeatedly amended and in course of time, more and more industries have been added to the First Schedule and the Centre has now brought under its control items like razor blades, gum, match sticks, soaps, paints, warnishes, weighing machines, sewing machines, hurricane lanterns, steel furniture, cutlery, pressure cookers, agricultural implements, bicycles, footwear, house-hold appliances, hand tools, type-writers, chinaware and pottery, oil-stoves, etc. It has been criticised that as a result of this indiscriminate extension of the First Schedule to cover a very high proportion of industries in terms of value of their output, "the basic constitutional scheme has been patently subverted and "industries" has been virtually transformed into a Union subject".

Do you agree with this view? If so can you give specific instances, if any, where this power has been used to the detriment of States' interests?

Q.7.2 (i) Should there not be laid down, in your opinion, some norms to define or describe what is "national/public interest" in the context of national control over an industry, when Parliament alone can legislate?

If your answer is in the affirmative, what should be such norms in your opinion?

(ii) From the present list of items in the First Schedule to the Industries (Development and Regulation) Act, 1951, what items, in your opinion, can be deleted on the ground that they are not really crucial to the national/public interest to justify control by the Union?

Q.7.3 Have you any suggestion to make for improving and/or decentralising the present procedures for industrial licencing and Central clearance for capital-issues, import of capital goods and raw materials and foreign collaboration?

Q.7.4 The National Committee on Development of Backward Areas in its reports on "Industrial Dispersal", "Village and Cottage Industries" and "Industrial Organisation"—has pointed out the big gap in raw material supply at fair rates to the small sector, marketing structures to ensure a non-exploitative price for the products of the small sector and financial support to the sector. The gap in technology to ensure a drudgery—free approach to the sector has also been emphasised.

In your opinion (a) have the States organised themselves sufficiently to support this sector? If not, in what time phase do you think this is possible? (b) What are the glaring deficiencies in the States' approach to this problem so far?

Q.7.5 In the context of loans to the State Plans what comments, if any, have you to make on the working of the Centrally controlled national industrial financing institutions, such as, Industrial Development Bank of India, Industrial Finance Corporation of India, Industrial Credit and Investment Corporation of India, Life Insurance Corporation and Unit Trust of India?

Q.7.6 Locational decisions on Central investments in the public sector are matters of crucial interest to the States. It is alleged that the States are not always taken into confidence before deciding on such locations.

Is this criticism justified?

Q.7.7 Criticism has been voiced that in several cases the Centre has either favoured or neglected individual States in the matter of its direct investment in heavy industries. Is there any justification for such criticism? If so have you any suggestions in this regard which might make such Central investment decisions more objective?

Q.7.8 Are you satisfied with the methodology adopted for identification of industrially backward districts/areas for provision of various Central fiscal and financial incentives for promotion of industries, given the present limitations of information? To what extent, the various Central incentives for promotion of industries in backward areas have succeeded in your opinion?

Do you have any alternative suggestions, on the above matters?

Trade and Commerce

Q.8.1 Article 307 of the Constitution provides for appointment by Parliament by law of an authority for carrying out the purposes of Articles 301, 302, 303 and 304 which deal with the imposition of certain restrictions on trade, commerce and intercourse among States. No much authority (under Article 307) has so far been constituted. Regulatory laws (tax and non-tax) imposing restrictions on freedom of trade and commerce are a perennial source of controversy between the States and the Centre and among the States themselves. Do you think that in the interests of securing better Centre-State relationship in trade and commerce, it is necessary to appoint an authority to :—

(a) survey and bring out periodically a report on the restrictions imposed on intra-State and inter-State trade and commerce by different governments;

(b) recommend measures to rationalise or modify the restrictions imposed with a view to facilitate trade and commerce; and

(c) examine the complaints from the public and the trade in this regard?

Have you any comments to offer? Please specify them.

Agriculture

Q.9.1 While agriculture, including animal husbandry, forestry and fisheries, is in the State List (List II, Seventh Schedule), through several Entries in the Union List and particularly these in the Concurrent List of the Seventh Schedule, the Constitution provides a large scope for Central initiative in agricultural matters. The Study team of the Administrative Reforms Commission on Centre-State Relations (1967), while examining the scope of Entry 33, in the Concurrent List, had observed "it appears to us that agriculture should be treated as a State subject and that Central attachment in the scope of the assumption of responsibility for substantive activity should not be permissible".

How far has this position changed since 1967? To what extent would you go with the above view point?

Q.9.2 Examining the Centre-State relations in agricultural development, the National Commission on Agriculture (1976) had recommended that a long term perspective be developed in which the "Central and Centrally sponsored schemes being implemented through the State agency ultimately form part of the State sector" and that their number should be kept to a minimum.

Would you agree with this view, and if so for what reasons? Do you have any specific suggestions to offer in this respect?

Q.9.3 The National Commission on Agriculture (1976) had also suggested (i) that the States should be 'closely associated' with the formulation of the Central and Centrally sponsored sectors of the agricultural plan through Joint Working Groups, and (ii) that there should be a continuous dialogue between the Central and the State Working Groups to ensure that adjustments effected in the plan on account of resources constraints are "within the general acceptance of the States and their appreciation of priorities of programmes and implementing capacity".

To what extent do you think effective cooperation exists between the Centre and the States on the above aspects? What improvements, if any, would you like to suggest?

Q.9.4. How far, and with what implications, Union Government's initiative affects the States with respect to (a) fixation of minimum of fair prices of agricultural items, (b) irrigation (including inter-State aspects), (c) provision of strategic inputs, including credit and (d) forestry policy and administration?

If you find any serious problems in Centre-State relations in these aspects, what solutions, if any, would you like to suggest?

Q.9.5 Do you find any problem in the sphere of Centre-State relations with respect to the role of agricultural research (e.g., Indian Council for Agricultural Research) and financial institutions (e.g., National Bank for Agricultural and Rural Development). (NABARD)? What suggestions, if any, would you like to give in this respect?

Food & Civil Supplies

Q.10.1 Do you think that the present arrangements for Centre-State consultation are consistent with the actual responsibilities of the State Governments or there is scope for improving Centre-State liaison in the areas of procurement, pricing, storage, movement and distribution of foodgrains and other essential commodities? Please give specific suggestions.

Q.10.2 Do you think that the arrangements for administering the Essential Commodities Act and other regulatory Central Acts affecting States' areas of responsibilities need to be periodically reviewed? If so, what arrangements would you like to suggest in this regard?

Education

Q.11.1 Some States have expressed the view that there is unnecessary centralisation and standardisation in the field of education and too much of Central interference in the initiative and authority of the States? How far is this criticism justified?

Q.11.2 Have you any comments to make on the role of the University Grants Commission—(a) in exercising influence over University education, and (b) in extending financial assistance?

Q.11.3 What suggestion would you like to make to evolve a consensus among the States as well as between the Centre and the States in the field of education through a process of discussion, consultation and persuasion?

Q.11.4 Do you discern any difficulty in the operation of the Constitutional provisions under Articles 29 and 30 which guarantee the rights of the minorities in regard to the establishment and management of denominational educational institutions? If so, what improvements would you like suggest?

Q.11.5 Can you give any other specific instances of conflicts or issues between the Centre and the States in regard to programmes of educational development and suggestions for resolution of these issues ?

Inter-Governmental Co-ordination

Q.12.1 In U.S.A. the Advisory Commission on Intergovernmental Relations (ACIR) was created by the Congress in 1959 to monitor the operation of the American Federal system and to recommend improvements. As a continuing body, the Commission approaches its work by addressing itself to specific issues and problems, the resolution of which would produce improved cooperation among the levels of government and more effective functioning of the federal system.

Do you think it would be useful to set up such an institution in our country which would promptly deal with many of the irritations and problems which arise with regard to Centre-State relations in India? If so, please elaborate as to what should be the role and composition of such a body.

Agriculture

Q.9.1 While agriculture, including agricultural education and research, is in the State List (Entry 14, Seventh Schedule), through several Entries in the Union List and particularly those in the Concurrent List of the Seventh Schedule, the Constitution provides a large scope for Central initiative in agricultural matters. The study team of the Administrative Reforms Commission on Centre-State relations (1967), while examining the scope of Entry 14 in the State List, had observed "It appears to us that agriculture should be treated as a State subject and that, in all matters of the scope of the distribution of responsibility for substantive activity should not be permissible".

How far has this position changed since 1967? To what extent would you go with the above view points?

Q.9.2 Examining the Centre-State relations in agricultural development, the National Commission on Agriculture (1976) had recommended that a long term perspective be developed in which the Central and Centrally sponsored schemes being implemented through the State agency ultimately form a part of the State sector and that their number should be kept to the minimum.

Would you agree with this view, and if so, for what reasons? Are you advocating any alternative suggestions in this respect?

Q.9.3 The National Commission on Agriculture (1976) had also suggested (i) that the States should be actively associated with the formulation of the Central and Centrally sponsored sectors of the agricultural plan through joint working groups and (ii) that there should be a continuous dialogue between the Central and the State Planning Groups to ensure that adjustments effected in the plan on account of resources constraints are within the general acceptance of the States and their appreciation of priorities of programmes and implementing capacity.

To what extent do you think effective cooperation exists between the Centre and the States on the above aspects? What improvements, if any, would you like to suggest?

Q.9.4 How far and with what implications Union Government's initiative affects the States with respect to (a) fixation of minimum of fair prices of agricultural produce, (b) irrigation (including non-Plan expenses), (c) provision of essential inputs including credit and (d) forestry policy and administration?

If you find any serious problems in Centre-State relations in these respects, what improvements, if any, would you like to suggest?

Q.9.5 Do you find any problem in the sphere of Centre-State relations with regard to the role of agricultural research (e.g. Indian Council for Agricultural Research), and financial institutions (e.g. National Bank for Agriculture and Rural Development (NABARD))? What suggestions, if any, would you like to give in this respect?

Food & Civil Supplies

Q.10.1 Do you think that the present arrangement for Centre-State cooperation is consistent with the actual responsibilities of the State Governments, or there is scope for improving Centre-State relations in the sphere of procurement, storage, movement, and distribution of foodgrains and other essential commodities? Please give specific suggestions.

Q.10.2 Do you think that the arrangements under the Essential Commodities Act and the Sugar Cane (Control) Act [illegible] or separate rules need to be reviewed? If so, what arrangements would you suggest in this regard?

Fisheries

Q.11.1 Some States have expressed the view that deep-sea fishing [illegible] within the territorial waters [illegible] of the State. [illegible]

Q.11.2 Have you any suggestions [illegible] of the University Grants Commission [illegible] affecting financial assistance?

Q.11.3 What regulation would you [illegible] the Central and the States [illegible] through development of [illegible] programmes?

Q.11.4 Do you consider any [illegible] of the Constitutional provisions [illegible] as to ensure the right [illegible] in regard to the establishment [illegible] of [illegible] local [illegible] so as to [illegible] suggest?

Q.11.5 Can you give any specific instances of conflict of interest between the Centre and the States in regard to procurement of [illegible] and the separate and suggestions for [illegible] the same?

Inter-governmental Coordination

Q.12.1 In U.S.A. the Advisory Commission on Intergovernmental Relations (ACIR) was created by the Congress in 1959 to monitor the operation of the American federal system and to recommend improvements. As a permanent body, the Commission approaches its work by addressing itself to specific issues and problems, the resolution of which would produce more efficient cooperation among the levels of government and more effective functioning of the federal system.

Do you think it would be useful to set up such a similar body in India? What would generally be its [illegible] and functions [illegible] and problems [illegible] to be referred to [illegible] in India? If so, please give the details of what should be the composition of such a body.

SUPPLEMENTARY QUESTIONNAIRES NOS. 1 to 10 ON DIFFERENT TOPICS ISSUED TO THOSE CONCERNED WITH THE SUBJECTS

COMMISSION ON CENTRE STATE RELATIONS

Supplementary Questionnaire No.1

(FOR CENTRAL GOVT.)

1. A study conducted by the IIPA in February 1984 on 'Small Scale Sector & Big Business' has pointed out that the reservations of certain categories of industries have been circumvented by large industrial houses. Do you agree with this conclusion? Will you please enumerate the legislative and administrative arrangements for preventing entry of big business houses in the reserved areas ?

2. Kindly give a brief note indicating the number of units in the Small Sector which have come up during the last five years and the investment involved in the reserved area and one non-reserved area.

3. What are the present arrangements for consultation with the State Governments for augmenting the schedules under the IDRA Act? Have you received any communication from any State Government pointing out the need for improving the arrangements and for periodic review ? Do you think there is such a need ?

4. One of the complaints frequently made in the field of industries is that of excessive centralisation and inordinate delay in clearance of cases. Please comment ? Can you broadly indicate in what proportion of cases the clearance is delayed due to various reasons including the procedure. Please give details of a few cases.

5. It has been reported in the press that a few State Governments are trying to circumvent the policy on MRTP by entering into joint ventures with the large/big business houses etc. in certain spheres. To what extent this is true and what are the implications of such practices ?

Supplementary Questionnaire No. 2

(FOR STATE GOVTS.)

Industry

1. The First Schedule to the Industrial Development and Regulation Act enables the Union Government 'to take under its control' the industries specified therein particularly the larger units. There is a viewpoint that this arrangement is essential for effecting desired regulation over the setting up or expansion of such industries. On the other hand, views have been expressed to the effect that regulation of industries in its different aspects should be done by evolving separate arrangements.

   What is your opinion on the above view point ? What concrete arrangements would you suggest for regulation of industries, if different from the present system ?

2. **One of the objectives of industrial regulation is to reserve certain categories of industries for the Small Scale Sector. It is held by many that this requires uniform legislation covering the entire country for which a centralised legislation is desirable. The alternative to this could be that each State Government separately legislates on the subject but it may lead to variations in the list of industries and the qualifying amount from State to State.**

   Which of the above two approaches would you favour and for what reasons ? If you have any other alternative to suggest, please specify.

3. What is the role of the State Governments in promoting the growth of Small and Medium Industries? Do you think there is scope for an expanded role for the States ? If so, please indicate how this can be achieved ?

4. Do you agree that the reservation of some of the listed items in Schedule I for Small Scale Sectors is in conformity with your State Government's Policies to promote the growth of Small Scale Sectors ? Do you feel any of the items reserved for Small Scale Sector should be removed from the List ? If so why ?

5. Some experts have commented that the Centre has virtually converted 'industries' which is 'essentially a State subject' into a Central subject by virtue of entry 52 of List-I. Do you agree with this view ? If so would you kindly specify the area of encroachment(s) alongwith the legislation and relevant sections in the legislation causing the encroachment ?

6. Do you agree with the industrial policy resolutions announced from time to time ? What according to you would be the best way of drawing a balance between a uniform national policy and adequate power of the State in accordance with the interest of the Constitution ?

7. A view has been expressed that although industries is a State subject, in formulating industrial policy, adequate consultations between the Centre and the States do not take place. To what extent do you agree with this view-point ? Do you have any suggestion to improve the present system ?

8. Do the provisions and working of the Monopolies and Restrictive Trade Practices (MRTP) Act in any way affect the industrial development of the States ? If so, please specify in what manner, would you like to suggest any improvement in this regard ?

Supplementry Questionnaire No. 3

INTER-STATE RIVER WATER DISPUTES

1. Whether bodies like Damodar Valley Corporation (DVC), Bhakra-Beas Management Board (BBMB), set up under specific Acts are an effective way of

management of inter-state river water and river valleys ? If so, whether the Central Government, (Ministry of Irrigation and Power) have any plan to use the provisions of the River Boards Act, 1956 ?

2. There has been adverse criticism about the inordinate delay in referring the Inter-State River Water disputes to the Tribunal under Section 4 of the Inter-State River Water Disputes Act. The Study Team of the Administrative Reforms Commission on Centre-State Relations has, therefore, suggested that there should be a mandatory time-limit within which, after an application under Section-3 is received from a State Government, the dispute must be referred to a Tribunal by the Central Government. It has been suggested that this should be incorporated in the Inter-State River Water Disputes Act, 1956 by an amendment thereof. What are your views in this respect ?

3. It has been suggested that the Tribunal's awards should by law be required to be given within a period of 3 years. This also will require an amendment of the River Water Disputes Act. What are your views in this respect ?

4. It has been suggested that Section 11 may be amended to enable the aggrieved State or States to approach the Supreme Court for the enforcement of the duty enjoined on the Central Government to constitute the Tribunal and refer the dispute to it, in case no tribunal is set up within the mandatory time-limit suggested in Q. 2. What are your views in regard to this suggestion ?

5. One of the difficulties in the expeditious disposal of Inter-State River Water disputes by the Tribunal may be the lack of availability of data, or, delay in supply of the data by the State Governments. It has been, therefore, suggested by some experts that if the State Governments do not provide necessary data in time, the Tribunal may proceed to give its award on best-judgement basis making use of the existing data before it. This will require building up of necessay data base in respect of the existing Inter-State Rivers and river valleys. At present, Central Water Commission has some arrangements to collect data of the waters of such Inter-State rivers and river valleys. Institutional arrangements should be strengthened to collect this data from the major rivers and to ensure their regular review and up-dating :

(a) What are the present arrangements for collection of data in this respect ?

(b) Does the Central Water Commission have its own arrangements for such data collection or do they rely on data supplied by the State Government ?

(c) Is any separate institutional arrangement is necessary for this purpose ?

6. Have you any improvements to suggest in the existing arrangements between the Union and the States, which would ensure not only equitable distribution of river waters between the States concerned but also their optimum use for the wider national interest ?

Supplementary Questionnaire No. 4

QUESTIONNAIRE ON A GOVERNOR'S DISCRETIONARY POWERS UNDER ARTICLES 163 & 200

I—Statement of Broad Issues

This Questionnaire seeks to elicit views on the discretionary powers of the Governor under Article 163 of the Constitution and in particular on his discretion in reserving Bills for the consideration of the President under Article 200.

2. The discretionary power of the Governor to reserve Bills passed by the State Legislature for the consideration of the President, and the extent and manner of the exercise of that discretion have been questioned. Delays sometimes occur at the level of the Government of India in conveying President's assent or withholding of assent to Bills so reserved. The broad issues therefore are :—

(i) the scope of a Governor's discretionary power under Article 163;

(ii) the scope of the discretionary power of a Governor to reserve a Bill under Article 200 for the consideration of the President ;

(iii) the principles/norms/considerations that should govern the exercise of discretionary power particularly in reserving Bills for President's consideration; and

(iv) the advisability of prescribing time-limit within which a Governor and the President should take one of the other steps specified in Articles 200 and 201 respectively.

3. In the following paragraphs an attempt has been made to give a brief description of how articles 163 and 200 came to be adopted by the Constituent Assembly and background information on these and other Articles of the Constitution which have been taken into account while framing the Questions.

II—Background

4. **Views of Constitution framers Art. 163.**—When Clause 143 of the Draft Constitution (as Article 163 then was) was under discussion in the Constituent Assembly, Shri H.V. Kamath moved an amendment for deletion from this Article the words "except in so far as he is by or under this Constitution required to exercise his function, or any of them in his discretion". and consequent deletion of sub-clause (ii), (which corresponds to clause (2) of the present Article giving a definitive power to the Governor to decide the question, if any raised. whether any matter is or is not one as respects which he is by or under the Constitution required to act in his discretion).

5. The proposed amendment was vigorously supported by Dr. H.N. Kunzru, Prof. Shibban Lal Saksena, Shri H.V. Pataskar and Shri Rohini Kumar Chaudhuri. The focal point of their criticism was that the wide phraseology in which Clause 143 was couched, gave the Governor a general power to choose in his discretion, whether or not in the performance of any of his functions he had to solicit, abide by or overrule the advice of his Council of Ministers. [*vide* extracts in Appendix A (i)].

6. **In concurrence with Shri T.T. Krishnamachari and Shri Alladi Krishnaswami (who opposed the amendment) Dr. Ambedkar tried to dispel the apprehensions of Dr. Kunzru and others by giving this interpretation about the use and scope of Clause 143 : "This Clause is a very limited clause, it says except in so far as he is by or under this Constitution.** Therefore, article 143 will have to be read in conjunction with such other articles which *specifically* reserve the power to the Governor. It is not a general clause giving the Governor power to disregard the advice of his Ministers in any matter in which he finds he ought to disregard (emphasis added). [For fuller extracts, see Appendix A (ii)].

7. **Present position—Discretion of Governors.**—Whatever might have been the views of the framers of the Constitution, it would appear from a plain reading of Article 163 that clauses (1) and (2) of the Article confer on the Governor the general power to exercise discretion in respect of any of the functions entrusted to him by the Constitution. The expression "by or under the Constitution" in clause (1) can be taken as covering all situations in which the power to exercise discretion is either expressly mentioned or necessarily implied in the relevant Articles. Further, a decision of the Governor to act in his discretion in a particular situation is protected from being questioned by any court or other authority by clause (2).

8. In practice, situations have arisen and will arise in which a Governor may necessarily have to exercise his discretion even though there may be no express provision to that effect in the relevant Articles. Thus, there may be no Council of Ministers duly responsible to the Legislative Assembly to advise him; or, the advice given by the Council of Ministers cannot be reconciled with the course of action which, in the opinion of the Governor, should be adopted in view of his responsibility either to the Centre under the Constitution or to the Constitution itself which in accordance with his oath of office he is required to preserve, protect and defend.

The following are some examples :

(a) appointment of a Chief Minister [Article 164(1)] when no single party has a clear majority;

(b) dissolution of the Legislative Assembly [174 (2) (b)] when no stable Ministry can be formed;

(c) reserving a State Bill for the consideration of the President (Article 200); and

(d) reporting to the President that the Government of a State cannot be carried on in accordance with the provisions of the Constitution [Article 356(1)].

9. **Art. 200**—The substantive part of Article 200, when it was considered by the Constituent Assembly, carried the same wording as it does now. The Draft Article had only one Proviso corresponding to the First Proviso to the present Article 200. It empowered the Governor on a Bill being presented to him for assent, to return it *in his discretion* with a message to the Assembly for reconsideration. Dr. B.R. Ambedkar moved an amendment substituting a new proviso (*viz.* the present First Proviso to Article 200) in which *inter alia* the words "in his discretion" did not find a place. This was done in pursuance of a decision taken by the Special Committee of the Constituent Assembly to remove all references to discretionary powers of the Governor from the Draft Constitution. Dr. Ambedkar explained that in a responsible Government there could be no room for a Governor to act in his discretion. The amendment was adopted. The provisions of Article 163 were apparently lost sight of.

10. The Second Proviso to Article 200 owes its origin to Schedule IV of the Draft Constitution which contained Instruments of Instructions for the Governor. The Constituent Assembly deleted the Schedule but retained the provision which required the Governor to reserve a Bill for the consideration of the President, if in his opinion the Bill would have the effect of endangering the position of the High Court. The rationale for this was that it was essential to give this power to the President (of halting such legislation) in order to maintain an important institution like the High Court.

11. **Assent to Bills.**—When a Bill passed by the State Legislature is presented to the Governor, Article 200 gives him the following alternatives :—

(i) Assent to the Bill;

(ii) Withhold assent from the Bill;

(iii) Return the Bill, if it is not a Money Bill to the Legislature for reconsideration alongwith a message ;

(iv) Reserve the Bill for the consideration of the President.

12. **Distribution of Legislative powers.**—The alternative in Article 200 of reserving a Bill for the consideration of the President if that Bill is on a State List subject, has to be viewed in the context of the conferment of Legislative powers by Article 245 and their distribution between the Union and the States under Article 246 and Seventh Schedule. Article 246(3) gives exclusive power to the State Legislature to make laws in respect of matters in the State List. This is subject to :—

(i) the rule (a) that in case of an irreconcilable conflict and overlapping between Union and State powers, the Union power as enumerated in List-I shall, to the extent of the conflict, prevail over the State powers enumerated in Lists II and III ; (b) that in the *Concurrent* sphere in the event of repugnancy between a State Law and a law made by Parliament, the latter shall, to the extent of the repugnancy, prevail,

(ii) the limitations in other provisions of the Constitution *e. g.* Arts. 249, 250, 252, 253, 353, 357 etc.

13. **Bills to be reserved for President's consideration.**—Bills on States List subjects fall into three categories *viz.*—

(i) Bills which must be reserved for President's consideration *viz.* those-

(a) containing provisions which would so derogate from the powers of the High

Court as to endanger the position which that court is by the Constitution designed to fill (Second Proviso to Article 200);

(b) relating to taxation in respect of water or electricity stored, generated, consumed, distributed or sold by an inter-State river or river-Valley authority established by Parliament by law [Article 288(2)]; and

(c) being Money Bills and Finance Bills in respect of which directions have been given during a financial emergency in terms of Article 360 (4) (a) (ii).

(ii) Bills which may be reserved for President's consideration and assent to immunise them against challenge on the ground of Article 14 or Article 19 or to otherwise ensure their constitutional validity *viz.* those

(a) providing for acquisition of estates etc. (First Proviso to Article 31 A);

(b) giving effect to Directive Principle of State Policy (proviso to Article 31 C); and

(c) legislation imposing restrictions on trade and commerce and intercourse among States, when the necessary previous sanction of the President was not obtained. (Proviso to Article 304(b) read with Article 255).

(iii) Bills other than those failing under (i) and (ii) above *e.g.* under Article 254(2).

14. **Responsibilities of a Governor.**—The Governor is the Constitutional head of the State. But it may not be possible for him to follow invariably, as the President is required to do under Article 74, the convention in a parliamentary system of government of acting only on the advice of his Council of Ministers. As explained in paras 7 & 8 above, he may be required to exercise certain functions in his discretion.

15. The need for over-rulling the advice of his Council of Ministers arises mainly because of the Governors responsibility as Head of State and responsibility to the President and to the Constitution. Thus under Article 356, he has to report to the President if a situation arises in which the Government of the States cannot be carried on in accordance with the provisions of the Constitution. Certain Governors have special responsibilities vide Articles 371, 371A, 371C, and 371 F. The oath or affirmation of the Governor under Article 159 which requires him to preserve, protect and defend the Constitution provides him an overall guideline in deciding whether or not to act in his discretion in a particular situation.

III—Questionnaire

1. (i) Keeping in mind the above background viz., all that was said in the Constituent Assembly in regard to the deletion or retention of the mention of the discretionary power in Article 163. Can this language of the Article, in your opinion, reasonably be construed as vesting the Governor with discretionary power of a general nature to be exercised in respect of any one or more of the functions assigned to him under the Constitution ? Does the expression "by or under the Constitution" in clause (1) read with clause (2) of the Article lend itself to this interpretation ?

(ii) Does the explanation-cum-interpretation, as to the above scope of clause (1) of Article 163 given by the Constitution-makers (S/Shri B. R. Ambedkar, T.T. Krishnamachari and A. K. Ayyar) hold good ? In other words, is the scope of the phrase "by or under the Constitution" in this Article, limited to those functions of the Governor in the performance of which he is *specifically* required by any provision of the Constitution *to act in his discretion* ?

(iii) If you agree with the aforesaid interpretation expounded by the Constitution-makers, could you identify such provisions which specifically reserve discretionary power to the Governor and read in conjunction with Article 163, have the effect of limiting its scope ?

(iv) Will the phrase "by or under this Constitution", occurring twice in Article 163, referentially take in those provisions of the Constitution also, which not expressly but by necessary implication require the Governor to discharge his functions or any of them in his discretion ? If so, could you identify those provisions ?

(v) If you agree with the suggsetion posed in the preceding question, would, you include among others, the following constitutional provisions, as requiring the Governor, by *necessary implication* to exercise his functions or any of them in his discretion *normally* or in extraordinary situation ?

(a) Article 164 under which the Governor is vested with the power to appoint the Chief Minister and dismiss the Ministers as they "held office at the pleasure of the Governor".

(b) Article 167 which gives the Governor the right to be informed of all dicisions of the Council of Ministers relating to administration and all proposals for legislation, to call for information relating to administration and legislation, and to require that any matter on which a decision has been taken by a Minister alone should be submitted for the consideration of the Council of Ministers.

(c) Article 174 which gives the Governor the power to summon, prorogue the House or Houses of Legislature of the State and to dissolve its Legislative Assembly.

(d) Article 175—Right of Governor to address and send messages to the House.

(e) Article 200 which gives the Governor the power to assent to a Bill, withhold assent therefrom or return it for reconsideration, or reserve it for the consideration of the President.

(f) Articles 355 and 356 (1) read together-giving the Governor the power to report to the President *i.e.* the Union Government as to whether or not the Government of the State is being carried on in accordance with the Constitution.

(vi) If a Ministry resigns and declines to stay in office till another is formed or till President's rule is proclaimed, is the Governor empowered under Article 163(2) to decide that the various executive functions will be exercised by him in his discretion witinhout the advice of a Ministry ?

2. (i) On the assumption that you agree with the suggestion posed in Q.1 (iv), is it not desirable in your opinion to circumscribe that discretionary power which he may claim by implication on his own decision under Article 163 read with other relevant Articles of the Constitution ? If so, in what manner ? Should it be done by making the necessary changes in Article 163 or/and other relevant provisions of the Constitution so that little is left to the Governor to imply, assume and decide that he would exercise any of his functions, under the Constitution in his discretion ?

OR

(ii) Would you like merely to regulate such discretionary power of the Governor by laying down broad principles ? If so, in what manner ? Should it be done by incorporating those principles in the Constitution itself, or in any instrument issued under the authority of the Constitution ?

(iii) A Governor's oath of office under Article 159 binds him to "preserve, protect and defend the Constitution and the law". Does this Article read with Article 163 allow a Governor to exercise his discretion in any matter where the advice of his Ministry appears to him to go against the Constitution or the law ?

3. (i) Whether under Article 163 read with Article 200, in choosing one of the alternatives available thereunder when a Bill is presented to him for assent, the Governor has (without or against the advice of the Council of Ministers) any discretionary power to reserve it for consideration of the President ?

(ii) Can the discretion of the Governor, if any, to reserve a Bill under Article 200 for the consideration of the President he spelled out from the responsibility cast on him directly or by necessary implication by or under Article 159, 355 and 356, the constitutionality of which, in his opinion, is —

(a) merely doubtful or debatable ; or

(b) patent on the face of it; or

(c) which is manifestly against the National interest or harmful to the unity and integrity of the country as a whole ?

The views expressed by some experts on this point are summarised in Appendix 'B'.

(iii) If the answer to the preceding question (i) be in the positive, is such discretion untrammelled? If not, what principles/ norms/ considerations should govern the exercise of this discretionary power, particularly in reserving Bills passed by the State Legislature for President's consideration ?

(iv) Will it be expedient to specify such principles/ norms/considerations in or in any instrument issued under the authority of the Constitution ?

(v) Whether any time-limit be specified in Articles 200 and 201 within which the Governor and the President shall exercise their respective powers, failing which the Bill shall be deemed to have been asserted to ? If so, what those limits should be ?

(vi) When a State Bill is returned by the President through the Governor for reconsideration as provided in the Proviso to Article 201, and the Bill, after it is passed by the Legislature with or without amendment, is again presented to the President for his consideration, should it not be laid down (on the analogy of the First Provision to Article 200) that the President shall not withhold assent ?

4. (i) When State Bills referred to in Article 31A or 31C are reserved for the consideration of the President and receive his assent, they cannot be challenged on the ground that they contravene Article 14 or 19. It may happen that the State Council of Ministers from the opinion that it is not necessary for the Bill to seek immunity from challenge on the ground of Article 14 or 19 and advise accordingly the Governor to accord his assent thereto and not reserve it for the consideration of the President. Should the Governor in such a situation, after overruling the advice of the Council of Ministers, reserve the same in the exercise of his descretion for the consideration of the President ?

(ii) If a Bill passed by the Legislature of a State relating to trade, commerce and intercourse amongst States is presented to the Governor for assent on the advice of the Council of Ministers would the Governor be justified in the exercise of his discretion to withhold his assent and reserve it for the consideration of the President on the ground that the previous sanction of the President was necessary for its introduction in the State Legislature under the Proviso to Article 304 (1) ?

(iii) A Bill which has received the sanction of the President in terms of the Proviso to Article 304(b) is passed by the State Legislature with amendments which, in the Governor's view, place restrictions on the freedom of trade, commerce and intercourse which cannot be considered as reasonable in the public interest. Can the Governor in the exercise of his discretion reserve such a Bill for the consideration of the President ?

(iv) If the in-built policy of a State Bill passed by the State Legislature with respect *to any of the matters in the State List* (*List II*) is at variance with the policy laid down in a Union law, should the Governor reserve such a Bill in the exercise of his discretion for the consideration of the President on the ground that, in his opinion, it appears to infringe the policy of the law made by Parliament ?

(v) If in the above case, the Policy of the Union is not incorporated in any Union Law but is being pursued in implementation of an executive order of the Central Government, will it be proper for the Governor to reserve such a State Bill [relating to a matter in List II] in the exercise of his discretion for the consideration of the President on the ground that, in his opinion, it is at variance with the Union Policy ?

(vi) In view of Article 254, will it be proper for the Governor to reserve a Bill passed by the State Legislature for the consideration of the President merely because, in his opinion, it is repugnant to or may be in conflict with an existing Central Law or a Bill pending for legislation before Parliament ?

(vii) Assuming that the Governor has a discretion in reserving Bills for the consideration of the President, is he competent under the Constitution to reserve indiscriminately all State Bills for the consideration of the President merely on the ground that they relate to matters mentioned in the Concurrent List (List III)?

(viii) If a Bill on a State List subject is reserved by the Governor for the consideration of the President on the ground that it infringes some provision of the Constitution or some Central statute or some policy laid down in a Union statute, will it be proper for the President to require the State Government to make modifications in the Bill which would require a substantial change in the Policy underlying the State Bill ? In such a case, will the entire procedure of reserving such a Bill for the consideration of the President and the President's assent to the Bill being made conditional on certain Policy changes being made by the State Government amount to an encroachment by the Union on the field of legislation set apart by the Constitution for the State ?

5. (i) When a State Bill is reserved by the Governor for the consideration of the President on the ground that it infringes some provision of the Constitution or that in the opinion of the Governor so derogates from the powers of the High Court as to endanger its position, is the Union Executive the appropriate authority to decide on the nature and extent of repugnancy or unconstitutionality of the Bill ?

(ii) For the above purpose, should the Union Council of Ministers advise the President to refer the Bill to the Supreme Court under Article 143 and act in accordance with such opinion as that Court may give ?

(iii) Should the Union Executive or the Supreme Court, as the case may be, examine the entire Bill on only those provisions of the Bill which are in question ?

APPENDIX-A(i)

Shri H. V. Kamath's amendment in constituent Assembly to draft Article 143 – Extract of speeches of Shri Kamath and other Members who supported the amendment

SHRI H. V. KAMATH (C.P. & Berar : General) : Mr. President, Sir, I move : "That in clause (1) of article 143, the words 'except in so far as he is by or under this Constitution required to exercise his functions or any of them in this discretion' be deleted.".

If this amendment were accepted by the House, this clause of article 143 would read thus :—

"There shall be a Council of Ministers with the Chief Minister at the head to aid and advice the President in the exercise of his functions."

Sir, it appears from a reading of this clause that the Government of India Act of 1935 has been copied more or less blindly without mature consideration. There is no strong or valid reason for giving the Governor more authority either in his discretion or otherwise *vis-a-vis* his ministers, than has been given to the President in relation to his ministers. If we turn to article 61(1), we find it reads as follows :—

"There shall be a Council of Ministers with the Chief Minister at the head to aid and advise the Governor in the exercise of his functions."

When you, Sir, raised a very important issue, the other day, Dr. Ambedkar clarified this clause by saying that the President is bound to accept the advice of his ministers in the exercise of all of his ministers in the exercise of all of his functions. But here article 143 vests certain discretionary powers in the Governor, and to me it seems that even as it was, it was bad enough, but now after having amended article 131 regarding election of the Governor and accepted nominated Governor, it would be wrong in principle and contrary to the tenets and principles of constitutional Government, which you are going to build up in this country. It would be wrong I say, to invest a Governor with these additional powers, namely, discretionary powers. I feel that no departure from the principles of constitutional Government should be favoured except for reasons of emergency and these discretionary powers must be done away with. I hope this amendment of mine will commend itself to the House. I move, Sir.

PANDIT HIRDAY NATH KUNZRU : (United Provinces : General) : Mr. Presidnet, I should like to ask Dr. Ambedkar whether it is necessary to retain after the words "that the Governor will be aided and advised by his Ministers" the words "except in regard to certain matters in respect of which he is to exercise his discretion". Supposing these words, which are reminiscent of the old Government of India Act and the old order, are omitted, what harm will be done ? The functions of the Ministers legally will be only to aid and advise the Governnor. The article in which these words occur does not lay down that the Govenor shall be guided by the advice of his ministers but it is expected that in accordance with the Constitutional practice prevailing in all countries where responsible Government exists the Governor will in all matters accept the advice of his Ministers. This does not however mean that where the Statute clearly lays down that action in regard to specified matters may be taken by him on his own authority this article 143 will stand in his way.

My friend Mr. T.T. Krishnamachari said that as article 188 of the Constitution empowered the Governor to disregard the advice of his Ministers and to take the administration of the province into his own hands, it was necessary that these words should be retained, *i.e.* the, discretionary power of the Governor should be retained. If however, he assured us, section 188 was deleted later, the working of article 143 could be reconsidered. I fully understand this position and appreciate it, but I should like the words that have been objected to by my Friend Mr. Kamath to be deleted. I do not personally think that any harm will be done if they are not retained and we can then consider not merely article 188 but also article 175 on their merits; but in spite of the assurance of Mr. Krishnamachari the retention of the words objected to does psychologically create the impression that the House is being asked by the Drafting Committee to commit itself in a way to a principle that it might be found undesirable to accept later on. I shall say nothing with regard to the merits of article 188. I have already briefly expressed my own views regarding it and shall have an opportunity of discussing it fully later when that article is considered by the House. But why should we, to begin with, use a phraseology that is an unpleasant reminder of the old order and that makes us feel that though it may be possible later to reverse any decision that the House may come to now, it may for all practical purposes be regarded as an accomplished fact ? I think, Sir, for these reasons that it will be better to accept the amendment of my honourable Friend Mr. Kamath, and then to discuss articles 175 and 188 on their merits.

I should like to say one word more before I close. If article 143 is passed in its present form, it may give rise to misapprehensions of the kind that my honourable Friend Dr. Deshmukh seemed to be labouring under when he asked that a provision should be inserted entitling the Governor to preside over the meetings of the Council of Ministers. The Draft Constitution does not provide for this and I think wisely does not provide for this. It would be contrary to the traditions of responsible government as they have been established in Great Britain and the British Dominions, that the Governor or the Govenror-General should, as a matter of right, preside over the meetings of his cabinet. All that the Draft Constitution does is to lay on the Chief Minister the duty of informing the Governor of the decisions come to by the Council of Ministers in regard to administrative matters and the legislative programme of the Government. In spite of this, we see that the article 143, as it is worded, has created a misunderstanding in the mind of a member like Dr. Deshmukh who takes pains to follow every article of the Constitution with care. This is an additional reason why the discretionary power of the Governor should not be referred to in article 143. The speech of my Friend Mr. Krishnamachari does not hold out the hope that the suggestion that I have made has any chance of being accepted. Nevertheless, I feel it my duty to say that the course proposed by Mr. Kamath is better than what the Drafting Sub-Committee seem to approve.

PROF. SHIBBAN LAL SAKSENA (United Provinces : General) : Mr. President, Sir, I heard Very carefully the speech of my honourable Friend, Mr. Krishnamachari, and his arguments for the retention of the words which Mr. Kamath wants to omit. If the Governor were an elected Governor, I could have understood that he should have these discretionary powers. But now we are having nominated Governors who will function during the pleasure of the President, and I do not think such persons should be given the powers which are contemplated in section 188.

Then, if article 188 is yet to be discussed and it may well be rejected—then it is not proper to give these powers in this article before hand. If article 188 is passed, then we may reconsider this article and add this clause if it is necessary. We must not anticipate that we shall pass article 188, after all that has been said in the House about the powers of the Governor.

These words are a reminder of the humiliating past. I am afraid that if these words are retained, some Governor may try to imitate the Governors of the past and quote them as precedents, that this is how the Governor on such and such an occasion acted in his discretion. I think in our Constitution as we are now framing it, these powers of the Governors are out of place; and no less a person than the Honourable Pandit Govind Ballabh Pant had given notice of the amendment which Mr. Kamath has moved. I think the wisdom of Pandit Pant should be sufficient guarantee that this amendment be acceped,

It is just possible that article 188 may not be passed by this House. If there is an emergency, the Premier of the province himself will come forward to request the Governor that an emergency should be declared, and the aid of the Centre should be obtained to meet the emergency. Why should the Governor declare an emergency over the head of the Premier of the Province? We should see that the premier and the Governor of a Province are not at logger heads on such an occasion. A siutation should not be allowed to arise when the Premier says that he must carry on the Government, and yet the Governor declares an emergency over his head and inspite of his protestations. This will make the Premier absolutely important. I think a mischievous Governor may even try to create such a situation if he so decides, or if the President wants him to do so in a province when a party opposite to that in power at the Centre is in power. I think article 188, even if it is to be retained should be so modified that the emergency should be declared by the Governor on the advice of the Premier of the Province. I suggest to Dr. Ambedkar that these words should not find a place in this article, and as consequential amendment, sub-section (ii) of this article should also be deleted.

SHRI H. V. KAMATH : Sir, on a point of clarification, Sir, may I know why it is that though emergency powers have been conferred on the President by the Constitution no less than on Governors, perhaps more so, discretionary powers as such have not been vested in the President but only in Governors?

SHRI H. V. PATASKAR (Bombay : General) : Sir, article 143 is perfectly clear. With regard to the amendment of my honourable Friend Mr. Kamath various points were raised whether the Governor is to be merely a figure-head, whether he is to be a constiturional head only or whether he is to have discretionary powers. To my mind the question should be looked at from an entirely different point of view. Article 143 merely relates to the functions of the ministers. It does not primarily relate to the powers and functions of a Governor. It only says :

"There shall be a Council of Ministers with the Chief Minister at the head to aid an advise the Governor in the exercise of his functions."

Granting that we stop there, is it likely that any complications will arise or that it will interfere with the discretionary powers which are proposed to be given to the Governor ? In my view article 188 is probably necessary and I do not mean to suggest for a moment that the Governor's powers to act in an emergency which powers are given under article 188, should not there. My point is this, whether if this provision, *viz.*, "except in so far as he is by or under this Constitution required to excercise his functions or any of them in this discretion is not there, is it going to affect the powers that are going to be given to him to act in this discretion under article 188? I have carefully listened to my honourable Friend and respected constitutional lawyer Mr. Alladi Krishnaswami Ayyar, but I was not able to follow why a provision like this is necessary. He said that instead later on, while considering article 188, we might have to say 'Notwithstanding anything contained in article 143". In the first place to my mind it is not necessary. In the next place, even granting that it becomes necessary at a later stage to make provision in article 188 by saying "Notwithstanding anything contained in article 143", it looks so obnoxious to keep these wordes here and they are likely to enable certain people to create a sort of unnecessary and unwarranted prejudice against certain people. Article 143 primarily relates to the functions of the ministers. Why is it necessary at this stage to remind the ministers of the powers of the Governor and his functions, by telling them that they shall not give any aid or any advice in so for as he. the Governor is required to act in his discretion? This is an article which is intended to define the powers and functions of the Chief Minister. At that point to suggest this, looks like lacking in courtsey and politeness. Therefore, I think the question should be considered in that way. The question is not whether we are going to give discretionary powers to the Governor or not. The question is not whether he is to be merely a figurehead or otherwise. These are questions to be debated at their proper time and place. When we are considering article 143 which defines the functions of the Chief Minister it looks so awkward and unnecessary to say in the same article "except in so far as he is by or under this Constitution required to exercise his functions or any of them in his discretion." Though I entirely agree that article 188 is absolutely necessary I suggest that in this article 143 these words are entirely unnecessary and should not be there. Looked at from a practical point of view this provision is misplaced and it is not courteous, nor polite nor justified nor relevant. I therefore suggest that nothing would be lost by deleting these words. I do not know whether my suggestion would be acceptable but I think it is worth being considered from a higher point of view.

SHRI ROHINI KUMAR CHAUDHURI (Assam : General) : I rise to speak more in quest of clarification amd enlightenment than out of any ambition to make a valuable contribution to this debate.

Sir, one point which largely influenced this House in accepting the article which provided for having nominated Governors was that the Honourable Dr. Ambedkar was pleased to assure us that the Governor would be merely a symbol. I ask the honourable Dr. Ambedkar now, whether any person who has the right to act in his discretion can be said to be a more symbol. I am told that this provision for nominated governorship was made on the model of the British Constitution. I would like to ask Dr. Ambedkar if his Majesty the King of England acts in his discretion in any matter. I am told- I may perhaps be wrong - that his Majesty has no discretion even in the matter of the selection of this bride. That is always done for him by the Prime Minister of England.

Sir, I know to my cost and to the cost of my Province what 'acting by the Governor in the exercise of his discretion' means. It was in the year 1942 that a Governor acting in his discretion selected his Ministry from a minority party and that minority was ultimately converted into a majority. I know also, and the House will remember too, that the exercise of his discretion by the Governor of the Province of Sindh led to the dismissal of one of the popular Ministers- Mr. Allah Bux. Sir if inspite of this experience of ours we are asked to clothe the Governors with the powers to act in the exercise of their discretion, I am afraid we are still living in the past which we all wanted to forget.

We have always thought that it is better to be governed by the will of the people than to be governed by the will of a single person who nominates the Governor who could act in his discretion. If this Governor is given the power to act in his discretion there is no power on earth to prevent him from doing so. He can be a veritable King Stork. Furthermore, as the article says, whenever the Governor thinks that he is acting in his discretion nowhere can be questioned. There may be a dispute between the Ministers and the Governor about the competence of the former to advice the Governor; the Governor's voice would prevail and the voice of the Ministers would count for nothing. Should we in this age countenance such a state of affairs? Should we take more than a minute to dismiss the idea of having a Governor acting in the exercise of his discretion? It may be said that this matter may be considered hereafter. But I feel that when once we agree to his provision, it would not take long for us to realise that we have made a mistake. Why should that be so? Is there any room for doubt in this matter? Is there any room for thinking that anyone in this country not to speak of the members of the legislature, will ever countenance the idea of giving the power to the Governor nominated by a single person to act in the exercise of his discretion? I would submit, Sir if my promise is correct, we should not waste a single moment in discarding the provision which can power the Governer to act in his discretion.

I also find in the last clause of this article that the question as to what advice was given by a Minister should not be enquired into in any count. I only want to make myself clear on this point. There are two functions to be discharged by Governor. In one case he has to act on the advice of the Ministers, and in the other case he has to act in the exercise of his discretion. Will the Ministry be competent to advise the Governor in matters where he can exercise his discretion? If I remember aright, in 1937 when there was a controversy over this matter whether Ministers would be competent to advise the Governor in matters where the Governor could use his discretion, it was understood that Ministers would be competent to advise the Governor in the exercise of his discretion also and if the Governor did not accept their advice, the Ministers were at liberty to say what advice they gave. I do not know what is the intention at present. There may be cases where the Ministers are competent to give advice to the Governor but the Governor does not accept their advice and does something which is unpopular. A Governor who is nominated by the Centre can afford to be unpopular in the province where he is acting as Governor. He may be

nervous about public opinion if he serves in his own province but he may not care about the public opinion in a province where he is only acting. Suppose a Governor, instead of acting on the advice of his Ministers, acts in a different way. If the Ministers are criticised for anything the Governor does on his own, and the Ministers want to prosecute a party for such criticism, would not the Ministers have the right to say that they advised the Governor to act in a certain way but that the Governor acted in a different way? Why should we not allow the Ministers the liberty to prosecute a paper, a scurrilous paper, a misinformed paper, which indulged in such criticism of the Ministers? Why should not the Ministers be allowed to say before a court what advice they gave to the Governor? I would say, Sir—and I may be excused for saying so—that the best that can be said in favour of this article is that it is a close limitation of a similar provision in the Government of India Act, 1935, which many Members of this House said, when it was published, that they would not touch even with a pair of tongues.

PANDIT HIRDAY NATH KUNZRU : Well, Dr. Ambedkar has missed the point of the criticism altogether. The criticism is not that in article 175 some powers might not be given to the Governor, the criticism is against vesting the Governor with certain discretionary powers of a general nature in the article under discussion.

———

APPENDIX-A(ii)

Shri H. V. Kamath's Amendment in Constituent Assembly to Draft Article 143—Extracts of Speeches of Members who opposed the Amendment.

SHRI T. T. KRISHNAMACHARI : Mr. President, I am afraid I will have to oppose the amendment moved by my honourable Friend Mr. Kamath, only for the reason that he has not understood the scope of article clearly and his amendment arises out of a misapprehension.

Sir, it is no doubt true that certain words from this article may be removed, namely, those which refer to the exercise by the Governor of his functions where he has to use his discretion irrespective of the advice tendered by his Ministers. Actually, I think this is more by way of a safeguard, because there are specific provisions in this Draft Constitution which occur subsequently where the Governor is empowered to act in his discretion respective of the advice tendered by his Council of Ministers. There are two ways of formulating the idea underlying it. One is to make a mention of this exception in this article 143 and enumerating the specific power of the Governor where he can exercise his discretion in the articles that occur subsequently, or to leave out any mention of this power here and only state it in the appropriate article. The former method has been followed. Here the general proposition is stated that the Governor has normally to act on the advice of his Ministers except in so far as the exercise of his discretions covered by those articles in the Constitution in which he is specifically empowered to act in his discretion. So long as there are articles occurring subsequently in the Constitution where he is asked to act in his discretion, which completely cover all cases of departure from the normal practice to which I see my honourable Friend Mr. Kamath has no objection, I may refer to article 188, I see no harm in the provision in this article being as it is. If it happens that this House decides that in all the subsequent articles, the discretionary power should not be there, as it may conceivable do, this particular provision will be of no use and will fall into desuetude. The point that my honourable Friend is trying to make, while he concedes that the discretionary power of the Governor can be given under article 188, seems to be pointless. It is to be given in the article 188, there is no harm in the mention of it remaining here. No harm can arise by specific mention of this exception in article 143. Therefore, the serious objection that Mr. Kamath finds for mention of this exception is pointless. I therefore think that the article had better be passed without any amendment. If it is necessary for the House either to limit the discretionary power of the Governor or completely do away with it, it could be done in the articles that occur subsequently where specific mention is made without which this power that is mentioned here cannot at all be exercised. That is the point that I would like to draw the attention of the House to and I think the article had better be passed as it is.

SHRI ALLADI KRISHNASWAMI AYYAR (Madras : General) : Sir, there is really no difference between those who oppose and those who approve the amendment. In the first place, the general principle is laid down in article 143, namely, the principle of ministerial responsibility, that the Governor in the various spheres of executive activity should act on the advice of his ministers. Then the article goes on to provide "except in so far as he is by or under this Constitution required to exercise his functions or any of them in this discretion." So long as there are articles in the Constitution which enable the Governor to act in his discretion and in certain circumstances, it may be, to over-ride the cabinet or to refer to the President, this article as it is framed is perfectly in order. If later on the House comes to the conclusion that those articles which enable the Governor to act in his discretion in specific cases should be deleted, it will be open to revise this article. But so long as there are later articles which permit the Governor to act in his discretion and not on ministerial responsibility, the article as drafted is perfectly in order.

The only other question is whether first to make a provision in article 143 that the Governor shall act on ministerial responsibility and then to go on providing "Notwithstanding anything contained in article 143....he can do this" or "Notwithstanding anything contained in article 143 he can act in his discretion." I should think it is a much better method of drafting to provide in article 143 itself that the Governor shall always act on ministerial responsibility excepting in particular or specific cases where he is empowered to act in his dicretion. If of course the House comes to the conclusion that in no case shall the Governor act in his discretion, that he shall in every case act only on ministerial responsibility, then there will be a consequential change in this article. That is, after those articles are considered and passed it will be quite open to the House to delete the later part of article 143 as being consequential on the decision come to by the House on the later articles. But, as it is, this is perfectly in order and I do not think any change is warranted in the language of article 143. It will be cumbrous to say at the opening of each articles "Notwithstanding anything contained in article 143 the Governor can act on his own responsibility".

The Honourable Dr. B. R. AMBEDKAR : Mr. President, Sir, I did not think that it would have been necessary for me to speak and take part in this debate after what my Friend, Mr. T. T. Krishnamachari, had said on this amendment of Mr. Kamath, but as my Friend, Pandit Kunzru, pointedly asked me the question and demanded a reply, I thought that out of courtesy I should say a few words. Sir, the main and the crucial question is, should the Governor have discretionary powers? It is that question which is the main and the principal question. After we come to some decision on this question, the other question whether the words used in the last part of clause (1) of article 143 should be retained in that article or should be transferred somewhere else could be usefully considered. The first thing, therefore, that I propose to do is to devote myself to this question which, as I said, is the crucial question. It has been said in the course of the debate that the retention of discretionary power in the Governor is contrary to responsible government in the provinces. It has also been said that the retention of discretionary power in the Governor smells of the Government of India Act, 1935, which in the main was undemocratic. Now, speaking for myself, I have no doubt in my mind that the retention in or the vesting the Governor with certain discretionary powers is in no sense contrary to or in no sense a negation of responsible government. I do not wish to take up the point because on this point I can very well satisfy the House by reference to the provisions in the Constitution of Canada and the Constitution of Australia. I do not think anybody in this House would dispute that the Canadian system of Government, is not fully responsible system of Government, nor will anybody in this House challenge that the Australian Government is not a responsible form of government. Having said that, I would like to read section 55 of the Canadian Constitution.

"Section 55—Where a Bill passed by the Houses of Parliament in presented to the Governor-General for the Queen's assent, he shall, according to his discretion, and subject to the provisions of this Act, either assent thereto in the Queen's name, or withhold the Queen's assent or reserve the Bill for the signification of the Queen's pleasure."

PANDIT HIRDAY NATH KUNZRU : May I ask Dr. Ambedkar when the British North America Act was passed?

The Honourable DR. B. R. AMBEDKAR : That does not matter at all The date of the Act does not matter.

SHRI H. V. KAMATH : Nearly a century ago !

THE HONOURABLE DR. B. R. AMBEDKAR : This is my reply. The Canadians and the Australians have not found it necessary to delete this provision even at this stage. They are quite satisfied that the retention of this provision in section 55 of the Canadian Act is fully compatible with responsible government. If they had felt that this provision was not compatible with responsible government, they had even today, as Dominions, the fullest right to abrogate this provision. They have not done so. Therefore in reply to Pandit Kunzru I can very well say that the Canadians and the Australians do not think that such a provision is an infringement of responsible government.

SHRI LOKNATH MISRA (Orissa : General) : On a point to order, Sir, are we going to have the status of Canada or Australia? Or are we going to have a Republican Constitution?

THE HONOURABLE DR. B. R. AMBEDKAR : I could not follow what he said. If as I hope, the House is satisfied that the existence of a provision vesting a certain amount of discretion in the Governor is not incompatible or inconsistent with responsible government, there can be no dispute that the retention of this clause is desirable and, in my judgement, necessary. The only question that arises is.

PANDIT HIRDAY NATH KUNZRU : Well, Dr. Ambedkar has missed the point of the criticism altogether. The criticism is not that in article 175 some powers might not be given to the Governor, the criticism is against vesting the Governor with certain discretionary powers of a general nature in the article under discussion.

THE HONOURABLE DR. B. R. AMBEDKAR : I think he has misread the article. I am sorry I do not have the Draft Constitution with me. "Except in so far as he is by or under this Constitution", those are the words. If the words were "except whenever he thinks that he should exercise this power of discretion against the wishes or against the advice of the ministers", then I think the criticism made by my honourable Friend Pandit Kunzru would have been valid. The clause is a very limited clause; it says: "except in so far as he is by or under this Constitution". Therefore, article 143 will have to be read in conjunction with such other articles which specifically reserve the power to the Governor. It is not a general clause giving the Governor power to disregard the advice of his ministers in any matter in which he finds he ought to disregard. There, I think, lies the fallacy of the argument of my honourable friend, Pandit Kunzru.

Therefore, as I said, having stated that there is nothing incompatible with the retention of the discretionary power in the Governor in specified cases with the system of responsible Government, the only question that arises is, how should we provide for the mention of this discretion ry power? It seems to me that there are three ways by which this could be done. One way is to omit the words from article 143 as my honourable friend, Pandit Kunzru, and others desire and to add to such articles as 175, or 188 or such other provisions which the House may hereafter introduce, vesting the Governor with the discretionary power, saying notwithstanding article 143, the Governor shall have this or that power. The other way would be to say in article 143 "that except as provided in articles so and so specifically mentioned—articles 175, 188, 200 or whatever they are". But the point I am trying to submit to the House is that the House cannot escape from mentioning the some manner that the Governor shall have discretion.

Now, the matter which seems to find some kind of favour with my honourable friend, Pandit Kunzru and those who have spoken in the same way in that the words should be omitted from here and should be transferred some-where else or that the specific articles should be mentioned in Article 143. It seems to me that this is a mere method of drafting. There is no question of substance and no question of principle. I personally myself would be quite willing to amend the last portion of clause (1) of article 143 if I knew at this stage what are the provisions that this Constituent Assembly proposes to make with regard to the vesting of the Governor with discretionary power. My difficulty is that we have not as yet come either to article 175 or 188 nor have we exhausted all the possibilities or other provisions being made, vesting the Governor with discretionary power. If I knew that, I would very readily agree to amend article 143 and to mention the specific article, but that cannot be done now. Therefore, my submission is that no wrong could be done if the words as they stand in article 143 remain as they are. They are certainly not inconsistent.

SHRI H. V. KAMATH : Is there no material difference between article 61(1) relating to the President *vis-a-vis* his ministers and this article?

THE HONOURABLE DR. B. R. AMBEDKAR : Of course, there is, because we do not want to vast the President with any discretionary power. Because the provincial Governments are required to work in subordination to the Central Government, and therefore, in order to see that they do act insubordination to the Central Government the Governor will reserve certain things in order to give the President the opportunity to see that the rules under which the provincial Governments are supposed to act according to the Constitution or in subordination to the Central Government are observed.

APPENDIX B

Views of some Experts on the discretion of the Governor to Reserve A Bill under Article 200 for the Consideration of the President.

M.C. SETALVAD

"A very unusual feature of the Indian Constitution is the control which the Constitution enables the Union Executive to exercise over legislation passed by the State Legislature. Under Article 200 of the Constitution a Bill passed by the Legislature of a State consisting of one or two Houses, as the case may be, has to be presented to the Governor for his assent; and it is provided that "the Governor shall declare either that he assents to the Bill or that he withholds assent therefrom or that he reserves the Bill for the consideration of the President".

"Apart from the discretionary power of the Governor to reserve a State Bill for the consideration of the President contained in Article 200, there are certain other provisions in the Constitution which require either that Bills on certain State subjects shall not be introduced in the Legislative Assembly of the State without the previous sanction of the President, or that certain legislation, though competent to the State, must be reserved for the assent of the President in order to obtain validity.

There is no provision for the reservation of State legislation for the consideration of the National Executive either in the United States or in Australia. No d ubt, in certain Constitutions in the Commonwealth, provisions are found which empower the Governor-General to reserve the Bill for the signification of the Queen's pleasure, or which empower the Queen to disallow an Act which has been duly passed by the Parliament of a member of the Commonwealth and assented to by the Governor-General. Powers of this nature are found in the Constitutions of Canada, Australia and New Zealand. Convention has, however, established that the Queen would take no action in regard to a reserved Bill contrary to the wishes of the Government of the member of the Commonwealth concerned, and that her exercise of the power of disallowance is no longer possible. The founding fathers of the Indian Constitution seem, however, to have relied on the Canadian Constitution for the introduction of this control over State legislative power in the Constitution.

The Canadian Constitution, besides giving the power of disallowance of enactments passed by the provincial legislature to the Governor-General also provides for the reservation of provincial Bills for the signification of the pleasure of the Governor-General. A Bill so reserved does not become law unless the Governor-General has, within, one year, signified his assent. It may well be that the framers of the Canadian Constitution, having before them the working of the United States Constitution, thought it best to provide for this power in the Governor-General so that the Dominion executive may be able to control the exercise of their legislative power by the provincial legislatures and prevent its abuse by them. It appears that, in all, about 69 provincial Bills were reserved in Canada upto 1955 for the signification of the pleasure of the Governor-General, thirteen of which were assented to by him........"

"......As early as 1873, the federal authorities instructed the Lieutenant-Governor of Ontario not to reserve Bills relating solely to matters of provincial concern, and this instr. ction was repeated on many occasions to other Lieutenant-Governors The Federal Government did not consider it proper to assume responsibility in respect of matters of purely provincial concern."

"It appears from the study (made by the Indian Law Institute) that when Bills are sent to the Union Executive for the assent of the President, they are examined by the Union Government with reference to various matters, such as (a) compliance with Central statutory requirements; (b) conformity with the policies of the Central Government; (c) ultra vires the existing Central legislation; (d) constitutionality; and (e) availability of procedural safeguards to aggrieved parties. The study points out that it is a matter of doubt that a conditional assent which it has been the practice to accord is strictly in conformity with the Constitution. It points out that "the Centre may be helpless against a recalcitrant State, disregarding the direction issued or the condition imposed in an informal manner and not in strict compliance with the terms of Article 201........"

"Though the matter is not free from controversy, the better opinion seems to be that the powers vested in the Governor under Article 200 are discretionary powers. Having examined the proposed legislation, it would be for him to decide whether, as a part of the Legislature, he would assent to it. If he feels some doubt about the validity or the advisability of the course of action outlined in the Bill, he can ask the Legislature to reconsider the whole or a particular part of it. It may be that he may feel the matter to be of such importance that he should not take the responsibility of assenting to the Bill, himself, but reserve it for the consideration of the President. All these are indications that the power vested in the Governor requires him to exercise his own judgment in the matter. That judgment may be exercised from the point of view of the constitutionality of the legislation or its advisability in the interests of the State or in the larger interests of the country. These aspects emphasise the importance of the part intended to be played by the Governor as the Constitutional Head of the State".

"......This is a very debatable question. On a proper interpretation of the Article 200, it would seem that each of the three alternatives which the Governor has under Article 200 is a function to be exercised by him in his discretion. Ordinarily, a Governor would reserve a Bill for the consideration of the President only in special circumstances. He may have doubts about the constitutionality of the Bill; or he may feel that the Bill conflicts with some parliamentary legislation or that is not in consonance with the policy adopted in the matter all over the country........"

"......The Union Executive seems to have exceeded its powers under the Constitution by intimating that the President would assent to the Bills on certain alterations being made in them or on cert in conditions being satisfied.

[Shri M.C. Setalvad : pages 73 to 77 and 161 to 166, Union and State Relations (1974)]

Dr. HARI CHAND

"Then there are two articles of the Constitution, namely, articles 200 and 356 which give discretion to the Governor, if not directly at least by implication. It is argued that while reserving a Bill for the consideration of the President under Article 200, the Governor must exercise his discretion irrespective of the advice tendered to him by the Council of Ministers. Otherwise th purpose of Article 200 would be entirely defeated and it would be reduced to a dead letter.

(Dr. Hari Chand : Page 88, Constitutional Developments since Independence—Indian Law Institute).

SHRI CHANDRA PAL

"Articles 200 and 356 of the Constitution also provide discretionary powers to the Governor, not directly but by necessary implication. The Governor must use his discretion for reserving a Bill for consideration of the President under Article 200 of the Constitution irrespcetive of the advice given to him by his Council of Ministers.

(Shri Chandra Pal : Page 128, Governor's Power to appoint Chief Minister : Some recent trends and problems, Journal of the Institute of Constitutional & Parliamentary Studies, Vol-XVII).

H. M. SEERVAI

"In *K. A. Mathialagan* v. *The Governor* (A.I.R. 1973 Mad. 198 F.B.) a Full Bench of the Madras High Court held that the exception in Article 163(1) has reference only to these functions in which the Governor is expressly required to use his own discretion. In the matter of prorogation the Governor is subject to and bound by the advice of the Chief Minister when he is so authorised under allocation of Government business rules.

After the Supreme Court's decision in *Shamsher Singh's* case (A.I.R. 1974 S.C. 2192)—the proposition that the Governor is required to act in his discretion only by *express provisions* is no longer good law, for, both the judgments (of A.N. Ray, C.J. and Krishna Iyer, J.) in that case held that in some cases the Governor had power to act in his discretion as a matter of necessary implication. Again, the statement that the words "in his discretion" have the technical meaning given to them under the G.I. Act 1935, is also not good law, for the Supreme Court gave those words their plain natural meaning, namely, that where the Governor acts "in his discretion" he is not obliged to follow the advice given to him by the Council of Ministers. The Full Bench did not give weight to the language of Article 163(2) which postulates that a question might arise whether by or under the Constitution the Governor is required to act in his discretion; and Article 163(2) provides an answer by making the Governor the sole and final judge of that question, and by further providing that no action of the Governor shall be called in question on the ground that he ought or ought not to have acted in his discretion. It is submitted that in view of Article 163(2) the Court had no jurisdiction to decide whether the Governor ought or ought not to act in his discretion as rightly held by the Calcutta High Court in *M. P. Sharma's* case."

(H.M. Seeravai, Para 18.48, page 1730, Constituional Law of India, Third Edn., Vol. II).

N. A. PALKHIVALA

"The object of the "Constitution-makers" in enacting these provisions was simple and clear. While the constitutionality of any State legislation can always be challenged in a court of law, its wisdom cannot be; and, further, it is better to prevent a clearly unconstitutional measure from reaching the statute book than to have it struck down later by the court. A Governor is expected by the Constitution to reserve only such Bills for the President's assent as are patently unconstitutional or palpably against the national interest."

"The Rajamannar Committee recommended repeal of that provision of Article 201 which permits the Governor to reserve any Bill for the consideration of the President. However, this power may be usefully retained if its indiscrimanate use can be checked by some machinery, *e.g.* by providing mandatory guidelines in the Instrument of Instructions to the Governor".

(N.A. Palkhivala : Pages 12 and 13, Centre-State Relations : A Broad Perspective).

PROF. M. P. JAIN

"A general provision authorises the State Governor to reserve a Bill passed by the State Legialature for presidential consideration and assent. No norms have been laid down in the Constitution as to when the Governor can exercise this power, or when the President can refuse to give his assent to a state Bill, and on its face, it appears to be a blanket power. The Governor is a nominee of the Centre. It has not been made clear whether the Governor is to act in this matter on the advice of the state ministers or on his own responsibility. Obviously, it is difficult to think that the state ministers will give him such an advice, and, therefore, he will act either on his own initiative or on the 'dictate' of the Centre."

(Prof. M. P. Jain: Page 219 Constitutional Developments since Independence—Indian Law Institute).

DR. R. B. TIWARI

"When a Bill has been passed by the State Legislature, it is presented to the Governor for his assent under article 200 of the Constitution. The Governor has power to reserve the Bill for the consideration of the President. This he will do by using his discretion. A legislative measure which, in the opinion of the Governor, must have the approval of the Central Government, will be reserved by the Governor for the President's consideration. In the exercise of his power the Governor has to play a constructive role in federal relations."

Further the Governor is bound by virtue of second proviso to article 200 to reserve a Bill for the consideration of the President "Which in the opinion of the Governor would, if

it became law, so derogate from the powers of the High Court as to endanger the position which that court is by this constitution designed to fill."

Thus, the Governor's opinion in such matters is very important for the purpose of upholding judicial independence and integrity which is at the base of the democratic government.

(Dr. B.R. Tewari : Page 343, the Union and the States, Editors, S. N. Jain, Subhash C. Kashyap and N. Srinivasan).

D. D. BASU

As regards the Governor's power under Article 200, obviously, it is not included in the list of his functions which are to be exercised 'in his discretion'.

Some complication is, however, introduced by the fact that there is the second Proviso to Article 200 as well as some other provisions in the Constitution, *e.g.* the 1st Proviso to Article 31A (Vol. D. pp. 350, 368) which make it *obligatory* for the Governor *not* to give his assent to a Bill, even though he may be so advised by his Ministers, but to *reserve* the Bill for consideration of the President in the specified cases. In such cases, if the Governor acts according to ministerial advice, contrary to the *Express provisions* of the Constitution, his assent would be *void*. [of. State of Bihar V. Kameswar, A. 1952 S.C. 252 (265)].

The question is whether even outside these cases, the Governor has the implied authority to withhold his assent and reserve the Bill for the consideration of the President. Ray, C.J., opined (para 56) that even in these cases the Governor would be justified to act according to 'the best of his judgment' and to 'pursue such courses which are not detrimental to the State'. It is quite possible that when different politicial parties are in power at the Union and the State levels, the Council of Ministers of a State may not like sensitive legislative measures to be forwarded to the President for acting according to the view of the Union Council of Ministers. Can the Governor, in such a situation, withhold his assent against the advice of his Council of Ministers, on the ground that such advice of Ministers, responsible to the State Legislature, would be detrimental to the national interest ? The advocates of State power would point out that the power under Art. 200 stands outside the list of discretionary powers or functions/under the Constitution as well as those express provisions which make it obligatory for the Governor to reserve a Bill for the President's consideration. Such contention deserves a fuller considration by the Supreme Court in some future case, because the *pros and cons* do not appear to have been fully examined in *Samsher case* (para 56).

From the *legal* standpoint, one thing is clear, namely, that once it is evident that the Constitution does not include the function under Article 200 within the discretionary jurisdiction of the Governor, the same view should be taken under Article 200 as under Article 111,—so that the Governor must act according to the advice of his Council of Ministers to give his assent to a Bill passed by the State Legislature, except in those cases where the Constitution itself requires him to reserve a Bill for the consideration of the President.

(D. D. Basu : pages 309-310, commentary on the Constitution of India, Volume-E, Sixth Edition).

D. D. BASU

It may be expected that the President will use his power to refuse assent to a reserved State Bill only upon the federal principle, viz., where the proposed law may be apprehended to clash with some Union Legislation or Union policy. Again, the power of refusal should be resorted to only in extreme cases where the power of return fails or may be expected to fail or where it is not quite safe to leave the constitutionality of the State law to be determined by the courts *e.g.*, where there is a patent violation of some fundamental right or unconstitutionality on some other ground upon which authoritative judicial opinion may have been already available; or a violation of the Directive Principles of State Policy as regards which annulment by the Courts is not open. Another salutary object may be the safeguarding of uniformity of legislation, *i.e.* the avoidance of unnecessary diversity in principle (as distinguished from details) between laws of different States relating to the same subject. Perhaps the President may also use his power where legislation by one State unnecessarily affects the legitimate interests of another State or its citizens.

Apart from such exceptional cases, the President should not veto laws passed by the representative Legislatures of the States, who have the primary right to determine their policies and implement them within the limits set forth by the Constitution, simply because the Union Executive does not approve of those policies, may be' owing to difference in the party complexion. If that is done, the veto power would be an instrument for transforming the federal system into a unitary one. Again, since the President, under our Constitution has no power of direct disallowance, and his power of veto relates only to reserved Bills as regard which he has also the power to return the Bill with a message for reconsideration, it is evident that the President will, in the first instance, resort to the milder alternative of return and that the power of veto will be used only if the State Legislature persists in its views and the Bill is again presented to the President in the same form, under the latter part of the Proviso to Article 201.

(D.D. Basu : Page 198, Commentary on the Constitution of India, Volume H, Sixth Edition,)

DR. S. N. JAIN

There are a large number of provisions in the Constitution through which the Central executive gets a controlling hand in State legislation.

In practice the process of giving the President's assent to State Bills involves two distinct stages : (1) Before a Bill is introduced in the State Legislature, the State sends the Bills for obtaining the administrative approval of the Union Government. This is in short is the prior approval of the Union Government, this is in short is the prior approval stage which is normally followed, though may not be required by th Constitution. (2) After the Bill is passed by the State Legislature, it is sent to the Union Government for assent. The Bills are usually sent to the Ministry of Home Affairs, Government of India, for scrutiny at both these stages. The Ministry sends the bill to the Ministry of Law and various other Ministries concerned with the subject-matter of the Bill. The Bill is examined from various angles, such as constitutionality, policy perspectives, procedural safe guards etc.

Grounds of Central scrutiny for Bills other than those received under Article 304(b)—

(a) Compliance with Central Statutory Requirements.

(b) Conformity with the policies of the Central Government.

(c) *Ultra vires* the existing Central Legislation.

(d) Examination from the point of view of constitutionality.

(e) Availability of procedural safeguards to aggrieved parties.

(Dr. S. N. Jain & Dr. Alice Jacob : pages 347 to 351, The Union and the States, Editors : S. N. Jain, Subhash C. Kashyap and N. Srinivasan).

DR. ALICE JACOB

"Thus the question arises as to whether a Governor can reserve a Bill for the assent of the President when such reservation is not agreed to by the State Government. Is he merely the constitutional head of the State or can he act in his discretion ?"

"When a Bill of the State Legislature is presented to the Governor for his assent, he has three courses open to him under Article 200. First, he can assent to the Bill; second, he can withhold assent and in the case of Bills other than Money Bills, return the Bill with his recommendations; third, he can reserve the Bill for the consideration of the President. The second Proviso further mentions a specific situation in which the constitution enjoins on the Governor to reserve a Bill for Presidential consideration when , in his opinion, the Bill prejudicially affects the powers of the High Court.

Regarding the question whether the Governor can reserve a Bill for the Presidential consideration when advised against by the State Cabinet, the dual role of the Governor envisaged by the Constitution becomes important. The Governor in view of his capacity as the nominee of the President, has to fulfil certain obligations. Consequently, it is reasonable to presume that the Governor can exercise his personal discretion irrespective of the advice of the State Cabinet, in referring a Bill to the President. However, in the interest of amicable Centre-State relations, the Governor should exercise his discretion only in exceptional and warranted cases."

(Dr. Alice Jacob : pages 30-31, The Union and the States, Editors : S. N. Jain, Subhash C. Kashyap and N. Srinivasan).

The following propositions emerge from the judgment of Ray C. J. : (Samsher Singh's case)—

RAY C. J.

Propositions emerging from his judgment which show that the President and the Governors are Constitutional heads of the Union and the State Governments.

"..........

(e) The expressions used in relation to the powers and functions of the President are : "is satisfied", "is of opinion", "as he thinks fit" and "if it appears to"; as to the Governor the expressions used are the first three.

(f) However, the position of the Governor is slightly different, because, Article 163 provides : "Council of Ministers to aid and advise Governor—(1) There shall be a Council of Ministers with the Chief Minister of the head to aid and advise the Governor in the exercise of his functions, except in so far as he is by or under this Constitution required to exercise his functions or any of them in his discretion. (2) If any question arises whether any matter is or is not a matter as respects which the Governor is by or under this Constitution required to act in his discretion the decision of the Governor is his discretion shall be final, and the validity of anything done by the Governor shall not be called in question on the ground that he ought or ought not to have acted in his discretion. (3) The question whether any, and if so, what advice was tendered by Ministers to the Governor shall not be inquired into in any court".

(g) Provisions of our Constitution which use the expression "in his discretion" with reference to the Governor are : Article 371A(1)(b) and (d) and (2)(b) and (f), and Sch. VI paras 9(2) and 18(3). In addition to the express provisions mentioned above there are two provisions where by, necessary implications, the Governor can act in his discretion. Thus Art. 356 shows that the Governor can make a report to the President that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution "Here the Governor would be justified in exercising his discretion even against the advice of his Council of Ministers (because) the failure of the Constitutional machinery may be because of the conduct of the Council of Ministers". Again, "Art. 200 requires the Governor to reserve (for the consideration of the President) any Bill which in his opinion if it became law would so derogate from the power of the High Court as to endanger the position which the High Court is designed to fill under the Constitution ....Art. 200 indicates another instance where the Governor may act irrespective of the advice from the Council of Ministers.

............"

(H. M. Seervai, para 18.23, pages 1711-1712, Constitutional Law of India, Third Edn. Vol. II).

M.V. PYLEE

Under Article 200, power is vested in the Governor to return a Bill passed by the State Legislature and presented for his assent with a message requesting the Legislature to reconsider the Bill, either as a whole or any part of it, and suggesting recommendations for amendments. The Governor, however, cannot return a Money Bill. Although this power of the Governor can be made use of by the Ministry as a safeguard against hasty legislation, it appears to be little significant if its use is restricted to this purpose only. In fact, under a parliamentary system, almost all legislation is a product of the Government's initiative. If a Private Member's Bill finds an occasional place in the huge volume of Government business in the Legislature, even that cannot be passed without the support of the Government which commands a clear majority. In other words, almost every Bill that is presented to the Governor for his assent is the result of policy decisions taken at Cabinet level and of detailed consideration in the Legislature.

It is unlikely that such legislative enactment would be sent back for reconsideration either as a whole or in parts at the instance of the Cabinet. This should lead us to the conclusion that the Governor, in his discretion, may return a Bill for reconsideration and suggest suitable amendments although the occasions for the exercise of such a power seem to be rare.

There is another provision under Article 200 which empowers the Governor to reserve a Bill for the consideration of the President if in the opinion of the Governor the provisions of the Bill will "so derogate from the powers of the High Court as to endanger the position which the Court is by this Constitution designed to fill". Although the Constitution has special provisions safeguarding the independence of the High Court and its powers and jurisdiction are defined therein, it operates within the boundaries of the State and as an integral part of the overall machinery of the State Government (consisting of the executive, the Legislature and the judiciary). Hence the State Legislature is competent to legislate on a number of matters which will directly or indirectly affect the working the High Court. This provision, therefore, safeguards the position of the High Court against any measure that may affect its independence.

The power of promulgating Ordinances is a power which the Governor exercises with the aid and advice of the Ministry. But there are three circumstances under which the Governor cannot promulgate Ordinance without prior instructions from the President. The second of these States :

The Governor shall not, without instructions from the President, promulgate any such Ordinances if he would have deemed it necessary to reserve a Bill containing the same provisions for the consideration of the President.

The power of the Governor to reserve a proposal of the State Cabinet to issue an Ordinance, for instructions from the President, should naturally be one that he exercises in his discretion.

(M.V. Pylee, pages 405-406, Constitutional Government of India).

Additional Questions Regarding A Governor's Discretionary Powers Under Article 200

(Please also see Appendices A & B to this Questionnaire)

POINT 1

1. The views on the discretionary powers of the Governor in regard to reserving Bills for the consideration of the President differ widely. One view is that the Governor must invariably go by the advice of his Council of Ministers except when the Second Proviso to Article 200 is attracted. (cf A. G. Noorani). This view derives support from what was said by the Constitution-makers with regard to the purpose, scope and use of draft Articles 175 and 176 (Corresponding to Articles 200 and 201).

[*Vide* Appendix A(i) and (ii)]

A limited variation of this view is that apart from the second proviso to Article 200, the Governor must reserve a Bill for the consideration of the President where it is obligatory to do so under the Constitution (*e.g.* First Proviso to Article 31A and Article 288). In respect of other Bills the Governor is bound by the advice of his Council of Ministers (cf. R.C.S. Sarkar). According to this view, the question of the Governor exercising his discretion in assenting to a Bill, or in withholding assent from a Bill or returning a Bill to the Legislature with a message does not arise at all.

2. Para 18.23 of Seervai's "Constitutional Law of India, Volume II" summarises the Judgement of Ray C. J. in Samsher Singh's case and para 18.32 gives the view of the learned author on the question whether the Governor can exercise certain powers in his discretion and if so what those powers are. Seervai goes no further than pointing outth at the second proviso to Article 200 requires, by *necessary implication*, the Governor to exercise his discretion in reserving for consideration of the President any Bill which *in the opinion of the Governor* if it became law would so derogate from the powers of the High Court as to endanger the position which that Court is by this Constitution designed to fill.

3. The contrary view is that each of the alternatives under Article 200 is a function to be exercised by the Governor in his discretion. If he has doubts about the constitutionality of a Bill, or he feels that a Bill conflicts with a Parliamentary enactment or a national policy, he should reserve the Bill for the consideration of the President. (cf. M.C. Setalvad). A substantially similar view is that under Article 200 the Governor, though he has no general power to veto legislation, can withhold his assent to a Bill or reserve it for the consideration of the President. The Governor should reserve a Bill if the Bill is patently unconstitutional or is palpably against the national interest, or is in direct opposition to a directive principle of State policy or is of grave national importance (cf. Soli J. Sorabjee). There is also the view that a Governor would violate his oath of office if he assented to a Bill which deals with a subject falling in the Union List (cf. L. P. Singh). In Basu's "Commentary on the Constitution of India" Sixth Edition, Volume-II (Pages 195 and 198) it is expressed that it is within the Governor's discretion to reserve a Bill passed by State Legislature for consideration of the President. The learned author suggests that the Governor has a discretion to reserve a Bill and the President *i.e.* the Union Council of Ministers a similar discretion to refuse assent to a Bill, only in extreme cases, where it is *patently* violative of some fundamental right or is unconstitutional on some other ground upon which authoritative judicial opinion may have been already available or it violates a Directive Principle of State Policy as regards which annulment by the Courts is not open or is repugnant to any Act of Parliament, or where it unnecessarily affects the legitimate interests of another State or its citizens.

Question 1.4—If, the view stated in para 2 above is the correct one, could you please comment on the other views summarised above and throw light on the incorrect assumptions if any on which they are based?

POINT 2

5. Under the First Proviso to Article 200, when a Bill other than a Money Bill is presented to the Governor for assent, the Governor may *inter alia* return the Bill, together with a message, to the Legislature for reconsideration. If the Bill is passed again by the Legislature and presented to the Governor for assent, the Governor cannot withhold his assent.

6. If the Governor returns a Bill with a message to the Legislature on the ground that the Bill was unconstitutional or against the national interest and if the Bill is passed by the Legislature again without removing those defects, it has been argued that there is nothing to prevent the Governor from withholding his assent to the Bill and reserving it for the consideration of the President. (cf. Soli J. Sorabjee).

Question 2.7—Is the above view correct ?

POINT 3

8. The Government of Nagaland has put forward the following views on the implications of Article 371A(1)(a).

9. According to that Government, Article 371A (1)(a) empowers the State Legislature to enact laws relating to the following matters enumerated in that sub-clause :—

(i) Religious or social practices of the Nagas;

(ii) Naga customary law and procedure;

(iii) Administration of Civil and Criminal justice involving decisions according to Naga customary law;

(iv) Ownership and transfer of land and its resources.

The Government of Nagaland argues that no act of Parliament in respect of the above matters can apply to the State of Nagaland unless its Legislative Assembly so decides by a resolution.

10. The subjects at (i), (ii) and (iii) overlap Entries 1, 2 and 13 of List III. The first segment of (iv) *viz.* "ownership and transfer of land" is convered by Entry 18, List II. The last segment of (iv) namely, "and its resources" impinges upon Entries 53 and 54 of List I. According to the Government of Nagaland the effect of the operation of Article 371A(1)(a) is that notwithstanding anything in the Constitution, legislative competence with regard to the aforesaid subjects at (i) to (iv) vests exclusively in the Legislative Assembly of Nagaland and that Articles 200 and 254 (2) also would not apply to State legislations on these subjects.

11. The Government of Nagaland claims that Article 371A(1)(a) has retrospective effect. That is, a law of Parliament on the four subjects in question which was passed prior to 1-2-1963 (*viz.* the date of formation of Nagaland) cannot apply to the State unless the Legislative Assembly of the State decides by a resolution that it applies. This interpretation is in accordance with the aggreement between the Government of India and the Naga People's Convention on the basis of which Article 371A was incorporated.

Question 3. 12. (i) Is the above reasoning correct ?

(ii) What are the implications of Article 371A(1)(a) in relation to Lists I, II and III in the Seventh Schedule?

(iii) Does Article 371A(1)(a) have retrospective effect?

APPENDIX A(i)

Comments and Suggestions received on articles 175, 176 & 231 (2) of the Draft Constitution, views thereon of the drafting and the Special Committees, and final recommendations of the Drafting Committee

The Draft Constitution as settled by the Drafting Committee was submitted to the President of the Constituent Assembly on 21-2-1948. It was published on 26-2-1948 and comments and suggestions were invited from all. The Drafting Committee considered on 23rd, 24th and 27th March, 1948 the comments and suggestions received till then and recommended certain amendments to the Draft Constitution.

2. In April 1948, the Special Committee consisting mostly of the Members of the Union Constitution Committee, the Provincial Constitution Committee and the Union Powers Committee, examined the Draft Constitution, the comments and suggestions received and the recommendations of the Drafting Committee thereon. In October, 1948, the Drafting Committee considered the recommendations of the Special Committee and examined the comments and suggestions on the Draft Constitution which were received after the Drafting Committee had last met (i.e. after 27-3-1948). Before the Draft Constitution was considered by the Constituent Assembly, a reprint of the Draft was made available to members, showing, opposite the relevant Articles, the amendments which the Drafting Committee had recommended for adoption.

3. The comments and suggestions received on draft Articles 175, 176 & 231(2) [which correspond to the present Articles 200, 201 & 254(2) respectively], the notes of the Constitutional Adviser which reproduce the views thereon of the Drafting/Special Committee and the recommendations of the Drafting Committee for amendment (*vide* pages 125 to 127 and 264 of Part 1, Volume IV ofB . Shiva Rao's "The Framing of India's Constitution—Select Documents" are summarised below :

DRAFT ARTICLE 175 (Present Article 200)

4. It was suggested that—

(i) Article 175 should provide that when a Bill passed by the State Legislature is presented to the Governor, "the Governor shall assent to the Bill". This should replace the provision that "the Governor shall declare either that he assents to that Bill or that he withholds assent therefrom or that he reserves the Bill for the consideration of the President".

(K. Santhanam, M. Ananthasayanam Ayyangar, T.T. Krishnamachari and Shrimati G. Durgabai).

(ii) This Article should provide *inter alia* that if the Governor does not assent to the Bill, the Legislatives Assembly of the State should get automatically dissolved and fresh elections should be held immediately.

(Tajamul Husain).

(iii) The provision that the Governor may reserve the Bill for the consideration of the President should be omitted.

(Jaya Prakash Narayan).

5. The notes of the Constitutional Adviser observed that under draft Article 175 the power of the Governor to declare that he assents to the Bill or that he withholds assent therefrom or tha the reserves the Bill for the consideration of the President would be exercised by him on the advice of his Ministers. Also as the Governors would be nominated by the President instead of being elected by the Provinces, all references to the exercise of functions by the Governor in his discretion would be omitted from the Draft Constitution. Accordingly, the words "in his discretion" would be omitted from the Proviso to Draft Article 175 and the power of the Governor to return the Billl to the Legislature under this Proviso would be exercised by him on the advice of his Ministers.

Further, the provision regarding reservation of a Bill for the consideration of the President would be necessary in view of draft Article 231(2) [present Article 254(2)]. Besides, a provision was being made for reservation by the Governor of Bills affecting the powers of High Courts for the consideration of the President, It was therefore essential that the provision regarding reservation of Bills for the consideration of the President should be retained

6. The Drafting Committee recommended amendments (i) deleting the words "in his discretion" in the First Proviso to Draft Article 175 and (ii) inserting the Second Proviso to that Article. (These correspond to the First and Second Proviso to the Present Article 200).

DRAFT ARTICLE 176 (Present Article 201)

7. K. Santhanam, M. Ananthasayanam Ayyangar, T. T. Krishnamachari, Shrimati G. Durgabai and Jaya Prakash Narayan suggested that this Article should be deleted. The Constitutional Adviser's note pointed out that, as the provision relating to reservation of Bills for the consideration of the President could not be omitted from Article 175, it was not possible to delete Draft Article 176.

DRAFT ARTICLE 231(2) [Present Article 254(2)]

8. K. Santhanam, M. Ananthasayanam Ayyangar, T. T. Krishnamachari and Shrimati G. Durgabai suggested that this clause should be deleted. The Constitutional Adviser's note explained that the expression "repugnant" used in clause (1) of this Article had sometimes been construed very widely. If the amendment was accepted, the State Legislature would hardly have any power to make laws with respect to a Concurrent List matter on which there was an earlier law made by Parliament or there was an existing law. This would unduly restrict the powers of the State Legislature to make laws in respect of the Concurrent List matter. The amendment could not therefore be accepted.

APPENDIX-A(ii)

Extracts of Speeches in Constituent Assembly on Draft Article 175.

DR. B. R. AMBEDKAR : The old proviso contained three important provisions. The first was that it conferred power on the Governor to return a Bill before assent to the Legislature and recommend certain specific points for consideration. The proviso as it stood left the matter of returning the Bill to the discretion of himself. Secondly, the right to return the Bill with the recommendation was applicable to all Bills including money Bills. Thirdly, the right was given to the Governor to return the Bill only in those cases where the Legislature of a province was unicameral. It was felt then that in a responsible government there can be no room for the Governor acting on discretion. Therefore, the new proviso deletes the word "in his discretion". Similarly, it is felt that this right to return the Bill should not be extended to a Money Bill and consequently the words "if it is not a money Bill' are introduced. It is also felt that this right of a Governor to return the Bill to the Legislature need not necessarily be confined to cases where the Legislature of the province in unicameral. It is a salutary provision and may be made use of in all cases even where the Legislature of a province is bicameral.

SHRI BRAJESHWAR PRASAD : Under Article 175 the the Governor has no power to veto a Bill in his own discretion or initiative but can do so only if he is so advised by his Ministry. I am not in favour of this provision. Then, he cannot veto a Bill that has been twice passed by the Legislative Assembly; even that is not acceptable to me. He has not got power in his discretion to veto a Bill or to reserve a Bill for the consideration of the President. There are two classes of cases in which a Bill can be reserved for the consideration of the President. It can be so reserved under certain articles of this Constitution, and also if the Governor is advised by his Ministry to do so. I want that the Governor should have power in his discretion to veto a Bill passed by the legislature, whether passed once or twice by it.

PROF. SHIBBAN LAL SAKSENA : I completely disagree with my friend, Mr. Brajeshwar Prasad, who seems to favour everything which gives power to the Governor and the Council. He wants that the Governor should have power to held up any legislation.

I know he is the moninee of the President, but it is quite possible that the party in power in the province may not be the same as the party in power in the Centre and the President may not be *persona grata* with that party. I therefore think that it will introduce a very wrong principle to give the Governor this power to go against the express wish of the Assembly and even of the Council. I think that the original proviso should remain and the Governor should have power to send back a Bill only where there is no Second Chamber.

SHRI T. T. KRISHNAMACHARI : The Governor will not be exercising his discretion in the matter of referring a Bill back to the House with a message. That provision has gone out of the picture. The Governor is no longer vested with any discretion. If it happens that as per amendment No. 17 the Governor sends a Bill back for further consideration, he does so expressly on the advice of his Council of Ministers. The provision has merely been made to be used if an occasion arises when the formalities envisaged in article 172 which has already been passed, do not perhaps go through, but there is some point of the Bill which has been accepted by the Upper House which the Ministry thereafter finds has to be modified. Then they will use this procedure; they will use the Governor to hold up the further proceedings of the Bill and remit it back to the Lower House with his message.

It is a saving clause and vests power in the hands of the Ministry to remedy a hasty action that they might have undertaken or enable them to take an action which they feel they ought to in order to meet popular opinion which is reflected outside the House in some form or another and for this purpose only this new proviso has been put in. It does not abridge the power of the responsible Ministry in any way and therefore, it does not detract from the power of the Lower House to which the Ministry is undoubtedly responsible; it does not confer any more power on the Governor. On the other hand it curtails the power of the Governor from the position envisaged in the original proviso which it seeks to supplant.

APPENDIX-B(i)

Views of some experts on the discretion of the Governor to reserve a Bill under Article 200 for the consideration of the President

SOLI J. SORABJEE

Under Article 213, the Governor performs functions which are legislative in nature, namely, promulgation of Ordinances. This function is to be performed on ministerial advice and not in the Governor's discretion. However, in deciding whether the ordinance falls within any of the categories set out in the proviso to Article 213, the Governor necessarily has to act in his individual discretion and judgment and arrive at his independent conclusion and in such a situation he cannot be bound by ministerial advice.

The rationale underlying this proviso is to prevent the state executive from promulgating an Ordinance which is of such a nature that the State Legislature, were it in session, would not be able to enact it as a law on account of certain constitutional requirements, or because the Ordinance is such that, if it were a Bill passed by the Legislature, the Governor would withhold his assent and reserve it for Presidential consideration

Under Article 200, the Governor can withhold his assent to a Bill or reserve the Bill for the consideration of the President. Obviously, in such matters he is not expected to act on the advice of the Council of Ministers when the Bill has been passed by the Legislature of the State.

The Governor has no general power of vetoing legislation passed by the State Legislature. None the less, he can stall the legislative measure by withholding his assent, not indefinitely, but for a reasonable time, and request the Legislature to reconsider the Bill and introduce such amendments as he recommends in his message. If, however, the Bill is passed again by the Legislature with or without amendment, the Governor shall not withhold assent therefrom, vide first proviso to Article 200.

There is another course open to the Governor. He may straightway reserve the Bill for consideration of the President and thereby stall the legislation.

What are the norms and criteria that the Governor should follow in reserving Bills for Presidential consideration ? ....

It is suggested the Governor should exercise the functions of reserving a Bill for Presidential consideration, if (a) the Bill is patently unconstitutional e.g., if *ex facie* it discriminates against certain persons or communities in a hostile manner, or it is a patent usurpation of the Union's legislative powers; (b) if it is palpably against the larger interests of the country from the point of view of its unity and integrity and the necessity of maintaining the federal principle, and clashes head on with the general policy of the Union; or (c) if it is in direct opposition to the directive principles of State policy; or (d) if the Bill passed by the State is of grave national importance, and especially in a case where it is apparent to him that the reconsideration of the Bill in the light of the amendments recommended in his message by the House or Houses would be an idle formality.

These examples are only illustrative. What needs to be emphasized is that this power should be exercised on rare occasions and in exceptional cases.

Divergent views have been expressed on the question whether the Governor after the second reading of the Bill and its passage in the Legislature can thereafter reserve the Bill for Presidential consideration. According to one school of thought, after the second reading the Governor cannot withhold assent to the Bill. The other—and the better—view is that the Governor's power is not exhauated after the passage of the Bill for the second time in the Legislature. If the Governor is of poinion that the Bill continues to contain provisions which are patently repugnant to the Constitution, there is nothing to prevent him from withholding his assent to the Bill and reserving it for consideration of the President.

Again the second proviso to Article 200 provides that the Governor shall not assent to a Bill which would, if it became law, so derogate from the power of the High Court as to endanger its position under the Constitution. This provision does not confer a discretion but casts an obligation upon the Governor. But the point is that the question whether the Bill does or does not derogate from the power of the High Court is a matter left to the opinion of the Governor—and again, from the very nature of the situation, he has to act in this contingency independently of the Council of Ministers and irrespective of their advice.

(The Governor, Sage of Sabateur : Roli Books International)

R. C. S. SARKAR

The Governer has the discretionary power to return a Bill for reconsideration of the Legislature and suggest suitable amendments. He may do so on the ground that the constitutionality of a Bill is doubtful or a Bill is mainfestly against state interest or national interest. This discretionary power is analogous to the President's power under the Proviso to Article 74(1).

This power of the Governer may be used by the Ministry to remedy defects in the Bill. But such cases will be rare. This provision will lose its significance if its use is restricted to this purpose only.

2. The Governer's power to reserve a Bill for the consideration of the President is in general tems. If literally interpreted, every Bill can be reserved for President's consideration and this has given rise to controversy.

3. In view of the erosion of the legislative authority of the States and their demand for greater autonomy, Article 200 should not be interpreted so as to give wider powers to the Union. Secondly, in a parliamentary system, the provisions of the Constitution should not be so interpreted as to enlarge the powers of the Governor at the cost of the powers of the real executive viz. the Cabinate.

4. The mandatory provisions where Bills have to be reserved for the consideration of the President are (i) Second Proviso to Article 200, (ii) Article 288(2), (iii) Article 31A, (iv) Article 31C and (v) during a financial emergency, Article 360(4)(a)(ii). The previous sanction of the President is required for the introduction of a Bill referred to in Article 304(v) or for moving

an amendment thereto. If the necessary previous sanction is not obtained, the Bill after it is passed has to be reserved for the President's consideration.

In all the above cases, the Governor, in the exercise of his discretionary power, has to reserve Bills for the President's consideration even without or against the advice of his Council of Ministers. In all other cases he should act only on the advice of his Ministry. Article 200 should be amended to make this clear and also to provide a time limit of, say, *3 months* within which the Governor should exercise his power. This power of the Governor cannot be regulated by an Instrument under the Constitution.

5. A Governor should not reserve a Bill either in the Concurrent field or in the State field for President's consideration, unless he is so advised by his Ministry.

6. If a Bill in respect of a State List matter represents a policy which, according to the Governor, is at variance with the policy laid down in a Union law, the Governor should not reserve the Bill except on the advice of his Council of Ministers. Similarly the question of reservation does not arise if the Union policy is laid down merely by an executive order.

7. When a Bill is reserved for the President's consideration the Union examines it not only from the point of view of its constitutionality but also from all possible angles to find out whether it conforms to the policies of the Union and whether there are procedural safeguards for aggrieved parties. The Union often tends to dictate its policies to the State. If a Bill on a State List subject is reserved under the Constitution, the President has the right to veto the Bill unless it conforms to the policy laid down by the Union. The Constitution gives powers to the Union executive to control State legislation. Whether this power should be restricted is a matter for discussion.

8. When a Bill is reserved either because it affects the powers of the High Court or its constitutional validity is in doubt, it is the duty of the Union executive to examine the entire Bill from all possible angles.

The advisory opinion of the Supreme Court should be sought only in exceptional cases where grave issues are involved.

9. When the President returns a Bill to the State legislature and it is passed again with or without amendment, the President should have the power to veto the Bill without giving reasons. In the peculiar circumstances prevailing in our country, the Union executive should have necessary control over State legislation.

10. A time limit of, say, 3 to 6 months should be provided for the exercise of President's powers under Article 201. If the President is dissatisfied with any Bill, he should in the first instance return the Bill for reconsideration of the State legislature. When the Bill is again received by the President he may either give his assent to the Bill or veto it. But no reasons need be given for vetoing a Bill because the President's action will become subject to judicial review.

Article 201 may be amended to give effect to the above suggestions.

[Summary of views communicated to this Commission]

A. G. NOORANI

Be it remembered that the Constitution of India does not confer on the Union the power of disallowance over State legislation as is enjoyed by the Union in Canada. What the Constitution confers, on the contrary, is a facility to the States to depart from and override Central legislation on a matter in the Concurrent List of topics for legislation if its own particular needs so dictate. The President's assent—i.e. the Government of India's approval—was intended by the framers of the Constitution as a necessary regulation of the facility lost it make a mockery of Central legislation which makes for uniformity. It was not intended to confer an arbitrary veto on the Centre or a licence for dilatoriness. It is a gross perversion of the Constitution that a power conferred on the Union to enable it to assist the States in enlarging their autonomy is abused by it systematically to curtail the autonomy. The Concurrent List covers subjects on which both the Union and the State would wish to legislate from their respective stand-points of uniformity and diversity. Balancing the two calls for statesmanship.

2. The constitutional position is perfectly clear. First the States are not at all obliged to refer to the President for his assent any Bill on a topic in the State List. Secondly, it is not open to Governor to reserve any Bill for the President's consideration except on the advice of the Council of Ministers. Both prepositions are subject to one proviso alone, namely, a Bill which in the opinion of the Governor would, if enacted, so "derogate from the powers of the High Court as to endanger the position which it is designed to fill by the Constituiton'. However, Bills on matters in the Concurrent List are preferable by the Governor to the President for his assent on the advice of his Council of Ministers when the State wishes to enact, for reasons of its local conditions, legislation to override central legislation on a matter in that List.

3. Once a Bill is passed by the State Legislature, the Governor can either accord his assent to it, withhold assent or refer it to the President (Art. 200). He is, however, bound to withhold assent and refer the Bill to the President if in his opinion it "derogates" from the power of the High Court. Under article 201 the President can either accord or refuse assent or return it for "reconsideration".

["Centre's Veto on States laws" by A. G. Noorani—Indian Express dated 20-9-1985].

L.P. SINGH

Articles 200 might give the impression that the Governor has wide discretion in the matter of giving assent to a Bill or reserving it for the consideration of the president. If, in the opinion of the Governor, a Bill is likely to derogate seriously from the powers of the High Court, the Governor is required to reserve the Bill for the consideration of the President; It is not so much a matter of exercise of discretion as of a constitutional obligation. However, a more complex question arises when the Governor is presented a Bill which deals with a subject falling within the Union List of the Seventh Schedule. I had a case in which the State :Legislature had passed a Bill dealing with a inter-State migration, which falls in the Union List. I felt that in assenting to the Bill I might be violating my oath of office—'to protect, preserve and defent the Constitution'—and in reserving it for the assent of the President, if advised by the Council of Ministers not to do so, I would be departing from a healthy convention which I was anxious to respect. The understanding Chief Minister helped me out by leaving me free to reserve it for the assent of the President.

2. There was a case in one of the other States, in which I was asked to approve Draft Regulations purporting to have been framed under the proviso to Article 320(3), which went beyond the scope of the proviso, and were violative not only of statutory rules but also of certain Fundamental Rights. I returned the papers with the observation that a Governor ought not to be required to append his signature, even by way of acquiescence, to proposals which were clearly violative of the Constitution and the law: and the matter rested at that.

3. I have mentioned these two instances because they involved a basic question : to what extent could a Governor, guided by his oath of office, refuse to agree to a course proposed by the Ministry ? The view I took was that in marginal or doubtful cases the Governor should act on the advice of the Ministry, and it is only when an obvious infringement of the Constitution is involved, and he has failed to persuade the Ministry to give up its proposal, that he should withhold his approval.

[The Governor, Sage or Saboteur : Roli Books International]

GOVIND NARAIN

It may be noted, in the context of Article 200, that in some catagories of Bills which are passed by both Houses of Legislature, it is obligatory on the part of the State Government to recommend to the Governor that the Bill be reserved for the assent of the President. Such Bills, in the normal course, are referred to the President and, after examination by the Union Ministries concerned, are put up for the President's orders. The powers of the President in respect of such Bills are laid down in Article 201 of the Constitution. A very important responsibility devolves on the Governor in respect of Bills which are derogatory in any manner to the position and prestige of the State High Court. The Second Proviso to Article 200 of the Constitution makes it obligatory on the part of the Governor

to reserve for the consideration of the President any Bill which in his opinion would, "if it became law, so derogate from the powers of the High Court as to endanger the position which that Court is by this constitution, designed to fill."

[The Governor, Sage or Saboteur : Roli Books International]

APPENDIX-B(ii)

Extracts from Supreme Court Judgement in Samsher Singh v. State of Punjab/Air 1974 SC 2192/Relating to Exercise of Discretion by Governor under Article 200.

RAY C. J.

54. The provisions of the Constitution which expressly require the Governor to exercise his powers in his discretion are contained in Articles to which reference has been made. To illustrate, Article 239(2) states that where a Governor is appointed an Administrator of an adjoining Union Territory he shall exercise his functions as such administrator independently of his Council of Ministers. The other Articles which speak of the discretion of the Governor are paragraphs 9(2) and 18(3) of the Sixth Schedule and Articles 371-A(1)(b), 371-A(1)(d) and 371-A(2)(b) and 371-A(2)(f). The discretion conferred on the Governor means that as the constitutional or formal head of the State the power is vested in him. In this connection, reference may be made to Article 356 which states that the Governor can send a report to the President that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution. Again Article 200 requires the Governor to reserve for consideration any Bill which in his opinion if it became law, would so derogate from the powers of the High Court as to endanger the position which the High Court is designed to fill under the Constitution.

55. In making a report under Article 356 the Governor will be justified in exercising his discretion even against the aid and advice of his Council of Ministers. The reason is that the failure of the Constitutional machinery may be because of the conduct of the Council of Ministers. This discretionary power is given to the Governor to enable him to report to the President who however, must act on the advice of his Council of Ministers in all matters. In this context Article 163(2) is applicable that the decision of the Governor in his discretion shall be final and the validity shall not be called in question. The action taken by the President on such a report is a different matter. The President acts on the advice of his Council of Ministers. In all other matters where the Governor acts in his discretion he will act in harmony with his Council of Ministers. The Constitution does not aim at providing a parallel administration within the State by allowing the Governor to go against the advice of the Council of Ministers.

56. Similarly Article 200 indicates another instance where the Governor may act irrespective of any advice from the Council of Ministers. In such matters where the Governor is to exercise his discretion he must discharge his duties to the best of his judgement. The Governor is required to pursue such courses which are not detrimental to the State.

K. IYER J.

153. We declare the law of this branch of our Constitution to be that the President and Governor, custodians of all executive and other powers under various Articles shall, by virtue of these provisions, exercise their formal constitutional powers only upon and in accordance with the advice of their Ministers save in a few well-known exceptional situations. Without being dogmatic or exhaustive, these situations relate to (a) the choice of Prime Minister (Chief Minister). restricted though this choice is by the paramount consideration that he should command a majority in the House; (b) the dismissal of a Government which has lost its majority in the House but refuses to quit office; (c) the dissolution of the House where an appeal to the country is necessitous, although in this area the Head of State should avoid getting involved in politics and must be advised by his Prime Minister (Chief Minister) who will aventually take the responsibility for the step. We do not examine in detail the constitutional proprieties in these predicaments except to utter the caution that even here the action must be compelled by the peril to democracy and the appeal to the House or to the country must become blatantly obligatory. We have no doubt that de Smith's statement* regarding royal assent holds good for the President and Governor in India :

"Refusal of the royal assent on the ground that the monarch strongly disapproved of a Bill or that it was intensely controversial would nevertheless be unconstitutional. The only circumstances in which the withholding of the royal assent might be justifiable would be if the Government itself were to advise such a course—a highly improbable contingency—or possibly if it was notorious that a Bill had been passed in disregard to mandatory procedural requirements : but since the Government in the latter situation would be of the opinion that the deviation would not affect the validity of the measure once it had been assented to prudence would suggest the giving of assent."

Supplementary Questionnaire No. 5

QUESTIONS ON THE OFFICE OF THE GOVERNOR AND PRESIDENT'S RULES ETC.

Appointment of Governors.

1.1 To ensure that in the appointment of Governors due regard is paid to the criteria envisaged by the framers of the Constitution, it has been suggested that a Governor should be selected from a panel of names cleared by an Advisory Group consisting of the Speaker of the Lok Sabha and the Chairman of the Rajya Sabha, the final decision being left to the Prime Minister. Do you agree ? Should the Leaders of the Opposition in the Lok Sabha and the Rajya Sabha be included in the Advisory Group ?

1.2 The convention of consulting the Chief Minister has reportedly fallen into disuse. It has been suggested that since this convention has failed, requirement of such consultation be made mandatory by so incorporating it in the Constitution itself, through an amendment. Do you agree ?

. 1.3 What are your views in regard to selecting Governors from among (a) politicians and (b) retired civil/defence personnel ?

Removal of Governors.

2.1 According to one view, the fact that the tenure of a Governor is precariously dependent on the unfettered pleasure of the President i.e. the Union Council of Ministers, has impaired his (Governor's) capacity to act in his own judgment in matters in respect of which he is required by or under the Constitution to exercise his discretion. On these premises it has been suggested that the Governor should be made removable only after following and impeachment procedure on the same lines and grounds as applicable to the President.

2.2 Alternatively, it has been suggested that a Governor should be made removable only in consultation with the Advisory Group proposed earlier for advising on the appointments of Governors. What are your views on this issue ?

Transfer and appointment for a second term.

3.1 Very often a Governor, before the completion of his tenure, is transferred as Governor of another state. Do you consider that this feature has affected the dignity of the office or the indpendence of its incumbment ?

3.2 After completion of his tenure should the Governor be eligible for appointment for a fresh term as Governor in either the same State or another State ?

Pension and Post-retirement restrictions.

4.1 Should a Governor on the completion of his full term be eligible for a liberal pension ? Will this make for greater objectivity in the exercise of his discretionary power while in office ?

4.2 Should a Governor after completion of his term, be made ineligible to hold any office of profit under the Government of India or the Government of a State ?

4.3 Should the Governor, after completion of his term, be made ineligible to hold any elective office such as Minister at the Centre or in a State, President of India, Vice-President of India or Member of Parliament or of a State Legislature ?

Role of Governor—Fortnightly reports.

5.1 According to the current practice, the Governor sends and the Centre expects fortnightly reports from the Governor as to how the activities and affairs of the Government in the State are being carried on. Can the authority for this practice be spelled out from the duties imposed on the Union *inter-alia*, under article 355 ? In any case, would you prefer the making of an express provision in the Constitution authorising or requiring such reports from the Governor ?

5.2 Is there scope for improving the content and purpose of the Governor's fortnightly report to the President ? Should he send a copy of this report to the Chief Minister ?

5.3 Besides reporting important developments in the State, should the Governor highlight major problems in which the Centre could help the State ? What should be the Governor's role vis-a-vis that of the Chief Minister in regard to such problems ?

Discretionery Powers.

6.1 What are the situations in which a Governor may be called upon to exercise his discretion as envisaged in Article 163(1) ? Could a situation arise in which a Governor may be constrained, in order to conform to his oath of office under article 159, to over-rule the advice of his Ministry and exercise his discretion ?

6.2 In his capacity as Chancellor of a University appointed *ex-officio* under a State Act, is it obligatory for a Governor to act according to the advice of his Council of Ministers ? On the contrary, should the Governor act according to his individual judgment after consulting his council of Ministers ? In either case what would be the Constitutional justification ?

6.3 (i) When a Governor is satisfied that the Chief Minister no longer enjoys majority support in the Legislative Assembly, should be proceed to (a) dismiss the Ministry or (b) ask the Chief Minister to face the Asssembly within the shortest possible time ?

(ii) If the Chief Minister is unwilling to face the Assembly within a reasonable time, should the

Governor (a) dismiss the Ministry or (b) summon the Legislative Assembly with the sole purpose of verifying the majority support of the Ministry, or (c) suggest to the Centre that President's Rule may be proclaimed ?

(iii) Should it be expressly provided in Article 174(1) that the Governor may in a situation like (ii) above, summon the Assembly in his discretion ?

6.4 If a Chief Minister or a Ministry is found indulging in or encouraging anti-national activities or engaging in corrupt practices, will it be constitutionally valid for the Governor to dismiss the Ministry and made efforts to identify another leader who can form a stable Ministry ? Alternatively, should the Governor recommend proclamation of President's Rule ?

6.5 In view of the controversies that have been raging around the actions of certain Governors' should a set of guidelines be issued to Governors by the President ? If so, will this need an amendment to the Constitution ?

Law and Order.

7.1 If there is public disorder (not amounting to 'internal disturbance') in a State, which the State police is unable to quell, will the Centre be competent to deploy *suo motu* its armed forces in aid of the State Police or its law enforcing agencies under Article 355 or in the exercise of its executive power under Article 73 read with Entry 2A of List-I ?

7.2 Do you agree with the view that under Article 355 the Union has the executive authority to deploy its armed forces in a State in order to protect the State against internal disturbance ? On the other hand, does the expression, "deployment of any armed force of the Union....in any State in aid of the civil power" occuring in Entry 2A of List I mean that the Centre can deploy its armed forces only if there is a request to that effect from the State Government ?

7.3 Assuming that the duty imposed on the Union by Article 355 forms part of the executive power of the Union, can the Union require that a State should sent to it information on the subject of public order and security within the State ? If the State fails to do so would such failure amount to impeding the exercise of executive power of the Union and justify Centre's giving appropriate directions under Article 257(1) ?

7.4 In the Constituent Assembly Dr. B.R. Ambedkar explained that the word "and" interposed between "external aggression" and "internal disturbance" on the onehand, and between "internal disturbance" and "to ensure that the government in every State is carried on in accordance with this Constitution" on the other, can be read both conjunctively and disjunctively, as the occasion may require.

This implies that occasions are conceivable where "External aggression" or "internal disburbance" exists as a fact but does not involve or give rise to a situation in which the Government of the State cannot be carried on in accordance with the Constitution. It follows that on such an occasion involving 'internal disturbance' simpliciter, Article 356 (1) cannot be validly invoked. If that be the right position what other steps or alternatives are permissible under the Constitution to enable the Union to discharge the duty imposed on it under Article 355 ?

7.5 Conversely a situation of "external aggression" may not be so serious in extent and nature as to cause or involve a situation of grave emergency threatening the security of India or any part thereof, to justify action under Article 352. What alternatives would be available under the Constitution to the Union in such a situation of 'external aggression" for performing the duties laid on it by Article 355 ?

President's Rule.

8.1 The phrase "a situation has arisen in which the Government of the State cannot be carried on in occordance with the provisions of the Constitution" occurring in Article 356 (1) is capable of both a wide as well as a narrow interpretation. In its widest amplitude it may comprehend each and every infringement of any provision of the Constitution, whatever be the extent and nature of the infringement or the relative importance of the provision infringed in the Constitutional set-up, as a breakdown of the Constitution. In the narrow sense this phrase would mean no more than an actual failure or break-down of the Constitutional machinery or the system of constitutional government in the State as contemplated in the Constitution.

In Basu's "Shorter Constitution of India the renowned author has coordinated several intrinsic factors including what was said in the Constituent Assembly Debates and as to the marginal heading of the Article so as to reach the conclusion that this phrase should be given the narrow interpretation indicated above. Do you think the expression "cannot be carried on" postulates that all possible remedial alternatives were explored or availed of but failed. The words "*cannot be*" indicate that this power is to be invoked as a last resort, the situation being such that it is not possible to rectify the aberration from the constitutional path by adopting any other alternative. The use of the word "provisions" in plural in the contexual expression "in accordance with the provisions of the Constitution" read with the marginal note, further fortifies the conclusion that it was intended to convey the sense of failure of the constitutional system of responsible government in the State and not astray infraction of some or/any provision of the Constitution, which could be rectified by having recourse to other remedial action. Do you agree with this interpretation? (b) Further, does the aforesaid phrase in Article 356(1) comprehend a situation where the failure or breack-down of the Constitution is imminent.

8.2 To what extent, if any, is the scope of Article 356(1) controlled by Article 355?

Coordination between States.

9.1 Do you consider that setting up of an Inter-State Council under Article 263 should not be postponed any longer? What should be its composition and functions?

9.2 It has been suggested that there should be prior consultation with the Inter-State Council, among others, in matters like appointment/removal of Governors, proclamation of President's rule in a

State under Article 356, undertaking legislation under Article 249, undertaking legislation under those entries in List I which impinge upon linked entries in List II or List III, State Bills reserved for the Consideration of the President, border disputes etc. Do you agree?

9.3 What are the reasons for Zonal Councils not being effective in achieving their objective of collectively pursuing States' interests?

9.4 How should the Inter-State Council function in relation to (a) the National Development Council and (b) Zonal Councils?

Failure to comply with Centre's directions

10. A view has been expressed that under Article 365, the President can lawfully hold that the government of the State cannot be carried on in accordance with the provisions of the Constitution, *only if* the direction of the Central Executive which is not complied with by the State, falls within the four corners of any of the provisions of the Constitution which expressly extend the executive power of the Union to the giving of such direction, namely; Article 353, 360(3), during the period when the appropriate proclamation of Emergency is in force, or Articles 256, 257 and 339 (2) when no such proclamation is in force. Conversely, the saction in Article 365 cannot be invoked if the direction disobeyed or ignored was issued under any other provisions of the Constitution e.g. Articles 347, 344(6), 350A, which do not expressly extend the executive power of the Union to the giving of the directions mentioned in those provisions, the reason being that non-compliance with direction issued under such directory provisions does not create a situation of substantive or constructive failure of the Constitutional machinery in the State.

Do you agree with this view?

Supplementary Questionnaire No. 6

QUESTIONS REGARDING ARTICLE 249 OF THE CONSTITUTION OF INDIA

Background

There was no provision in the Government of India Act, 1935 corresponding to the present Article 249. No such provision exists in the Constitutions of Australia, Canada and United States.

However, the author of this draft, Shri B. N. Rau, the Constitutional Adviser, cited the following extract from the Privy Council decision, *Attorney-General for Ontario* v. *Canada Tempoerance Federation*(1946 *A. C.* 193) to support the draft Article 226 (now Article 249).

"The true test is to be found in the real subject matter of the legislation ; if it is such that it goes beyond local or provincial concern or interests and must from its inherent nature be the concern of the Dominion as a whole, then it will fall within the competence of the Dominion Parliament as a matter affecting the peace, order and good Government of Canada, though it may in another aspect touch upon matters specially reserved to the Provincial Legislatures".

A perusal of the entire judgment however shows that this decision did not lay down any sweeping rule that by virtue of Sections 91 and 92 of the British North America Act, 1877, the Dominion Parliament is competent to legislate as regards any Provincial or local subject whenever, in its opinion, it has assumed national importance. In that case, the Privy Council was interpreting the residuary power of the Dominion Parliament to legislate for "the peace, order and good Government of Canada". In an earlier case *Russell* v. *The Queen.* (1882) 7 A. C. 829, the Canada Temperance Act, 1878 was "held to be within the legislative competence of the Dominion Parliament under s. 91 of the British North America Act, 1867, on the ground that it related to the peace, order and good Government of Canada, *and did not deal with any of the matters exclusively reserved to the Provinces by s. 92 of the Act of* 1867". The crucial lines are those that have been underlined. In *Attorney-General for Ontario's case* (ibid) decided on Junuary 21, 1946, the earlier decision in *Russel's* case was upheld and accordingly it was decided that Parts 1, 2 and 3 of the Canada Temperance Act, 1927, which replaced the Act of 1878, were equally valid Dominion Legislations.

Be that as it may, when the draft Article 226 (corresponding to the present Article 249) was on the anvil, it was severely criticised both inside and outside the Assembly. The Hindustan Times claimed in an Editorial that it dealt a death blow to Provincial autonomy. Several Law Professors expressed the belief later voiced by members of the Assembly—that it perverted the amending process and ought, therefore, to be removed from the draft Jayaprakash Narayan also urged that this provision should be dropped. The Legislatures of Bombay and East Punjab, when debating the merits of the Draft in the autumn of 1948, favoured its ommission, regarding it as a grave infringement of Provincial rights. Many Assembly members held this view, and twenty proposed an amendment deleting the article. Amount the many supporters of the amendment were K. Santhanam, M. A. Ayyangar, Smt. Durgabai, T.T. Krishnamachari and V. T. Krishramachari, Acharya Jugal Kishore, and five Muslims.

This Article was referred to a Special Committee which again considered the subject at its meeting on 11-4-1948, and recommended:—

"(i) A resolution authorising Parliament to legislate with respect to a State subject in the national interest should not be moved in the Council of States "without prior consultation with the Governments of States concerned."

(ii) It would have to specify the period during which Parliament was to have the power thus granted and this period was not to exceed 3 years; and

(iii) Further extensions for not more than 3 years at a time could be made by fresh resolutions."

The proposal of the Special Committee was accepted and the draft article was accordingly included. The Constitutional Advisor again defended the original draft article.

On 18-10-1948, the Drafting Committee again considered the draft Article and opined that it would not be necessary to dilute the provision to the extent of the suggestions made by the Special Committee that there should be previous consultation with the States. It decided therefore, to delete this condition and the draft article was accordingly revised.

This article was considered by the Constituent Assembly on 13-6-1949. Dr. Ambedkar moved and amendment restricting the scope of the legislation to a period not exceeding one year at a time.

Even thereafter, most of the members, including Pataskar, Alagesan, V. S. Sarwate, criticised that this article will be a mockery of Provincial autonomy and pleaded for its deletion. Shri B. M. Gupte, (who later became the Attorney-General of India), opposed the inclusion of the Article on the following grounds :—

"(i) One House of the Parliament cannot do this;

(ii) the State Legislature also should vote for the resolution;

(iii) there is nothing to warrant that such powers are necessary or required; and

(iv) during non-emergency times it should not be possible for the Centre to encroach upon the State fields."

However, this clause was adopted by the Assembly and incorporated as Article 249 in the present form.

Article 249 has been made use of on very few occasions. On August 12, 1950, consequent upon the requisite resolution passed by the Council of States, Parliament assumed powers under this Article in respect of all matters in Entries 26 and 27 of List II, for the effective control of black-marketing for a period of one year. It was later extended for one more year. The said resolution enabled Parliament to enact,— (1) Prices of Goods Act of 1950; (2) the Essential Supplies (temporary powers) Amendment Act of 1950. Later, another resolution passed by the Council of States under Article 249 enabled Parliament to enact— (3) The Evacuee Interest (Separation) Act of 1951. Subsequently, by the Constitution (Third) Amendment Act of 1954, items " (b) foodstuffs, including edible oilseeds and oil (c) Cattle fodder including oilcakes and other concentrates; (d) raw cotton, whether ginned or unginned, and cotton seed; and (e) raw jute" were added to Entry 33, List III to which Entries 26 and 27, List II, were, in terms subject.

After 1951, no occasion has arisen for exercise by Parliament of the power under Article 249. Thus, for the last 34 years, this Article is lying otiose.

Some State Governments and Political Parties have urged for deletion of the Article. To the same effect was the recommendation of the Rajamannar Committee (1971). Other have suggested its amendment for introducing safeguards against its misuse while the rest are not against its retention as it is.

Article 249 is vulnerable to criticism on these grounds :—

Grounds of criticism

(1) A resolution passed by the Council of States with a 2/3rd majority of the members present and voting does not necessarily mean that 2/3rd of the 22 States support the authorisation, because even the seven bigger States having larger representation in the House, namely, Uttar Pradesh (34), Bihar (22), Maharashtra (19), Andhra Pradesh (18), Tamil Nadu (18), Madhya Pradesh (16), and West Bengal (16), plus the nominated block (12) may furnish the requisite 2/3rd majority notwithstanding opposition from the representatives of the remaining 15 States. Thus it makes not only a mockery of the division of powers effected by Article 246 read with Schedule VII but also perverts and short-circuits the normal amending process enjoined by Article 368.

(2) The experience of the use of the Article in enacting the three enactments aforesaid in 1950-53 shows that this power has been invoked not to tide over a problem which has temporarily assumed national dimensions but as a stop-gap arrangement with the ultimate object of taking away the *explusive* competence of the States, permanently, in regard to that matter, through a constitutional amendment.

(3) None of the resolutions passed under this Article by the Council of States in the cases aforesaid were in keeping with the hope expressed by the Constitution makers, that the Resolution should "limit itself to a particular aspect of a subject in the State List instead of extending to the whole of that subject" (see B. Shiva Rao's Framing of India's Constitution, vol. IV, p. 261).

(4) In any case, Article 249 has remained otiose for the last 31 years. It is redundant, particularly when the same object can be achieved by resorting to the better alternative in Article 252.

Suggestions

Some of those who are not in favour of deletion of Article 249, suggest—

(1) That this Article should be so amended that the "matter" referred to in it should be limited to a particular aspect or items of an Entry in the State List so that Parliament should not, by passing a resolution under this Article, take over the *entire* field, even it be for a temporary period encompassed by that Entry.

(2) A resolution under Article 249 should not be moved in the Council of States, without prior consulation with the Intor-State Council which should have, among others, on its membership the Chief Ministers of all the 22 States.

(3) Another suggestion is that in addition to No. (2) above, previous consent of at least half of the State Governments and State Legislatures must be obtained.

(4) The most moderate suggestion which will least disturb the present provision is that in Article 249 in between the words "members present and voting" and "that it is necessary and expedient", should be inserted the following words:—

"representing not less than half of the total number of States"

Q. What is your reaction with regard to the comments/views and suggestions summarised above in this Note?

ANNEXURE

Article 249

(1) Notwithstanding anything in the foregoing provisions of this Chapter, if the Council of States has declared by resolution supported by not less than to-thirds of the members present and voting that it is necessary or expedient in the national interest that Parliament should make laws with respect to any matter enumerated in the State List specified in the resolution, it shall be lawful for Parliament to make laws for the whole or any part of the territory of India with respect to that matter while the resolution remains in force.

(2) A resolution passed under clause (1) shall remain in force for such period not exceeding one year as may be specified therein :

Provided that, if and so often as a resolution approving the continuance in force of any such resolution is passed in the manner provided in clause (1), such resolution shall continue in force for a further period of one year from the date on which under this clause it would otherwise have ceased to be in force.

(3) A law made by Parliament which Parliament would not but for the passing of a resolution under clause (1) have been competent to make shall, to the extent of the incompetency, cease to have effect on the expiration of a period of six months after the resolution has ceased to be in force, except as respects things done or omitted to be done before the expiration of the said period.

Supplementary Questionnaire No. 7

QUESTIONS REGARDING ARTICLE 252 OF THE CONSTITUTION OF INDIA

Background

This Article largely corresponds to Section 103 of the Government of India Act 1935. Whereas Section 103 enabled the Provincial Legislatures to amend or repeal a law so made by the Federal Legislature, clause (2) of Article 252 takes away this power of the State Legislatures and provides that an Act passed under clause (1) of Article 252 can be amended or repealed by following the same procedure. Thus, Clause (2) contains a bar to amendment or repeal by any State Legislature of the law passed by Parliament under Clause (1) of the Article.

Clause (2) was severely criticised in the Constituent Assembly and even after its enactment it has been the subject of perennial criticism by knowledgeable persons, political parties and others. During the Constitutent Assembly Debates, K. Santhanam expressed an apprehension that Clause (2) "may become inoperative because no State would like to get into a noose from which it cannot get out at all. As things stand, they can hand over the power to Parliament; but once the Act is passed, then the State becomes practically powerless even though the matter is one with respect to which it has power. This is rather unsatisfactory". Seervai, in line with several other critics, comments...."it is difficult to understand the reason for this departure (from its parent Section 103 of the Government of India Act 1935), for the Article loses its utility if the power of the State Legislature is permanently taken away...." (Parenthesis added).

On the other hand, the apprehensions so prophetically voiced by K. Santhanam have turned out to be true; for, even the Central Legislature finds it difficult to amend or revise a statute once passed by following the procedure laid down in clause (1) of Article 252. This difficulty stems from the fact that the consent/comments of the State Legislatures concerned solicited for the proposed amendment either may not be forthcoming or be so qualified and hedged around by discordant conditions, that it may not amount to the 'consent' requisite under Clause (1). The difficulty experienced in revising the Estate Duty Act, 1953 in its application to 'agricultural land', and the Urban Ceiling Act 1976 are in point. The following solutions have, therefore, been suggested to facilitate the working of the provisions in Article 252 :—

Suggestions

(1) Before framing the Bill and soliciting the resolutions/views of the State Legislatures under clause (1) of the Article, the Inter-State Council should be consulted.

(2) Clause (2) should be omitted and the power of the States to amend or repeal the Act passed under Clause (1) should be restored as under the Government of India Act, 1935 but subject to a proviso on these lines :

> "Provided that where such an amending or repealing law is made by the Legislature of a State. such an amending and repealing Law shall not take effect, unless having been reserved for the consideration of the President, it has received his assent."

(3) Any law passed by Parliament in respect of a matter in List II, by consent and adoption obtained under Article 252 (1), should not be of perpetual duration but for a specific term, say, for three years and subject to periodic review and re-enactment, if necessary, for a term not exceding the original term, by following the same procedure as specified in Clause (1) of Article 252.

Q. What is your reaction with regard to the comments/views and suggestions summarised above in this note?

ANNEXURE

Article 252

(1) If it appears to be Legislatures of two or more States to be desirable that any of the matters with respect to which Parliament has no power to make laws for the States except as provided in Articles 249 and 250 should be regulated in such States by Parliament by law, and if resolutions to that effect are passed by all the Houses of the Legislatures of those States, it shall be lawful for Parliament to pass an Act for regulating that matter accordingly, and any Act so passed shall apply to such States and to any other State by which it is adopted afterwards by resolution passed in that behalf by the House or, where there are two Houses, by each of the Houses of the Legislature of that State.

(2) Any Act so passed by Parliament may be amended or repealed by an Act of Parliament passed or adopted in like manner but shall not, as respects any State to which it applies, be amended or repealed by an Act of the Legislature of that State.

Supplementary Questionnaire No. 8

MISCELLANEOUS QUESTIONS REGARDING VARIOUS ARTICLES OF THE CONSTITUTION OF INDIA

Q. 1 Can our Constitution be called 'Federal" notwithstanding several unitary features not found in other 'Federation"?

Q. 2 Which provisions/features of the Constitution in Your opinion, are fundamental for the protection of the 'independence' and ensurance of the unity and integrity of the country?

Q. 3 (i) Are the obligations of the Union and the States arising expressly or by necessary implication from Articles 256, 257, 339(2), 354, 355, 356, 357 and 365 of the Constitution reasonable and necessary for preserving the independence, unity and integrity of the country?

(ii) Is any of these provisions susceptible to easy misuse? If so, would you suggest any safeguards, constitutional or extra-constitutional to minimise their possible misuse?

Q. 4 Criticism has been levelled that over the years under the colour of a declaration of "National interest" or "Public interest" purportedly made under certain Entries in List-I, the Union Parliament has drained out the content of the linked Entries in List II of the Seventh Schedule and thus improperly encroached upon the State legislative field.

Do you agree? If so, can you give any instances of such encroachments? Do you consider that such declarations should be of a perpetual nature or for particular durations subject to periodical review?

Q. 5 (i) Article 263 which appears under the caption "Coordination between the States", empowers the President to set up an Inter-State Council charged with the duty of:—

"(a) enquiring into an advising upon disputes which may have arisen between States, or

(b) investigating and discussing subjects in which some of the States have a common interest: or

(c) making recommendations upon any such subject and in particular for the better coordination of policy and action with regard to that subject".

It further invests the President with power to define its duties, organisation and procedure. What are your views/suggestion in regard to the necessity of setting up an Inter-State Council, its composition, specific role and authority?

(ii) Are the provisions of Article 263 wide enough to enquire into and advise upon any dispute which may have arisen between the States, or between a State or States and/or the Union? In other words, should an Inter-State Council, step up pursuant to Article 263, be competent to enquire into and advise upon a dispute which would otherwise be within the competence of the Supreme Court by virtue of Article 131? Will not in that situation, the functions of the Inter-State Council and the Supreme Court, if it is seized of the suit under Article 131, overlap and conflict with each other?

Q. 6 In Keshva Nanda Bharati's case, the Supreme Court ruled that Parliament was not competent under the exercise of its amendatory power under Art. 368 to alter or change the basic features/structure of the Constitution.

What should be the criteria, in your opinion, for identifying such features? Would you categorise the following as such features:—

(1) Unity and integrity of the Nation.

(2) Sovereign domocratic republican structure.

(3) Federal or quasi-federal feature of the Constitution.

(4) Judicial Review.

(5) Rule of Law.

(6) Supremacy of the Constitution.

(7) The objectives specified in the Preamble to the Constitution.

(8) Secularism.

(9) Freedom and dignity of the individual.

(10) The concept of social and economic justice—to build a welfare State.

(11) The principle of free and fair elections.

(12) The principle of separation of powers.

(13) Parliamentary system of Government.

Q. 7 What changes, if any, would you suggest in the distribution of legislative powers under the Seventh Schedule and other provisions of the Constitution?

Q. 8 Generally, can you point out any specific provision, or defect in the working of the Constitution which has generated friction between the Union and the States? What are your suggestions or solutions for minimising or alleviating such frictions, if there are any?

Q. 9 What are your views on Article 370 of the Constitution ?

Q. 10 Do you subscribe to the view that Sales Tax should be abolished, and instead, additional excise duty be levied by the Union in consultation with the the States and collected by the States themselves?

Supplementary Questionnaire No. 9

ARTICLE 356

1. In the Constituent Assembly Dr. B. R. Ambedkar explained that the power given under Art. 356 was a last resort power, to be exercised very springly when all other correctives fail. He also indicated some of these alternatives, which should be tried before invoking this extraordinary power. He Said :—

"....I share the sentiments that such articles will never be called into operation and that they remain a dead letter. If at all they are brought into operation. I hope the President who is endowed with these powers will take proper precautions before actully suspending the administration of the provinces. I hope the first thing he will do would be to issue a mere warning to a province that has erred that things were not happening in the way they were intended to happen in the Constitution. If that warning fails, the second thing for him to do will be to order an election allowing the people of the Province to settle matters by themselves. It is only when these two remedies fail that he should resort to this Article".

How far was the use of Art. 356 by the Janata Government in 1977 in accordance with the procedure suggested above by Dr. B.R. Ambedkar? In this connection it may be kept in mind that the power to dissolve the State Legislative Assembly vests under Art 174 in the Governor, and it can be assumed by the President only after, and not before, the imposition of the President's Rule.

2. In *Rajasthan Case*, the Supreme Court (per Mr. Justice P. N. Bhagwati) observed : "....merely because the ruling party in a State suffers defeat in the elections to the Lok Sabha.... by itself can be no ground for saying that the Government of the State cannot be carried on in accordance with the provisions of the Constitution. The federal structure under our Constitution clearly postulates that there may be one party in power in the State and another at the Centre." Do you agree with this observation.

In the light of this observation, will it be in accord with constitutional *propriety* as distinguished from arid *legality*, to use Art 356 for the purpose of dismissing the Ministry and dissolving the Legislative Assembly of a State on the *sole* ground that in Elections to the Lok Sabha the ruling party in the State has suffered an overwhelming defeat?

3. Two divergent suggestions have been made before the Commission. One which seeks its support from the extracted statement of Dr. B. R. Ambedkar, is that, if a Ministry is defeated in the Assembly and thereupon resigns and all efforts made by the Governor to have an alternative Ministry enjoying support of the Assembly fail, the Governor should not straightaway report and recommend of imposition of the President's Rule but he must try another alternative, viz., dissolve the Assembly in the exercise of his own judgement, irrespective of the advice of the defeated Chief Minister, keeping a care-taker Ministry and leaving the resolution of political dead-lock to the electorate.

The contrary suggestion put before the Commission, is that the Governor should not in the aforesaid situation dissolve the Assembly on the advice of the defeated Chief Minister or even in his own discretion, but recommend forthwith, imposition of President's Rule, leaving it to the President (i.e. the Union Government), eitherto keep the Assembly in a state of suspended animation for a period not exceeding two months or to dissolve it earlier.

What are your comments/views regarding these divergent suggestions?

4. A suggestion has been made that as a safeguard against the misuse of the power under Art. 356 and to make the control of Parliament over its exercise real and effective, provisions similar to these contained in clauses (7) and (8) of Art. 352 should be drafted on Art. 356, also. What is your reaction and comment in regard to this suggestion?

5. A suggestion has been made that as a safeguard against the misuse of the power under Art. 356 and for making the remedy of judicial review meaningful, the material facts and grounds, on the basis of which, President takes action under Art. 356, must be stated in the report of the Governor and also made an integral part of the Proclamation issued under Art. 356(1). It is further suggested that such self-contained report of the Governor and the Proclamation may first be laid before the Inter-State Council, and thereafter together with its advice/comments, they should be laid by the Union Cabinet before Parliament, not later than 2 months of the date of the issue of the proclamation. What is your comment with regard to this suggestion?

Additional Questions

1. Can the provisions of Art. 356 be legitimately used to resolve a ministerial crisis caused by an intra-party dispute or dissensions, or, for reform of mal-administration in a State ?

2. Does the last segment of Art. 355 allow some Central action other than that stipulated under Art. 356. That is to say, can the Union Government legally constitute a Commission of Enquiry against a State Chief Minister or Minister, on charges of corruption, nepotism or misuse of power ?

3. Certain academic, legal and political circles read clause (3) of Art. 356 as specifically requiring that the Presidential proclamation as to the failure of the constitutional machinery in a State must be placed before each House of Parliament for approval/or ratification *within* a period of two months. Do you agree with this interpretation ?

4. In a number of cases, the Proclamation issued under Art. 356(1) was not placed before Parliament within the prescribed period of two months. at all. It was avoided in various ways :

   (i) By dissolving the Legislative Assembly of the State concerned within two months of the imposition of the President's Rule. This happened in the case of West Bengal (1970). Mysore (1971) and Gujarat (1974). Similarly, in 1977, the proclamation dissolving the 9 State Legislative Assemblies, was never put before the Parliament.

   (ii) By rescinding the first proclamation and reissuing the same before the expiry of the period of two months stipulated in clause (3). This course was followed in the cases of Orissa (1971) and Bihar (1972).

   If your answer to the preceding question is in the affirmative, did not the failure to place the proclamation before both Houses of Parliament within the specified period of two months, in the above instances, amount to contravention or circumvention of the requirement in clause (3) ?

5. If the control of Parliament provided in clause (3) of Art. 356 was intended to operate as a safeguard against the arbitrary or improper exercise of the power, what solution would you suggest to plug the loopholes or to remove deficiencies in this safeguard, revealed by the decision of the Supreme Court in *State of Rajasthan Vs. Union of India* (AIR 1977 SC 1361) (Please see Annexure-A) ?

6. A suggestion has been made that even within the present framework of the Constitution the President can rightly insist that he will not take any irreversible action (including dissolution of the Assembly)

unless he is assured of majority support for the measure, not only in the Lok Sabha, but also in the Rajya Sabha, that in doing so he would not be acting against any norms of democratic principles. Here he would be acting with a view to assure that his office is not allowed to be used for circumventing or by-passing the constitutional requirement of approval by each House of Parliament. What is your comment in regard to this suggestion ?

7. If you do not agree with the suggestion posed in the preceding question, what is your comment with regard to the alternative suggestion propounded in certain circles that by a constitutional amendment such a discretion to stop or prevent misuse of the power under Art. 356 be conferred on the President ?

ANNEXURE 'A'

Abstract from Rajasthan Case

"Approval by either House of Parliament before the expiration of two months has no constitutional relevance to the life of Proclamation and the Proclamation would continue in (full) force (and effect) for a period of *two months despite* such disapproval."

(Parenthesis within brackets and emphasis added).

Supplementary Questionnaire No. 10

SUPPLEMENTARY QUESTIONNAIRE ON TAXATION OF AGRICULTURAL INCOMES

1. The subject "Taxes on agricultural income" is shown in Entry 46 of List-II-State List of the Seventh Schedule to the Constitution. A view has been expressed that the States have not adequately exploited this source of tax assigned to them to augment their revenues.

Is any direct tax on agricultural incomes being levied in your State? If so, please give information with respect to the following :

(a) Since when it is being levied ?

(b) The tax-base and broad rates of tax ?

(c) The yield during the last 5 years (1980-85) and as percentage of total tax revenue in the State.

(d) The rebates, concessions, relief, etc. given from time to time.

(e) Serious difficulties, if any, being experienced in the administration of the tax.

(f) Any estimates of tax-evasion which are available.

(g) Any other information relevant with respect to taxation of agricultural income in your State.

2. If at present no direct tax on agricultural incomes is being levied in your State, please inform about the following :

(i) Was it ever levied in some form and then given up ? If so,

(a) the period during which it was levied;

(b) the level of yield (both amount and as percentage of total tax revenue of the State), and

(c) the reasons for giving up the tax ?

(ii) If not levied at any time in your State,

(a) was it ever considered to levy the tax? If so, when and the main reasons for not levying.

(b) If levy of the same has not been considered at all so far, what are the views of the State Government in regard to it?

3. Are there any other direct taxes on agricultural sector which are being levied or were levied in your State ?

If so, broad details of their nature base, yield (also as percentage of total tax revenue of the State) and rebates/relief, etc. given with respect to them from time to time or reasons for discontinuing them, if given up.

4. A specific suggestion has been made that the Constitution be amended for transferring the subject of 'Taxation of Agricultural Income' from the State List to the Union List and the States should get the net proceeds of such a tax. Such an amendment would help the States in getting over the resistence they might face should they consider to levy agricultural income-tax, make available of more revenue to the States, and also ensure a uniform approach to taxation in this field.

What is your reaction to the above proposal? If you not do agree, please give reasons ?

5. Should you be favourably inclined to the proposal stated in Question 4 above, please comment on the following :

(i) What should be the exact tax base ?

(ii) Whether the proceeds of the tax should become available to the States in terms of the arrangements under Article 268 or 269 of the Constitution ? (Please give reasons also).

(iii) Whether in the levying of the tax States should be consulted (a) initially and (b) also at subsequent stages while varying tax rates, etc ? If so, what would be the appropriate form for such a consultation ?

6. Please give a short note highlighting any other matter which you might consider relevant for the Commission on Centre-State Relations to keep in view, but not covered by the above Questions. The note may also mention, *inter alia,* the facts with respect to structure of agricultural incomes/economy in your State and the changes in the same since 1960.

NOTE : In the "Replies to the Questionnaire", received from the State Governments and Political Parties, reproduced in the following pages, the paragraph numbers correspond to the serial numbers of the questions containted in the Questionnaire issued by the Commission.

(a) Replies to the Questionnaire

(b) Memorandum

Andhra Pradesh

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 Our country has been described as a Union of States. It is a federal Constitution. The provisions of the Constitution as well as the working of the Constitution has shown that there is a bias towards concentration of power with the Union.

1.2 The Articles mentioned in the question have found a place in the Constitution to ensure smooth administrative relations between the Union and the States. However, Article 356 has come in for a lot of criticism. We recommend the abolition of the Office of Governor as we have found in actual practice that Governor is a convenient and willing tool in the hands of the Union Executive to subvert the democratic process in a State. A review should be made of the needs or the States which have to shoulder heavy welfare responsibility and adequate tax resources should be provided to meet these commitments. Greater autonomy for States should be welcomed in national interest. The clause regarding 'Autonomy' should not be misconstrued for aggrandisement of powers. It should be considered as a logical concommitent to discharging welfare responsibilities.

1.3 Territorial as well as Functional decentralisation is inevetable in a vast and heterogenous country like India. There can be no quantitative analysis to arrive at optimum solutions in these matters.

1.4 No. federal Constitution of modern countries have co-ordinated national and provincial Governments.

1.5 Our Constitution is basically sound and flexible enough to meet the challenges of the times. If the Constitution worked under true spirit and intent, there may not be occasions for confrontation between the Union and the States. Recourse to Article 263 will provide a very healthy way out of all delicate problems of Union-State relationship. What is required is mutual consultation and avoidance of mistrust. Particularly, constitutional amendments of far-reaching character should be done through a consultative process with State leadership. This will be in keeping with the tradition of our original Constitution where Members of the Constituent Assembly were drawn from the leadership of the States also.

1.6 It is absolutely necessary to ensure the unity and integrity all over the country. The emergency provisions under Article 352, 353, 355 and 356 take care of this problem. However, we would like to reiterate that we do not consider it necessary to rely on Governors report for proclamation of Emergency under Article 356. In fact we recommend that the Office of Governor be abolished.

1.7 Articles 256 and 257 relate to directions by the Union Executive to the State Governments for compliance of laws made by the Parliament. These Articles have rarely been invoked and no controversies arising out of these provisions have been reported. Article 365 gives a constitutional backing to the President to secure the implementation of directions. This is a penal provision and is part and parcel of the earlier provisions. What is important in all these matters is that these provisions should not be misused or worked in a prejudicial manner. There is nothing inherently wrong with the provisions themselves.

So far as Articles 356 of the Constitution is concerned, it is our considered view that keeping a Legislative under suspended animation for more than six months is not advisable.

1.8 Reorganisation of boundaries may become necessary under public and national interest. Any alteration of States' boundaries should be done only after consultation with such States after eliciting the popular views in the affected areas.

PART II

LEGISLATIVE RELATIONS

2.1 The scheme of distribution of Legislative powers between the Union and the States is inherently weighed in favour of the Union. The Constitution has laid down in the Seventh Schedule, the three Lists, namely, the Union List, the State List and the Concurrent List. By virtue of Articles 248 and 249, the Union Parliament is in a position to enhance its legislative powers beyond the normal scope contained in the Lists. A judicious scheme of distribution of powers would vest with the State Legislatures, unequivocal powers relating to its discharge of responsibilities. This is absent in our Constitution. The State List consists of 66 items but some of them are subject to restriction flowing from the provision made in respect of them in the Union List and the Concurrent List. For example, Parliament has been empowered under Entries 7 and 52, 53 and 54 and 56 of List I (Union List) to legislate in respect of Industries, mines and minerals and water, which occur in the State List at Entries 24, 23 and 17 respectively. Similarly, there are Entries in the Concurrent List such as 20, 22, 23 and 34, which read with Article 251 circumscribe the power of the States in regard to Economic and Social Planning, Trade Unions, Industrial and Labour Disputes, Trade and Commerce in, and the production, supply and distribution of essential goods and Price Control. The phrase 'public interest' occuring in Entries 52, 53 and 54 have virtually nullified in practice the corresponding Entries in the State List. Some of the important Entries in the Concurrent List of the Seventh Schedule are :

(a) Entry 20, Economic and Social Planning;

(b) Entry 17 (a), Forests; and

(c) Entry 34, Price Control;

(d) Entry 33 (b), Trade and Commerce in, and production, supply and distribution of food-stuffs including oil seeds and oils;

(e) Entry 38, Electricity;

(f) Entry 25, Education including technical education, medical education and universities, subject to the provisions of Entries 63, 64, 65 and 66 of List I, Vocational and technical training of labour ; and

(g) acquisition and requisitioning of property.

Most of these Entries have enlarged the powers of the Union at the expense of the States. The Andhra Pradesh State would like to bring to focus two specific irritants. The Government of Andhra Pradesh had approached the Government of India for cutting forests to the required extent to lay road and lay on electric line. One of these instances related to the Telugu Ganga Project. The Union Government has treated the State Government as though it is a private party indulging in denudation of forests. This has been possible because of the Central Legislation under Article 317(a) Forests.

Entry 33 of the Concurrent List has been arbitrarily used by the Union Government to thwart the State Government's scheme of supplying rice at Rs. 2 a kilo, to the weaker sections.

2.2 In the first place, it must be ensured that the Union Parliament should evolve a criteria for legislating on State Lists. Wherever practicable, prior consultation with States by the Union should be imperative whenever Union Legislates on State List. These safeguards will ensure that the complementary legislative powers of the Union and the States are exercised in harmony. As regards Concurrent Legislation, it must be ensured that terms like 'public interest' and 'national interest' are not used as a cover for encroaching on the States' domain. Perhaps Entries like Broadcasting, T.V., etc., may be included in the Concurrent List.

2.3 Prior consultation with the State Governments will promote trust and confidence in the States, when the Union Parliament is legislating in national and public interest. However, consultation should not be reduced to formality. The spirit of the Constitution must be observed and Union Legislation on Concurrent List should be restricted to national and public interest which cannot be legitimately discharged by the State Government.

2.4 In a country with differing political parties at the Union and States, concepts of public and national interest may connote differently to different States and the Union. Any legislative measure in public of national interest will, therefore, be viewed differently by the constituent States and the Union. The law to be enforced cannot have a predetermined life. Like any other legislation, the life of legislation on these matters also will depend on the exigencies of national needs. What is important is that there must be a machinery for prior consultation and an institutional arrangement for review. This may assuage the feelings of those States or the Union which feel aggrieved.

2.5 The Seventh Schedule which spells out the jurisdiction of the Union and the States in legislating matters must be reviewed, keeping in view the overall national requirement. Consistent with national integrity and unity, equl importance should be given to development of a nation. The powers and responsibilities should be shared as co-equals.

PART III

ROLE OF THE GOVERNOR

3.1 The Political experience of the States where President's rule has been imposed under Article 356 has also necessitated a rethinking on the institution itself. We feel that the office of Governor has outlived its utility and we recommend the abolition of the office of Governor.

3.2 We are convinced that the Governor invariably acts as an agent and tool of the Union. We do not think any healthy convention can be fostered by Governor. We recommend the abolition of this post.

3.3 As mentioned earlier Governor's Report under Article 356 (1) to the President has shown an alarming degree of variations. It is not always that the recommendation of the Governor was in the spirit of the Constitution.

We have had instances where the Governors have preferred minority party leaders to form the Government. Whenever the political situation in a State gets confused and the party position in the Legislative Assembly is not clear, Governor's role become important. The functioning of democracy in the States cannot be left in the hands of the Governor who is a nominee of the Prime Minister. We recommend the abolition of office of Governor.

The Governors, by and large, accept the advice of the Council of Ministers for prorogation or dissolution of the Legislative Assembly. But we do not think that there is any need for the office of Governor.

3.4 We are convinced that there has been a gross misuse of the office of Governor. We do not consider it necessary to have the institution of Governor. The question of discretion of Governor in reserving bills for Presidential assent is irrelevant in the context of our recommendation to abolish the post of Governor.

3.5 No, we do not agree with the conclusion of the Indian Law Institute. What is important in such matters is not how many Bills have been delayed but what Bills have been delayed, and in what manner the President acting on the advice of Union Ministries revised the intention of the State Legislatures.

3.6 Is the Governor the Constitutional head of the State or is he an agent of the Union Government? Article 153 and 154 do not spell out the exact position, and it is widely believed that he does act for the President and the Union Government. This impression has gained ground by the actions of the Govenors in different States at different times. The Constitutional Bench of the Supreme Court unequivocally held that the Governor, though he is appointed by the President which means in effect and substance the Government of India, he is not amenable to the directions of the Government of India, nor is he accountable to them for the manner in which he

carries out his functions and duties. He is an independent Constitutional office which is not subject to the control of the Government ol India. Inspite of this judicial pronouncement by the Supreme Court in all significant respects the actual practice bears no relation to the constitutional position.

The white paper on the office of Governor released by Karnataka Government spells out the grave and dubious actions and decisions of Governors. The misdeed of Governor reached the Himalayan Height when the Governor of Andhra Pradesh dismissed the Telugu Desam majority party leader and Andhra Pradesh Chief Minister Sri N. T. Rama Rao on an alleged suspicion that Sri N. T. Rama Rao had lost majority support. After this incident the Governor forfeited whatever little credibility was left in that office. Andhra Pradesh State is convinced that no useful purpose is being served by the office of Governor which is a relic of the imperial past and the post should be abolished.

3.7 We recommend the abolition of the office of Governor. The mode of selection, security of tenure and other related issues does not therefore deserve any consideration.

3.8 The Governor need not perform the function of assessing majority in the House. We recommend the abolition of the Office of Governor. The question whether a Chief Minister enjoys a majority or not can always be tested on the floor of the House like any other issue coming up for decision and voting.

3.9 It is not always possible for the Legislature to elect a Chief Minister before passing vote of no-confidence against the previous Government. In the event of no political party having absolute majority and where coalition is also not possible, the only solution is to dissolve the House. In any case we do not propose any role for the Governor. We recommend the office of Governor be abolished.

3.10 We recommend the abolition of the office of Governor. The question of examining guidelines to Governor therefore does not arise.

PART IV

ADMINISTRATIVE RELATIONS

4.1 Articles 256, 257 and 365 are intended to ensure compliance of Union laws by recalcitrant States. Article 365 strengthens the hands of the Union by giving a Constitutional backing to enforce the Union directions. On no occasion did the State receive any direction.

4.2 Article 365 is penal provision intended to secure compliance of the States. If the law of the land is to be upheld, there is no other alternative. What is important is the exercise of power under this provision in good faith and in a bonafide manner.

4.3 It is always advisable for the Union to explore possibilities of securing compliance of Union directions by persuasion before resorting to the compulsive penal provisions of the Constitution.

4.4 We have already explained in the answer to Q. 3.6 that we recommed the abolition in the office of Governor and given the extreme example of gross misuse of the Governor's office.

4.5 Prolonged President's Rule will kill democratic initiative and make permanent solution even more difficult. Provisions under Clause 4 and 5 require no change.

4.6 The present arrangements for implementation of functions like Census and Elections by the State administration are working satisfactorily. In fact, these are the two areas where the State administration have acquitted very creditably in completing the time schedule operations.

4.7 It is a fact that Union intervention on State and Concurrent Lists has increased on account of the creation of a number of central agencies as cited in the question 4.7. These agencies may have been created in pursuance of a national policy to ensure a stable economy and a uniform Economic and Social balance in the country. There have been criticisms about the Agricultural Prices Commission and Food Corporation of India. In Central agencies which do not include representatives of the State Government, there is always a feeling that the Union does not take the States' view point into account before taking decisions.

4.8 In a co-operative federal structure like ours there is need for interdependence between the State Government on the one hand and the Union Government on the other. The present arrangement by which the best talent available in the country is harnessed and utilised for both Governments is necessary. The composition of the All India Services and the facility for national reference at any time will be a great cementing factor in Union-State relations. It must be appreciated that once an All India Service Officer is allotted to a State Cadre, he has to function under the authority of the State Government which utilises his services. Especially in disciplinary matters the State Government must have sufficient control. Under the present grievances procedure a Member of All India Service who is suspended by the State Government has right of appeal to the President. The appeal is decided by the President on the aid and advice of the Union Home Ministry. In other words, it is the Union Government which sits in judgement over the State Government in such matters. We recommend that the President should be advised by an independent and autonomous body like the Union Public Service Commission in such disciplinary matters.

It is necessary to remember that most of the senior posts in the Union Ministries are to be occupied by officers of the All India Services and, in particular of the I. A. S., on a deputation basis the 'period of deputation' being fixed. Unfortunately, in the past this aspect has been lost sight of, if not deliberately ignored. If the practice of officers of the State cadres working in Delhi reverting to the State Government at the end of the period of their deputation is followed strictly, it would result in such feeling being avoided. It would also have the additional advantage of more people working both in the Union Ministries in the States having the benefits of seeing both sides and, therefore, having a better understanding of the functioning of the Governments at both these levels. Such a knowledge cannot but be useful in removing any Union-State 'Irritant' real or imaginary.

4.9 The experience of the State Government that the Union Government has so far deployed the Central Reserve Police and other armed forces in aid of civil power only, on requisition from the State Government. Since the State Governments are not in a position to maintain a large force permanently which is very expensive, recourse to forces like the Central Reserve Police become necessary for the State Government.

4.10 In a democracy, media plays an important role. At present the Government media like Radio and Television (T. V.) are with the Union. Unlike some of the western countries where even private bodies control these media, in India even the State Government do not have these media under their control. For a variety of reasons it is felt that the State Governments also must be permitted to have their own media or at least a fair share of time in the Union Government's Radio and (T. V.) Television Programmes. In the absence of autonomous corporations controlling these media, this is a solution which should be acceptable to all concerned. We are not unaware that the misuse of these media can have global repurcussions and could land the country into strange situations affecting foreign relations. We recommend that a law be made, or the present law be amended, to enable State Governments, wherever feasible, to set up their stations, subject to such conditions or restrictions as necessary in the national interests. A statutory body may be set up to administer this Act so as to inspire in the State Government the confidence that any restriction which is imposed in really in the interests of the nation as a whole.

4.11 There has not been much impact on account of the deliberations of the Zonal Councils.

4.12 Much of the friction between the Union and the States in areas not covered by the Planning bodies could be reduced if the provisions of article 263 for setting up an Inter-State Council are utilised. This article has not been put to any worthwhile use till now, except in a very peripheral manner. There are several instances which will be outside the scope of the Planning process but need to be considered at the highest level. It will remove much of the misunderstanding not only beteween the Union and the States but among States *inter se*, if this Council, as envisaged in Article 263, is formed on a firm basis and also meets regularly, say not less than once or twice a year.

The State forum could also be taken advantage of for discussing even items which fall within the Union List so that even the Central Policies could be formulated after giving an opportunity to the States to express their view and simultaneously hear and understand the reasons of the Union Government for any proposed policy. The Inter-State Council is really a high-powered body and the consensus which emerges on various issues discussed in it should be given the highest consideration and not merely brushed aside after having gone through the formalities of holding such meetings. Such a course of consultations and consensus is likely to have results which are more lasting than discussions held between individual Ministers or among individual officers.

PART V

FINANCIAL RELATIONS

5.1 Transfer of resources, from the Centre to the States, has been taking place through the Finance Commission, Planning Commission and others. Some of these are statutory and others are discretionary transfers. In spite of sizeable transfers, the States have not become financially stable and in fact their position has deteriorated. The objectives of equity and reduction of regional imbalances also have not been achieved so far.

2. We feel that this situation, even after a sufficiently long period of 34 years, is mainly due to the spirit in which various Constitutional measures have been worked and its inherent federalism allowed to deteriorate into an arbitrary unitary system, and not to any inherent short-comings of the Constitution as such. Examples of this situation are very well known and the States have been pointing them out to various Finance Commissions and in the meetings of the NDC. Some of them may be briefly mentioned here.

3. (i) Surcharge on income tax levied in 1962-63 as a temporary measure, is still being continued, thus depriving the States of legitimate resources.

(ii) By an amendment of the Income Tax Act in 1959, the income tax paid by companies was brought under Corporation Tax which is not divisible with the States. Thus, a very elastic source of revenue has been denied to the States.

(iii) Resources collected through CDS, Bearer Bonds etc. which flow out of and A kin to Income Tax, are denied to the States.

(iv) The 3 commodities transferred from State Sales Tax to Additional Excise Duties under a tax rental agreement are not being exploited properly in spite of very strong sentiments of the States. Further, States are being steam rollered into transferring 5 more commodities from sales tax.

(v) Grant in lieu of the abolished tax on railway passenger fares is being fixed in a cavalier fashion, depriving the States of sizeable resources.

On a number of the above grievances of the States, the Finance Commission were convinced of the validity of the States' claims, but were constiained to make any amends because of their Terms of Reference and the *Letter* of the Constitution. Unless the Constitution is worked in the *spirit* in which it was framed and the federal polity is restored in its true sense, the States will continue to the supplicants for resources only and not true and full partners with the Centre.

5.2 The situation described by the ARC Study Team on Centre-State Relations, is more true now than before. The remedy lies in bringing more taxes such as Corporation Tax, Surcharge on Income tax etc., into the divisible pool and also equitable sharing of some of the non-tax revenues of the Union [i.e., (d) and (e) of the alternatives mentioned].

5.3 Without adequate transfer of resources and their equitable distribution among the States, the States have naturally failed in reducing regional imbalances in their own respective areas and the disparities among the States have also increased. This situation created as a result of the Centre's own mistaken actions cannot be cited as a reason for putting more powers in the hands of the Centre. Symptoms should not be mistaken for the disease. The remedy lies in restoring to the States their due status envisaged in the Constitution. Further, statutory transfer of resources account for about 40% of the total transfers to States. Over the years, the transfers from the Finance Commissions are becoming more equitable. Inspite of sizeable discretionery transfers by the Centre, backward States have not been able to advance relatively. It is precisely because of this that we contest the view that only a strong Centre with elastic resources can reduce regional imbalances.

5.4 We do not agree with view expressed in Q.5.3 above. However, to be in a position to transfer larger resources to the States for their balanced development, the Centre should mobilise resources through tax and non-tax measures, economy in expenditure and only a reasonable and safe deficit financing as a last resort.

2. We consider that the classification of budgets into Revenue and Capital is not so material as the overall picture. The Centre may be having Revenue Account deficits but its Capital Accounts has always been a surplus. Further, the deficits on Revenue Account are not simply because of transfer of resources to the States, but also in a large measure due to heavy non-plan expenditure (defence, etc) and encroachment into development sectors which are best left to the States for planned development. In view of this, the Centre can avoid a large measure of deficit financing by rearranging the priorities between the States and the Centre and economies in expenditure.

5.5 (a) We have already indicated our views in this regard in our Memorandum to the Eighth Finance Commission.

(b) The present formula is acceptable.

(c) Non-plan assistance should be limited to Natural Calamities Relief and a few other items. These discretionary transfers should be strictly limited.

5.6 We are not in favour of a 'special federal fund'. The existing institutions i.e., Finance Commission and Planning Commission are adequate, provided these instruments are utilised in the proper spirit.

5.7 The States have not been asking for transfer of certain taxation powers from the Centre to the States. The 3 principles of taxation mentioned in the Questionnaire are unexceptionable. What we are submitting is that the existing Constitutional provisions should not be nullified through Centre's unilateral actions, and a large measure of financial strength should be injected into the States for performing the tasks assigned to them under the Constitution.

5.8 We agree with this view except for the inclusion of Sales Tax. The Constitution had already allocated various taxes to the Centre and the States on the basis of sound principles of taxation, Sales Tax, which is the sheet anchor of States tax revenues and is an instrument of States' economic policies, should remain with the States. A Council of Central and State Finance Ministers exercising control over 4 Central taxes will go a long way in curbing the tendency of the Centre attribute to itself resources from surcharge on Income Tax, Bearer Bonds, etc.

5.9 We do not agree with the view that a permanent Finance Commission should deal with all resources transfers. Finance Commission and Planning Commission are meant for different purposes and they should continue to discharge them. A better coordination of their activities, however, is desirable.

5.10 We do not think that transfer of resources from the Union to the States have so far any direct bearing on promotion of efficiency and economy in expenditure and reduction of disparities in public expenditure.

2. We have always been trying to promote administrative efficiency and observe economy in expenditure, more so in the context of paucity of resources due to inadequate transfer of resources from the Centre.

3. Public expenditure includes all expenditure incurred by a Government both under Plan and Non-plan and also capital and revenue accounts. Because of the overall inadequacy of resources transferred and their inequitable distribution among the States, the disparities in Public Expenditure have not narrowed down.

5.11 This view reflects only one side of the coin. Transfer of resources by the Finance Commissions are made not on the basis of the allegedly inflated revenue deficit forecaste by States but on the basis of thorough examination and scrutiny by the Commissions on the basis of actuals for the previous years, firm decisions taken and implemented by the Governments etc. Finance Commission also evolve norms both for receipts and expenditure. To say that States would first waste funds simply because the resources are being transferred from the Centre, is far from the truth. As long as one is a 'giver' and the other is a 'taker', some exaggeration in claims cannot be ruled out. But transfers are made after a thorough scrutiny of the claims only.

2. Ours being a parliamentary democracy, different political parties come into power from time to time on the basis of their manifestos. Perceptions in regard to priorities are bound to differ from party to party and from one Government to another. What may appear populist viewed in one context, may not be perceived in the same manner in a different context. It would be far-fetched to presume that States waste resources only to earn more from the Finance Commissions. At the same time any scheme of devolutions should provide for encouraging financial discipline.

5.12 We have made this proposition before the Sixth and Seventh Commissions. We submitted to the Eighth Commission also that the approach of the Seventh Commission, in this regard should be continued.

5.13 We fully agree with the views expressed by the Seventh Finance Commission.

5.14 Even though the two examples given in the questionnaire appear as non-tax revenues in the Central budget, in essence they are not so.

2. Special Bearer Bonds Scheme was envisaged to mop up at least part of the black money circulating in the economy. The proceeds of the bearer bonds were primarily from the concealed incomes. Had the Government of India's tax collection machinery been more efficient, these incomes would have been subject to Income Tax and the net proceeds shared with the States. Hence we feel that the receipts from this scheme should have been shared with the States.

3. As regards administered prices of petroleum products, coal, iron, etc., being raised instead of excise duties on these items being increased, every one knows that this is only a stratagem employed by the Centre to deprive the States of their due share in resources.

4. Surcharge on Income Tax, Compulsory Deposit Scheme, etc., also come under this category of resources denied to the States.

5.15 No, they are not satisfactory and there is scope for improvement specially under market borrowings.

2. During the First Plan period, the share of States in the total market borrowings was 76% and came down to 63% in the Third Plan. It deteriorated thereafter and stood at 23% in the Sixth Plan period. Since the plan outlays of States and Centre are almost equal, there is every justification for the States' share being increased to at least 50% of the total market borrowings.

5.16 Because of the inadequate transfer of resources on the one hand and the ever incerasing burdens of committed expenditure, D.A. and pay increases to Government employees and teachers rising aspirations of the people, compulsions to undertake larger plan outlays etc., on the other, have resulted in larger deficits in State Budgets. This dis-equilibrium has to be remedied through larger transfer of resources on a permanent basis. Instead of this, the transfer of resources as a percentage of Centre's revenues has been steadily declining. It is this situation which requires urgent remedial measures.

5.17 A periodical review of the States' indebtedness (mainly to the Centre) and the measures suggested by the Sixth and Seventh Commissions, are only fire fighting exercises and do not touch the root causes.

2. We suggested to the Eighth Finance Commission that

(a) Loans and advances from the Central Government consolidated by the Seventh Finance Commission as well as those not consolidated, and outstanding as on 31-3-1984 may be written off. This will give a considerable relief to the capital account as well as revenue account.

(b) Loans and advances from the Central Government advanced during 1979-84 and expected to be outstanding as on 31-3-1984 but excluding special loans for clearing over-drafts may be consolidated and given a repayment period of 30 years for the entire amount.

(c) Plan and non-plan assistance from the Central Government expected to be given after 31-3-1984 may be given in the shape of 50% grants and 50% loans in view of the fact that even the outlays on irrigation and power projects and such other capital assets are not turning out to be productive in terms of finances of the State Government.

(d) The States' share of net small savings collections may be given as loans in perpetuity.

5.18 After nationalisation of major institutions of finance and the commercial banks, the questions of State's capacity does not arise; and the States never had any freedom, since these questions were always decided by the R.B.I. What we would like to see is a more reasonable vertical division of these drawings on private savings and their equitable distribution among the States.

5.19 We do not think the Centre is justified in charging a higher rate of interest from the States than what they were paying to the foreign creditors.

2. Some States are cornering a major portion of the "assistance for externally aided projects" for various reasons. It should be possible in devise a formula, outside the Gadgil formula, to compensate those States who could not avail of the assistance for externally aided projects.

5.20 No. Reserve Bank of India only fixes the total borrowing limits for the country as a whole for any year, based on its assessment of the economy, market conditions etc. It is the Central Government which is fixing the limits of individual States and the Centre. We have been urging the Planning Commission to evolve certain objective criteria for this purpose also to be approved by the N.D.C. But this has not been done so far. A loan council will only be duplication of the existing machinery and will not serve any purpose.

5.21 Doubling or trebling of the Ways and Means limits are not going to rectify the basic imbalance in the States' resources position, which results in overdrafts year after year. What is required is strengthening of the States' resources structure significantly. After this is achieved the States should be able to manage their finance prudently and without getting into overdrafts. Unless the resources based of States is widened and strengthened, no amount of tinkering with it by way of enhancing the "limits" etc. will help.

5.22 No. The Seventh Finance Commission had stated that : "in the matter of additional resource mobilisation the States as a whole have not lagged behind the Central Government and the performance of the States has been on the whole creditable."

(Chapter 9, Para 11)

However, there is always scope for improvements and further exploitation, especially in the rural sector of the economy.

5.23 We fully agree with the view expressed regard ing the Centre. The Centre is obviously aware of these short-comings and is taking remedial measures.

5.24 Yes, we think so.

5.25 We feel that although 34 years have passed since the framing of the Constitution the Government of India has, with the exception of two measures, not taken any action to exploit the levies visualised under Article 269. Even out of these two, the tax on Railway Passenger Fares was abolished long ago and only the Estate Duty remains in operation. The Centre should take urgent and appropriate measures under Article 269 to augment the resources of the State.

5.26 All States have been representing this issue before the various Finance Commissions. Our Government's views may be seen in our Memorandum submitted to the Eighth Finance Commission . We are of the view that the Central Government has been extremely remiss in this regard by limiting the annual grant to Rs. 23 crores, whereas it could be as high as Rs. 125 crores on a conservative estimate. in this connection, reference is also invited to Chapter 7 of the Report of the Seventh Finance Commission.

5.27 This grievance does not appear to have any substance. The budgets of Union Territories (Plan and Non-plan) are approved by the Ministry of Finance and fully financed by the Centre. Hence there is no question of depriving them of their share in the buoyancy in Central taxes.

5.28 Our views on this question were clearly spelt out in our Memorandum to the Eighth Finance Commission. The State Government has every interest in seeing that the amounts are efficiently utilised for the purpose for which they are meant. The financial procedures and evaluation methods applicable to all other expenditure, are employed for this expenditure also.

5.29 We consider that the creation of N.L.C., N.C.C. and N.E.C. is not necessary and they will serve no useful purpose.

5.30 We do not agree. Who collects the funds (or has a right to them) and on which people they are spent are very important for us. We do not want our State Government to be reduced to a non-entity We are equal partners with the Centre in our great endeavour for economic and social progress of our country. We do not welcome the idea of being a mere spending agency, directed and controlled by somebody else. Our Government represents our people and we have to be fully capable of discharging our responsibilities to them. in this connection the following extract from our Memorandum to the Seventh Finance Commission is relevant :

"Our submission is that revenues are not the crux of the matter in some of these issues. Just as man does not live by bread alone. state do not exist by revenues alone. It is not the power to spend that is the *sine qua non* of a State. This power is enjoyed by several bodies by a process of delegation or devolution. The crucial test of the State even of its pale version in a federal structure, is the power to tax. If this power of the field in which it can be exercised is so abridged as to be of little residual significance, the very nature of the State will undergo a change and consequently a basic alteration in the Centre-State balance in our federal structure would have taken place. We are aware of the many arguments for centralisation of the powers for taxation in a federal structure together with decentralisation of functions and the matching of the two through a process of devolution. But in this matter as in many others a stage comes when quantitative change becomes a qualitative change and we would submit that the reduction of the sphere of taxation of the State to only income-tax from agriculture would be such a state."

5.31 (a) We agree, Yes

(b) We consider this criticism is not justified. Attention is drawn to the reply to Q. 5.11.

(c) We do not think that a permanent National Expenditure Commission will serve any useful purpose, besides creating a few more jobs and adding to the existing infructuous expenditure.

5.32 There are no problems in this regard.

5.33 Audit reports contain evaluation audit also in the sense that different sectors are covered through a review of schemes.

5.34 Yes, we think so.

5.35 Yes, Even if there are some gaps, they are covered in the process of PAC's thorough discussions on the audit Reports.

5.36 Expenditure control through exchequer control can be and is exercised by the concerned State or Central Government only and this procedure is correct. C.A.G. has accounting and auditing functions and they should not be confused with expenditure control.

5.37 Yes, definitely.

5.38 We do not think that an Expenditure Commission is required. The existing statutory and legislative bodies are adequate for the purpose.

5.39 The scope of the question apparently covers need for detailed approvals at the level of Government of India for schemes fully or partially funded by them. While it is entirely correct that adequate monitory arrangements should be evolved, there is no need for the Centre to approve the minutes details of the projects. Since the States have adequate apparatus for formulating and approving the schemes, Centre may with advantage limit itself to issuing broad guidelines. Detailed approvals lead only to delays.

As regards Centrally Sponsored Schemes once the broad details of the scheme are finalised by the concerned Ministry the details framing of the scheme should be left to the State Government concerned where the local conditions may vary. There is considerable delay at present in getting sanctions from the concerned Ministries for these schemes. As in the case of State Plan Schemes there is a similar difficulty in furnishing audited figures of expenditure for Centrally Sponsored Schemes. The Central Government should not insist on furnishing of audited figures of expenditure.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 Eventhough "economic and social planning" is an entry in the concurrent list of Seventh Schedule of the Constitution, this also covers a large variety of activities which legitimately fall in the States sphere. As this entry is important for the development of national economy, it has contributed more than any other single entry, to the erosion of federalism and to the disturbance of the equilibrium between the Union and States. People's participation in the political process has increased enormously over the years and being very close to the people, the State Governments have to the very sensitive to the aspirations of the people. But there is inadequate participation of the States in the entire planning process. The Union has been getting involved increasingly in programmes which are within the domain of the State Governments. There have been, therefore, persistent complaints against the process of planning and decision taking at the Union level. The Planning Commission which came into existence, not through the Constitution but through an executive decision, is the all important body which formulates the national as well as the State level plans to conform to the overall objectives of the national plan. The Centrally Sponsored Schemes are conceived and formulated in detail by the concerned Union Ministries and the States are left with the task of execution only. Most of the schemes like soil and water conservation, minor fishing ports, DPAP, etc. are in the areas of States' constitutional responsibilities but are encroached upon by the Central Ministries. After several attempts through the NDC for reducing the expenditure on Centrally Sponsored Schemes, the NDC decided in 1968 that the expenditure of these Centrally Sponsored Schemes, should be limited to 1/6th of the total Central Assistance to States. Even this directive has been ignored in practice. Therefore, we feel that the Study Group of A.R.C. was right in its observations.

The remedial measures, therefore, lie in promoting initiative in the States and secure involvement of the States in the planning process. The national planning process should be witalised as a conjoint and co-operative effort of the Union and the States. This can be achieved by the establishment through a constitutional provision of the National Planning Development Council with the Prime Minister as the Chairman and Chief Ministers as the Members. The Planning Commission will be a technical are to be controlled and directed by the NPDC.

Broadly speaking, the functions of the proposed National Planning and Development Council could be :

(a) formulate the guidelines for economic and Social Planning to be undertaken by the Union and States in their respective spheres.

(b) consider and approve the Five Year Plans from time to time.

(c) mobilise the efforts and resources of the nation in support of the Five Year Plan.

(d) formulate and approve the principles governing allocation of plan resources between the public sector and the private sector, between the Union and the State and among the States.

(e) review from time to time the implementation of Five Year Plans.

(f) review the progress towards balanced development of all the States and to recommend appropriate measures for achieving this objective as soon as possible.

(g) consider and advise on all important policies that have a bearing on the economic and social.

(h) identify major projects in crucial sectors like irrigation involving large outlays with a view to ensuring liberal funding by the Centre to supplement State's resource. (This flexible approach for larger irrigation projects is required to ensure full utilisation of river waters at the same time not imposing undue burden on the State's resources). and

(i) in particular decide on allocation as between Union and the States, of the market borrowings, the external finances, discretionary transfers and advise on all taxation measures that effect both the Centre and the States.

6.2 As stated earlier, we conceive of a body established through a constitutional provision with larger involvement and of greater power than the existing N. D. Council and call it NPDC which is also to be representative both of the Union and States. The Planning Commission is envisaged to advise and assist the NPDC in its planning, process and functioning wholly, under the control and direction of NPDC instead of under the direction and control of the Union Government as hitherto. Indeed, Planning Commission would cease to have independent existence. It would only be technical arm and secretariat of NPDC. NPDC may remit specific matters to *ad hoc* or standing sub-committees constituted with the membership of NPDC itself. It may be noted that the NPDC is deliberately structured to be different from the Inter-State Council envisaged in Article 263.

6.3 The Planning Commission over the years has acquired a strategic position and has been weilding considerable power over the States in economic and financial matters. Since latter half of 60s there have been complaints about the working of Planning Commission, the process of planning and the manner of decision making on important economic matters of interest to States in general. The Planning Commission was originally envisaged to be an expert body which can command the confidence and respect of entire nation the Union and the States alike. Previously all acknowledged experts in the field were at the helm of it. The manner in which its members have been changed in recent past has reduced its credibility as a truely national institution of competence. Though national consensus is an essential desideratum for success of plan, the Planning Commission does not always view itself as a body answerable equally both to the Union and States. Its tone, superiority complex, rigid procedures, dictatorial attitude have given rise to resentment among the State Governments who have over the years developed their own competence and expertise and have become

increasingly assertive of their constitutional position. Some have come to think that it has become an instrument at Union Level to thwart the State programmes and policies. The Planning Commission has come to usurp some of the functions relating to financial devolution which properly belonged to Finance Commission in terms of Constitution. There has been lack of understanding and consultation between Planning Commission and State Governments and some economists observed that under the present system of planning the States tend to lose their initiative, fail in fulfilling the role set for them by the founding fathers of the Constitution—some suggesting even redefining the roles of Union and States in regard to economic Planning reorienting the existing institutions.

The present composition and procedure of Planning Commission provide for arithmetical exercises and to some extent imposing priorities/Schemes through the machanism of M.N.P. earmarked outlays and centrally sponsored Schemes. The Secretariat of N.P.D.C. should take on its rolls officials from the State Government who have had technical background and practical experience in matters relating to the development activities in the States so that the N.P.D.C. can advise the States better.

6.4 This is already covered.

6.5 This is already covered.

6.6 This is already covered.

6.7 At present, Central assistance is being given on the basis of 30% grant and 70% loan, the loan being repayable in 15 years. In view of increasing Central assistance to the States and the above pattern of assistance, the debt burden of the States has been going up, the effect of which is to reduce the quantum of resources actually available to the States for developmental purposes. Recognising this fact, assessment of the non-plan capital gap has also been included in the terms of reference of the Sixth, Seventh and Eighth Finance Commissions. It will be much better to prevent the problem from arising by increasing the grant component of the Central Assistance rather than creating it by attaching unrealistic conditions and then referring it for review by a body like the Finance Commission. Even from the point of view of the schemes included in the Plan, it would be evident that 70% of Plan investments cannot be said to be capable of generating resources for repayment thus justifying the 70% loan component. The grant component should therefore be increased to 50%.

Simultaneously, the terms of repayment of the loan component should be made much softer than they are at present. The loan component should consist of half ordinary loans as at present and half soft loans the repayment periodof which could for instance be 50 years and a reasonably low interest rate on the lines of I.D.A. loans to the Centre. It might superficially appear that this will affect the resources position of the Central Government, but it can easily be seen that in the ultimate analysis this would not be correct. To the extent repayment conditions are onerous and the States have an obligation to pay interest and repay the original the resources of the States for their Plans will be less which would mean the Central assistance for a given Plan outlay would have to be more. By making the terms more generous the States' resources will be released for financing the Plan and to that extent the need for Central Assistance will go down. But achieving this ultimate purpose, by making the terms of Central assistance more liberal, improves the States' own resources position and to that extent strengthens their financial autonomy.

The present pattern of release of Central assistance by the Ministry of Finance is all right and no change is called for in the present pattern.

The present distribution of Central assistance among the States based on the Gadgil Formula, which was evolved after a great deal of deliberation and as a result of consensus among States, has worked well in a field so complicated and so diverse. However, this formula and pattern of releases could continue only till such time the NPDC evolves new criteria on a comprehensive basis covering external finance, borrowing, other discretionary transfers etc.

6.8 It is seen that statutory transfers accounts for 40% while discretionary transfers 60% of total transfers. It is this preponderance of discretionary transfers (which are mostly in the form of loans) that negated the princip'e of viability of State Unit and made States vulnerable in their relations with the Union Government.

Once the Plan is approved, the quantum of assistance to each State from out of the total set aside for States in the Five Year Plan is determined mostly on the basis of the population as per modified Gadgil Formula. But the States under the constitution have a much larger developmental sphere than the union and being in immediate touch with the people they are sensitized to the stirrings at the grass roots. Yet they play no meaningful role in Planning process. The concentration at the Union level of decision making in economic matters in general and planning, in particular field to provide the requisite challenge to bring out the needed response from the States.

Secondly the quantum of resources set aside in the national plan for assistance to State Plans which affects the size of the State Plan is settled by the Union Finance Ministry and allotted to the Planning Commission. There is no known objective basis behind the decision of Finance Ministry.

Thirdly with regard to Centrally Sponsored Scheme States share is shown in State Plans though both Central and Centrally Sponsore Schemes are conceived and planned in detail by the Union Ministries only and the task left for the State is execution. Most of these schemes, as already stated, fall in the areas of States' constitutional responsibility.

The additionality given through the external assistance operates in favour of stronger States only besides the allocation of market borrowing and the investments through institutional finances.

We would therefore suggest that the transfer of resources outside the purview of Finance Commission should be the sole responsibility of the N.P.D. Commission whose constitution we propose.

6.9 This is already covered.

6.10 It is very much true that State Plans are distorted by large number of Centrally Sponsored Schemes. These schemes are conceived and planned in detail by the Union Ministries and not by the State Government. The only action called for is to provide for State's share in the State Plan and the task is to execute the schemes, most of which are in areas of State's constitutional responsibility. Given the complex system of the C. S. S., M. N. P. and earmarked outlays the States have very little manoeuverability to determine their own priorities. Further over the years there have been several changes in these schemes—some schemes transferring to State, some being added. There were therefore several attempts through N.D.C. to reduce the expenditure on a number of such schemes whereupon in 1968 the N. D. C. cleared that the expenditure on these be limited to 1/6 or 1/7 of total assistance of State Plans which is ignored. Further attempts also yielded no results.

6.11 The existing, monitoring and evaluation machinery in the Planning Commission is of very little help to the State Governments. There is need for development of monitoring and evaluation techniques relevant to the nature of the activities in the State Government. Such a technical expertise and guidance by the Planning Commission in the field monitoring & evaluation will be of use to the State Governments also. The State Governments will naturally avail of guidance and expertise if they are worthwhile. Perhaps monitoring and evaluation techniques will have to be designed to suit different sectors and indeed different departments within the State should be encouraged to build their own monitoring and evaluation systems. Trying to centralise monitoring and evaluation has not helped in the past.

6.12 This is already covered.

6.13 The basic problem in regard to the Planning Boards in the State Government is that their effectiveness is very limited since the frame available in determining plan priorities within the State Government is very marginal given the pattern of approval of the State Plans by the Central Government. Further, the relationship between the State Planning Boards and the Planning Commission of India is not at all defined. It may be better to leave each State Government to decide about the type of Planning Boards that they would like to build up. Prescribing the composition and functions of boards on a uniform pattern will not be desirable.

PART VII

MISCELLANEOUS

Industries

7.1 The constitution makers wanted Union of India to limit their control to specific industries and leave the rest to the State Government. However, Industries Development Regulation Act 1951 lists out various Industries which are brought under the purview of the Act and which gives complete powers to the Central and its agencies to control and regulate the development of industries. In actual practice, unless an industry gets the clearance under the IDR Act or is exempted from the purview of the Act by virtue of the Industrial size limit specified it will not be possible for the industries to come up. This has affected promotion and development of industries in the State.

7.2 (i) All industries except those connected with the Defence or National Security or war effort should be allowed to be regulated by the State Governments.

(ii) A large number of industries particularly in the consumer field and light industries will automatically get excluded from the purview of the control exercised by the Industries Development and Regulation Act.

7.3 The Planning Commission can recommend to the National Development Council in each plan period the broad indications of the level to which production can be increased in the different industries and what could be the pattern of specious distribution with reference to demand, transport capability etc., when these guidelines are adopted by the National Development Council each State Government could decide on the number of industries that can be encouraged in the State and what type of encouragement could be given. The normal rules relating to pollution etc. would be observed by the State Government as they are much interested in these as the Central Agencies. The applications for capital goods imports and the raw material from these industries will be dealt with as per the normal rules in force at each point of time.

7.4 The list relating to the import of machinery or raw material for small scale industries should be announced by the Govt. of India from time to time. When once that is done all efforts towards the developmental of small industries should be left to the State Govt. Liberal provisions regarding institutional finance to small Industries will greatly boosted by encouraging small local banks to be established, which would help in mobilising savings and channelising it to industrial investment.

7.5 The States which already have the developed base of industries and enterpreneurship have been able to get better share of the finances available through the Central Financing Institutions. There is need for the Central Financing Institutions to lay greater emphasis in the promotional aspects in so for as industrial backward states are concerned particularly having regard to availability of natural resources.

7.6 & 7.7 It is necessary that the location of Central Sector Public Enterprises—like—Steel Plants of Defence Establishments—shou'd be decided with reference to techno economic, considerations and the approval of location should be a matter that should be decided by the National Development Council. The National Development Council may not be able to discharge this function by itself but it is possible that the National Development Council should set up some arrangements which would enable proper rationable decisions to be taken on this issue.

7.8 The incentive policy has by and large worked well. However, unless the concept of backward area is limited to block or Taluk level the impact of incentive policy is very limited at present.

Trade and Commerce

8.1 Any matter affecting Centre and States or one or more States require a proper consultative machinery and furom. We feel that Inter-State Council contemplated under Article 263 of the Constitution would be an effective machinery for resolving the disputes to a considerable extent. In a growing economy there is always need for adjustment between States and as between State and Centre. Appointment of an authority is not likely to solve the problem by itself. What is really required is the appreciation of the genuine problems of the States and the traders, and practical solutions will have to be found as and when problems arise.

Agriculture

9.1 We would agree with the stand taken by the Study Team of the Administrative Reforms Commission on Centre-State Relations (1967).

9.2 We agree with the stand that Central and Centrally sponsored schemes being implemented through the State agency should ultimately form part of the State Sector and that their number should be kept to a minimum. However in practice this is not happening. At the time of approval of State Annual Plan and Five Year Plan the Planning Commission is obviously approving a lower provision keeping in view the desire of Government of India to have more and more Centrally sponsored schemes.

This is not a desirable practice.

9.3 The role of the State Governments in the formulation of Central and Centrally sponsored sectors of the agricultural plan is only nominal and the suggestions of the State Government in effecting adjustments in the working of the Central and Centrally sponsored schemes are also not given the due weight they deserve. The Central Government should have a dialogue with State Government before formulating any Central or Centrally sponsored scheme and it should also have annual review meeting wherein the State Government's view should be kept in view in making necessary adjustments.

9.4 Confining to fixation of minimum prices and provision of inputs we are to state that the Government of India is observing only a formality in consulting the State Government in the fixation of minimum or fair prices for agricultural items. The State Government's views are called for by the Agricultural Prices Commission through a questionnaire and the Government of India calls for the remarks of the State Government before accepting the recommendations of the APC. Instead of resorting to the paper correspondence it is desirable for the APC to convene a meeting of all Secretaries of State Governments before finalising their recommendations. The Government of India should also convene a meeting of all the Chief Ministers before finalising their decisions in fixation of prices.

In regard to the provision of strategic inputs, the Government of India allots the fertilisers to State Government. The State Government has no control over the distribution of fertilisers by the manufactures through private dealers and co-operatives. Once the Government of India allots certain quantity to a State from a particular manufacturer, the manufacturer is at liberty to allocate it between private dealers and co-operatives. Since the State Government would be interested in encouraging the distribution of fertilisers through co-operative sector, the State Government must have power to distribute the fertilisers given to a State between co-operatives, Agro-Industries and private dealers instead of vesting this power with manufacturers.

9.5 There are no particular problems in regard to agricultural research. So far as NABARD is concerned it is acting more like a wing of Government of India rather than a national autonomous body helping agricultural and rural development. This is clear from the fact that they have not been hopeful at all in assisting the MARKFED of this State in getting cash credit limits even against the Government guarantee from the State Co-operative Bank for undertaking stabilisation operations in cotton and groundnut.

Food and Civil Supplies

10.1 The present arrangements for Centre-State consultations are inadequte and does not help the State Government to discharge their responsibilities in a satisfactory manner.

10.2 Yes. Periodical review is absolutely necessary. (A consolidated note on the above two questions is submitted below).

The Essential Commodities Act is issued by the Government of India and any order issued by the State Government under Section 3 of the Act can only be with the prior concurrence of the Government of India even though it is the State Government that alone is in a position to implement the provisions of this Central Act.

The Rice Mill Levy Order (Andhra Pradesh Rice Procurement (Levy) Order 1984) has been issued under the Essential Commodities Act. According to this order every mill which manufactures rice has to deliver 50% as levy at the procurement prices to the Government agency viz. the Food Corporation of India. In 1974 the A. P. State Civil Supplies Corporation Ltd. came into existence and it was also made a State agency for procuring rice under mill levy. Though the A. P. State Civil Supplies Corporation Ltd. continued to be the procuring agency in the mill levy order, the procurement for Central Pool was only being done through the Food Corporation of India which is a Central agency.

Because of heavy commitment on the part of the State Government to supply rice to the vulnerable sections at Rs. 2/- per K. G. the State Govt. wanted to the supplement the needs of the Public Distribution system through procurement by the A. P. State Civil Supplies Corporation Ltd. also as the quantities that we have been getting from the Food Corporation of India are not sufficient to meet the entire demand of the public distribution system. However, though the Government of India have concurred in our proposal to have the A. P. State Civil Supplies Corporation Ltd. as another procurement agency in the levy order, they have, called upon us not to do any procurement through the A. P. State Civil Supplies

Corporation Ltd., and have mentioned that there should be only one agency for procuring rice *i. e.* Food Corporation of India.

In view of the need to procure more rice, the State Government proposed to increase the levy percentage in 1983-84 from 50% to 62.2/3%. However, the Government of India have not concurred in this and desired that the existing percentage of 50 should be continued. The State Government have also in order to maintain the price of rice at reasonable levels, proposed a clause in the Mill Levy Order to enable the Government to fix reasonable prices for purchase of levy-free stocks available with the millers by the State agencies. The Government of India have however turned down this proposal also and informed the State Government that there should not be any control over the prices of the levy-free stocks held by the millers.

The follwoing prices were suggested for paddy by the State Government for the crop year 1984-85;

Common	Rs. 160/- per quintal
Fine	Rs. 167/- per quintal
Superfine	Rs. 177/- per quintal

The Government of India fixed only the following prices :

Common	Rs. 137/- per quintal
Fine	Rs. 141/- per quintal
Superfine	Rs. 145/- per quintal

Even though the Agricultural Prices Commission had recommended to the Government of India to fix paddy prices at higher levels for the Southern States, the Government of India did not take into consideration the recommendation of the Agricultural Prices Commission but have just fixed support prices uniformly throughout the country.

When the Government of Andhra Pradesh proposed a payment of Rs. 10 per quintal over and above the support prices for paddy by the Rice Milling Industry and the Co-operatives (and not even by the State Government itself), the Government of India instructed that price over and above the support prices should not be paid by the State Government or even arranged to be paid by the Millers and Co-operatives. The Government of India desired the orders in which the millers have been requested to pay Rs. 10/- per quintal over and above the support prices be withdrawn with the result that the State Government had no alternative left except to follow the instructions given by the Government of India, though the State Government wanted to help the farmers by arranging purchases of paddy at a little more than support prices announced by the Government of India through the Rice Milling Industry and Co-operatives. Such restrictions go against the interests of the farmers of the Andhra Pradesh who grow paddy under extremely adverse agro-climatic conditions and whose prices for Kharif paddy, their main production never average the support prices announced by the Government of India.

The Government of India have fixed support prices for coarse grains but have not been undertaking price support operations through Food Corporation of India.

For the open market operations of price to be made through A. P. State Civil Supplies Corporation Limited, the Reserve Bank of India will not provide cash credit accommodation unless it is cleared by the Government of India. For release of cash credit accommodation, even for open market purchases for the public distribution system (not procured parallel to Food Corporation of India) the Reserve Bank of India insist on clearance from the Government of India.

The requirement of the State Government is about 1.75 lakh tonnes of rice per month, in view of the rationalisation of distribution. Despite repeated offers by us to procure more, give more to the Central Pool for Centre's own retention and draw more also for our use, the Government of India have only been making 80,000 tonnes of rice per month and the remaining 9,53,000 tonnes have to be bought from the mills at negotiated prices from levy-free stocks and not at procurement prices in view of Government of India's direction that no agency other than the Food Corporation of India should procure rice. Recently, the Government of India have been taking the stand that higher levels of procurement are unhealthy, even though there is dire need to build up buffer rice stocks in the country and rice is just not available in the international markets, unlike wheat, whatever may be the price of Government of India is prepared to pay for the foreign rice.

The Government of India have not been able to allot palmolien oil to meet our minimum requirements. In order to ensure availability of groundnut oil in the open market and also with a view to making available groundnut oil to the consumers at reasonable prices. We approached the Government of India for giving concurrence for a levy order on groundnut oil so that the State could procure groundnut oil and supply to the vulnerable sections at reasonable prices and to regulate movement of levy free groundnut oil as in the case of rice. However, the Government of India did not permit a levy on groundnut and groundnut oil on the ground that Andhra Pradesh is a deficit State in groundnut production.

Solutions

1. The Government of India may permit the State Government to carry out any amendments in Control Orders issued under the Essential Commodities Act in the interests of ensuring fair and equitable distribution of essential commodities in Andhra Pradesh without reference to Government of India for concurrence. However, the Government of Andhra Pradesh will keep the Government of India informed of the amendments carried out in the control orders under the Essentail Commodities Act.

2. The State Government may be delegated with the powers to have its own agency besides Central Government's agency for procurement of rice.

3. The State Government may be delegated with the powers to fix the prices of levy-free rice also with a view to controlling the prices in the open market, and also for sale to the Andhra Pradesh State Civil Supplies Corporation Limited, of course keeping in

view the cost of production by the millers, less, if any, sustained by him in delivering levy etc. This measure is necessary to ensure that the prices are kept under the control in the open market and also to ensure availability of rice within the State.

4. The Government of India may permit the State Government arranging payment of extra amount than that fixed by the Government of India for paddy by the rice milling industry and co-operatives (Not by State Government).

5. The State Government may also be delegated with the powers to fix the levy percentage taking into consideration the local needs, etc.

6. The State Government may be permitted to draw the rice required for its public distribution system from out of the quantities delivered to the Food Corporation of India as levy by the millers. No ceiling need be imposed on these drawals. The State Government may be given power to deliver to the Food Corporation of India, whatever quantity is possible and draw the quantity after giving the rice meant for Central Pool.

7. The stocks remaining unlifted from the Food Corporation of India of a particular month may be permitted to be drawn in the next month, without imposing restriction that it should be drawn only before 10th of the succeeding month.

8. The Reserve Bank of India may be informed that cash credit accommodation to the State agency may be given without any clearance from the Government of India so long as the State Government is adopting the policy laid down by the Government of India in the matter of procurement.

EDUCATION

11.1 The Criticism does not seem to be justified. In fact our view is that the Central Government should take greater initiative and leader ship provide financial support to the State Governments, in particular, in the following areas :

(1) Status and Education of Teachers.

(2) Universal Elementary Education.

(3) Vocationalisation of Secondary Education.

(4) Equalisation of educational opportunities and improving the levels of educational growth in different States.

(5) Improvement of educational Standards.

11.2 The University Grants Commission with its main objective of co-ordinating, promoting and maintaining educational standards in Higher Education, should ensure fair and equitable distribution of its grant among different Universities in various parts of the Country. There has been a feeling that the funds from this organisation are not reaching the needy Universities to the required extent. It will be worthwhile to consider whether setting up of Regional, U.G.Cs for different regions in the country, could help in more equitable allocation of funds to Universities in different regions or in the alternative a representative of the State Government should be included in the Commission so that the views of the State can be projected. There should be detailed and indepth inspection of Universities by the U.G.C., say, once in three years to assess objectively the development needs of Higher Education and to provide the required financial support.

11.3 The University Grants Commission helps to evolve consensus among the States as well as between the Centre and the States in the field of higher education. There is no such body to achieve this objective as far as primary and secondary Education is concerned. The setting up of a Commission on the lines of University Grants Commission may be considered for evolving consensus among the States as well as between the Centre and the States in the field of Primary and Secondary Education.

11.4 The Constitution of India confers certain cultural and educational Rights to minorities. Art, 30 of the Constitution enjoins that all minorities whether based on religion or language shall have the right to establish and administer educational institutions of their choice. Further the State shall not in granting aid to educational institutions discriminate against any educatunal institution on the ground that it is under the management of a minority based on religion or language. Various religious institutions and other denominal Institutions have established educational institutions. Some of them are also receiving grants-in-aid. Though the institutions are established and managed by a paticular religions denomination etc., admission into these intitutions is open to all irrespective of the religions or language to which the candidates belong. Taking protection under the guarantees enshrined in the constitution, the managements of these institutions are not following various rules and regulations in admissions, appointments and also service protection to the teaching and the non-teaching staff. At present there does not seem to be any guidelines to determine whether an institution is a minority instituion etc. This Government Feels that it is necessary to define classified minority institutions and their privileges. There have been no specific instances of conflicts.

11.5 Hither-to the issues are sought to be finalised through discussions and consultations, in forms like the C.A.B.E. (Central Advisory Board of Education).

Inter-Governmental Co-ordination

12.1 In India there are agencies like National Development Council, the Planning Commission, Inter-State Councils, etc., which are expected to resolve problems which arise with regard to Centre-State relations. We recommend that a National Planning and Development Council (NPDC) be created through and appropriate consitutional provision. The members of N.P.D.C. should have the Prime Minister as the Chairman and Chief Ministers as Members. The Planning Commission should become a technical arm and Secretariat of the NPDC. In addition to the matters relating Five Year Plans, the NPDC should become a body in which continuous consultations take place on all matters touching the Union-State relations on finance and planning. In particular this should cover the extent of allocation of resources for Plan, borrowing, external finances, discretionary transfers and taxation measures affecting both the Centre and the States. Further the

NPDC should identify major projects in crucial sectors like Irrigation involving large outlays with a view to ensuring liberal funding by the Centre to supplement States resources. This flexible approach for larger Irrigation projects is required to ensure full utilisation of river waters at the same time without imposing undue burden on the States' resources. It should be possible for the NPDC to remit specific matters to *ad-hoc* or standing Sub-Committees constituted with the memberships of the NPDC itself. It may be noted that the NPDC is deliberately structured to be differential from the Inter-State Council envisaged in Article 263. This Council which has to be created by a Presidential order may not have the requisite degree of stability, continuity and immunity from the sudden changes that may be demanded by the Union Cabinet through recourse to Article 74.

In addition, more effective use of Inter-State Councils envisaged in Article 263 will go a long way in resolving inter-governmental problems. This restructuring is in lieu of the present arrangement.

Andhra Pradesh

MEMORANDUM

Federalism in India is a relic of the imperial past. In origin, the British India administration was no more than company management. With the Queen's Proclamation in 1863, the Head of British India became a Crown's Representative. Ever since, the entire political and administrative structures within the country were oriented towards serving the colonial master abroad with the labour of local vassals. Neither the cultural heritage nor other bonds of unity of the Indian people was ever a factor in the delimitation of the British Empire into various federal units. Provincial boundaries were formed to suit military strategy and administrative convenience. Province itself had no meaning as it did not cannote a common clime or culture. In reality, there was no federation.

When India heard the lilting notes of dawning freedom on 15th August, 1947, ecstasy was effervescing over the country. The triumph epiated the most intellectual mind. In their anxiety to proclaim a written constitution, the founding fathers relied heavily upon the Government of India Act, 1935 for spelling out the federal features of the Constitution. Definitely, the fundamental law of the country intended to govern the slaves could not be made the basis for the governance of a free people. The Government of India Act, 1935, could not have anticipated the soaring ambitions and aspiration of a jubilant free people. nor was there any realisation of the importance of finer and subtler influences like language and culture.

It is not proper to compare the Union of a free republican India with an Empire or a Kingdom in India in the pre-British era, and to stress that an Empire or a Kingdom, disintegrated, and India suffered, whenever the central power became weak, the analogy is erroneous. Empires and Kingdoms of earlier times were acquired by force and maintained by force. The Republic of India was established willingly by the people of India. Over centralisation of authority and the unconstitutional accumulation of power by a Union Government are more like the force that is associated with autocratic Empires and Kingdoms. It is that very Central authocracy, and not the rightful claims of our States that can endanger the unity and integrity of the country. It is such danger to the country's interests which requires to be investigated, loacated and guarded against. The Sarkaria Commission is entrusted with that investigation. The language of reference made it clear that it is not just that the working of the Constitution for three decades is to be academically reviewed. Distortions and perversions introduced into the nations, political and economic life by forces not altogether democratic, not altogether untouched by party selfishness and individual selfishness, call for an analysis of those forces, constitutional and extra-constitutional, which hinder-democracy rather than straighten it out, and which stand in the way of development of the people. Also, it is not as if the Union and States are separate solidified political and economic blocks of power or as if the States as solidified blocks of power suffered, at the hands of the Union as another solidified block of power. It is that the people of each State as part of the people of India suffered a set-back politically, economically and socially, in the administrative areas of the States, by the unconstitutional accumulations of power in the hands of the Union Government (so far away) and by the un-constitutional depletion of power in the hands of the State Governments (so near).

The basic feature of the Indian Constitution is cooperative federalism. All federalism is co-operative. Ours particularly is. In the U. S. A., Canada and Australia, for instance, in a matter like Income-tax which both, Union and State can levy against a citizen, there can be said to exist an avoidable form of competitive federalism. Duel citizenship in State and Federation is another example of that competition. The Constitution of India does not countenance competition between Union and State or between State and State. There is an anticipatory elaborateness in our Constitution by the incorporation into the Articles of our Constitution of the import of many classic decisions of the highest courts adjudicating political and fiscal rights in the other three federations. Still, our Constitution takes added care to stress the principale of co-operation between the Union of India and the States of India. It strives to eliminate conflict between the Union and the States, or between State and State. It leaves no possible situation of disagreement really unprovided for. It makes room for constitutional or statutory bodies which are to step in to avoid conflict or confusion of rights and duties, as between the Union and the States. Even then, it must be agreed, first that constitutional hurts and irritations experienced by the federal units in India are real, and scound, that they are not peculiar to India.

If the nature of the Indian Constitution is co-operative federalism, the aim of the Indian Constitution is equilibrium, political, economic and social Parts III and IV. Fundamental Rights and Directive Principles, stress social equilibrium desired as between man and man or group and group. Parts XII and XIII, Finance, Trade and Commerce, decide the economic equilibrium desired as between the Union and the States. The preamble itself first, then Part

XI (Relations between the Union and the States), then the Seventh Schedule, then Chapter IV of Part V and Chapter V of Part VII (the Judiciary) and, in fact, all the provisions of the Constitution define the political and functional equilibrium desired as between the Union and the States, as between the Legislature and the Excecutive and as between them both and the Judiciary. There is no assumption, search where you like in the Constitution, of authority in one creature of the Constitution and of subordination in another creature of it. And yet Reports associated with some eminent men of law and Seminars associated with well-known scholars and administrators proceed on a contrary assumption even when seeking the goal we all seek : a harmonious Union-State relationship under our Constitution. In fact, the equilibrium we speak of as cleraly contemplated by our Constitution is disturbed whenever unconstitutional authority is assumed, or unconstitutional subordination is imposed in the name of the so-called 'quasifederality' of the Constitution of India. Such an imbalance is today's reality. That error, we assert again, is not so much in the Constitution itself as in the working of it differently by different political parties at different times for their own benefit. The dominance of a single political party for three decades between 1947 and 1977, in the affairs both of the Union and of the bulk of the units of the Union was the most important of the reasons for the fall in practical political standards of federality. Political parties and political personalities failed the federal Constitution of India far more than the Constitution of India failed the federal people of India or the federal States of India.

Ineffective or inadequate representation of a State's point of view in the affairs of the Union, however caused, certainly leads to a sense of neglect among the people of that State. State governance touches a citizen far more surely and far more frequently, and directly than the Union governance. It is a familiar constitutional principle of federal distribution of legislative and executive powers that subjects or items of governance (Entries like in the Lists of the Seventh Schedule of the Constitution of India) which bear upon a citizen most in life's routine should, as far as possible be placed and governed nearest to him : for his due appreciation or effective protest in matters political and administrative. For that very reason, a citizen of India, in normal times and in a normal way, identifies himself more than closely with the State to which he belongs or in which he is domiciled rather than with the Union to which he also belongs and of which he is a citizen. His Loyalty to the Union is unambiguous and complete His identification, in a national crisis, with the governance of the Union is total, forgetful of all regional ties and reckless of all odds. The Wars with China and Pakistan have shown that the Indian citizen is Indian to the core. But a citizen's identification with his State in normal times is more spontaneous, and he wears his loyalty to his State nearer his skin : Nevertheless, a citizen of the Union of India who is at the same time domiciled in his State—the State of Andhra Pradesh, in this instance—has no divided loyalty in him. The people of Andhra Pradesh stood formost in the ranks of patriots who fought for Indian freedom, whether India fought the British or fought the stooges of the British. The history of those times both in Andhra and in Telangana, now one Andhra, Pradesh, is replete with instances of man and women who sacrificed their all for their nation and their country, and for nothing lesser.

The idea of 'Federalism' is also inherent in Part XII of the Constitution which deals with financial rights, duties and obligations in matters of taxation, etc., as between the Union and the States. Seventh Schedule proclaims a federation. The desire of the States, expressed vehemently by some of them and not so vehemently by some others that there should be a re-evaluation of the relations in the political, legislative, administrative, fiscal and financial areas between the Union and the States, and that healthier conventions and practices (and even constitutional amendments, if necessary) should be brought about in order to give effect to the new thinking released by a re-evaluation of the existing system is proof of healthy democratic urges in the nation.

We are still a largely illiterate people in all the States of India. The great bulk of our villages are without drinking water. More than half our population literally starves every day for want of a second square meal. Quite a large number go without a satisfactory first. The nation's health is substandard. In cities, towns and villages, one finds that hospitals, doctors, nurses and medicines are notoriously scarce or inadequate. We are a poor nation. Industry and Agriculture are only making the rich richer, and not quite changing the lot of the poor. The greater part of the items of welfare governance are entrusted to the States by the Constitution, and the States are systematically deprived of financial resources of required political power and economic enterprise, by insidious processes. The Union Government prescribes policies and programmes to a State within the State's own sphere. If it is not somebody's Twenty-Point Programme, it is somebody's else's Six-Point Programme, each an encroachment on the jurisdiction of the States. Political Propaganda on behalf of the party ruling the Union and attempting to spread its rule to the States become more important than State activity on its own initiative for its own economic progress. Union Governments steadily expand their Ministries and Departments to include more and more State Subjects. The States become a happy hunting-ground for the Union in crucial political and economic areas of State activity. The State slowly ceases to be a viable political or economic unit.

The powers of Articles 270, 275, 282, etc., are misinterpreted and misused by successive Union Governments. Political parties, with High Commands at the All-India level and with an obedient following in the regions, create a hierarchy of party leadership and party following, encourage the dependence of the men of the regions on the men of the High Command, and imbue the body politic with sub-servience and lack of initiative. Political parties, when they also occupy seats of power in the Union and in the States, tend to confuse their constitutional positions of responsibility, and their 'little brief authority' in the Union and in the States with their own steep grades of party hierarchy, with their Central High Command and their dumb regional following. To them it is a one-party Government ruling an amalgam of their Union and the States, not known to the Constitution. And in their view their High Commands govern Union and State as one monolithic political

structure. The States are treated by successive Union Governments as mere owned subsidiaries and not the equals of the Union. The truth is that their respective powers may be unequal but their power is equal. It is in this spirit that the States of India now seek the restoration of this constitutional equality between the States of India and the Union of India. When a federal constitution, drawn up by the people of India, vests certain powers in a Federal Union and certain other powers in the Federal Unit, the Constitution so drawn up treats both the Federal Union and the Federal Unit equally, as equal creatures of the Constitution. The Constitution is equi-distant from both, looks on both with an equal eye. This Memorandum seeks to assert this Constitutional equality, and to press for this equi-distance of the Constitution from both the Union of India and the Units of that Union.

THE GOVERNOR

Article 153 of the Constitution lays down that there shall be a Governor for each State and Article 154 vests the executive powers of the State in him. Through the personality of the Governor, the Continuity of Administration is expressed. However, most States have grave suspicions about the office of Governor which can be misused and perverted beyond the pale of recognition. A catalogue of mistakes and mischiefs played by the Governors is available in the 'White paper on the Office of Governor' released by the Government of Karnataka. Since the publication of the white paper, many more mechinations of the Governor have come to light. The most despicable and cruel assault on democracy was inflicted by the Governor of Andhra Pradesh when the Telugu Desam majority party leader Sri N. T. Rama Rao and his cabinet was dismissed on an alleged suspicion that the Chief Minister did not enjoy the majority support in the legislature. By virtue of this single action of the Governor of Andhra Pradesh, the office of Governor has forfeited credibility for ever. No effort on the part of well meaning statesman and politicians would convince Andhra Pradesh State that the Office of Governor is of high public importance, invested with dignity and decorum. The State Government is convinced beyond any doubt that the Governor has no useful role to play in the working of the Constitution or in the Administration of the States.

However, noble or moral a Governor may be, however, successful or statesman like he may be, however thoughtful and subtle he may be, he is a marionette whose strings are pulled by the Prime Minister of India.

An objective analysis of the office of Governor will show that he is the last vestige of imperialism, a modified version of the agent of Viceroy. Whatever may have been his importance during British administration, he has no place in modern democracy. An appointee who holds office by virtue of the fancy of the Prime Minister and during the 'Pleasure of the President' cannot but be a servant of the Union. Democratic political systems based on direct elections have thrown up mass leaders who owe an obligation to the people to fulfil their aspirations. The Chief Minister represents the quintessence of popular will in the State and there can be no higher authority in the State than the Chief Minister. It is the responsibility of the Chief Minister who has got elected by the people to run the Administration and to satisfy the people. A Prime Minister's nominee overseeing the actions of the Chief Minister is anachronistic. The least that we can do to such an office is to accord an unceremonious burial. It is strongly recommended that the institution of the Governor be abolished.

THE ROLE OF ALL INDIA SERVICES

At present the top Civil Services posts in the State are held by member of the All India Services belonging to the Indian Administrative Service, the Indian Police Service and the Indi n Forest Service. Prior to 1947 the top Civil posts in the country, especially at the Government level were managed by Members of the Indian Civil Service. The same British tradition has been continued even today and All India Service Officers are appointed to the State Cadtres with the provision for deputation to Serve in the Union Government.

The All India Service Cadre and Recruitment rules and also other basic service rules regarding the discipline, control and appeals are vested in the Union Home Ministry, Even though there is a provision that whenever amendments to these statutory rules are proposed, consent of the majority of States has to be obtained, it has been possible for the Union Home Ministry to secure whatever changes it wanted in the composition and control of the All India Services. It must be appreciated that once an All India Service Officer is allotted to a State Cadre, he has to function under the authority of the State Government which utilises his services.

Recently the Andhra Pradesh State Government has been faced with serious embarrassment by Central interference in disciplinary matters pertaining to Members of All India Services. The State Government had taken action to suspend some of the All India Service Officers on grounds of corruption and lack of integrity but the Union Government had ordered their reinstatement pending enquiry. These Officers against whom the State Government had initiated preliminary action of suspension but have got reinstated by the Centre canot be effective and cannot be entrusted with any responsible position until their enquiry is over. In this context, it becomes imparative to keep these officers virtually under suspension by not giving them a suitable posting. This anomalous situation could be avoided if the Union Government refrains from interfering with the disciplinary action of the State Government until the enquiry proceedings are over. In the alternative if the Union Government feels strongly about the reinstatement of an officer pending enquiry then it should be possible for the Union Government to accommodate such officers in the Union Government's duty posts till such time as enquiry is over.

Under the present grievances procedure a member of All India Service who is suspended by the State Government has a right of appeal to the President who is the appointing authority for such officers. The President, however, acts on the aid and advice of the Union Home Ministry who is a part of the Union Government. In effect, the appeal of the All India Service Officer is decided by the Union

Government and not by the President. Perhaps the States will have greater confidence in the findings and judgements and also the final orders of the President if he were to act as President on the aid and advice of an independent and autonomous body like the Union Public Service Commission. In the absence of such an arrangement it is clear that the State Government's judgement is questioned by the Union Government. This could lead to unnecessary friction between the Union and the States. It is time that the Union Government considered setting up an independent advisory agency to the President to deal with the All India Disciplinary appeal matters. The State Government is of the view that if the President passes an order on the advice of Union Home Ministry, it ceases to have the stamp of impartiality and objectivity.

Considering the fact that a large part of administration is dealt with and even finally disposed off at bureaucratic levels even in the Union Government, it is very necessary that the States' interests are protected by adequate representation of the officers from the States at the various levels of bureaucracy in Union posts. States must have a right to be represented in the Union bureaucracy.

INTER-STATE COUNCIL

The constitutional provision under Article 263 for establishment of Inter-State Council should be effectively utilised. There has been some controversy about the nature of this constitutional body called Inter-State Council and its role. The Article reads :

"If at any time it appears to the President that the public interest would be served by the establishment of a council charged with the duty of—

(a) Inquiring into the end advising upon disputes which may have arisen between States;

(b) Investigating and discussing subjects in which some or all of the States, or the Union and one or more of the States, have a common interest; or

(c) Making recommendations upon any such subject and, in particular, recommendations for the better co-ordination of policy and action with respect to that subject;

it shall be lawful for the President by order to establish such a council, and to define the nature of the duties to be performed by it and its organisation and procedure.

By notification of 8th August, 1952, the Government of India in the Ministry of Health constituted a Central Council of Health with the following duties to be performed:

(a) to consider and recommend broad lines of policy in regard to matters concerning health in all its aspects, suggest the provisions of remedial and preventive care, environment hygeine, nutrition, health education and the promotion of facilities for training and research;

(b) to make proposals for legislation in fields of activity relating to medical and public health matters, laying down the pattern of development for the country as a whole;

(c) to examine the whole field of possible co-operation on a wide basis in regard to inter-state quarantine during time of festivals, outbreak of epidemic diseases and serious calamities such as earthquake and famine and to draw up a common programme of action;

(d) to make recommendations to the Central Government regarding distribution of available grants-in-aid for health purposes to the States and to review periodically the work accomplished in different areas through the utilisation of the grants-in-aid; and

(e) to establish any organisation or organisations invested with appropriate functions for promoting and maintaining co-operation between the Central and State Health Administrations".

Other notifications issued so far relate to Panchayat Raj and Sales Tax and have similar features. These Councils, however, have not been put to objective use for resolving Inter-State or Union-State problems. This forum should be utilised for discussing matters which do not pertain to planning and development and which are mostly administrative in character. The composition, the duration and the functions of such councils could be decided on the basis of local and administrative requirements. It would be a healthy practice to refer all proposed legislations in the Concurrent List to such representative Inter-State Council for eliciting their opinions. A forum where free and fair discussion could take place on issues affecting Inter-State and Union-State relations is not only useful but is also necessary. It shall be a noble constitutional devise for discussing the nations' problems generally before those problems become intractable but particularly to maintain fair and just harmonious constitutional relations between the Union and the States or between State and State

CONCURRENT LEGISLATION

Concurrent Legislation by the Union and by the States on the States on the entries enumerated to List-III of the Seventh Schedule gives scope for controversy between the Union and the States. Parliamentary Legislation in Concurrent List does not require the consent of the States. There is no machinery or process even for consultation between the Union and the States in the manner of Legislation by Parliament on an Entry in the Concurrent List. Nor any convention or practice grown in respect of Concurrent List by the Parliament. This is an unfortunate State of affairs.

Some of the important Entries in the Concurrent List of Seventh Schedule are:

(a) Entry 20, Economic and Social Planning;

(b) Entry 17 (a), Forests;

(c) Entry 34, Price Control;

(d) Entry 33(b) Trade and Commerce in, and Production, supply and distribution of food stuffs, including oil seeds and oils ;

(e) Entry 38, Electricity;

(f) Entry 25, Education including technical education, medical education and universities, subject to the provisions of Entries 63, 64, 65 and 66 of List I; Vocational and technical training of Labour; and

(g) Acquisition and requisition of Property.

A glaring example of legislative arrogance on the part of the Union relates to the Entry forest. It was mentioned in the State List and was lifted into the concurrent List as late as 1976 and became effective from 3rd January, 1977 by the 42nd Amendment. As early as 1967, A.P. Act of 1967 (Sec. 28) had provided "No owner of any forest without the previous permission of a District Collector, cut trees or do any act likely to denude the forest or diminish its utility". The same theme was almost repeated by Parliament in 1980 by its Act of 1980 (Sec. 2 of the Act 69 of 1980). The State Government of Andhra Pradesh applied to the Union Government for permission to cuts a few trees in the forests to lay the road and another to lay electric line. One of these related to Telugu Ganga Project. The Union Government raised several querries about the possibilities of alternative courses etc. The Union Governments correspondence with the State Government smacks of dealing with a party rather than a responsible State Government.

On the very encroachment by the Union on the State Powers through the device of concurrent Legislation serious damage has been done to the States' powers even in respect of the State List. Three sets of Entries are important in this context ·

(a) Entries 7 to 52 of List-I and Entry 24 of List-II, which deal with Industries;

(b) Entry 54 of List-I and Entries 23 and 50 of List-II which deal with Mines and Mineral Development and Taxes on mineral rights;

(c) Entry 56 of List-I and Entry 17 of List-II which deal with water and irrigation.

Industries is a subject primarily of the State and they are subjected to some restrictions that may be imposed in the Parliament in the Public interest but as a result of Industries Development and Regulation Act, 1951. State lost their jurisdiction in respect of Industries wholly and completely. Under the pretext of public interest the parliament has emasculated the State Legislatures of its legitimate right to regulate industries. Similarly Mines and Minerals Regulation and Development Act openly ousted the Legislative Jurisdiction of the State in respect of Mines and Minerals. Only saving grace left in the train of destruction of States Powers was a feeble provision under section 15 of the Act by which the State Governments have been given powers to frame rules in respect of Minor Minerals.

It is only worthwhile noting that although Irrigation is a State Subject (Vide Entry 17 of List-III) the competence of the State is limited by the provision of Entry 56 of the Union List, "Regulation and Development of Inter-State rivers and river valleys to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedinet in the public interest".

The main object of including entries in the Concurrent List is to enable the Union to legislate on a matter which prima facie is State's domain, but which in the larger interest of nation do require union legislation. But the indiscriminate use of Concurrent List by the Union and the transfer of entries from State list to Concurrent List has destroyed the spirit of this enabling provision. The Concurrent list has become a convenient tool in the hands of the Union to encroach upon the legitimate spheres of States activities. This should not be allowed to happen. We feel that Union should not have recourse to the concurrent list of transfer entries from State list to Concurrent List unless the subject is of such a national importance and in real national interest which compel such a transfer of Power from the States to Union. Even in such cases there must be a prior consultation with the States before any Union legislation is placed before the Parliament. The Union must take the States into full confidence in dealing with matters relating to concurrent list.

PLANNING AND FINANCIAL RELATIONS

Transfer of Resources

1. The Constitution of India has provided for division of responsibilities between Union and States, and financial powers to meet these responsibilities. The instrument of Finance Commission was devised by founding fathers of the Constitution to meet the changing circumstances. However, a number of developments have taken place in the last 35 years leading to a totally unsustainable level of a symmetry between the resources and the responsibilities of the State Governments. The reasons for the emergence of this situation must be recognised as follows :

(a) The Union Government adopted a number of devices to circumvent the Constitution in the field of taxation affecting the States adversely.

(b) The mechanism of market borrowings has emerged as an important source—the access to which is virtually controlled and allocated by the Union Government.

(c) External borrowings and External assistance have also become extremely important sources of funding public investments and are monopoly of the Union Government.

(d) The discretionary transfers (as distinct from statutory devolution under awards of Finance Commission) have increased in quantum as well as complexity—apart from the terms of such transfers themselves being designed to perpetuate dependency relationship.

(e) Large scale acceptance of the concept of welfare State has resulted in larger responsibilities for the State Government than could have been envisaged by the Constitution-makers.

2. Some of the measures adopted by the Union which are in the nature of circumventing the Constitution and depriving the States of their due share are :

(i) Surcharge on Income-tax levied in 1962-63 as a temporary measure and continued indefinitely (abolished very recently only).

(ii) By an amendment of the Income Tax Act in 1959, the Income-tax paid by the companies was brought under Corporation Tax which is not shareable with the States.

(iii) Additional excise duties on three commodities levied by the Union in lieu of Sales Tax are not being exploited properly. Union is making further attempts to take over 5 more commodities from sales tax.

(iv) Revenues collected under CDS and Special Bearer Bonds, though flow from the same source as income tax, are not shared with States.

(v) Grants in lieu of tax on railway passenger fares are fixed in an *ad-hoc* manner depriving the States of their due share.

(vi) Instead of raising the excise duties, the Union has resorted to raising administered prices, thus depriving States of their due share.

(vii) The Union has been lax in exploiting the levies under Article 269 of the Constitution.

3. Large scale recourse to market borrowings to finance public investments is essentially a phenomena of planned era. The Constitution makers could not have envisaged a situation where all the States will have to be indebted to the Union and all the States will have to get access to the open market borrowings only as dictated the Union Government. Thus, the States share in the open market borrowings had come down from about 50 per cent in the Third Plan to about 22 per cent in the Sixth Plan. In fact, the States should be getting a major part of this recourse. Further in a matter like National Small Savings, The Union Government passed on only 2/3 share of the net savings to the State Governments. Further, the monetary and fiscal policies are invoked to virtually throttle the State Government's initiative to take recourse to borrowings to finance specific developmental projects. Such restricted role to the financing of a development projects in a State Government could not have been dreamt by the Constitution makers.

4. Similarly, with increasing inter-dependance of the World and interest taken by the developed countries in the growth of poorer nations, there has been increasing importance to aid both from bilateral and multilateral (World Bank, IMF, ADB, etc.) Channels. Further, International Commercial banking has become an important instrument of transfer of resources. The Union Government emerges as the sole beneficiary. Only if the donors insist on taking up of projects in the State sector, does the Union Government permit such financing and even here the State Government cannot receive the assistance in full and in any case the terms are standardised to be consistent with plan assistance.

5. The discretionary transfers between the States and Union Government exceed the amount of statutory transfers. The primary reason for this situation is the transfers made to the States on Plan account. While there has been an agreed formula for distribution of Plan assistance as between different States, in practice, the Union Government has been unauthorisedly (i.e. violative of the decisions of the NDC) increasing project/programme under central sector or centrally sponsored schemes. More important, the terms on which most of the discretionary transfers are made involve a larger proportion of loans than of grant. To the extent the Plan investments themselves are increasingly meant to finance welfare activities such as Education and Health, the pattern of financing such investments by a major share of loans has resulted in a State of perpetual indebtedness of the States.

6. The adoption of socialistic State with emphasis on welfare has resulted in large amount of recurring expenditures on scholarships and hostels for weaker sections, schools, hostels, etc. Apart from the fact that these are inelastic, involve recurring expenditure and staff-intensive, there are no mechanisms by which the States, in good conscience can contract their obligations in this regard. Any State which intends to carry out its obligations to the people by appropriate level of welfare activities is unable to do so within the rigid financial constraints imposed. The States are particularly frustrated by the fact that the Union territories such as Delhi, Chandigarh are able to provide a far higher level of services and are also permitted to subsidise essential items (like transport, water) on a very liberal scale. Similarly, the Union Government's effort in mobilising resources in areas within its jurisdiction but totally analogous to the States' sales tax (viz., Central Sales Tax and additional excise duties in lieu of sales tax) is strikingly inadequate compared to the effort of the States. The record of Union Territories in this area is no better.

7. In this light, instruments have to be conceived and developed so that a fundamental reform and restructuring of Union-State financial and planning relations is brought about. The restructuring should be able to capture the current realities of the asymmetry between resources and responsibility, providing at the same time, mechanisms to meet the changing and dynamic situations of socio-economic growth and roles of Governments. Major elements of the proposed reform can be summarised as follows :

(a) The Union Governments' recourse to the tax measure that might affect the tax revenues of the State should be subject to consultations involving the State Governments. Some of the measures that have been taken by the Union Government such as surcharge, Corporate tax etc. should be remedied.

(b) The relative shares of the Union and States in recourse to market borrowings should be determined by either an independent body or preferably a body having representation of both Centre and the States. Such a body should have a close involvement in the process of financing of Planned development.

(c) The States should be enabled and in fact encouraged to raise local resources through borrowing for financing specific projects. The broader issues like monetary and fiscal policies are certainly not inconsistent with efforts for local resources-mobilisation. For instance, specific

projects can be financed through issue of project-related savings Bonds on the same terms as National Savings Certificates. In other words, these project-related Bonds will be analogous to small savings : except that those Bonds are related to specific local project and 100% amount will be available to State's project rather than 2/3rd of the net as in the case of small savings now.

(d) Similarly, in respect of external assistance and external borrowings, the monopoly of the Union in the actual disposition of the resources as between different States and projects within the country is untenable. While external finance is rightfully the domain of the Union Government, the allocation of such financial resources available to the country as a whole should be a matter of joint consultations between the Union and the States.

(e) The discretionary transfers which are currently funnelled through a variety of channels should be replaced by a more equitable and continuous arrangements of transfers through institutional mechanisms for consultations. The package of measures should involve assessment of the welfare needs and responsibilities, the relative shares of loans and grants, the *inter-se* allocations among the States etc. Further benefits of Central sector investments are allocated arbitrarily by Union Government (such as Power from Kalpakkam). These are also in the nature of discretionary transfers.

(f) It would be necessary to appreciate the link between International Trade, Commerce and Development in the light of increasing role of exports and imports in the process of growth. It will not be easy for the State Governments to perceive and participate in the developmental process if they are not involved in handling the exports and imports. For instance, State level institutions must be given a greater role in export trade.

(g) Major Irrigation projects involving huge outlays which ultimately benefit the nation as a whole should be liberally funded from the national resources. Starving these state projects will be to the detriment of the nation.

8. To meet the above requirements, it is suggested that a National Planning and Development Council (NPDC) be created through an appropriate constitutional provisions. The members of NPDC should have the Prime Minister as the Chairman and Chief Ministers as Members. The Planning Commission should become a technical arm and Secretariat of the NPDC. In addition to the matter relating to Five-Year Plans, the NPDC should become a body in which continuous consultations take place on all matters touching the Union-State relations on Finance and Planning. In particular, this should cover the extent of allocation of resources for Plan, borrowings, external finances, discretionary transfers and taxation measures affecting both the Centre and States. Further the NPDC should identify major projects in crucial sectors like Irrigation involving large outlays with a view to ensuring liberal funding by the Centre to supplement State's resources. This flexible approach for larger Irrigation projects is required to ensure full utilisation of river waters at the same time without imposing undue burden on the States' resources. It should be possible for the NPDC to remit specific matters to *ad-hoc* or standing Sub-Committees constituted with membership of the NPDC itself. It may be noted that the NPDC is deliberately structured to be different from the Inter-State Council envisaged in Article 263. This Council which has to be created by a Presidential Order may not have the requisite degree of stability, continuity and immunity from the sudden changes that may be demanded by the Union Cabinet through recourse to Article 74.

MEDIA

In a democracy, media plays an important role. At present, the Government media like Radio and Television (T.V.) are with the Union. Unlike some of the western countries where even private bodies control these media, in India, even the State Government do not have these media under their control. For a variety of reasons, we feel that the State Governments also must be permitted to have their own media and also have a fair share of time in the Union Government's Radio and Television (T.V.). We recommend that law be made, or the present law be amended, to enable State Governments, wherever feasible, to set up their stations, subject to such conditions or restrictions as may be necessary in the national interest. A statutory body may be set up to administer this law so as to inspire in the State Governments the confidence that any restriction which is imposed is really in the interests of the nation as a whole. It is also recommended the All India Radio and Door Darshan should function as autonomous corporations and not as departmental units.

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 The Constitution of India is a quasi-federal one suited to its geo-political requirements. It is not a federal one in the classical sense as applied to the Constitution of the United States of America. It cannot also be called unitary in as much as it provides for a duel polity with the Union Government at the Centre and States Governments at the peripheral levels with the added features of Union Territories. The quasi-federal character of the Constitution is highlighted by the fact that while on the one hand, as Article 1(1) of the Constitution stipulates, India is a Union of States, on the other hand, the areas or boundaries of the States can be altered by the Parliament, as laid down in Article 3, by law made by it and the distribution of legislative powers in Chapter I of Part XI of the Constitution provides for a Union List, a Concurrent List and a State List with the stipulation that the Parliament has exclusive power to make any law in respect of any matter not enumerated in the Concurrent or State List. Thus, while the States forming the Union of India have their governments with well defined and independent powers in the spheres allotted to them to give the Constitution a federal structure, the operation of the Concurrent List and the residuary powers apart from those in the Union List, provides for a role more akin to a unitary system. This feature of the Constitution though demanded and justified by the Indian situation, brings in a unitary bias away from the principles of orthodox federal Government. As, however, the unitary bias becomes manifest more in an emergency or in particular situations without undermining the functioning of the State Government at the local, regional and peripheral levels in their allotted shperes as in a federation, our Constitution as a whole is a federal one in normal times with provisions to convert itself into a unitary one in emergency to justify its being classed as a quasi-federal one.

1.2 The Rajamannar Committee advocated the classical form of federalism to make the Indian polity closer to that of the United States of America in the distribution of powers between the Centre and the States. Such an approach is not germane to Indian soil. Apart from the wisdom of the framers of our Constitution, based on the history of the Indian polity over hundreds of years, the experience we have gained during the last thirtyfive years on the functioning of our Constitution leads us to the conclusion that the approach of the Rajamannar Committee cannot be accepted on the basic logic of integrity of the Union of India. No Modification in the basic frame-work of our Constitution is called for. There is, of course, a need for continued review of some of the provisions of the Constitution particularly in the matter of devolution of the overall national resources. This, in fact, is being done not only during the debates in the Legislatures at the Union and the State levels but also through the working particularly of the Finance Commission. In view of this, we cannot subscribe to the view of the Rajamannar Committee.

1.3 The view that for our country there is a need for substantial decentralisation with adequate safeguard for considerable centralisation in times of emergency cannot be disputed. This, however, does not call for any major amendment to our present Constitution. The existing provisions in the Constitution are adequate to provide for the necessary institutional arrangements for a constant dialogue between Governments at the Union and the State level to facilitate the right pattern and degree of administrative decentralisation, both vertical and horizontal, the interest of development administration and balanced regional development.

1.4 The "traditional" type of federation as mentioned does not seem to exist anywhere in the modern world.

1.5 The Constitution of India as it stands amended now is basically sound and flexible enough to meet the requirements of Indian polity as it has emerged over the last 35 years. The evolution of our polity and the amendments made so far in the Constitution have been in a healthy democratic direction. The framework has provided for a viable socio-economic system as enshrined in the Directive Principles of the Constitution. For the problems and issues which are bound to arise in the working of a developing economy with a democratic form of Government, having by and large a federal frame work as ours, the mechanism of a Standing Council like the Inter-State Council, as envisaged in the Article 263, for coordination between States should be adequate. It can take care of all issues of national importance arising out of relations between States or the Union and the States. The composition and function of this Council may, however, be formalised either through enactment or through development of healthy democratic conventions.

1.6 We wholly subscribe to the view that the protection of the independence and ensurance of the unity and integrity of the country are of paramount importance. The structuring of the distribution of legislative powers in Chapter I of Part XI of the Constitution as reflected in the three Lists in the Seventh Schedule; and in particular, Articles 3, 11, 256, 257, 258, 260; and, the emergency provisions in part XVIII of the Constitution i.e. in Articles 352 to 360 and Articles 365, are designed to provide ample safeguard for this basic national objective. These provisions have armed the Union Government with

adepuate power and cast on them the responsibility of playing the paramount role for achieving this end.

1.7 We are of the view that the extent provisions in the constitution in this regard are reasonable. This can ensure achievement of the end mentioned in question 1.6 above. The Articles mentioned in the question are to be interpreted in a spirit of mutual trust so essential to the functioning of a democracy and should also be viewed in the context of the unity and integrity of the country. In such a view, these Articles are reasonable.

1.8 The view that the provision in Article 3 requires re-consideration deserves attention. The virtual unfettered power enjoyed by the Parliament in formation of new States and alteration of areas, boundaries or names of existing States, with a token requirement of taking the views of the Legislature(s) of the concerned State(s), may be modified to provide that the concurrence of the concerned State(s) Legislature(s) would be obtained or, in the alternative, the concurrence of a majority of the State Legislature(s) would be required.

PART II

LEGISLATIVE RELATIONS

2.1 While there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and the States, the Lists in the Seventh Schedule to the Constitution call for a further review in the context of the experience gained by us over the last 35 years. Such reviews have of course taken place because of national debates on issues like Education and Forest leading to items in the State List being brought to the Concurrent List. Similarly, an entry 92 A was inserted in the Union List bringing taxes on the sale or purchase of goods under the control of the Parliament and making the hither to befo e existing entry 54 in the State List subject to the provisions of entry 92A of the Union List. The entries pertaining to distribution of legislative powers on economic and financial resources governing the development efforts of the State Governments should be re-examined in the light of corresponding provisions which exist in the Government of India Act, 1935 and the submissions made by the State Governments before the successive Finance Commissions.

2.2 We do not propose any change in the basic scheme of distribution of legislative powers as well as the details of the subjects entered under the three lists in the Seventh Schedule. The State Government would however, suggest that where there is a necessity for central enactments on subjects otherwise included in the State List, such enactments should be made only after consultation with the Standing Inter-State Council as mentioned in our reply to Q. 1.5.

2.3 The adoption of the system of consultation as was envisaged under the Government of India Act, 1935 and as already mentioned in our answer to Question 2.1 above, would be desirable for ensuring a better working relation between the Union and the State Governments.

2.4 In view of the answer given to Question 2.1 above such declarations should be subject to periodic review by the standing consultative body.

2.5 None.

PART III

ROLE OF THE GOVERNOR

3.1 The role of the Governor as envisaged in the Constitution and established by conventions is ideal and suitable for the Indian conditions.

3.2 The role of the Governor should be that of a friend, philosopher and guide even in the discharge of the discretionary functions. The Governor should consult the concerned State Ministry though the opinion given by such State Ministry may not be binding either on the Governor or on the Union Government.

3.3 While making report to the President suggesting action under Article 356(I), the Governor is to make report in his discretion. Since the provision is intended to be used only in emergency, the desirability there of is beyond doubt; but there should be certain additional safeguards. The exercise of such power for purposes other than constitutional should be prevented.

In regard to the appointment of Chief Minister, the role of the Governor should be akin to that of the President of India.

In regard to the prorogation or dissolution of the Legislative Assembly, the Governor should act in accordance with the advice tendered by the Council of Ministers.

3.4 Articles 200 and 201 give general power of reservation of the bills for consideration by the President. In this respect, no guidelines have been given to the Governor. It will be adviseable to have an Instrument of Instructions to the Governor giving them certain guidelines in this matter. The power, though discretionary in nature, cannot be exercised in an arbitrary manner. In so far as this State is concerned, such a situation has not arisen.

3.5 No comment.

3.6 The Governor is not an agent of the Centre and may not exactly be described as an ornamental head of the State. He is undoubtedly "a close link" between the Centre and the States. But the position of the Governor is not an independent one. Alike the President of India, he should also act in accordance with the advice tendered by the State council of Ministers except in the sphere where he is required to function in a discretionary manner. There should be a clear demarcation between the functions where the Governor is expected to work in his discretion and the functions where he is expected to work in accordance with aid and advice of the Council of Ministers. The more precise this demarcation is made, the less will be the chances of confusion and ambiguity. The confusion has arisen mostly in cases where the Governors have been designated as the ex-officio

President of Corporations, Public Institutions or other bodies which are not directly within the control of the State Government. In such cases also, the functions of the Governor should be exercised on the aid and advice of the Council of Ministers. Sphere of discretionary powers should be kept limited to the cases covered by Articles 356 and 365, and in the matter of selection of the Chief Minister under Article 164. In regard to other functions, the Governor should be bound to act in accordance with the advice of Council of Ministers.

3.7 The functions of the Governor are different than that of the High Court Judges and as such, the tenure of his office and the manner of his appointment or removal cannot be the same as prescribed in the case of a Judge of Supreme Court or of High Court.

3.8 The position of the Governor is that of the constitutional Head of the State. The frame work of the Indian Constitution is such that question of empowering him in this manner cannot be recommended. The position of the Governor in this regard is not in any way different from that of the President of India except only in the cases where he is to discharge his duties in his this discretion. Even though some amount of discretion is inevitable in the matter of appointment of the Chief Minister under Article 164, the same power for the purposes of checking and verifying the loss of majority in the legislature cannot be given to a Governor who might elect to act as an Agent of the Union Government. Such power, if given, would be contrary to the principles of federalism.

3.9 The system introduced in the Republic of Germany by Article 67 of the Basic Laws may not be suitable under the Indian Constitution where there is shifting of allegiance amongst the political leaders and Members of Legislative Assemblies and Parliament. Even though the solution offered by the Republic of Germany appears to be idealistic in nature, it cannot be treated as practical in the Indian context.

3.10 The guidelines regarding the manner in which discretionary powers of the Governors are to be exercised should be formulated in consultation with the States by the Union and these guidelines could be contained in an Instrument of Instructions in a similar manner as they were adopted under the Government of India Act, 1935.

PART IV

ADMINISTRATIVE RELATIONS

4.1 While on such instance of any direction issued under these Articles has come to the notice of this State Government, the provisions are in the interest of national security and unity and to be used only when the dictates of an emergent situation made it unavoidable for the President in the national interest.

4.2 In consonance with our replies to Q. 4.1 above, we are in agreement with the latter of the two views indicated in the question. In our view, no country with a federal type of government can uphold its sovereignty and integrity if the directions given by the Union Government in the national interest, as determined by the Parliament through enactments, can be disregarded by a State Government. The Union Government cannot remain helpless because of absence of any reserve provision in the Constitution enabling it to enforce such directions. Articles 355 being such and enabling reserve provision should, therefore, remain as it is.

4.3 While the recommendation of the Administrative Reforms Commission as quoted here would help sound Centre-State Relations, the State Government are not aware of any instance of issue of directions under these Articles by the Centre to a State.

4.4 This State has no experience of any arbitrary invocation of the provisions in Article 356. It would, however, be desirable in the interest of sound Centre-State relations to provide for some safeguards in the Article itself in the form of specific conditions president which must be satisfied before the President can take over the administration of a State on the ground of failure of the Constitutional machinery. Such conditions precedent may be say, a loss of majority in the State Legislature by the party in power and the like.

4.5 The logic of any time-limit to be prescribed under Article 356 is that of an emergency created by a failure of the Constitutional machinery in State. As emergency situations of this nature are bound to differ from State to State or from time to time in a given State, it is difficult a *priori* to say what time-limits would be adequate for restoring normalcy in any one case. At the same time, to do away with any time limit in clauses (4) & (5) of the Article would be against the very spirit of the Constitution providing for an elected Government in every State. The President's Rule is not in itself a solution to the problem but provides only a stop-gap arrangement till a solution is found. No change or modification in the existing provisions in clauses (4) & (5) of the Article is, therefore, necessary.

4.6 The present arrangements are working satisfactorily. However, the arrangements in this regard can be improved further to remove the feeling that while the State Administration is extending all co-operation in this regard, the relationship is one-way only. The Central agencies should have regular and prior consultations with the State Government and administration before issuing directives to their State units for smooth conduct of the functions like in the matter of deployment of State Government staff and Police Force for election work.

4.7 These agencies are undoubtedly functioning as nodal organisations in the national economy as a whole and are assisting the States in fulfilling obligations cast on them by the Constitution. They have a role to play in removing regional disparities in development and supplementing the efforts of the State Governments whose resources are inadequate to fend for themselves even if the subject dealt with by these Central agencies are enumerated in the State List. Therefore, it would not be appropriate to criticise the role of these Central agencies or to undo the arrangement merely on the ground that

through these agencies, the Union has made inroads into the States autonomy contrary to the scheme of distribution of powers, or of subjects in the Seventh Schedule to the Constitution. What is, however, necessary is that the policies in pursuance of which the agencies continue to function are reviewed regularly by the Union Government in Consultation with the State Governments preferably through the Standing Inter-State Council suggested in our replies to Part-I of this Questionnaire. As these agencies are designed to deliver the goods more effectively and if in f·ct they do so, the Seventh Schedule itself can be re-fashioned to give them the Constitutional cover instead of deriding them as Union agents against State autonomy. These agents would, however, be effective only if the Union Government ensure that these are responsive to the problems and requirements of the States. It would also be advisable that as a matter of national policy it should be discussed in the agencies like the National Development Council as to at what level such Central agencies should function when their role extends to subjects covered in the State List. These agencies would even be more effective for supplementing and not supplementing the role of the corresponding State Agencies as for instance in the case of food procurement and distribution. In other subjects also it would be desirable to suggest that the Central agency should be concerned only with projects or programmes having above a certain minimum resources or outlay level or when it has Inter-State Implications.

4.8 The State Government are of the view that All-India Services have been serving the purposes for which these were created. There is no need for further control by the State Government in addition to what is already provided now under the All India Services Act and the Rules made thereunder. The State Government have control over the members of the I.A.S. in all matters except that no major punishment can be inflicted on them without concurrence and approval of the Union Public Service Commission and the Government of India. This limitation on the power of the State Government is essential to retain the All-India character of the Services.

4.9 Maintenance of law and order is a State matter and the State Governments should be given total freedom in controlling any situation arising in their respective States. The duty of the Union as specified in Article 355 should be so construed as to mean making available the Central Reserve Police and other armed forces in aid of civil power in any State. The assumption of direct control in regard to maintenance of law and order by the Central Government is neither desirable nor can it be assumed under the existing provisions because the Article 355 will have to be read with Schedule VII, List II (Entry-1).

4.10 Television & Radio should continue in the Central List in the interest of national intergation but the State Governments should be allowed to have a share in the broadcasting programmes on a fair and re-sonable basis to meet their problems of mass communication in the interest of administration and development. This does not require any amendment in the Seventh Schedule but a healthy convention of National Policy to be evolved through consultations by the Union Ministry of Information and Broadcasting with the State Government through Inter-State Councils or a consultative body in the Ministry comprising all State Ministers in charge of Information and Public Relations.

4.11 The Zonal Councils have become virtually non-existent now. In view of the replies given to Q.4.12 below these agencies would be superflous now especially for the States in the North Eastern Region which has an additional agency of the North Eastern Council.

4.12 The State Government are of the view that an Inter-State Council under Article 263 of the Constitution should be established. Its roles and functions should be designed after taking into consideration what has been stated in our replies in Part II of the Questionnaire about the role of such a Council. It should encompass the matters of institutional planning and development policies and may even take over the role of the National Development Council if it is constituted in the pattern suggested by the Administrative Reforms Commissions with Prime Minister as its Chairman and Union Minister of Finance and Home, Chief Ministers of States and the Leader of the Opposition of the Parliament as regular members with provision for co-option of any other Central or State Ministers whose subjects come up for deliberation on a particular occasion. The functioning of such a Council, therefore, should be detailed in laws to be enacted by the Parliament after consulting the State Legislatures. It should also be serviced by a permanent Secretariat which may be that of the Planning Commission. This device may also make planning a more co-ordinated and co-operative exercise between the Union and the State Governments.

PART V

FINANCIAL RELATIONS

5.1 The Constitution allocated to the States subject such as agriculture, medical, public health, law and order etc. that touch intimated the lives of the people. Such subjects can be efficiently administered only by the States who are closer to the people and are more keenly alive to their problems and needs, with the advent of planning there has been a shift in strategy and national priorities. The fiscal burden of the newly devised development strategy and the reordering of plan priorities has fallen relatively heavily on the States compared to any time in the past. The gradual shift towards emphasis on social justice calls for a realignment of resources in favour of the States because services and programmes that favour more equitable social order come within the purview of the States. There can be no doubt that having regard to the growing responsibilities of the States, the distribution of taxes and revenues is very unfare to the States. This has resulted in a chronic and winding gap between the States' own resources and their expenditure necessitating dependence on the Centre for financial assistance to meet growing obligations. Of late, this has generated a persistent demand from the States for larger transfer of funds from the Centre.

The existing scheme of fiscal transfer from the Centre to the States is marked by the prevalance of a parallel assessments of needs of the States by the Finance Commission and the Planning Commission. This new element in fiscal transfer was not envisaged by the framers of the Constitution. To a certain extent there might be overlapping of efforts if two independent agencies are simultaneously responsible for recommending assistance to the States. This overlapping situation is sought to be corrected by a distinction between plan and Non-Plan expenditure on revenue account. While the Finance Commission confines itself to tax sharing and grants-in-aid covering non-plan revenue account of the States, Plan assistance is channelised through the Planning Commission in the shape of both loans and grants. The tax sharing is regarded as a matter of right and can leave the States with surpluses which they are free to spend. The grants under Art. 275 are generally unconditional and not on a matching basis. They have also never exceeded the Non-Plan deficits of the States though the terms of reference do not seem to prevent the Finance Commission from recommending grants to poorer States in excess of their non-plan deficits. On the other hand the scheme of tax sharing leaves some States with large non-plan surpluses. Since the States contribution for plan should generate from non-plan surpluses and additional resource mobilisation undertaken by the States, the poorer States fined themselves in a weak bargaining position in the matter of plan finalisation. In this context, the Finance Commissions might accord a developmental orientation to the flow of funds recommended by them considering the existing disparties in the provision of State Services as between advanced States and others. There seems to be no need for a change in the present system or the establishment of a single body to recommend all financial assistance from the Centre. The Planning Commission may recommend assistance for plan projects. This will divest the Commission of the responsibility of finding resources and enable them to discharge planning functions in a better way.

5.2 The observations of the A.R.C. Study team are not only valid even now but by and large financial dependence on the Centre has been growing over the years. This process cannot be halted or reversed by a mere redistribution of taxing powers in favour of the states. There can be no controversy on the need to enlarge the size of the national kitty in terms of tax resources. Nor can the advantage of a vast all India market with free mobility of capital & skill be lost sight of. Having regard to all these aspects the present division of tax resources given in the Constitution appears to be by and large well conceived and needs no radical change except to the extent indicated below.

By virtue of entry 46 of list II of the 7th Schedule to the Constitution of India tax on agricultural income is a State subject. On the other hand, Article 366 of the Constitution defines agricultural income as such income as defined for purposes of the enactments relating to Indian Income Tax. The Income Tax Act, 1961 includes income derived from the performance of any process to render the produce marketable within the purview of agricultural income. The Supreme Court has recently held in the case of Commissioner of Sales Tax, Lucknow, Vs. D. S. Bist (44 STC 392) that the process of converting green tea leaf into manufactured tea is a process necessary for rendering the green tea leaf marketable. In view of this judgement of the Hon'ble Supreme Court, income derived from manufacture of tea should be treated as agricultural income. On the other hand, however, rule 8 of the Income Tax Rules, 1962 lays down that 40% of the income derived from cultivation and manufacture of tea shall be treated as non-agricultural income. Consequently, the States cannot levy tax on the income derived from manufacture of tea which is contrary to the views expressed by the Hon'able Supreme Court in the aforesaid case. The Central Income Tax Rules, should therefore, be amended so as to enable the States to treat income derived from cultivation and manufacture tea as fully agricultural income and to tax it accordingly. It may be observed that through this is not a matter relating strictly to the division of power under the Constitution as between the Union and the States, the aforesaid rule under the Income Tax Act made by the Central Government on the strength of Article 366 of the Constitution constitutes an in-road on the powers of the State to levy tax.

Another matter which needs attention is the provision of Article 276 of the Constitution under which the total amount of tax payable in respect of any one person to the State or any one Municipality, District Board or other Local authority in the State by way of tax on professions, trades, callings and employments shall not exceed Rs. 250 per annum. While this provision might have been reasonable at the time of framing the Constitution the ceiling imposed by this provision constitutes an unreasonable restraint on the powers of the States to levy and realise tax from this source. With the escalation in the general price level and the inflation that has taken place in the country since the early sixties a change in this limit has become necessary so as to enable the States to augment their resources. It is felt that the ceiling should be suitably raised from Rs. 250.

It is also necessary to bring about changes in in the distribution of nationally collected taxes, inclusion of the proceeds of new items like Corporation tax, Surcharge on I.T. Custom Duty etc. in the divisible pool full implementation of the tax powers given to the Union for exclusive distribution to the States. Apart from devolution of taxes, grants-in-aid on the basis of the principle of equalisation will serve to restore the financial imbalance of the States particularly of the backward areas. That apart, huge financial resources at the command of the Centre through its control over the nationalised banks, financial institutions, domestic loans, foreign aid and deficit financing need to be shared with the States with a view to reducing growing dependence on the Centre.

5.3 While the need for a strong Centre is not denied, a strong Centre is in no way inconsistant with strong States. On the contrary, a strong Union can only be a Union of Strong States. The Indian Constitution provides the Centre with much greater powers than the States in the legislative, administrative and financial spheres. The Constitution provides for the levy and administration of taxes with wider economic base such as Income Tax, Corporation Tax, Union

Excise Duties and Customs Duties by the Union Government, whereas the resources allocated to the States are comparatively meagre and have only limited growth potential. Apart from elastic sources of tax revenues the Centre has at its command all resources mobilised through nationalised banks, financial institutions domestic and foreign loans and deficit financing. While the present division of resources provided in the Constitution is not sought to be disturbed, the pattern of transfer should be such that the resources are applied at points where they are most needed with a view to reducing regional disparties and attaining social and economic justice.

5.4 In order to attain the objectives, the Centre may take recourse to better administration of existing taxes as well as implementing the tax power given to the Union for exclusive distribution to the States which has had hitherto remained unexploited. Secondly, there need to be proper vigilance over the magnitude, propriety and efficiency of Union expenditure. Better administration of public undertakings is one of the many measures that can be taken for achievement of better control over expenditure. Deficit financing to a limited extent may be adopted as a last resort. So long at it boost up effctive demand there may not be adverse affect on the economy. The Indian economy is marked by high rate of unemployment combined with inflation. In such a situation inflation tends to get aggravated if massive dose of deficit financing is pursued.

5.5 The objective criteria that should be used for determining the share of taxes may be as follows :—

(a) **Share of taxes**

Income Tax:—The divisible pool of income tax should be stepped up from the existing 85 p. c. to 90 p. c. The distribution of the net proceeds of income tax may be on the basis of 90 p. c. population and 10 p.c. backwardness.

Surcharge of Income Tax:—Surcharge of income tax has been levied year after year and raised from 10 p. c. to 15 p.c. but its proceeds have been retained exclusively by the Centre. The estimated yield from surcharge is Rs. 219 crores in the budget for 1984-85. A surcharge is levied for meeting the requirements of some unexpected events and it should remain for the limited period of such requirements. But a surcharge continued indefinitely could well be regarded as an additional income tax shareable with the rest of the proceeds of income tax. It should be merged with the basic rates and made shareable with the States.

Corporation Tax:—The growth of Coropration tax over the years has been phenomenal. In 1952-53, the income tax realisation was Rs. 143 crores and that of Corporation tax about Rs. 44 crores. The position has considerably changed since then. In the budget for 1984-85 the income tax revenue is estimated at Rs. 1801 crores and the Corporation tax revenue at Rs. 2588 crores. Thus in the past 32 years while income tax has grown by 1159 p.c., Corporation tax has grown by 5782 p.c. The exclusion of Corporation tax from the divisible pool has deprived the States of a source of revenue that is more buoyant than income tax. It is suggested that 50 p. c. of the Corporation tax which is only a form of income tax, should be brought into the divisible pool by appropriate amendment of the Constitution and distributed among the the States in the same manner as income tax.

Union Excise Duty :—The States' share in the net proceeds of Union Excise Duties should be raised to 50 p.c. in place of the existing 40 p.c. *Inter se* distribution among the States may be on the existing basis.

Additional Duties of Excise:—The incidence of additional excise duties as a perentage of the value of clearance should be raised to 10.8 p.c. and should not be allowed to fall below this level in future and a ratio of 2:1 should be maintained between the yield from the basis and the additional duties. Distribution of net proceeds among the States may be on the basis of 70 p.c. weightage for population, 20 p.c. for State domestic product and 10 p.c. for production.

Estate Duty in respect of property other than agricultural land: Distribution of net proceeds should be on the basis of location of property in respect of immovable property and on the basis of population in respect of property other than immovable.

Grant in lieu of tax on railway passenger fares. The quantum of grants should be increased to match the buoyancy of the passenger fares from the present static level of Rs.16.25 crores. The quantum of grants should be redetermined with a view to compensating the loss that the State Governments are sustaining over the years. *Inter se* distribution among the State may continue on the existing basis.

(b) **Plan Assistance**

Prior to Fourth plan, assistance was mainly schemaatic being tied to particular projects or schemes and thereby assumed a character of conditional grants. The Gadgil Formula made it more general through its recommendation of block loans and grants. To a large extent such assistance was freed from the string attached to it. The whole plan assistance, however, depends on approval by the planning Commission of the plan as a whole.

Even now on some items the assistance is tied to some earmarked sectors and a spending shortage in such sectors could invite a proportionate cut in assistance. The pattern of assistance under the present system is 70 p.c. loan and 30 p.c. grant. For the purpose of distribution of Central assistance, eight States are kept outside the purview of Gadgil formula and termed as Special category States. These are Assam, Himachal Pradesh, Jammu and Kashmir, Manipur, Meghalaya, Nagaland, Sikkim and Tripura. Central assistance to special category States is determined in terms of their actual need and past performance. The pattern of assistance is 70 p. c. loan and 30. p.c. grants for general areas and 10 p.c. loan and 90 p.c. grant for hill areas. The present system and procedure of channelising Central assistance through the planning Commission may continue. Assam may be allowed to retain its special status outside the Gadigil formula. However, in recognition of the special a position accorded to Assam, the pattern of Central assistance may be changed to a uniform pattern of 90 p.c. grant and 10 p.c. loan abandoning the existing distinction as between general and hill areas.

(c) Non-Plan Assistance

The States are receiving statutory assistance under the provision of Art 275(I) as per recommendations of the successive Finance Commissions. Besides, Assam is receiving a small sum under clause (a) of the second proviso to Art. 275(I) for administration of the Tribal Areas. Apart from the statutory assistance, the States are also receiving from the Centre non-plan assistance channelised through respective Ministries for other purposes, the more important being (i) relief and rehabilitation of displaced persons, (ii) relief necessitated by hostilities, (iii) construction and maintenace of border roads, roads of strategic impoartance and national highway, (iv) modernisation of police force, (v) labour and employment, (vi) Education, (vii) Social Welfare and (viii) C. R. F.

So far assistance under the provisions of Art 275 (i) is concerned the non-plan revenue gap should be ascertained haveing regard to backwardness, special problems and matters of national concern. The non-plans grant sh uld not only cover the gap so assessed but should leave the backward States with sufficient surplus on revenue account which can be ploughed back for fresh development.

The composite State of Assam was receiving a sum of Rs. 40 lakhs as grant under clause (a) of second proviso to Art 275 (1) which has been reduced to Rs. 13 lakhs following the reorganisation of the State. This amount has been fixed on the basis of the average excess of expenditure over the revenue in Tribal Areas during the two years immediately preceding the commencement of the Constitution. The expediture in in the Hill District in recent years has grown considerably above the preconstitution level though income has not gone up proportionately. This situation needs to be reviewed.

Most other non-statutory assistance takes the the form of reimbursement of expenditure on a limited number of specific items combined with advance assistance for which provision is made in the State budget. Though there is no complaint with regard to the procedure adopted for this purpose, it is increasingly being felt that some more items of expenditure should be fully reimbursable for instance of late, the the State Government has received a substatial amount for relief necessitated by hostilities but the pattern of assistance adopted by the Central is 70 p.c. loan and 30 p.c. grant. The nature of such assistance calls for a revision of the pattern of assistance by treating the entire amount as outright grant. So far as expediture on outside BNS is concerned, the States do not receive any non-plan assistance. The MHA charges Rs. 24 lakhs per annum per Bn of CRPF/BSF, plus actual cost of transportation, movements, accommodation, water supply etc.

Though maintanance of law and order is a State subject yet in abnormal situations large scale delpoyment of Central Bns. becomes necessary in addition to full deployment of State forces. If the Centre insists on payment for such services this will have disastrous effects on State finances particularly considering the abnormal situation that calls for such deployment. In this context the observation of the Sixth Finance Commission is of special relevance. That Commission urged the Government of India to waive payment altogether for the services of CRPF made available to the State for maintenance of law and order. They further observed that the Government of India would continue to have a decisive voice in determining whether or not the law and order situation in a State warrants supplementary support in the form of CRPF and there is no reason to apprehend that the State Government may invoke assistance of the CRPF on a large scale if payment for the same is waived. After all the Government of India have an equal stake with the State Governments in the maintenance of law and order throughout the Country This aspect need consideration.

5.6 The existence of inter-regional and inter-State disparities in the rates of economic growth even after sustained efforts of over three decades by FC and PC clearly shows the inadequacy of measures taken in this regard. With a view to reducing inter-State disparities and ensuring social justice a part of the share of taxes may be set apart and credited to a special fund exclusively for distribution among the backward States. The Fund so created may be financed out of any increase in States share of taxes and suggested incorporation of Corporation Tax and surcharge in the divisible pool. This would narrow down inter-State disparities and the backward States will be left with adequate surplus for investment in development activities.

5.7 & 5.8 The framers of the Indian Constitution have adopted the principle of separation and clearly demarcated the spheres of taxation both the Union and the States and two separate lists of taxation were drawn up for the purpose. While allocating the taxation functions to the Union and the States due regard was paid to the principles enumerated for a sound taxation system.. As a result, the Union was vested with the powers to levy broad-based taxes both direct and indirect like IT, CT, Customs and Excise which satisfy the canons of economy, efficiency, convenience, etc. The States were left with the powers to levy taxes on consumption and localised items of income and wealth. Judging from the stand point of economy, freedom of trade and commerce and equity, it may at this stage, perhaps not be possible to transfer any item of taxation from Union list without adversely affecting internal trade and economy. There is no denying the fact that major taxes like IT, CT, Customs Duty, Excise, etc. have a profound bearing on the economy of the country as a whole and as such the present division of tax resources in the Constitution need not be changed. Nevertheless, any concession, exemption and incentive that the Centre is now giving or propose to give which have the effect of reducing the divisible pool and other relevant matters the fiscal effect of which fall on the States, should be reviewed in depth by a Committee on which Centre and State Finance Ministers are represented. This State has already extended support to the proposal for replacement of sales tax by additional excise on five commodities provided that not only the current revenues from sales tax on these commodities be protected but special consideration is extended to the State. Any way, sales tax being the most elastic and bu yant source of revenue to the States any further incursion in this field will take away the limited flexibility the States now enjoy in the matter of augmenting their revenues.

5.9 For the purpose of transferring resources to the States to cover non-plan gap, the Centre appoints a F.C. every year. Over a period of five years many unforeseen liabilities might arise which the Finance Commission will not be in a position to provide for. Thereby the States are left to the mercy of the Finance Ministry and the Planning Commission. Besides, each Finance Commission is required to take the levels of State expenditure obtaining upto a particular date as stipulated by its terms of reference. The choise of a date prevents the Commission from taking cognisance of any liability adopted by the States after that date. Such an approach is designed to curb the propensity of the States to rush ahead with fresh expenditure proposals along with the announcement of a F.C. Consequently, many pressing non-plan needs are either shelved or taken up with severe strain on State finances. There is however, no genuine reason to feel that the appointment of a F.C. will ring a signal for the States to go ahead with fresh expenditure simply to take advantage of the award. Such short-comings of the Five Year Finance Commission system can be averted by a permanent Finance Commission type body with wide powers of annual allocation to the States. The plan is to be financed through any surplus on non-plan revenue account, additional resources raised by the States and plan assistance given through the Planning Commission. Once the Finance Commission is made a permanent body freed from simple gap filling approach, the Planning Commission will be relieved of the burden of finding resources for bridging non-plan gap and can perform its role of investment planning and decision making in more effective manner.

5.10 Sound fiscal management is dependent, among other things, on economy in expenditure consistent with efficiency. The manner in which the States deploy the resources allocated to them so as to get the best possible results from the expenditure incurred gives an idea about the level efficiency and of economy exercised by the state. Each Finance Commission adopts certain norms on an all-India basis for maintenance and upkeep of assets. It is, very often, not possible for the States to adhere strictly to such norms due to localised factors and abnormal price escalation. However the State Governments in their eagerness to conserve resources for the plan have been impelled by motives of economy in public expenditure very often have to curtail expenditure at the cost of essential services. Fiscal transfers from the Union have not so far been able to reduce significantly the disparties in the level of public expenditure among the States. Disparities between the States still persist particularly in backward States in terms of essential administrative and social services. Imbalances also exist among different areas within the State. Far greater priority needs to be assigned in providing essential administrative and social services in the backward States. This calls for larger allocations for education, medical cares, public health and welfare of SC/ST and OBC. A beginning has been made in this respect by the Sixth Finance Commission, while the earlier Commissions had assessed the requirements of States largely on the basis of maintenance of administrative and social services at the level obtaining in the base year, the Sixth Finance Commission for the first time made a departure from this norm. They sought to raise the provision for some of the administrative and social services in backward States with a view to bringing them up to the national average and recommended grants for the purpose. The Seventh Finance Commission also adopted a similar approach and recommended extension of this benefit to some other selected services. Such an approach should gradually be able to narrow down existing disparities in the standard of service and level of public expenditure among the States. The approach adopted by the Sixth Finance Commission and followed by the Seventh, if pursued with vigour, is likely to promote over a period of time efficiency in administration and remove disparities in this regard.

5.11 In India fiscal transfers from the Union to the States is performed mainly by two separate agencies, the Finance Commission and the Planning Commission. The Planning Commission is entrusted with the task of recommending plan assistance. While the role of Finance Commission is limited to making recommendations for meeting the fiscal requirements of the States arising from their Non-Plan revenue account, the grants-in-aid recommended by the Finance Commission under Art 275 after considering the tax devolution to the States have been used to bridge the residual gap. A view is sometimes expressed that this has encouraged the States to exaggerate their revenue requirements in the hope of qualifying for the grant. The elaborate terms of reference of the Finance Commission should be able to curb such propensities if any on the part of the States. If necessary the terms of reference may be suitably amended to secure this objective.

A distinction, however, need to be made here as between the weaker States and others. It will not be correct to say that the weaker States also exaggerate their revenue requirements ignoring all norms of financial discipline. In fact, in their bid to extend to their people the level of administrative and other services obtaining in the advanced States, the weaker States project their revenue requirements in a manner which may not satisfy certain norms. They, however, do so not because of a propensity towards financial indiscipline and improvidence but becuase of their anxiety to secure for their State a minimum level of service.

5.12 The State Government also feels that the Seventh Finance Commission has quite appropriately preferred the modality of devolution of taxes and duties to grants-in-aid for transferring resources to the States. This would enable the States to share the benefits or buoyancy in the tax receipts of the Centre and of additional taxes raised by it. But such an approach may work to the detriment of weaker States having a poor tax base due to low degree of urbanisation and industrial backwardness and tend to aggravate the existing disparities among the States. This hindrance can be overcome if grants-in-aid are relieved of gap filling approach to maintain the budgetary equilibrium of the States. Instead they may be used as a tool to reduce the level of disparities among the States and to ensure distributive justice.

5.13 The State Government is fully in agreement with the principles enunciated by the Seventh Finance Commission about the role of grants-in-aid in the scheme of fiscal transfers from the Union. First of all, requirements of the States may be assessed on

the basis of maintenance of administrative and social services at the existing level and thereafter provision may be made for the improvement of administrative and social services in backward States where marked deficiencies are noticed in terms of per capita availability of such services with a view to catch up with the national average. Lastly, weightage may be accorded on matters of national concern. In case of Assam the State has a special responsibility in the matter of border security being located on or near the country's international borders with China, Bangladesh, and Bhutan.

Moreover the State has a long common boundary with the neighbouring States of Meghalaya, Nagaland, Manipur, Tripura and Mizoram. The presence of different ethnic groups alongside the borders had resulted in occasional tensions needing establishment and maintenance of border police outposts at considerable cost. The State Government are of the further view that grants-in-aid should not only cover the revenue gap of the States in the manner assessed by earlier Commission, but should leave the States, particularly the less developed ones with sufficient surplus on the revenue account which could be ploughed back for fresh development. In assessing the needs of the State for grants-in-aid all those aspects deserve special consideration.

5.14 The decision of the Government of India to float Special Bearer Bond implies reduction in aggregate revenues from taxes on income. Similarly, raising of administered prices of items like petroleum, coal, etc. with a view to mobilising additional resources for the Centre deprives the States of any share of such accrual. Instead of raising administered prices had this been done through revision of rates of Excise duty on such items the States could get their due share. It is, therefore, in the fitness of things that yields from such levies should be brought under the divisible pool for distribution among the States.

5.15 The savings generated in the Indian Capital market are at present distributed between the Centre and the States in the shape of market borrowings, loans against share of small savings collection and negotiated borrowings from financial institutions and LICI. Under the present system the States can borrow funds only within the Country and subject to the limitations imposed under Art. 293 of the Constitution.

In recent years the total amount of market loans have been allocated among the States broadly on the same principles as those adopted for distribution of central assistance for plan. However, the shares so determined have been allowed to vary upward by 10% in a year to all the States. In other words market borrowings have been allocated to different States by the RBI on the advice of the Planning Commission and the Union Ministry of Finance. If this principle is substituted by allowing market loans to be floated by the States on competitive basis this will enable the richer States to get more funds offering competitive interest rates at the cost of the poorer States which would be extremely unfair. The State Government subscribe to the view that the economically weaker States should be assisted with more grants than loans therefore, more Central loan and market borrowings may be allocatted to the richer States and more outright grants to the weaker States.

At present two-thirds of the net collection of small savings is advanced to the States as loan. The State Governments are of the view that such loan should be treated as loan in perpetuity. Institutional borrowings like State Governments borrowings from NCDC, RBI, IDBI, LIC. etc. occupy an insignificant role in the scheme of public debt of States like Assam. It is felt that such borrowings should be distributed on the basis of investmet priorities for specific self liquidating projects which should be able to take care of the obligations arising out of servicing and repayment.

5.16 The budgetary deficits of the States are no doubt growing at a much faster rate than that of the Centre. The Combined budgetary deficits of the States in 1983-84 was Rs. 750.00 crores and that estimated for 1984-85 is Rs. 1312 crores. In the same period the dificit of the Centre is estimated to grow from Rs. 1695 cores to Rs. 1762 crores. It is also true that inspite of a substantial increase in transfer of resources from the Centre in absolute terms, the percentage of the Centre's revenue receipts being transferred to the States is declining. This trend is partially reflected in the quantum of central transfers channelised through the Finance Commission. During 1974-79 transfers to the States on the basis of the award of the Sixth Finance Commission aggregated to Rs. 11,168 crores out of the total revenue receipts of the Union amounting to Rs. 43,976 crores or 25.4 p.c.

In terms of the recommendations of the Seventh Finance Commission, the overall devolution of resources during 1979-84 is estimated to be Rs. 20,843 crores out of Rs. 80,126 crores, or 26 p.c. recording hardly any increase. While the needs of the States are growing fast in volume, the resources allocated to them lack the needed flexibility resulting in fiscal imbalance and growing indebtedness of the States. The total outstanding debt of the State Governments rose to Rs. 27449 crores in 1981-82 from Rs. 8,718 crores in 1970-71. The situation warrants urgent corrective measures to bring about better correspondence between resources and responsibilities of the two tires-the Centre and the States in our federal set up.

5.17 Over the years the problem of indebtedness of the States has attained enormous proportions as a result of economic planning. The outstanding public debt of the States has risen from Rs. 8,718 crores in 1970-71 to Rs. 27,449 crores. Considering the magnitude of the problem an annual review of indebtedness instead of a periodical one as at present might be undertaken. A permanent Finance Commission type body shall be able to look into the problem effectively. As observed by the ARC study team, among the various components of public debt of the States, the loans from the Central Government occupy a predominent place. An analysis of the debt position of the States as on 31st March, 1982 shows that of the outstanding debt of Rs. 27,449 crores loans from the Centre constitutes Rs. 19,967 crores and accounts for 72.7 p.c. of the total indebtedness. Along with the growth of public

debt, apart from repayment liability on the capital account the burden of interest charges on revenue account of the States has also become progressively heavier and is causing serious concern to the States. The average rate of interest on outstanding debt has also risen from year to year. This is evident from the debt servicing and repayment liability of Assam. Estimated interest payment of the State in 1984-85 is about Rs. 94 crores and repayment of principal to Centre Rs. 78 crores whereas estimated revenue from State taxes is about Rs. 134 crores. This shows that State's own tax revenue can not even meet the debt servicing and repayment liability. With the advent of economic planning public debt has assumed a serious proportion because loans predominate over grants in the compositon of central assistance for plan. The growth of public debt need not cause any concern so long as borrowed funds are utilised in self liquidating projects. But under the compulsion of economic planning and priorities accorded large portion of the borrowed funds have to be utilised for building up economic and social over heads. A shift in favour of grants in the pattern of central assistance for plan as well as removal of deficiencies in the present scheme of devolution is called for to remedy the financial instability of most of the States.

5.18 In India, the States are given powers to borrow within the Country and external borrowing is reserved exclusively for the Union. The State's borrowing powers are also subject to such limitation as may be imposed by State Legislatures and further a State may not raise loans without the consent of the Government of India if there is still outstanding any part of a loan which has been made to the State by the Government of India. Since all the States are indebted to the Centre in varying degrees, there cannot be said to be any freedom left with the States even in the matter of raising internal loans. These constitutional restrictions are placed on the States internal borrowing with a view to avoiding adverse monetary and fiscal affects arising from competitive and unbridled borrowing powers of the States. Under the present arrangements, the total quantum of public loans to be raised by the Centre and also its allocation between the Centre and the States is decided by the Government of India. Without affecting the basic principles of sound finance such decision can be taken in consultation with the States and having regard to their actual requirement in the context of development.

5.19 It is true that on foreign borrowings the Centre charges from the States a higher rate of interest than what it pays to the foreign lender. So far as this extra amount is chargd to defray the expenses of handling such aid it can not be said to be unjustified. In any case, the relending rate of interest should not exceed the expenses incurred by the Centre for contracting and relending such funds. Since the weaker States are not in a position to draw up projects which satisfy the specifications of the external agencies, certain percentage of rupee equivalent of net external borrowings contracted each year may be disbursed to the Statse as special credit.

5.20 States cannot be allowed to borrow as much as they like from the capital market since the richer and more developed States would avail the larger proportion of available funds at the cost of weaker States by offering competitive rates of interest. The Centre would then have to enter the market on behalf of the weaker States. Anyway, the case for larger volume of loan is not justified for the poorer States. Rather they deserve larger amounts of grants. Nevertheless the idea of a loans council appears to be a welcome step in the sense that it would be able to dispense with the misgivings in the minds of advanced States about the manner in which loans are being distributed at present between the Centre and the States. This council would recommend the maximum amounts that can be borrowed by the Centre and by diffrenet States on the basis of the principles approved by the NDC.

5.21 The inherent inadequacy of the States' finances to met their essential obligation get reflected in their over draft with the Reserve Bank of India. The gap between receipts and expenditure is the real cause of the ailment of which over draft is a mere symptom.

The ever increasing gap is caused by a multiplicity of factors. On one hand the State has to incur heavy expenditure on law and order, social services and debt servicing. On the other hand, failure to invest adequately in self liquidating projects has resulted in a situation where the revenues yielded are not even sufficient for the maintenance of assets already created. Mere doubling of the entitlement of ways and means advance will not ease the situation. Unless, the disease itself is cured the symptoms will persist. Liability for servicing and repayment of debt for a backward State like Assam amounts to about Rs. 187 crores which is far in excess of its own tax revenues. Remedial measures call for a change in the present patten of central assistance for plan reducing the predominance of loans over grants, reduction in rate of interest, rescheduling of outstanding debts annually instead of after every 5 years as at present and a more liberal scheme of devolution. Besides, the distinction between normal and special ways and means advances may be dispensed with and the over all limit of ways and means advances should not be lower than the aggregate of the existing limits of the two kinds of advances. The existing practice of demanding security in respect of special ways and means advances causes severe hardship and mey, therefore be abandoned. Further, the existing rate of interest, applicable to ways and means advances and overdrafts should be lowered to the level of that applicable to plan assistance and to other forms of assistance extended by Government of India. The additional liability on account of interest would itself act as a deterrent to improvidence on the part of the States.

5.22 Performance of the States in terms of resource mobilisation should be viewed in the perspective of the powers conferred on them by the Constitution and the available base for mobilisation of resources. Most of the taxes left with the States, with the exception of sales tax, are inelastic. In sales tax again most of the States have reached a saturation point and there is little or no scope to raise further resources through modification of sales tax rates.

Inspite of the constitutional limitations it will be seen that some States show a higher tax effort per capita than others. This is due to uneven level of industrialisation and urbanisation prevalent in the States. Low degree of urbanisation and industrial backwardness prevants the weaker States to catch up with the advanced ones in terms of per capita tax effort. In our country the major portion of national income originates in the agricultural sector and hence this sector should bear a large part of the burden. This is equally true of the States where major portion of SDP represents agricultural income. In this State the revenue collected from agricultural sector comes mainly from the tea plantations. Here again the assessment is done by the Income Tax authority and 60 per cent of the income is treated as agricultural income which can be taxed by the State and the remaining 40 per cent is treated as non-agricultural income and can be taxed by the Centre. The State Governments' efforts to get the whole income accrued from tea to be treated as agricultural income did not find favour with the Centre and this has stifled States initiative in the matter of realisation of agricultural income tax. This aspect has been discussed in greater detail in reply to Question No. 2 of this part.

Apart from tea, the farm sector in the State is highly scattered and unorganised and presents little scope for tapping of resources. In consonance with the accent on removal of poverty land holdings up to a certain limit is exempted from land revenue. In spite of the limited scope the State Government is alive to the need of exploiting its own sources of revenue adequately.

In fact, the States cannot avoid this responsibility since their performance in the matter of mobilisation of resources is constantly and regularly being reviewed by the Planning Commission and the Finance Commission.

5.23 The Central Government failed to raise the incidence of additional excise duties as a percentage of the value of clearance to 10.8 p.c. as agreed to with the States in 1970 in respect of items where sales tax has already been replaced by additional excise duties. Moreover, taxes and duties listed in Art. 269 have not been fully tapped by the Centre to raise resources for the exclusive purpose of the States. The State Governments are, as a result being deprived of revenues which legitimately belong to them. Besides, huge arrears, taxes and tremendous increase in investment in public enterprises even for meeting their losses has created a situation which needs to be reversed to increse the size of the Central surplus.

5.24 There is no doubt that much of the present distortion in Union-State relations would not perhaps have grown as it has over the years had the States been provided with opportunity for full and free discussion with the Centre before taking decision on matters affecting revenues of the States. Much of the discontents could either have been avoided or dissolved through the process of consultation between the Centre and States. The views of the State Governments should be ascertained while moving a Bill to levy or vary the rate structure or abolish any of the duties and taxes enumerated in Art. 268 and 269.

5.25 Art. 269 of the Constitution lists the taxes levied and collected by the Union and lay down that the net proceeds therefrom are to be assigned to the States. Under this Article no tax except estate/succession duty in respect of property other than agricultural land has been levied by the Union. Tax on railway fares and freights was once levied in 1957 but subsequently repealed in 1961. Art. 269 has not, so far, been fully availed by the Centre to raise resources for the exclusive purpose of the States.

5.26 The State Government feel that by freezing the total amount allocable to the States for many years at the static level of Rs. 16.25 crores the Centre has treated the States in a manner less than fair in the matter of grant in lieu of the repealed tax on railway passenger fares. The quantum of grant should be redetermined immediately to compensate fully the loss that is being substained by the States over the years.

5.27 No comments.

5.28 The present arrangement in regard to financing of relief expenditure is that as recommended by successive Finance Commissions, an amount referred to as the margin money is provided and when a calamity occurs necessitating expenditure on relief measures, the States have the margin to draw upon immediately. In determining the margin the successive Finance Commission considered the actuals of relief expenditure of the States for a few years and adopted the average of such expenditures as the margin for each State. Prior to the Seventh Finance Commission the margin did not provide for any element of repairs and restoration of public assets but included only items of direct relief like gratuitous relief, drinking water, fodder arrangements as well as relief works. The Seventh Finance Commission for the first time provided for repair and restoration of public assets over and above direct relief in the calculation of margin on the basis of 9 years' average expenditure with suitable price escalation. In our view the adoption of 9 years average of actual expenditure does not truely reflect the need of the States and its substitution by 3 years would be a more realistic indicator.

In case of natural calamity of more than moderate severity necessitating relief expenditure in excess of margin money, a Central team makes an on-the-spot assessment of the extent of damage caused and recommends the ceiling of expenditure above the margin. In regard to the expenditure of a state on relief and repair/restoration of public works following a natural calamity, Central assistance is made available as non-plan grant not adjustable against the plan or Central assistance for plan of the State to the extent of 75% of the total expenditure in excess of the margin. The remaining 25% is left to the States to meet from their own resources. But in case of Assam with its slender resource base and fury of floods manifesting itself practically every year, it becomes impossible to bear the burden of 25% in excess of the margin. Assam's case should be considered on a special footing and the entire expenditure in excess of the margin should be fully borne by the Centre. In order to ensure optimum utilisation of relief assistance the States should be free to incur expenditure on any item of relief and repairs subject to the overall ceiling.

5.29 It is felt that creation of too many agencies may lead to over-lapping of jurisdiction and functions. The proposed loans Council should be able to look into the distribution of loan and its utilisation for productive purposes and also the credit requirements of the States. However, a National Economic Council might be established to serve as a forum for consultation between the Union and the States in matters of economic, commercial, fiscal and monetary policies.

5.30 Collection and distribution of fund must conform to certain norms or else they will frustrate the basic purpose of how best the funds can be collected and employed for the benefit of the people so as to ensure distributive justice. As such, collection of funds must satisfy the cannons of economy, efficiency, convenience etc. So also spending of funds should conform to national policies and priorities so that they can be applied at points where they are more needed in order to secure social justice and removal of regional disparities.

5.31 At present there is no organisation except Parliament and its statutory committees that can exercise vigilance over the magnitude, appropriateness and efficiency of Union expenditure. Apart from the enormous increase in Central expenditure in recent years on subjects within their sphere, there has been tremendous increase in the expenditure on financing public enterprises as well as on subjects included in the concurrent list, which ultimately has the effect of depriving the States through diminution of surplus transferred to the States. A National Expenditure Commission was experimented within 1979 but it was wound up. The Finance Commission may be assigned the task of looking into the receipts and expenditure of the Centre and a permanent Finance Commission type body may dispense with the requirement of a National Expenditure Commission.

On the other hand, the State Government with limited resources at their disposal do not have the capacity to indulge in fiscal indiscipline in a big way. In any case, the State's expenditure proposals are reviewed annually by the Planning Commission besides periodic review by the Finance Commission. In the circumstances, a National Expenditure Commission for the States does not seem to be necessary.

5.32 The present system of compilation and submission of accounts involves a lot of delay at various stages and as a result the overall financial picture of State pertaining to a particular financial year emerges after a considerable lapse of time. By the time, the final account of a year is obtained, effective steps to plug the loop holes or any remedial measures become meaningless due to the time lag. Moreover, accounting delay serves as a serious impediment to regular flow of funds from the Centre where release of Central assistance is dependent on audited figures of expenditure.

5.33 The desirability of evaluation audit is not denied but while conducting such audit due emphasis needs to be given on achievement rather than pointing out defects alone. Unless suggestive remedies are focussed evaluation audit shall not serve any meaningful purpose. Left to C & A .G. the conducting of evaluation audit might lead to direct interference with the executive. Considering the desirability of evaluation audit it should be entrusted to an agency consituted by the State Government itself.

5.34 No comments.

5.35 At present C & A. G. does only test audit. The periodicity of such audit is biennial, triennial etc. Though the reports are often delayed they serve a useful purpose to the extent the State Government want to take remedial action on the basis of the audit report for bringing the erring officials to book and for plugging procedural and other loopholes.

Since, in the nature of things, the C & A. G.'s report is always likely to be delayed a useful improvement could be supplementing the C & A. G.'s audit by a extensive system of internal audit.

5.36 Internally, there is the Ministry of Finance with its Financial Advisers in every Ministry to check improper spending and externally, there is Parliament with its committee assisted by the C & A. G and between them they are expected to keep a wacth on Union and State spending. Though the Public Accounts Committee and the Committee on Public Undertakings have done very useful work.

5.37 Yes, the Estimates Committee should go into the wider aspects of policies and programmes and advise the Government on improvements necessary.

5.38 No separate Expenditure Commission is considered necessary in view of the existing provision in the Constitution empowering the C & A. G. to play this role and the periodical scrutiny of the expenditure of States as conducted by the Planning Commission and the Finance Commission.

5.39 We share the views expressed by some State Governments in this regard. In order to avoid such irritants and consequential delay leading to lapse of funds, the proper implementation of schemes and evaluation thereof should be left with the respective State Governments. There is no reason to apprehend that the State Governments will indulge in improper spending. The State Governments are equally interested in achieving economic and social objectives at a minimum cost.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 Plan formulation passes through at least four stages. The Planning Commission prepares basic documents which are at each stage discussed by the N.D.C. Prevailing economic situation and performance of the current plan is reviewed through mid-term apprisal of the plan performance. In the light of this appraisal N.D.C. formulates the objectives/outlines for the next plan. The approach paper is prepared by the Planning Commission. Thereafter, it is again approved by the N.D.C. Then guidelines are issued by the Planning Commission to the States for preparation of draft plan. In the whole process State involvements are only during the N.D.C. mee-

tings which is considered as inadequate. Planning Commission or its Working Groups may involve State representatives at the formative stage, preparation of basic documents wherein the State's development aspirations for the period may be reflected. The State's participation at the subsequent stage of plan formulation may obviate, to a great extent, any tendency towards imposition of the schemes formulated by the Central Ministries.

The present system of sending guidelines to the States and asking them to work out their plan scheme in a hurry gives no time for reflection and scrutiny. This should be remedied by sending the guidelines well in advance. Discussions with the States by the Working Groups may be spread over longer periods doing away with the present system of calling all the States together and hurriedly going through each State's programme in a single day which results in rushing to decisions through bargains rather than any fruitful discussion. Invariably Working Groups have most of the say in the bargain.

6.2 Owing to their poor finances and due to inadequate planning machinery the States are landed in a situation where they can take few terminal decisions on the development of their own States. Irrigation, Power, Education and Health Scheme are conceived, planned, financed and implemented by the State Governments. Requirement that the Schemes conform to national schemes of priority takes away the marginal decision making power from the States. When, as have been mentioned earlier, finances of the State is in a bad shape, involvement of the Centre is complete. The sectors mentioned above, though essentially State subjects, by their very nature need huge capital outlay compelling the States to look to the Centre for finance and materials resulting in increasing Central encroachment on State subjects. The remedy lies in strengthening the State Planning machinery and actual financing of major projects through Central loans or grants.

It is not considered necessary that the N.D.C. should be a statutory body unless the changes suggested in our replies in Part I and Part IV are given effect to for the Inter-State Council. As at present the basic documents should be prepared by the Planning Commission in consultation with the States at every stage in the absence of the statutory Inter-State Council. The N.D.C. will continue to prescribe objectives, lay down guidelines for the Planning Commission and finally approve the Plan p repared by the Planning Commission in the light of the guidelines. Once the development plans are approved by the N.D.C., the States should be free to implement them dispensing with further discussion with the Planning Commission which will, of course, continue to provide adequate financial resources to implement the schemes.

The prevalent system does not enable the States to have any say in shaping the national policies. The agenda papers not related to the State's Plan do not reach the State capital before final decision. This omission may be rectified and participation of States in formulating national policies should be ensured.

6.3 The resolution constituting the Planning Commission invested the Commission with certain responsibilities. The Commission is supposed to act as an independent body. It may consult the Central and the State Governments and act in close understanding with both. Notwithstanding the resolution defining its responsibilities, the Planning Commission in its present form is essentially an agency of the Central Ministries. States are seldom taken into confidence in the formulation of schemes of national importance. The Central Ministries, through the Planning Commission, are in commanding position in formulation of schemes particularly the Centrally sponsored schemes or in schemes in respect of which the Central Government shares expenditures though the schemes fall under State subjects.

The remedy lies in cutting across the tendency on the part of the Planning Commission towards dependence on the Central Ministries in formulating its decisions. Interaction should at best be limited to consultation with the Ministry and the State and not beyond that.

6.4 The Central Government is vested with virtually unlimited economic powers. Not to speak of the Union List and those not specified in the Seventh Schedule, the Central Government has over-riding powers in respect of the Concurrent List. Since economic planning involves decisions of wide dimensions and of serious consequence in the socio-economic fabric of the country, it is proper that the nation's highest planning level should consists of eminent experts in the sphere of Economics, Science, Technology and Management. This body should be of the highest status and responsible only to the National Development Council. it should be Free from other influences and act directly under the guidance and direction of the nation's highest Development Council. This will ensure at least optimum utilisation of the potential towards achievement of the nation's aspirations, working within the guidelines set up by the National Development Council.

6.6 The Planning Machinery at the State level is not at all equipped to guide the State Government on the national priorities. Until the State Planning Machinery is strengthened, the Planning Commission will continue to be in a commanding position. The States, due to their poor finances, are dependent on Central decisions and have to determine their priorities and selection of schemes well within the bound demarcated by the Centre through the Planning Commission. The requirement that it should conform to the national scheme of priorities take away even the marginal decision making powers from the State. As centrally sponsored schemes of education, health, employment, irrigation etc. constitute part of the State Plan, these are conceived, formulated and sponsored by the Central Government. Even the outlays are included in the Central Sector Plan, the only task left to the State being to implement it. The States are compelled to accept it even though such schemes do not fit in their scheme of Priorities. This they are obliged to do only because the State's resources are limited. This involvement in every detail has resulted in the erosion of the State's autonomy. Once the outline is approved by the highest body *i.e.*, N.D.C. State should be free to work out how to implement the detailed schemes without any interference by the Centre.

6.7 The present system of channelising Central assistance through loans and grants, seems to be working satisfactorily. Divested of the responsibility of finding resources the Commission may devote itself solely to the evaluation and guidance of the plan scheme and to be instrumental, as it should be, in economic transformation of the country. This channelisation should conform to certain criteria outlined by the N.D.C. viz., backwardness of the State and their resource constraint. The basic objective should, of course, be balanced development of all the States, taking into consideration the special problems confronting each particular State. There should be check against too much inroads into the State schemes based on the special needs of the particular State in an effort to make them conform to the national priorities. Allowance should be given to the State Planning Machinery to handle the Special Regional Problems on its own. The Planning Commission may, however, oversee that the scheme is not too ambitious so as to be beyond the realm of practical implementation.

6.8 As stated in reply to Q. 565 (b), Assam may be allowed to retain its status as a special category State outside the Gadgil formula. The pattern of Central assistance may be changed to an uniform pattern of 90 per cent grant and 10 per cent loan, doing away with the existing distinction as between General and Hill Areas

6.9 The criteria evolved by the N.D.C. for allocating central plan assistance to States places the backward States at a great disadvantage. Advanced States with more resources could go for bigger State Plans. Added to this, private investments are attracted mostly by advanced States, and are extremely shy in the less developed States. This cuts at the root of balanced development of States.

Assam being a special category States outside the Gadgil formula and inr ecognition of the special position accorded to Assam there should not be different pattern for General, Hill and Tribal Areas. The existing distinction may be abandoned and the whole State may be governed by the uniform pattern of 90 per cent grant and 10 per cent loan. Determination of priority sector may be left to the State. The present system of allocation of 50% on population and 50% on area basis has not resulted in any perceptible forward step on the part of hill areas of weaker States towards their goal of removal of poverty apart from the avowed object of balanced regional development. The quantum of special Central assistance should be in conformity with the special need for accelerated development in certain spheres e.g. high incidence of poverty and under development prevalent among the Tribal and the Other Backward Classes of the North Estate Region. The State Government should be given a free hand in the drawing up and implementation of priority sector schemes without any string attached to it.

6.10 Most of the Centrally Sponsored Schemes are conceived, formulated and sponsored by the Centre. Schemes of this category, coming under Primary Education, Public Health and Social Welfare constitute part of the State Plan. The States are obliged to implement them even if such schemes do not get integrated with the rest of the State Plan and remain attached as appendages. The Centre may consider these schemes necessary from the national point of view while the States are tempted by the inducement of Central assistance in the initial stages.

But under the federal policy and prevalent distribution of fiscal powers, any change in this regard cannot be visualised. As long as the State continue to suffer from the chronic illness of financial weakness and resource constraint, the Centre will continue to use its power more effectively reducing the limited decision making power enjoined on the States by the Constitution.

6.11 The State Evaluation and Monitoring machinery in Assam established in the year 1965 to watch the implementation of plans is not adequate to cope up with the increasing workload. At present, the evaluation organisation has been able to take up only evaluation schemes of experimental nature and few important schemes from the point of view of the State. Again, in respect of monitoring of plan schemes the organisation has not been able to achieve much due to inadequate staff in the organisation.

In order to examine that the Central and State funds invested in the development plan yield the desired results, the State Evaluation and Monitoring Organisation needs to be suitably strengthened without further delay. A proposal for strengthening of the State Evaluation and Monitoring machinery has already been sent to the Programme Evaluation Organisation, Government of India during the year, 1982 which has been again renewed in the month of June, 1984.

The State units of the Planning Commission's Programme Evaluation Organisation, should maintain more effective and closer ties with the State Evaluation Organisation. Instead of present practice of occassional exchange of reports prepared by each organisation separetely, there should be constant rapport, close cooperation and in appropriate cases joint studies may be undertaken.

6.12 No Comments.

6.13 In Assam the State Planning Board oversees the Plan formulation and implementation. But the extent of effective exercise of the State Board is circumscribed, as the State Plans are prepared within the guidelines prepared by the Centre. Secondly, the strengthening process of the State Planning machinery has been hindered or rather crippled by excessive inroads by the Centre. The strengthening of the State Planning machinery has to be effected through a prescription issued by the Planning Commission which, in effect, is a catelogue of junior officers, assistants and peons to be recruited and a few minor items to be purchased. The list does not provide for appointment of experts with decent salaries attached to their post. Nor does the list provide for any construction or purchase of conveyances for providing mobility for effective functioning of the machinery.

The remedy lies in allowing the State Planning machinery to strengthen itself and to meet its own needs without let or hindrance within the financial

limitations recommended by the Planning Commission. In fact, if necessary, States may go beyond the recommendations of the Planning Commission for strengthening the Planning machinery at the State level to be able to handle its own Plan and with the implementation of Plan Schemes.

PART VII

Miscellaneous

Indusries

7.1 The First Schedule to the Industries (Development and Regulation) Act, 1951 envisaged Central regulation of a few industries which were of vital public interest and of national importance. Thereafter Central control has grown to add more and more industries of all types leaving to the States only the small scale industries which are also controlled by the Centre to a large extent. However, we have no instance to cite that the Centre has used a deliberate policy to the detriment of the States' interest. But the Central Regulation has caused a situation in many States like ours, where vast natural resources, particularly gas and mineral resources, have remained unutilised/unexploited—as for example the cases of cement industry, oil exploration/natural gas can be cited. The policy followed by the Centre in the early 70s of discouraging additional capacity in surplus States retarded the expansion of such industries in the State and thereby exploration/exploitation and utilisation of the vast resources.

7.2 We are of the view that the Central Government should only regulate those industries having connections with defence and security of the country. The licensing authority for the remaining industries should be vested with the State Government under the guidelines of the Central Government.

7.3 It is observed that licences are taken for many items by big houses but never implement them. It is observed that such licences are taken to stop establishment of similar projects by other parties. It may also be pointed out that backward States are normally victims of this as new licences for these items are not considered on the ground that licences for excess capacity of these items have been issued. Definite time Schedule be fixed for implementation of the project and such licences should be cancelled after the expiry of stipulated time. Application from public & Co-operative sector should not be rejected on the ground of excess capacity licence being issued if the project is found otherwise viable. Applications for industrial licences for establishing project in category-A backward district and non-industry district should be given over-riding preference. Although the principle is laid down by the Government of India for non-industry district but this is not followed in practice.

7.4 Many States particularly the backward States are not fully organised to support the small scale industries mainly in respect of supply of raw materials and marketing assistance. Although State Small Scale Development Corporations are authorised to procure and distribute all variety of steel materials, the performance is not very satisfactory because the cost of materials often becomes uneconomic for S.S.I. units. For other items, it is suggested that the organisation like S.T.C., M.M.T.C., N.S.I.C. etc. should open their functioning establishment in all States so that the small enterpreneur from the State need not run for their requirement to the head office or regional offices of these organisations. It is observed that the offices of these organisations were opened in many States but without sufficient power. The offices should be given necessary powers to function to assist the local S.S.I. unit in true spirit. Central Government is the biggest individual buyer in the country. It is true that the Central Government has taken number of steps to provide marketing assistance to Small Scale Industries but many more are necessary. It is suggested that the requirement of various organisation of Government of India's establishment & undertaking should purchase the requirement of various items from the local units where these items are required to be consumed. If the prices offered in such cases are found to be higher, the prices may be fixed by competent authority on cost analysis basis which is the established practice of D.G.S. & D.

7.5 The Centrally Controlled national industrial financing institutions working in Assam are I.D.B.I. & I.F.C.I. But the functioning of other organisations like L.I.C.I., I.C.I.C.I. are not encouraging. Government may consider establishment of a single Centrally controlled national industrial financing institution for each States where all the facilities may be made available.

7.6 & 7.7. Locational decisions on central investment in public sector is the most important matter particularly for the State where the private investment is shy. The Industries reserved for public sector should be established in the State where there is potentiality as well as availability of raw materials and in such cases the State Government concerned should have a major say in location of the industrial project. In respect of other items backward States should get preference. Under no circumstances States' demand for establishment of central sector projects should be turned down on the ground of lack of suitable infrastructure if the project is otherwise viable.

7.8 We are fully satisfied with the policy of the Government of India in regard to the assistance given for development of the backward areas.

Trade and Commerce

8.1 We agree to the provision of Article 307 of the Constitution providing for appointment of an authority for the purposes enjoined in Articles 301 to 304.

Agriculture

9.1 So far as the Centrally sponsored schemes are concerned, it is evident that while/approving the State Plan, Central Government priorities are not keeping in tune with the State Government priorities—the tendency being to retain uniformity in the terms and conditions for the entire country. It is therefore, considered meet and proper that the Government of India would give priority to the interests of the States.

9.2 It is suggested that in such cases, the Government of India should continue to bear the whole expenditure of the scheme so long as the Government of India considers the running of the scheme necessary.

9.3 Apart from the recommendations of the National Commission, the Government of India should also formulate locally suitable schemes keeping in view the diverse conditions in different States.

9.4 (a) Fixation of minimum or fair prices of agriculture items uniformly throughout the country does not appear proper. It is suggested that they should be fixed keeping in view local conditions of productivity, market price, demand etc. which differ from State to State.

9.5 National Agricultural Research institutions should come forward to help the State Governments for solving local problems faced by different States as all the States do not have the infrastructure for conducting researches on the local problems.

Similarly NABARD should formulate the credit scheme keeping in mind the different stages of development in each State instead of having a uniform regulation applicable to all States.

Food & Civil Supplies

10.1 Present arrangements for the purpose mentioned in the question are adequate.

10.2 Periodical review will definitely help improved functioning. The States should have unfettered power in respect of those enforcement and regulatory orders administered by the States.

Education

11.1 It is not true that there is unnecessary centralisation and standardisation in the field of education and excessive interference. Our experience in recent past is that Centre seldom interferes in this sphere and has always sympathetically treated the problems of the State. It is an established fact that centralisation is essential in some fields of education and perhaps in such fields only the Centre has guided the States. Educationally, Assam is one of the nine backward States and it has received special attention and financial aid from the Centre.

11.2 The State is receiving satisfactory financial assistance from the University Grants Commission. There is wide scope for the University Grants Commission to tone up the administration of the Universities for their effective functioning. In this respect, they can also extend financial help for imparting training for better management of University affairs. It will be better to provide legal action against the Universities for their failure to conduct the examinations timely.

11.3 At present a Central Advisory Board under the Chairmanship of Union Minister of Education is functioning and all the State Education Ministers are its members. Timely meeting of this Board facilitating exchange of views at regular intervals will be quite adequate and no separate arrangement is called for.

11.4 There is no difficulty in maintenance of separate institutions for linguistic minorities both tribal and non-tribal, except financial drawbacks. There are restrictions in rules and procedures to provide deficit finance to such institutions. Even if rules are relaxed, it may not be convenient to give financial aid to all the linguistic minorities 'institutions'. The Central Govt. may consider to provide a scheme under the Central Sector for giving aids to such institutions.

11.5 There is no such conflict between the Centre and the State in Educational fields.

Inter-Governmental Co-Ordination

12.1 No serious problems in the Centre-State relations have been found in this State. Therefore, the setting up of an Advisory Commission in the line of U.S.A. is not considered necessary.

Modified/Additional Replies From Government of Assam to some selected questions of the questionnaire (Received in July, 1987)

PART I

INTRODUCTORY

1.2 The distribution of powers between the Centres and the States is very important to maintain federalism and the democratic norms in a federal system of administration. Some powers which have been incorporated in List III of the Constitution have to be incorporated in List II in order to make federalism more effective. Entries, like, 17A-Forests, 17B-Protection of Wild Animals and Birds of List III should be brought to List II. Unless the States are given exclusive powers in respect of natural wealth and resources, such as, oil, forests and some minerals, the States cannot be resourceful. This will affect the economy of the States where there are plenty of such resources. Therefore, occasional review of distribution of powers between the Centre and the States is a must and considering the exigencies more power should be given to the States for the development. More concentration of powers in the Centre will not be conducive to allround development of the States.

1.8 Article 3 of the Constitution needs to be suitably amended for making it mandatory to obtain the prior approval of the State Legislature before a bill is introduced in the Parliament to change the area of any State.

PART II

LEGISLATIVE RELATIONS

2.1 It appears from the amendments of the Constitution made from time to time that there is a tendency of the Centre to curtail powers of the State by making additional entries in List III to the Seventh Schedule. It has already been mentioned in the original answer to Question 2.1. The Entry 92-A made in List I by way of amendment in the year 1956 has virtually taken away the power of the State under Entry 54 as it stood prior to the amendment of 1956. Likewise, Entries 17-A and 17-B made in List III by amendment of the Constitution made in 1976 have curtailed the powers of the State in respect of Forests and protection of wild animals and birds. Prior to that amendment, the State exercised its powers on the subjects mentioned in the aforesaid two entries. So, the view that there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and the States is not basically correct. The tendency of the Centre which has been clearly exhibited from the amendments of the Constitution is to curtail the legislative autonomy given to the States and this tendency is not a healthy one for maintaining cordial relation between the Centre and the States. The Centre should not encroach upon the State Legislatives field on the basis of the so-called "national interest" or "public interest"

2.5 (i) Entry 97 in the Union List of the Seventh Schedule has given enormous powers to the Parliament to make laws in any other matter not enumerated in List II or List III. This entry appears to have given unguided powers to the Parliament. Some restrictions should be made so that in making any law where State is concerned, the Parliament, before introducing any Bill shall obtain prior approval of the State Legislature.

(ii) It is necessary to amend Article 213 of the Constitution in respect of promulgation of Ordinance by the Governor of a State. From the existing provisions of Article 213 it appears that even in utmost urgency, the Governor is not entitled to promulgate any Ordinance without instruction from the President in respect of the items mentioned under the proviso to clause (1) of the said Article 213. Some provision like the provisions of the Article 255 of the Constitution should be incorporated in Article 213 so that the Governor can exercise power in utmost urgency to promulgate Ordinance without instruction from the President.

(iii) Under Article 16(3) of the Constitution, the Parliament has been authorised to make law in regard to a class or classes of employment or appointment to an office within a State prescribing requirement as to residence prior to such employment or appointment. In that view of the matter, the Centre should make some law prescribing the condition of permanent residence within the States prior to the employment or appointment of a citizen. It should be a condition-precedent that a citizen coming from one State to another State and seeking employment must be a permanent resident of the latter State.

(iv) Crude oil was first discovered in Digboi around 100 years ago and the first refinery in the country was set up at Digboi at the turn of the century. Over the last few decades, crude oil and natural gas have together emerged as the single most important source of primary energy in the world. In 1984, out of 7201.6 million tonnes of crude oil equivalent energy consumed. Oil and Natural Gas accounted for 2844 and 1409 million tonnes of oil equivalent. In India, against the worldwide estimated per capita primary energy consumption of 1529 KG oil equivalent the consumption was only 196 KG. Again, against the world wide per capita consumption of 604 KG oil equivalent and 299 KG oil equivalent for crude oil and natural gas, India's consumption was only 55 KG and 5 KG respectively. Thus, with economic development, the importance of oil and natural gas as a primary source of energy is bound to increase.

Within the country, in 1983-84, out of the total production of 26.20 million tonnes of crude oil, off-shore oil production accounted for 17.39 million tonnes and on-shore oil production was 8.62 million tonnes, of which the share of Assam was 5.00 million tonnes. The share of Assam in 1985-86 was almost same when the total crude oil production reached the figure to 30.16 million tonnes of which off-shore crude oil production accounted for 20.82 million tonnes.

Thus, Assam accounts for between 1/5th to 1/6th of the total crude production of the country (both off-shore and on-shore).

However, a perusal of the income derived by the Centre from exploration and production of crude oil alone would show, for example, that the Central Government earned a total of Rs. 2751 crores in the year 1983-84 on account of royalty, sales tax, profit divident, corporate tax and oil development cess. On the other hand, the State of Assam earned only Rs. 58.07 crores on account of royalty and sales tax. In 1983-84, Assam produced 5.009 million tonnes and thus, the State made on earning of Rs. 115.93 per tonne of crude oil versus the Centre's earning of Rs. 1057 per tonne of crude oil of 26 million produce that year. Thus, even in the single year of 1983-84, the per tonne earning of the Central Government on account of production of crude oil was almost 10 times as much as that of the State.

The State Government is of the view that retention of the subject of Regulation and Development of oil Fields and Mineral Oil Resources in the Union List is resulting in an enormous transfer of the State's resources to the Union depriving the State of Assam which is one of the least developed States in the Country and which suffers from the disadvantages of relative inaccessibility, small size of market and backwardness in relation to the rest of the country from making use of one of its principal natural resources in order to foster the development of the State. The illustration given above has not taken into consideration the additional enormous profits earned by the Central Government, through the processing and sale of the petroleum products and also the production of petro-chemical, based on this basic raw material. It has also not taken into consideration the similar profits and revenues earned by the Central Government on account of the sale of natural gas which has come to be recognised as an equally important source of energy as oil.

Therefore for balancing regional development and for allowing the State of Assam to obtain a just share of the profits made by the Central Government on account of production of crude oil and natural gas, it is necessary that the subject of development of on-shore Oil Fields and Mineral Oil Resources be transferred from the Union List to the State List. Off-shore development of Oil Fields and Mineral Oil Resources could continue to remain in the Union List.

PART III

ROLE OF THE GOVERNOR

3.5 It is the common knowledge that Bills passed by State Legislatures are pending months together and some-time years together with the Central Government. In some cases it is found that the Bills are not even sent to the President for assent. Due to such undue delay in obtaining the assent of the President, State Government faces immense difficulties in respect of the implementation of the scheme provided in the Bill passed by the State Legislature and sent for assent of the President. There should be a machinery to look after this important matter and the Central Government should be alert so that no Bill is unnecessarily withheld from the assent of the President. It should also be looked into that the Bills sent for assent of the President are attended to without any delay. In connection with inordinate delay in getting the assent of the President two Bills passed by the Assam Legislative Assembly may be cited. They are— (1) Assam Panchayati Raj Bill, 1986 and (2) Assam Forest Protection Force Bill, 1986.

3.7 There are divergent views in respect of the office held by the Governor. It is needless to mention that unless there is a cordial relation and coordination between the Ministry and the Governor of a State, the administration of the State cannot be run smoothly. There are instances that due to lack of such cordial relation and co-ordination, the administration of a State had suffered badly. In order to avoid such unpleasant situation, the Central Government should consult a State Government before a Governor is appointed for a State. The Governor so appointed should be acceptable to the State Government. This has to be done for the greater interest of smooth administration of a State.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.6 In addition to the answer already furnished to the Commission, the following is also the view of the State Government—

> Although "Planning" as a subject is in the Concurrent list, it has virtually become a Central subject. While the exercise of planning can be done by a State, such an exercise will be fruitless unless the plan prepared is approved by the Planning Commission. On such approval will depend the plan allocation. Thus it is quite clear that planning is no longer a concurrent subject, but has become a Central subject in all but name.
>
> Viewed in this context, and that the Five Year Plans have progressively tended to reflect national priorities much more than local needs and aspirations, it is appropriate that the financing of the five year plans should be by and large the responsibility of the Central Government, except in so far the resource position of the State allows. In contradistinction to the present system the concept here is that the development plan of a State should not be based on its capacity to raise resources but should be based on agreed needs. Since national priorities are reflected more than anything else in the development plan, the financing should also be from the national fund. As it is, the share of income tax and other taxes made available to a State is not increasing due to other means of raising resources resorted to by the Central Government such as administered prices, surcharge on various

taxes, which do not come into the divisible pool. Particularly for a poor state such as Assam, national planning, involving national priorities as it does should also be based on national resources and not on the State resources.

PART VII

MISCELLANEOUS

Education

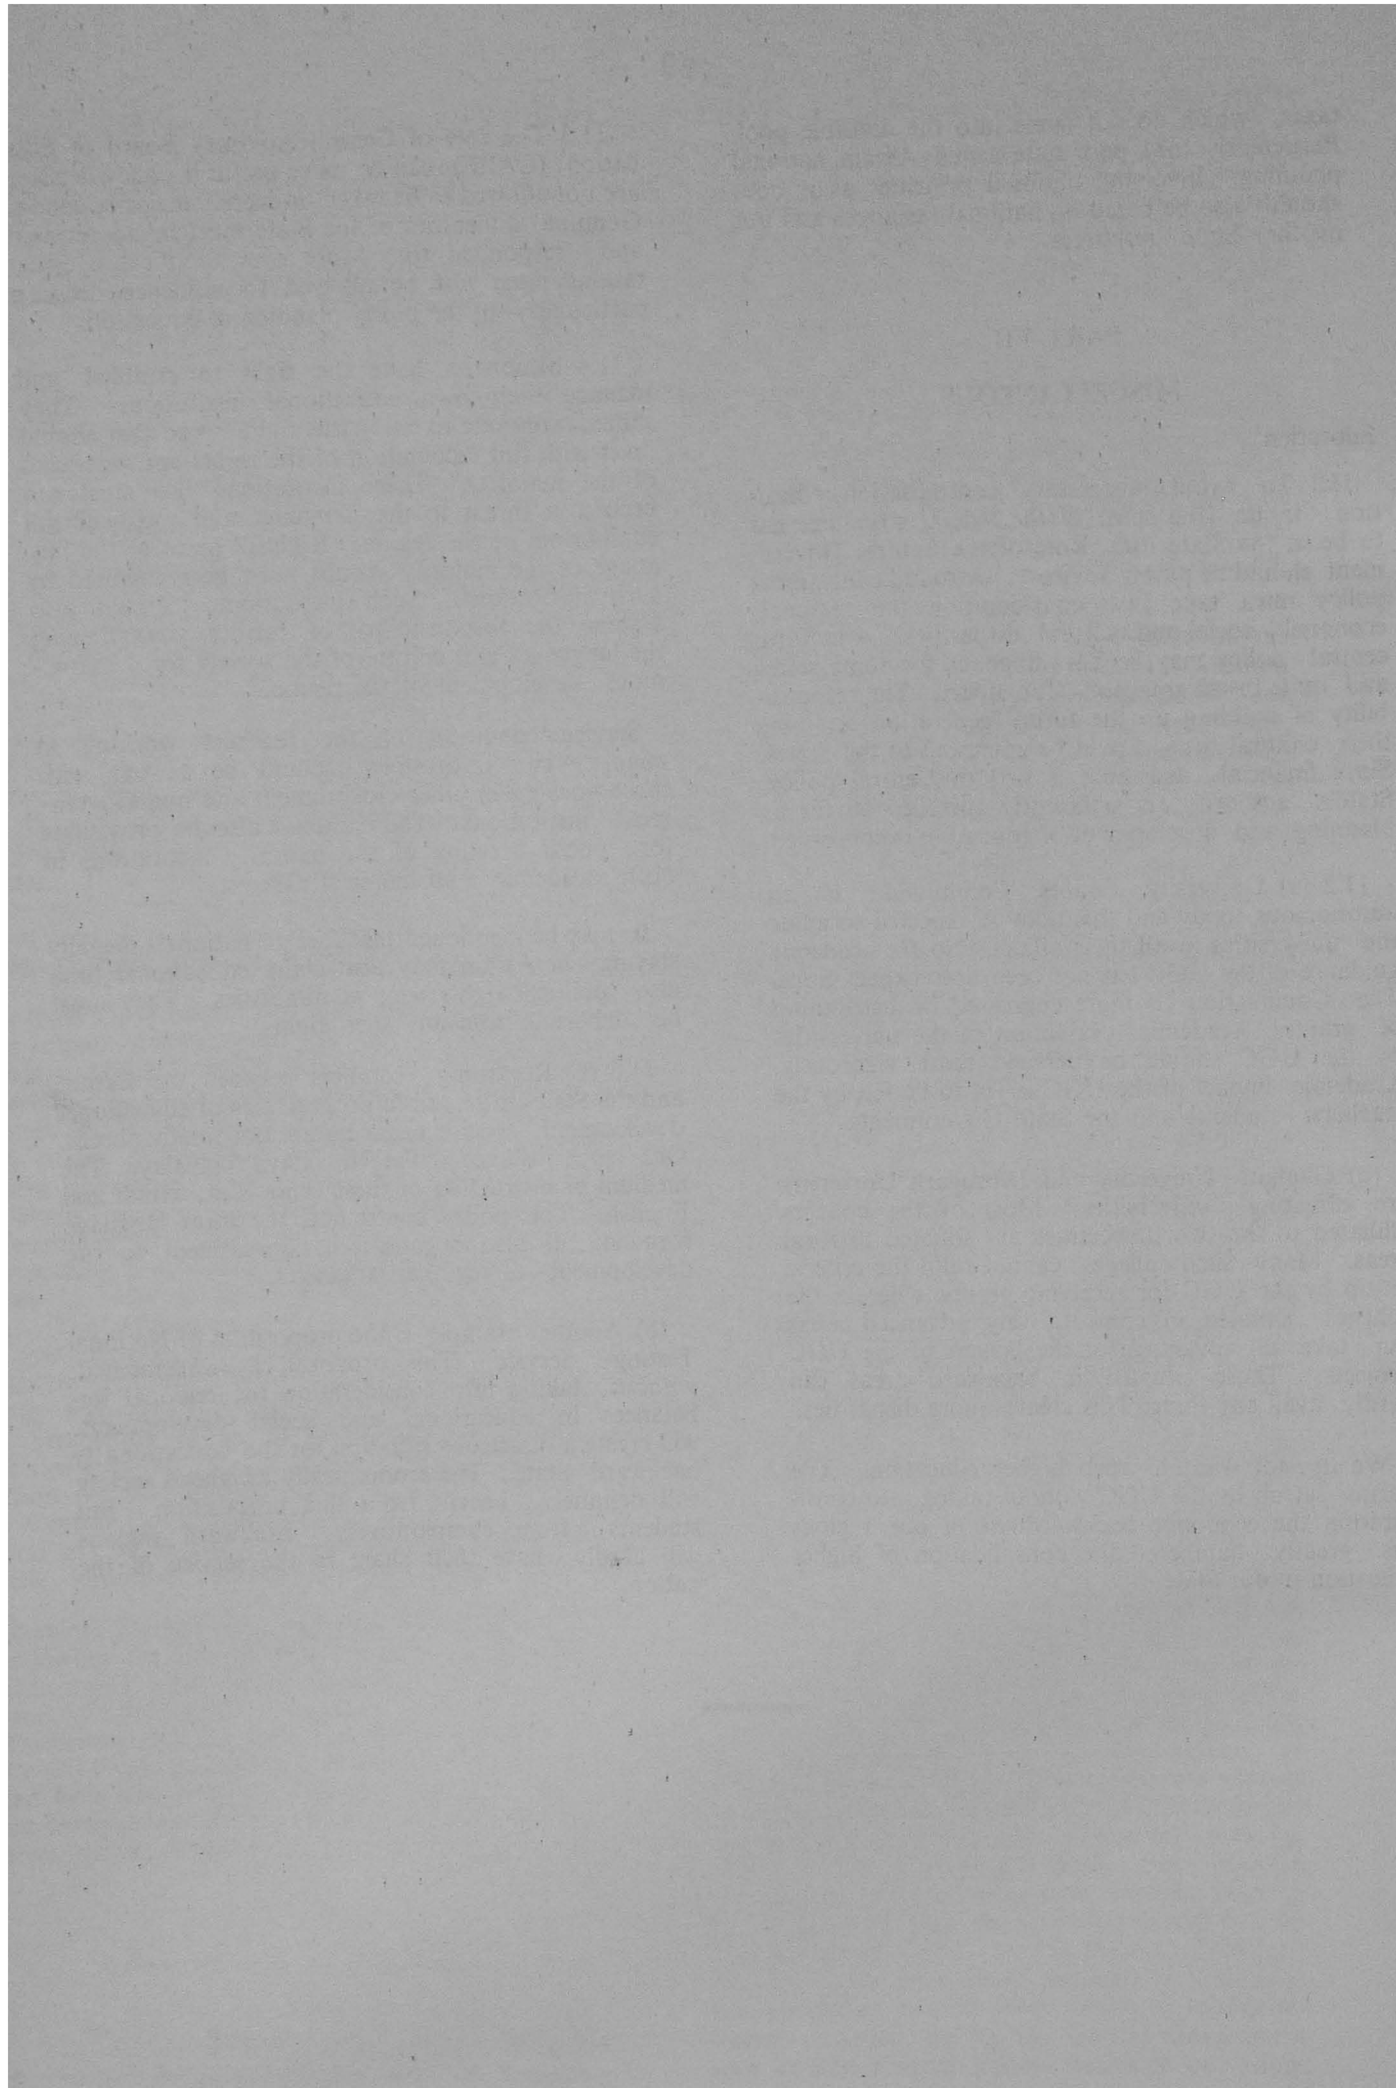
11.1 To avoid unnecessary centralisation, education, in the true spirit of the federal structure, has to be in the State list. Role of the Central Government should be purely advisory. A sound educational policy must take into consideration the regional, economic, social and cultural disparities. A uniform central policy may be advantageous for some states and quite disadvantageous for others. The responsibility of building up the future generation retaining their cultural roots should be entrusted to the States. Since financial assistance is tied to Central policy, State's authority is sufficiently curtailed so far as planning and development of education is concerned.

11.2 (a) University Grants Commission is an autonomous body and this body is expected to guide the universities in all their affairs. So far academic guidance of the UGC has not been upto expectations. The Commission is more engrossed in distribution of grants. Academic evaluation of the universities by the UGC should be persued more vigorously. Academic impact of the UGC is yet to be felt by the teachers, students and the State Governments.

(b) Gauhati University and Dibrugarh University are affiliating universities. Most of the colleges affiliated to the two universities are situated in rural areas. Many such colleges cannot fulfil the criteria set-up by the UGC for receiving grants, whereas the colleges situated in comparatively advanced areas can take full advantage of the benefit of the UGC projects. Those situated in backward areas can hardly avail any thing. This creates more disparities.

We do not want to curb higher education. The norms set up by the UGC without taking into consideration the economic backwardness of our regions has greatly hampered the consolidation of higher education in our State.

11.3 The role of Central Advisory Board of Education (CABE) can be more useful if policy decision are not allowed to be taken on merely majority counts. Genuine difficulties of the State must be appreciated and responded to. More over, political considerations must not be allowed to influence decision particularly in the policy planning of education.



11.4 Minorities have the right to establish and manage their own educational institutions. They should continue to enjoy this right. And they should do it with full recognition of the rights and privileges of the majority. These institutions also must not become a threat to the language and socio-cultural equilibrium of the region. Rightful place of the language of the majority groups must be recognised by such institutions. Such institutions should also assume the responsibility of further strengthening the languages and culture of the society for a harmonious development of the region.

Service condition of the teachers working in minority run institutions should be at par with those working in other Government and non-Government institutions. There should also be provisions for public scrutiny of the minority institutions in both academic and financial aspects.

It may be mentioned that foreign nationals illegally staying in Assam may also claim educational (and also political rights etc.) as minorities. They must be debarred from any such rights.

11.5 (a) Regarding conflicts between the Centre and the States in regard to programmes of educational development, specific instances are not totally absent. One such instance is the Novodaya Vidyalaya. The medium of instruction of these schools are Hindi and English. This policy contradicts the three language formula. It also negates the commitment to the development of regional languages.

(b) Another example is the proposition of National Testing Service. This proposal, if implemented, without taking into consideration the regional imbalances in educational and social development, will create a disastrous situation for the educationally backward State. The economically advanced society will definitely benefit from this proposition. But students from comparatively backward regions will hardly have their share in the service of the nation.

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

No reply given.

PART II

LEGISLATIVE RELATIONS

2.1 There is nothing basically wrong in the scheme of distribution of Legislative Powers between the Union and the States as envisaged in the Constitution. There is no such case in this State where Article 249 has been made use of by the Parliament as a result of which any State Law has been overridden to the detriment of the State. No Law made by the Parliament has been a source of irritation to this State. There has also been no such Legislation by the Parliament by which the State Powers have been eroded or any specific difficulty created. The Union has not made any encroachment on the State Legislative field in the name of either National Interest or Public Interest to the detriment of this State.

2.2 Our Constitution has justified its existence and it does not require any major change. The distribution of powers under the Legislative List of the 7th Schedule of the Constitution is balanced and does not require any interference so as to amend the Constitution. Strong centre is needed to preserve the unity and integrity of the Nation and, as such, no change in the Legislative List is suggested by this State.

2.3 The provisions as contained in the instruments of the instruction under the Government of India, 1935, that whenever any Legislation by the Centre was under taken on a concurrent subject, the Provincial Government had to be consulted beforehand, should not be adopted. Various States have not different local interest and they may not agree on a particular point, which is essential for the National interest and, as such, it is only the Centre who may judge the paramount interest of the Nation in relation to a particular zone. It is not desirable that the Union should consult with the Provincial Government before making any legislation on concurrent subject as mentioned in List III of the 7th Schedule of the Constitution.

2.4 The Declaration enabling the Parliament to legislate on certain subjects within the exclusive competence of the State in "National Interest" or "Public Interest" should be for a particular duration subject to periodic review. The provision enabling the Parliament to legislate on certain items in the State List on the ground of National interest or Public interest should be for a particular period subject to periodic review. National interest must over-ride Zonal interest.

2.5 Not in favour of any change in regard to the Union State relations in the legislative sphere. The existing provisions are sufficient which alone can maintain good relationship between the Union and the State.

However opinion of the Legislative Assembly and Council can also be obtained on the relations between the Union and the States in the legislative sphere.

PART III

ROLE OF GOVERNOR

No reply given.

PART IV

ADMINISTRATIVE RELATIONS

No reply given.

PART V

FINANCIAL RELATIONS

5.1 Before replying to this question, it would be necessary to have a look at the main features of the financial arrangements made in the Constitution laying down, *inter alia*, the pattern of distribution of revenues between the Union and the State, and the nature, scope and manner of transfer of resources from the Centre to the States.

While the Constitution makes a clear delimitation of taxing powers of the Union and the States leaving no room for concurrent jurisdiction, it also makes a provision for the yield from certain taxes and duties levied and collected by the Union to be assigned to the States in certain cases and to be shared between them in case of some others. The States retain the proceeds of their own taxes and levies wholly to themselves. In addition, they receive certain sums as their shares both as constitutional right and assignment from the Union.

The taxes and duties levied and collected by the Union can be classified into four district categories :

(i) these taxes, the proceeds of which are entirely retained by the Centre, such as, custom duties, corporation tax and wealth tax;

(ii) those taxes, the net proceeds of which are wholly assigned to the States such as, Estate Duty, taxes on railway fares and freights, terminal taxes, stamp duties and excise duties on toilet and medicinal preparations;

(iii) those taxes, the net proceeds of which are compulsorily shared with the states such as, income-tax; and

(iv) those taxes, the proceeds of which may be shared with the States; if the Parliament by law so decides, such as, excise duties other than those on toilet and medicinal preparations. Besides additional duties of excise, levied by the Union in replacement of sales tax, wholly accrues to the States.

Apart from the tax sharing arrangements described above, the Constitution also envisages statutory grants-in-aid to the States under Article 275 which can be extended to the States which are determined to be in need of assistance. There is an element of discretion in this provision as regards its applicability in general. There is, however, an obligation created by the proviso to the aforesaid Article for meeting the costs of such schemes of development as may be undertaken by a State with the approval of the Government of India for the purposes of promoting the welfare of the Scheduled Tribes or raising the level of administration of the rest of the areas of that State.

There is another provision in Article 282 which empowers the Union or the State to make grants for any public purpose, notwithstanding the fact that it falls outside the purview of their legislative authority. It is obvious that this is an enabling provision to meet a situation not otherwise provided for. Since plan grants are made under this provision, the use made of this Article has evoked considerable controversy which should not detain us here because it will be dealt with later at the appropriate place.

The makers of our Constitution were fully aware that howsoever meticulous care is exercised in devising a system of clear out division of functions and resources between the Union Government and the States, there is bound to arise, as has happened in other federations too the, problem of achieving an enduring correspondence between the functions and resources of the two layers of Government. Hence, the problem of fiscal imbalance—both vertical and horizontal is not an exceptional phenomenon of the financial arrangements enshrined in our Constitution.

The nature of the sources of revenue and the expenditure functions entrusted to the Union and the States having been decided naturally in consideration of different principles, there would invariably arise a situation which will place the Union in a comfortable position with major, elasitc, high yielding and rapidly growing sources of revenue as against the States, which are left with comparatively inelastic, narrow-based revenues sources but burdened with the responsibilities of expanding nature, such as maintenance of law and order, education, agriculture, public health, irrigation and so on. Thus, results a vertical imbalance when we take into account the fiscal needs of the States against their resource position vis-a-vis that of the Union.

Apart from vertical fiscal imbalnace, which will universally affect all the States, on account of the States being not economically equally placed at the time the Constitution came into operation and also for the reason of the varying levels of development achieved by them at any given time as well as their varying revenue potentials and needs of expanding expenditure commitments, the States would inevitably come to face the impact of horizontal fiscal imbalance, which coupled with vertical fiscal imbalance adds greatly to their revenue requirements.

The framers of the Indian Constitution were fully conscious that complete separation of taxing powers leaving no room for overlapping jurisdiction of the Centre and the States in this regard would by itself not do away with the inevitability of imbalance between the functions and resources of the States leading to inadequacy on their part to discharge their obligations under the Constitution solely on their own. In almost all federations, the inevitability of fiscal imbalance of the nature described above has been given due recognition and constitutional provisions made for transfer out of federal revenues sums to the constitutent units to remedy the imbalance. Hence, our Constitution too made constitutional provisions for wide ranging resources transfers from the Union to the States.

Since the plan of distribution of revenues between the Union and the States had assigned the former a place of primacy, the framers of the constitution did not think it desirable to give the Centre unfettered hand in the matter of financial transfer to the States. Keeping this in view, Article 280 of the Constitution provided for the appointment of a Finance Commission once in every five years to make a quinquennial review of the finances and needs of the Union and the States and recommend financial transfer to the States.

According to the constitutional provisions, the Finance Commission is intended to be the chief instrument of transfer of revenues from the Union to the States. It derives its authority from the Constitution and its composition is settled in accordance with an Act of the Parliament. It is empowered to make recommendations to the President about the distribution between the Union and the States of the net proceeds of the shared and shareable taxes and the allocation between the States of the respective shares of such proceeds. It is also required to suggest the principles to govern the grants-in-aid of the revenues of the States. Moreover, any other matter can also be referred to the Commission by the President in the interest of sound finance.

The constitutional provisions, therefore, making the financial arrangements and providing for the scheme of devolution as well as setting out the mechanism of resources transfers to the States are manifestly adequate in themselves and do not call for a change. The Finance Commission, composed as it is of distinguished persons in their own fields, is an institution enjoying constitutional status and so is independent in its own sphere and its deliberations are not likely to be susceptible to outside interference. Hence, the mechanism of resource transfer, which operates in accordance with the principles laid down by the Finance Commission, is subject to the limits set by the recommendations of the Commission.

In this view of the matter, we are not inclined to hold that the mechanism of resource transfers, as envisaged in the Constitution, suffers from inherent weakness or deficiencies so that it cannot come upto the expectations of the makers of the Constitution. We

are, however, aware that the field of Union-State financial relations has not been so quiet. In fact many issues have been raised suggesting, *inter alia*, that the way these arrangements have been working has led to a situation in which the transfer of resources has neither succeeded in meeting the needs of the States nor has been able to secure a reasonable measure of uniformity in standards, the two broad objectives which any scheme of fiscal transfers should desirably aim at. We do not believe that the said failure of resource transfers in enabling the States to meet their growing requirements or in producing equalising effects on standards of administration social and economic services can be attributed to any discernible infirmity of the constitutional provisions. If there has been failure on these counts, the reasons lie elsewhere.

The framers of the Constitution had hoped that the mechanism of fiscal transfers which they provided in the Constitution would achieve the objective of covering the revenue gap between the resources and the fiscal needs of the States to discharge their growing responsibilities. It can be nobody's case that this hope has been fully realised; and for this the methodology followed by the Finance Commission is answerable. The Finance Commissions have been following what has come to be known as the gap-filling approach. The States are called upon to submit forecasts of revenue and expenditure on non-plan account in a standard form. The forecasts thus obtained are reassessed in the light of certain broad considerations and on the basis of certain assumptions so that the forecasts are adjusted to make them comparable. Then the Commissions work out the gross deficits or surpluses on the non-plan revenue account of the state budgets. After allowing for devolution of tax shares from the divisible pool of taxes, the gaps are treated as budgetary needs of the State Governments. In case some States are still found to suffer from deficits in their non-plan revenue account, they are considered eligible for grants-in-aid, otherwise not. In other words, the budgetary gaps so assessed have tended to be equated with financial needs of the States.

The estimate of the gap on non-plan revenue account assessed in the manner described above, is based merely on normative growth rates of revenue and expenditure assumed by the Finance Commissions, which were not in a position, on the other hand, to reduce the tax shares of those States which were found to enjoy non-plan revenue surplus after receiving tax shares because such shares were dependent entirely on different sets of criteria uniformally applicable to States irrespective of the nature of the gap assessed. One consequence of this methodology has been that richer States have received higher amounts in the total devolution as compared to some weaker States which had to remain content with the fixed sums of grants-in-aid to fill in the gap.

The past Finance Commissions have made reference to the needs of the States in varying terms but they have never attempted to estimate the real financial needs of the States in relative terms and recommend fiscal transfers accordingly. They seem to have assumed that the gap between estimated revenue and expenditure reflects the financial needs of a State. This assumption is open to question. The real financial needs of a State cannot truly be reflected by the budgetary gap estimate in the manner detailed earlier, because the financial need has to be measured keeping in view broad economic consideration such as, levels of development, disparities in the revenue potentials, the standards of essential public services of different States. The estimated budgetary gap as assessed by the Finance Commissions, used only for the limited purpose of determining grants-in-aid, cannot be held as representing the real financial need of a State, which should be assessed in a comprehensive manner by taking an overall view of the resources and responsibilities of the States so as to determine their relative needs in an objective manner.

In estimating the revenue gap, the Finance Commission rely on several assumptions which eventually tend to make the revenue gap estimate unrealistic. For instance, the revenue potentials of a State are unduly exaggerated by assuming that the States would earn certain positive rates of return even from their public utility undertakings such as, Electricity Boards and Road Transport Corporations. To make such assumption amounts to totally ignoring the realities of the situation. We know from our own experience that the State Government have not received any amount from the Electricity Board either by way of repayment of loan or interest thereon during the entire period covered by the recommendations of the Seventh Finance Commission, even though the Commission had taken credit for a certain rate of return thus adding to the resources of the State, which in fact, has not materialised. So is the case with our Road Transport Corporation, in whose case also the Seventh Finance Commission had stipulated a fixed rate of return during the devolution period and had hoped that the return so earned would add to the resources for the States plan. This turned out to be a pious hope.

Then again, the Finance Commission expected the irrigation work yielding certain rates of return. Such expectations, it may be pointed out, are based on questionable premise that public utilities like generation and supply of electricity, road transport undertakings or irrigation projects should make profits like commercial ventures. It need not be forgotton that they create infrastructures and also carry social obligations so that they cannot be treated at par with commercial undertakings run with a motive to earn profits. To ignore these aspects amounts to taking an unrealistic view of the nature and purpose of such public utilities, let alone their social obligations and the socio-political mileu in which they have to operate. The assumption of positive return from the undertakings of this nature can only be hypothetical and, in real sense, will not add to the revenue of the States or the resources for their plans. Hence, a correct assessment of the revenue of a State should not take credit for returns from such undertakings. If at all, rates of reasonable return can be assumed only on such enterprises of the States which are commercial by their very nature so that they can be ligitimately expected to yield profits. Other public utilities and undertakings, intended to create infrastructures and fulfil certain social obligations should not be expected to give return on the investments therein.

There is yet another instance to show how the revenue gap is estimated by ignoring a significant portion of the inevitable expenditure incurred by the States on pay and dearness allowance of their employees merely on the ground that such expenditure was incurred after the reference date. If on such technical grounds, substantial expenditure is not taken into account, the estimate of revenue gap will not correctly reflect the gap between revenue and expenditure of the States.

Since the Finance Commissions have based their estimates on such unrealistic assumptions, the revenue gaps worked out by them have turned out to be under-estimate of the revenue gap. To illustrate the point by referring to our own case, the Seventh Finance Commission assessed that the non-plan revenue gap in the case of Bihar for the devolution period would be Rs. (—)1057·53, but the assessment has been found to be a gross underestimate because the actual gap during the devolutions period is estimated to be of the order of Rs. (—)2659·32 crores.

It would thus appear that the estimate of revenue gaps made by the Finance Commissions is based on a number of such unrealistic assumptions that the gaps so assessed, even as far as they go, do not correctly reflect the actual gap between the revenue and expenditure of the States. Moreover, the chief defect of the gap-filling approach lies in the fact that the budgetary gap, which the Finance Commissions determine, is equated with the real financial needs of a State. The inescapable consequence is that the gap between the resources and the fiscal needs of the States to discharge their growing responsibilities remain uncovered to a considerable extent.

The remedy lies in furnishing the methodology adopted by the Finance Commissions so that the real financial needs of the states are assessed in a comprehensive manner and met by requisite financial transfers.

There is another point which is usually raised to show that a significant part of the financial arrangements between the Centre and the States has gone out of the purview of the Finance Commissions. Referring to the emergence of Planning Commission over the years as a dominant arbiter of transfer of resources to the States, it is said that this has resulted in quality and overlapping of functions of the Finance Commission and the Planning Commission and, in the process, the Finance Commission's role has been restricted to non-plan fiscal transfers only, the Planning Commission being given exclusive sway over Central assistance for State plans. In this situation of parallel operation of the two Commissions, it is but expected that the Finance Commission has not been left in a position to take a total view of the finance of the States and, therefore, the transfers through the Finance Commissions have failed to come up to the expectations of the framers of the Constitution.

This raises the question of the respective roles of the two Commissions. More appropriately, this matter can be discussed in detail while replaying to question number 5.9. It would be sufficient here to point out that the crucial question is to see if there is any inherent contradiction between the functions of the two Commissions and if the interactions between them produces any discernible adverse impact of fiscal transfers to the States. It should not be forgotten that economic and social planning is an accepted national policy. Therefore, the Central and State plans reinforce each other and together aim at achieving the set goals. For the same reason, despite their separate identities and difference in composition, separately varying but not necessarily fundamentally conflicting ways of functioning and approach, the Finance Commission and the Planning Commission cannot afford to adopt opposite postures and swerve from the common path of working towards the end of furthering, in their own ways, economic development of the country accompanied with balanced growth of the States. In this view of the matter, the possibility of existence of lack identify of approach between the two Commissions cannot be overplayed .The objective being common, the results of their efforts would not be contradictory but complementary to each other. This finds support in the observation of the Seventh Finance Commission to the effect that 'Central assistance for State Plans is not decided independently of the situation of the State resulting from the Finance Commission awards, for, to the extent that the States' resources are improved vis-a-vis their requirements for their Plans, the proportion of Central assistance for the Plan in the total transfer can be smaller.' This interdependance between the efforts of the two Commissions largely obviates the likelihood of adverse impact on the total fiscal transfers to the States.

True, the Constitution did not contemplate of federal fiscal transfers otherwise than through the Finance Commission. Even so, the Planning Commission came into being almost simultaneously with the Constitution coming into operation. So, transfers through these two Commissions came to be woven into the system of fiscal transfers to the States right from the beginning. And, the pattern has come to stay.

So far, we have urged that the mechanism of fiscal transfers is capable of satisfying the expectations of the framers of the Constitution. The failures, wherever noted, do not arise because of any inherent infirmity in the constitutional arrangements for division of resources between the Union and the States or fiscal devolution. We have, however, noted that there is room for improvement in the methodology followed by the Finance Commissions so as to make the transfer of resources through their endeavours more equalising in effect.

While the principles of fiscal devolution have evolved as a result of labours of eight Finance Commissions and hence have acquired some degree of consistency, their is scope for periodic changes in the sharing of central taxes and duties as well as giving of grants-in-aid to the States. Whenever such changes are brought out on the basis of recommendations of Finance Commission, voices of protest are hardly heard. The position is not the same when changes are governed by considerations other than those recommended by Finance Commissions. An instance in view is the decision of the Government of India to implement the recommendations of the Eighth

Finance Commission from 1985-86 to 1988-89, a period of four years only instead of the usual period of five years which, in the present ease, would have been from 1984-85 to 1988-89. We do not propose to apportion blames. All that we intend to any is that in a federal structure, recommendations of institutions like Finance Commission have their own place and they should be accorded due regard.

Now we come to resources transferred to States through Finance Commission. During the first five-year plan period, that is 1951-52 to 1955-56, the total transfer amounted to Rs. 447 crores. As against this, the total resources transferred during the period (1974-75 to 1978-79) covered by the fifth-year plan was of the order of Rs. 11048 crores and during the sixth five year plan period (1979-80 to 1983-84) the financial devolution went up to Rs. 22888 crores. In other words, the fiscal transfers through the Finance Commission have recorded a phenomenal increase during the first thirty two years.

If we look at fiscal transfers from another angle, it will be evident that in the year 1972-73, the transfer of resources by way of tax shares constituted 36.8 percent of net devolution of resources from Centre to States (including net loans and advances from Centre to States.) This percentage has gone up to 52.6 in the year 1982-83 (B.H.). As regards grants-in-aid (both discretionary and non-discretionary), it constituted 32.4 percent of net devolution of resources from the Centre to States in the year 1972-73 and the percentage has gone up to 33.9 in the year 1982-83 (B.H.).

It will thus appear that not only total financial transfers have gone up during these years, but also there has been an increase in tax shares and grants-in-aid received by States both in quantum as well as percentage of net devolution of resources from Centre to States.

However, another side of the picture emerges if we look at transfer of resources from the Centre to States as percentages of aggregate receipt and aggregate disbursement of the Central Government. During the year 1972-73, net devolution of resources from Centre to States constituted 33.6 percent of aggregate receipt of the Central Government. In the year 1982-83, this percentage came down to 27.1 only. Similarly, during the same period, the net devolution of resources from Centre to States as percentage of aggregate disbursements of Central Government recorded a decline from 30.5 in 1972-73 to 26.4 in 1982-83.

It would thus be seen that whereas in absolute terms the total quantum of financial devolution has been increasing over the years, there has been a noticeable trend of decline in the transfer of resources as percentage of both aggregate receipt and aggregate disbursement of the Central Government. It may be mentioned that both the aggregate receipt and aggregate disbursement of the Government of India have increased considerably during the same period. The aggregate receipt in the year 1972-73 was Rs. 8619 crores. It has gone up to Rs. 33437 crores in the year 1982-83 (B.E.). Similarly, aggregate disbursement was Rs. 9488 crores in the year 1972-73. It has gone up to Rs. 34808 crores. But this increase is not adequately reflected in the transfer of resources to States in so far as the percentage of aggregate receipt transferred to the States has gone down.

It is of crucial significance to emphasise the point that irrespective of the channel through which fiscal transfers are effected, it is ultimately the quantum of fiscal transfers and their eventual impact on achieving the accepted objective of economic development of the country accompanied with balanced growth of the States. It is in respect of removal of regional disparities that, according to us, fiscal devolution over the year appear to have failed in fulfilling the expectations. In spite of over 30 years of planning process, not only the regional disparities have not been removed, but these have been further accentuated. The per capita income of Bihar at current prices was Rs. 870 in 1980-81 against the average per capita income of the country of Rs. 1571. A look at the per capita income of Bihar during the entire period of planning will indicate that the gap between the per capita income of this State and that of the country as a whole has been widening. In respect of per capita SDP (Average 1976-79), Bihar occupies the lowest position with Rs. 753 as against Rs. 2250 of Punjab (which is the highest) and Rs. 870 for Uttar Pradesh, Rs. 918 for Orissa and even the specially classed States, such as Manipur, Meghalaya have gone ahead of this State. This clearly symptomises growing regional disparities.

Removal of inter-State, disparities is necessary for achieving all-round uniform progress in the country. This calls for a reorientation of approach of financial devolution keeping the end of attaining balanced regional growth in view. It should be realised that tangible result in removal of regional imbalances can only be achieved by giving up the present system of assessing the financial needs of the States by lumping together the backward and better-off States and then evolving common criteria for resource allocation. Instead, a more pragmatic approach is needed to assess the needs of backward States particularly in the light of their special problems and give them special treatment for the purpose of resource transfer.

Fiscal equalisation, however, has not been expressed as an explicit objective by any of the Finance Commissions. Reference to removal of inter-State disparities has been made by them and for this purpose recommendations for grants for upgradation of administrative standards, wherever they are adjusted to fall below the levels obtaining in other States were made for certain backward States. Recognition has also been given to special problems of certain States. Such recommendations, however, were by their very nature limited in scope and could not be expected to make significant dent on the problem of inter-State inequalities, for which the total devolution of resources should be distributed on principles that give due primacy to backwardness.

It was the Sixth Finance Commission which made a bold departure from the earlier Commissions in giving further recognition to the special problems of backward States, and for the first time, had given them access to resources on a liberal scale to enable

them to come up to the national average in important administrative and social services. The Seventh Finance Commission did more in the direction. The Eighth Finance Commission has leaned in favour of the backward States and tried to make the scheme of devolution more progressive because this, according to the Commission, is what the national interest requires. It has given added weightage to factors which go to help the backward States. We have the feeling that it is a step in the right direction and needs to be carried forward in that spirit.

In conclusion, we can say that the expectations of the makers of the Constitution have not been fully realised not because of anything inherently wrong with the institution of Finance Commission, but mainly because of two reasons. Firstly, the manner in which the gap between the needs of the States and their resources are assessed is based on a methodology which leaves much to be desired. And, secondly, each Finance Commission has evolved its own method of assessing the relative backwardness of the States, which has resulted in shift of emphasis on factors reflecting the true extent and nature of backwardness of States. We believe that, of late, there has been a growing realisation that balanced growth can be achieved only by greater emphasis on removal of inter-State inequalities and determined steps in that direction will ensure adequate financial devolution so as to enable them to catch up with the more developed States, thus fulfilling the real objective of financial arrangements conceived by the framers of the Constitution.

5.2 We agree that the observations made by the ARC Study Team on Centre-State Relations still hold good. The Centre continues to be in the position of financial dominance and, the States dependent on the Centre for financial withdrawal to meet their numerous obligations.

At the same time, we also believe that this situation is quite natural in view of the allocation of taxing powers to the Centre and the States made by the Constitution and the access of the Union Government to various other sources of non-tax financial resources. This phenomenon of vertical fiscal imbalance is not unknown to other federations, nor it is unexpected for our federal structure. In fact, framers of our Constitution were aware of this eventuality, hence they consciously made provision in the financial arrangements for mechanism of wide-ranging fiscal transfers to States. We had occasion to dwell at length on the different aspects of fiscal imbalance and implications of transfer of resources to States in our reply to question no. 5.1. We need not enter into repetition and will only reiterate our view that the constitutional provisions governing financial relations between the Centre and the States are adequate in themselves and so they do not call for any change. Against this background, we give below our views on various alternatives suggested in this question.

The alternative (a) envisages a basic change in the financial relations between the Union and the States. As we have stated above, we are not in favour of change in the constitutional provisions relating to financial relations between the Centre and the States. Moreover, if this alternative is accepted it would mean that some more taxing heads would be transferred to the State List and having done so, there would be no question of transfer of resources from the Centre to the States. Stated in other words, the alternative would seem to suggest that financial independence of the States could be secured merely by placing within their reach certain items of taxes, which at present do not belong to them. It may be mentioned here that financial relations between the Union and the States are not confined to taxing powers alone. Nor can it be said that by merely giving more taxing powers to States, their financial dependence on the Centre will cease to exist and the States will no longer continue to be the Receiver and the Centre the Giver. In this connection, it has to be remembered that dependence of States on the Centre is not the effect merely of the constitutional provisions relating to transfer of resources from Centre to States. Large size plan assistance fall outside the scope of these constitutional provisions and yet, in no small measure, States are beholden to the Centre for central assistance, to a significant extent, of considerable dependence of the States on the Centre. This picture can hardly change merely because some more elastic taxes are added to the State List.

Moreover, the course suggested also ignores some other vital areas of financial relations between the Union and States. For instance, market borrowings, central loans to States to enable them to tide over their ways and means difficulties, utilisation of foreign funds for benefits of the States etc. are matters in respect of which States' dependence on the Centre would continue even after some more taxing powers are transferred to the States.

There is yet another reason why the suggestion does not appeal to us. Taxing powers can be vested in respective authorities keeping in view the nature and base of taxation and also economy in administering the tax. So, where the basis of tax is country wide, the Central Government is the appropriate authority to impose and collect the tax, also because from the point of view of economy and efficiency in administration of such a tax, the power to levy and collect such a tax should rest with the Central Government. The States can tax their own citizens of income generated within their respective territorial jurisdictions. The point is that distribution of taxing powers has to take into account recognised imperatives of a federal structure. Taxes which affect the national economy in general or generate effects on inter-State trade or commerce should remain with the Centre. It is pointless to argue that taxes like income tax, custom duties or central excise can be transferred to the States. To do so would be economically unsound and administratively inexpedient. Improper allocations of taxing powers will cause distortions in the tax system and will lead to failure in achieving optimum exploitation of sources of tax revenue.

For the foregoing reasons, we do not support the alternative mentioned at (a). The reasons explained in the foregoing paragraphs also do not impel us to endorse the suggestion mentioned at (b) also.

The alternative at (c) envisages three things. Firstly, all taxing heads/taxing powers would be transferred to the Union List, which will mean

that the States will no longer possess any power to impose taxes. In other words, they would cease to have any tax-revenue of their own, because all tax receipts will accrue to the Consolidated Fund of India, which will constitute a shareable pool. It is this pool from which the States would receive their share.

Secondly, it is proposed that the respective shares of the Union and the States as a whole should be specified in the Constitution itself. This will obviously require a constitutional amendment. Moreover, laying down the share of the States in the Constitution would result in taking away from the Finance Commissions their existing power to determine the share of the States as a whole in the proceeds of shareable or shared taxes. There is another important point to which we will draw attention in this connection. A constitutional provision specifying States' share in the shareable pool will be a permanent feature not capable of periodical revision, as is the case at present when the Finance Commissions make a qninsquennial review of the finances of the Centre and the States and recommends principles for determining the respective shares of the Centre and the States as a whole. Share of the States thus fixed practically once for all is fraught with the danger of proving as an avoidable irritant to Centre-State relations, because the shares once fixed shall continue indefinitely, at least unless and until a change is brought about by constitutional amendment, in spite of positive changes in the economic and financial conditions which may necessitate a fresh look at fiscal devolution to the States. Unless, some provision exists for a periodical review the course may well become counter productive from the point of view of Centre-State relations.

Taking up the alternative (d), we do not favour the idea that the proceeds of custom duties should be shared with the States. The case, however, with the proceeds of corporation tax and surcharge on income tax is different.

In the case of corporation tax, it has been our case before the Finance Commissions that the proceeds of corporation tax should be shared with the States. In fact, even before the constitution came into operation, corporation tax used to be shared between the Centre and the Provinces. The Constitution, as originally prepared, had not kept the proceeds from the tax out of divisibility. However, it was by an amendment in 1959-60 that the tax on income paid by companies was taken out of the divisible pool.

The proceeds of corporation tax have far outstepped the proceeds of income tax over the past years. Had amendment of 1959-60 not kept the tax on company incomes out of the divisible pool, the States would have been receiving their due share in proceeds of corporation tax, which have shown greater buoyancy than income tax. Thus, the States have been deprived of their due share in this expanding source of revenue.

'As regards corporation tax' the Eighth Finance Commission has noted, 'the grievance of the States is even stronger'. The Sixth Finance Commission's recommendation that the matter of inclusion of corporation tax in the divisible pool should be discussed in the National Development Council has not produced any concrete result. The outcome of the meeting of the Chief Ministers held on 19th and 20th May 1979 could not satisfy the States, because their case was rejected on the plea that, Corporation tax being analoguous to income tax, its distribution amongst States according to principles governing distribution of income tax would benefit less developed States at the cost of advanced States. This view is certainly obvious of the crying need to fill financial devolution more in favour of backward States to speed up removal of inter-State inequalities.

The Eighth Finance Commission has come to the conclusion that 'further review of this matter is overdue, as it is important to remove this major irritant in Centre-State relations. Corporation tax has shown a high elasticity and it would seem only fair that the States should have access to such a source of revenue'.

Hence, we support the idea that the Corporation tax should be brought into the divisible pool.

As regards Union surcharge on income tax, we have been consistently pleading before the Finance Commissions that the proceeds should be shared with the States. We concede the right of the Union to levy surcharges for its own purposes. Nevertheless, we are convinced, as the Seventh Finance Commission felt, that "though Article 271 does not in express terms lay down that Union surcharge should be for meeting the burdens of the Centre arising from any emergent requirements, there is an underlying assumption that a surcharge should only be levied for meeting the requirements of some unexpected events and should only be for the period during which it lasts. In this view, a surcharge continued indefinitely could well be called on additional income tax shareable with the rest of the proceeds of income tax".

The Eight Finance Commission has laid emphasis on the constitutional position that it is not permissible to merge the surcharge with income tax. Yet, the Commission has taken into account the fact that the proceeds of surcharge had added to the Centre's resources in deciding what the share of the States in the divisible pool of income tax should be. This amounts to indirect acceptance of the legitimacy of the case of the States that they have a justified claim on a share in the proceeds of surcharge on income tax.

We are not convinced of the rationale of keeping the surcharge on income tax as a permanent but separate impost. It would be more appropriate and logical to merge the surcharge with the basic rates of income tax. When we make this suggestion we do so with a precedent in view the surcharge levied on income tax for some years was merged with the basic rates after the Second World War. There is nothing to stand in the way of acting accordingly again, more so when the surcharge has become a regular and permanent feature of taxation of personal incomes. If, however, that is not found possible for any reason, the proceeds of the surcharge should be made divisible with the States.

We now come to the alternative (e). In our reply to question No. 5.14, we have suggested that the yield from Special Bearer Bonds should be shared with the States. We have also expressed our views on the need for a suitable modification in the policy relating to administered prices with a view that the States are not deprived of their due share in central excise revenue to which some part of increase in administered prices may be attributable. We have also made a suggestion that the net deposits under the Compulsory Deposit (Income Tax Payers) Scheme may be treated at par with net small savings collections and a part thereof may be made over to the States.

We do not consider it necessary that other non-tax revenues of the Centre need be shared with the States.

In conclusion, it does not appear to us that acceptance of either of the alternatives would materially alter the present position of dependence of the States on the Centre. On the other hand, we feel that with desired change in the methodology of the Finance Commission, to which we have made reference earlier and also in replies to some other questions, the existing arrangements for financial devolution would create satisfaction, provided certain taxes and non-tax revenue of the Centre, are also shared with the States, as suggested above.

5.3 The laudable objective to provide social and economic justice and to endeavour to eliminate inequalities amongst groups of people residing in different areas is really unexceptionable. In fact, one of the acceptable goals of planning in India has been economic development accompanied with balanced regional growth. Reduction of inequalities of income and wealth amongst various strata of society has been the avoid aim of planned progress.

It is, however, also true that for various reasons all States were not economically equally placed so that their capacity to ensure through their own resources reduction of regional inequalities or to attain social and economic justice varies widely. The crucial issue is whether the remedy lies in making the Centre more strong by giving it more elastic sources of revenue and more discretionary powers to use the funds at its disposal for the development of poorer States.

We are in favour of a strong Centre. At the same time, we also hold that strong Centre is not inconsistent with strong States. For we earnestly believe that India, being a Union of States (the Indian Constitution does not use the word "federation") can be really strong only when the States are strong. Any attempt at restructuring of financial relations should not miss to take in to account these basic facts.

The distribution of financial powers between the Centre and the States envisaged in the Constitution seeks to harmonise their seemingly conflicting interests by striking a balance between excessive centralisation of powers in the hands of the Centre and extensive decentralisation of powers in favour of the States. The division of revenues between the Centre and the States was accordingly made and the mechanism of fiscal transfers was devised for the purposes of taking care of fiscal imbalances resulting from the financial arrangement made by the Constitution.

It is against this backdrop that the answer to this question should be sought. The various sources of taxes suitable for the Centre have been allocated to the Central Government. Taxes which can be appropriately levied and collected by the States have been given to them. Then there are provision for financial adjustments. The basic principle underlying the division of taxing powers between the Centre and the States is that the taxes which affect the economic life of the entire country should belong to the Centre. Accordingly, custom duties, taxes of company incomes, excise duties etc. are levied by the Centre. On the other hand, the taxes left at the command of the States are such as do not affect the entire economy are local in their effects, and on grounds of administrative efficiency and relative costs of collection, more appropriately belong to the States.

If, therefore, some of the taxes at the disposal of the States are transferred to the Centre, on the one hand, the States will cease to have at their command sufficient resources of their own to meet their normal expenses and cope up with increasing requirements for providing social, economic and administrative services, and, on the other hand, such an arrangement will disturb the financial plan stipulated in the Constitution. And, we have already pointed out in reply to Question No. 5.1 that the constitutional provisions laying down the scheme of division of resources and financial readjustments are adequate in themselves and do not need any change.

If the suggestion to make over to the Centre certain of the taxes, which are with the States at present, is accepted, it will lead to unnecessary centralisation of sources of revenue at the level of the Centre and the problems of financial adjustments would get more complicated, and invite more irritants rather than assuaging the strains on Centre-State relationship. The attitude of the States towards prudence in financial management may tend to be weakened because their sense of responsibility in ordering public expenditure is likely to be adversely affected.

Moreover, considering the nature of State taxes, it is difficult to say that they are anywhere near the Central taxes and levies in the matter of elasticity or buoyancy. In fact, taking into account the yield from State taxes as compared to the yield from Central taxes, it would appear that the taxes levied by the Centre amounts to about 67 percent of the total of taxes levied both by Centre and the States. Hence, there does not seem to be a reasonable possibility of achieving any substantial gain by transferring some of the State taxes to the Centre. Moreover, it would be economically unsound and administratively inexpendient to make over some or other of the taxes at present allocated to the States.

The disadvantages, on the other hand, are many, which will inevitably follow from such a rearrangement of taxing powers as would reallocate some more

taxes to the Centre. First it will further accentuate vertical fiscal imbalance by increasing the already existing centralisation in the Indian federal fiscal system. Secondly, the States would be left with practically negligible resources of their own which will make them utterly dependent for their requirements on the Centre and consequently also place them under continuous debilitating influence of lack of proper financial discipline. Thirdly, such a real-location of taxes between the Centre and the States will greatly distort the basis of resource allocation and hence aggrevate the evil effects of lack of correspondence between the functions and resources of the States. Above all, incalculable damage will be done to fiscal federation and, in fact, too much centralisation will set a trend in the opposite direction.

It is also not very clear to us how regional imbalances could be reduced to any significant extent, merely by giving the Centre more elastic sources of revenue and more discretionary powers to use the funds available with it for the development of poorer States. For one thing, there would be excessive centralisation of funds and the States will be left with much reduced resources of their own so that their financial capacity to meet their obligations will greatly suffer. Since ours is a developing economy there is self-evident need for a growth oriented fiscal policy, which should aim at effecting such an inter-regional transference of resources as would promote regional growth and at the same time be equitable. Therefore, removal of regional imbalance cannot possibly be achieved merely by céntralisation of resources. On the other hand, more necessary will be deployment of resources in areas of under development taking into account regional variations in resource endowments. So, it is agian the question of financial readjustments by way of fiscal transfers that can play an effective role in the reduction of inter-State inequalities, which cannot be achieved merely by placing more revenues and more discretionary powers in the hands of the Centre. It is more relevant, therefore, to look for and devise such principles of resource transfers as could lead to removal of inter-State disparities.

We also do not consider it necessary that more taking powers should be given to the States either. All that we plead for is suitable modifications, within the existing pattern of financial relations between Centre and the States, of the principles governing fiscal transfers so as to make them more progressive to achieve greater inter-regional equalisation.

5.4 The objective set forth in the preceding question is to provide social and economic justice and endeavour to eliminate inequalities amongst groups of people residing in different areas. Growth with special justice is an accepted goal of planned development programmes in this country. The development strategy adopted achieve the set goal accords the requisite priority to social and economic justice and removal of inequalities of incomes and wealth amongst peoples as well as inter-regional disparities.

Since the financial resources allocated to the Union by the constitutional provisions have placed the Centre in a more advantageous position than the States, and since planning for development is guided and regulated by the Government of India through the mechanism of Planning Commission, the Centre should bear a greater part of the responsibility for balanced growth, which implies removal of inter-regional disparities and elimination of inequalities amongst groups of people residing in different areas.

Any developing country requires an increasing revenue to meet its growing expenditure. For achieving the goals set forth in the preceding question, the requirement of revenue is still greater. There are various ways and means of raising more revenue resources. The choice has to be made keeping in view the requirements of the national economy.

Taxation is one such course open to governments to raise revenue. It has to be realised, however, that besides raising revenue, the objectives of taxation also include regulation and economic control. The planning Commission has viewed the tax policy as an instrument of mobilising resources for development and allocating them according to plan priorities. Thus taxation is a significant source of development finance. It however, be clear that revenue raised through taxation will not automatically be available for achieving social justice or removal of inequalities. It will depend on the priority given to attaining these objectives. In our case, social justice or removal of inter-regional inequalities have not been given the high priority which can warrant predominance in allocation of resources to these sectors.

Even so, the need for raising more revenues cannot be disputed. The question is whether and how far this should be done through taxation. It is pointed out in certain quarters that the developing countries have been different in collecting taxes, so that the ratio of tax revenue to GNP in their case is nearabout 15 percent as against 30 percent or so in the case of developed countries. In other words, it is suggested that either more taxes could be imposed or the level of existing taxation could be further raised for collecting more revenues. It is, however, difficult to contend that how the ratio of tax revenue to GNP necessarily reflects the position that the present level of taxation is far below the taxable capacity of the people in developing countries. In fact, it is admitted on all hands that taxable capacity is not arithmatically measureable. Yet there is a limit to which taxation could be used for raising resources, for augmentation of revenue is but one of the objectives of tax policy. There are also political, administrative as well as economic limits to raising resources through taxation. We do not think that having regard to all these points, the Government of India can raise further resources only through taxation to attain the objectives set forth in the preceding question.

But, there can always be scope for adjustments in the tax structure keeping in view the interest of the national economy and the need for greater resources. Such attempts would include efficient and strict administration of taxes so as to reduce to the minimum the scope of tax evasion. It should be considered important to plug the 100 holes in tax administration so that even with existing tax structure, the yield could be raised by strictly dealing with cases of tax evasion. One such instance is provided by concealed incomes which could be discovered and brought within the net by a special scheme of Bearer Bonds. Such incomes could have been assessed and

subjected to tax in ordinary course. Who knows there may still be more cases of concealed incomes.

We are not in favour of raising more revenue through subventions from richer States to Central Pool under some principles. This will amount to trying to remove inequalities by levelling down rather than levelling up. Moreover, such an arrangement will require constitutional amendment which we do not consider necessary for reasons explained in our replies to earlier questions. An attempt in this direction would lead to avoidable inter-State friction, which we think to be against the interets of national unity.

Better control over expenditure is an unexceptionable mode of conserving resources. Financial prudence lies in ordering public expenditure in an efficient way so as to ensure optimum utilisation of available resources. We believe that adjustments in tax structure coupled with efficient and strict administration of taxes and strict control ever public expenditure would result in considerable improvement in resource position of the Centre as well as States.

We are at one with what the approach paper to the Seventh Five Year Plan says about augmenting resources. It has rightly pointed out that tax collection can be raised, even without raising rates, by widening the tax net and toning up administration.

We also agree with the Approach Paper that the required resources have to be mobilised in a manner which minimises dependence on deficit financing which has a high inflationary potential. Though a policy of deficit financing for economic development, especially in developing countries, is widely advocated and usually practised, it has many pitfalls and unless used moderately and wisely, it may do more harm than good. Therefore, limited deficit financing is always preferable.

According to us, therefore, efforts to raise further resources should be along the lines indicated in the Approach Paper. We would like to emphasise, in this connection, that while measures to raise more resources have their value, what is equally, if not more, important is to make proper assessment of the needs of the States in a realistic manner and devise and evolve such principles governing transfer of available resources as according full recognition to removal of inter-State inequalities, which according to us, is in national interest.

5.5 We would base our reply to the question on the promise, stated in the question itself, that present devolution through the two channels of the Finance Commission and the Planning Commission have not succeeded in bridging the gap in resources between the poorer and the richer States. We would add here that not only regional disparities are substantial, but there is evidence to show the widening gap in the level of development amongst various States. In terms of per capital SDP, the position of less developed States such as Bihar, Orissa, M.P. and U.P. has either worsened or remained static over the years. Between 1950-51 and 1975-76, Bihar for instance, continued to occupy the 14th place amongst the States (barring the specially classed States) and U.P., another backward State, has moved down during this period from the 8th to the 15th position. During the same period, Punjab has moved up to the top most position and Maharashtra from 4th to the end position. The gap between the richer and poorer States has thus widened. This is so because of financial devolution to the weaker States has been inadequate as compared to their requirement for achieving higher rate of growth to improve their relative level of development. Therefore, principles weighted in favour of backwardness should be adopted to determine financial devolution. According to us, this should be the over-riding consideration.

With these broad observations, we now proceed to indicate the criteria for determining devolution on various counts.

Taking up the question of the share of taxes, we would first deal with income-tax. At present, the net proceeds of income tax is distributed amongst the States 90 percent on the basis of population and 10 percent on the basis of contribution for which assessment is taken as the indicator of contribution. These principles for distribution are based on the recommendations of the Seventh Finance Commission.

We have pleaded before the Eighth Finance Commission that assessment or collection as basis for distribution would be altogether abandoned. We reiterate this view here too. Our conviction that assessment collection as a basis for distribution of income - tax should be given up rests on the ground that there is great difference between the origin of income and its collection and the concentration of the latter in industrially advanced States and their metropolitan cities. Besides the income earned in a State is, to a large extent, conditioned by federal economic policies pursued in national interest and is likely to bestow unequal benefits and impose unequal burden on different States.

Years ago, the Second Finance Commission had expressed an the view that in de course the factor of collection should be altogether eliminated. The economic integration of the country and the abolition of inter-State trade barrier clearly indicated that business incomes were derived from the country as a whole. Hence, the Commission rightly thought that collection would not be an equitable basis to retain in the developing situation. In fact, barring to the industrialised State of West Bengal and Bombay, widest measure of agreement was expressed by the States before the Commission that population alone should form the basis of distribution. Even if convinced of the submission so made, the Commission did not recommend that collection as a basis should be given up largely with a view not to upset the prevailing position; but it did reduce the weight given to collection from 20 percent to 10%. The fifth, sixth and seventh Commissions have retained this weight given to collection.

The Seventh Finance Commission was unequivocal on the point that a larger proportion on the basis of contribution would set a trend in the wrong direction. The factor which weighed with the Sixth and Seventh Commissions against raising the weight given to contribution as a basis of distribution not only still hold good, but have also acquired over the years increase relevence, so that, in our view

the desirability or propriety of continuing contribution as a factor of distribution has become highly questionable. In fact, according to us, the time has come to completely stand on contribution as a basis of distribution.

For the foregoing reasons, contribuion needs to be replaced by an equalising factor such as backwardness. Thus only two criteria, namely, population and backwardness, should be taken into account for distribution of the divisible pool of income tax.

Successive Finance Commissions have recognised population as representing the general needs of a State. Since all the States are not economically equally placed, population as a factor of distribution would not be non-discriminating in effect, because, if adopted as a sole factor, it will mean equal per capita distribution irrespective of need. The problems confronting the less developed States. like ours, are not only of expansion of social and administrative services but of making the desired efforts for providing a sound base for development. Hence we consider it extremely necessary that population as a criterion for distribution should be supplemented with another criterion, such as backwardness of a State, with a view to arriving at a proper relative measure of need.

Bearing these considerations in mind, we suggest that 70 percent of the divisible pool of income tax should be distributed on the basis of population and the rest 30 percent should be distributed only amongst the States with per capita income below the average per capita income of all States, in proportion to the shortfall of the State's per capita income from all States' average, multiplied by the population of the State.

Coming to the distribution of the net proceeds of Union excise duties assigned to the States, it can be noted that the first and the second Finance Commissions had taken population as the sole basis of distribution. The third and fourth Commissions introduced another element according to which some weightage was allowed to social and economic backwardness of the States. All the succeeding Commissions have gone by the same basis of distribution, namely, population and backwardness, although the indicators of backwardness adopted by them have not been the same.

None of the Finance Commissions gave any place to factors such as consumption, urbanisation or industrialisation and the like. The Second Commission thought that accepting such factors as basis for distribution would result in unequal benefits to the States, because consumption of dutiable articles was higher in urbanised States, so that this factor would work to the detriment of predominantly non-urbanised States. The Third Finance Commission aptly observed that consumption was not relevant because distribution embraced also duties on raw materials, intermediary goods and industrial manufactures. The The Seventh Commission therefore, thought it unnecessary to go by the factor of consumption.

Thus, by now it has become an established principle to adopt the criteria of population and backwardness for distribution of the net proceeds of Union excise duties. We think that the two criteria should continue to govern the distribution amongst the States of their share of excise duties.

As to the question of relative weightage to be given to the two criteria of population and backwardness, the Sixth Finance Commission allowed 75 percent of the divisible pool to be distributed on the basis of population, and the balance 25 percent, on the basis of backwardness, as indicated by a States per capita income, in relation to the distance of a State's per capita income from that of the State with highest per capita income, namely Punjab, multiplied by the population of the State concerned. This worked to the utter disadvantage of backward States, like ours, because every other State, regardless of its backwardness, became united to a share in the remainder 25 percent of the divisible pool. In our own case, the share of the divisible pool came down to 11.47 percent from 13.81 percent during the Fifth Finance Commission period. On the other hand, the share of most of the richer States went up. This was the inequitable consequence of the formula adopted by the Sixth Finance Commission.

We had, therefore, suggested to the Seventh Finance Commission that 70 percent of the divisible pool of excise duties should be distributed amongst the States on the basis of population and the remaining 30 percent should be distributed exclusively amongst the States whose per capita income fall below the average per capital income of all States in proportion to the shortfall of the State's per capita income from all the States average, multiplied by the population of the State. We consider that such a formula would give due recognition to the needs of the backward States. The Seventh Finance Commission, however, did not see its way to accept this suggestion. It thought that adoption of a multiple formula would be more equitable, neither unduly favourable to certain States nor harsh against some others. Therefore, the Commission decided to give equal weight to each of the four factors, population, inverse of per capita SDP multiplied by the projected population of the State as on the 1st March 1976, percentage of poor in each State measured according to a method evolved by the Commission, and a formula of revenue equalisation worked out by the Commission.

The Seventh Finance Commission hoped that the combination of measures recommended by it would enhance the preparation of the proceeds of excise revenue distributed amongst the States on the basis of assessment of their relative backwardness. To some extent, this hope was realised. In our own case, the share in the divisible pool showed an improvement and rose to 13·025 percent as against 11.47 percent on the basis of the recommendations of the Sixth Finance Commission. But, yet it failed to restore the percentage to which this State was entitled under the principles recommended by the Fifth Finance Commission, according to which the State's share was 13·81 percent. Thus, the intention of the Seventh Finance Commission to do more than earlier Commissions in this direction was fulfilled only to a limited extent.

In view of what has been urged above, the State Government has also suggested to the Eighth Finance Commission to accept the same formula which had

submitted before the Seventh Finance Commission, namely, that the distribution should be 70 percent on the basis of population and the rest 30 percent to be distributed exclusively amongst the States whose per capita income fall below the average per capita income of all States in proportion to the shortfall of the States per capita income from all the States average, multiplied by the population of the State. In our view, this formula will better serve the end of reduction of inter-State inequalities. Income tax having lost its dominant position as a balancing factor of State finances, excise revenue alone, considering its size, must have, as also recognised by the Seventh Finance Commission, a predominant role to play in the transfer of financial resources to the States, more so when bulk of the fiscal transfer should be by way of tax shares rather than grants-in-aid under Article 275. In this view of the matter, the formula suggested by us above is in consonance with the objective of strengthening the finances of backward States particularly.

It will appear that we have suggested the same principles of distribution of the divisible pool of both income tax and union excise duties. It seems to us that the question of adopting uniform set of principles to govern the distribution of the divisible pool of both these taxes deserves more serious consideration that it has received so far. Prof. Raj Krishna, in his note of dissent appended to the report of the Seventh Finance Commission, had advocated one and the same formula for adoption and distribution of shareable revenue on account of both the taxes on a number of grounds, with which we are in full agreement.

Prof. Raj Krishna had pointed out that distribution of the divisible pool of income tax and union excise duties according to different sets of criteria was not necessary on any legal ground. A reading of relevant Articles of the Constitution, namely, Article 270 and 272, would not reveal any explicit provision or implied intention to suggest that it was legally required not to adopt uniform principles to determine distribution of the income tax revenue and the excise revenue. The Constitutional provisions, therefore, do not impose any limitation on the discretion of the Finance Commission in the matter.

We have repeatedly pointed out in our replies to some other questions that fiscal imbalance, both vertical and horizontal, is an unmistakable feature of our federal financial structure. Therefore, in order to secure a better correspondence between the functions and responsibilities of the States, greater fiscal devolution to States from the Centre is necessary. The horizontal fiscal imbalance is also required to be corrected by a step in the direction of making inter-State allocations more equitable so that greater equalising effects are generated. So, from both these points of view, the interest of the States lies in the total volume of financial devolution. Therefore, adequacy and progressivity of the transfers are really significant. It is not so material whether such transfers come by way of income tax share or sharing of excise revenue. We agree with the view of Prof. Raj Krishna that if progressivity could be a good principle for distribution of the net proceeds of excise duties, it cannot be argued that it was not a wholesome principle for sharing of the divisible pool of income tax.

Thus, on tne one hand, there is no legal bar to adopting same formula for the distribution of revenues both from income tax and union excise duties, and on the other, there are good economic reasons to justify uniform criteria for allocation amongst the States, *inter se* of the share out of the proceeds of both the taxes. In fact, Prof. C. H. Hanumantha Rao, another member of the Seventh Finance Commission was at one with this approach, but he did not press the issue mainly backwardness of States. The Commission on its part, chose not to adopt this approach largely on the consideration that it might not be acceptable to developed States. We can only say that principles to be evolved by the Finance Commissions should be based on propriety and objectivity rather than agreeableness or disagreeableness of any section of opinion.

It is on these considerations that we have suggested uniform set of principles to govern distribution of the divisible pool of both income tax and union excise duties. We are happy that the Eighth Finance Commission has appreciated the force in this submission and has recommended uniform formula to govern the distribution amongst the States of the divisible pool of both income tax and union excise duties.

Now, we come to distribution, amongst the States, of the proceeds of the Additional Excise Duties. The principles according to which the net proceeds of these duties are distributed amongst the States are based on the recommendations of the Seventh Finance Commission.

Additional Excise Duties were imposed in replacement of sales tax levied by the States on the three commodities namely, cotton fabrics (including woolen and rayon or artificial silk fabrics), sugar and tobacco including manufactured tobacco. The Finance Commissions, therefore, have taken consumption of these articles as the basis of distribution, differing, however, in adoption of indicators of consumption, mainly because of absence of reliable data relating to consumption of these articles. For instance, the Seventh Finance Commission, took dispatches as a fair indicator of consumption of sugar. But in respect of other two commodities, it could not find dependable statistics to indicate the level of consumption. Hence, it adopted a different method to measure the relativities of consumption of these articles the two commodities relative consumption would be adequately reflected by the product of population of a State and its per capita State Domestic Product and accordingly the percentage share of each State was worked out.

The consequence of the formula adopted by the Seventh Finance Commission was that the percentage share of this State got reduced and was less than that available under the recommendations of the Sixth Finance Commission. Let us have a quick look at the comparative position emanating from the recommendations of the Sixth and Seventh Finance Commission. The Sixth Finance Commission had recommended that 1·41 percent of the total net proceeds of these duties should be treated as attributable to Union Territories. The Seventh Finance Commission, on the other hand, assessed such percentage separately for each of the commodities, and

such percentage in respect of each of the articles was more than 1·41. In respect of sugar, it was 3.271 percent, in respect of textiles it was 2·192 and for tobacco, the percentage was 2·192, so, on all counts, greater percentage was treated as the amount attributable to Union Territories, which obviously left reduced amount, in terms of percentage, of the total net proceeds to be distributed amongst the States. Bihar was allowed 9·36 percent of the remainder of the net proceeds as its share by the Sixth Finance Commission. According to the Seventh Finance Commission, this share was much lower in respect of each of the commodities concerned. In respect of sugar, the percentage was 5·933, in respect of textiles 7·221, and in respect of tobacco it was 7·219. Therefore it may be that in absolute terms the State would have received more by way of devolution on this count, reduction of the percentage was hardly consistent with the accepted position that the share of the States out of the proceeds of the Additional Excise Duties should be equivalent to that the States would have got had they continued to levy sales tax on these articles. There is no reasonable ground that the consumption of these articles has gone down, to that reduced share in our case runs counter to the principle of compensation tax on these commodities. Moreover, reduction of percentage of these has prevented our State from benefitting from the consistent rise over the years in the proceeds from these duties.

Therefore, in our view any formula which results in depriving the State of its legitimate share in the growing potential of the proceeds from these duties should not be considered justified because, after-all, the arrangement by which these duties replaced sales tax levied and collected by the States was, in the words of the Fourth Finance Commission, "essentially in the nature of a tax rental agreement".

Coming to the question of formula of distribution amongst States of the net proceeds of Additional Excise Duties, we see sufficient ground to place that principle of distribution of net proceeds on account of levy of additional excise duties should not be different from one recommended for basic excise duty. The reasons for this view are more than one.

Under the tax rental agreement, the impost is not on sale or purchase of goods, but at the State preceding sale or purchase. The character of basic excise duty and additional excise duties is not different from each other on this count. Yet the mode of devolution of Union excise duties and additional excise duties is different only because the latter is based on tax rental agreement. Moreover, only because of this tax rental agreement, it was possible for the Seventh Finance Commission to reduce the percentage share of this State. Such a reduction would not have taken place had there been continuance of sales tax on these articles. The tax rental agreement has now worked for over twenty five years and as such has practically come to stay as a permanent arrangement. Moreover, even if a State wishes to opt out of the scheme, it will not be possible for any State to do so because of the coiling on rate on the concerned items under Sections 14/15 of the CST Act, 1956 so that the receipt of the State will be subject to limitation.

The essential nature of tax rental agreement has practically undergone vital change because of the arrangement having acquired permanance, more so in view of the freedom of the States to opt out of the scheme being severely limited. This change has made additional excise duties akin to and not materially different from basic excise duties.

For the foregoing reasons, there should not be any difference between the principles governing distribution of the proceeds of basic excise duties and additional excise duties.

Now, we come to plan assistance. It is, no doubt, true that the Central assistance is given now in accordance with the modified Gadgil formula. Nevertheless, neither the sums given to the States in the shape of block grants and loans by way of Central assistance have been certain nor they bear a definite proportion to the size of the plan out.

Moreover, even the modified Gadgil formula has not succeeded in bringing about the desired change in the complexion of development. In spite of the thirty years of the planning process not only regional disparities have not been removed but these have been further accentuated. For instance, a look at the per capita income of Bihar during the entire period of planning will indicate that the gap between the per capita income of the State and that of the country as a whole has been widening. One reason has been that the resources deployed on development in the State have been about the lowest in the country. Even in the Sixth Plan, the per capita plan outlay in Bihar has been Rs. 572 as against Rs. 872 for all States.

Economic backwardness, persisting particularly in the less-developed States, can be removed only by higher developmental outlays made available to such States. We are of the view that the existing formula for distribution of Central plan assistance will need suitable modification for achieving the objective of removal of inter-State economic disparities and backwardness.

The present Central assistance for State plan is faulty in as much as it leads to considerable debt burden on the States, because it is composed of 70 percent loan and 30 percent grant. The dominant portion of Union loans to the States consists of Plan loans. This arrangement loses sight of the capacity of the borrower to pay. Moreover, the scheme of Central assistance tends to accord equal treatment to unequal States as regards the loans and grant component of the assistance, evidently results in unequal burden on the States. Consequently, the backward States suffer most. Their repaying capacity being severely limited, these loans cause great strain on their budgetary position, so that the less developed States, unlike the developed States, are left with reduced resource to be utilised for further economic development. Thus, the yawning gap between the levels of development of richer States and the backward States has continued to widen. This is certainly contrary to the declared objective of aiming at rapid economic development with balanced regional growth.

It is true that the modified Gadgil formula is slightly more progressive than the original one. The actual disbursement of Central assistance during the Fourth and Fifth plan periods, however, would show that some of the States had received excess amount of

assistance than the stipulated level, while some others were adversely effected. Bihar was one of the States which received less than the estimated level of the assistance. From the point of view of per capita plan expenditure in this period also a less developed State like Bihar, has been sufferer. We would, therefore, urge that the allocation of Central plan assistance should adhere to the formula laid down for the purpose, because if that is done, it would ensure progressive reduction in regional disparities, it should be necessary to substantially reduce the loan component of Central assistance for State plans. We would suggest that the States having per capita income below the all-States' average per capita income should be given Central assistance in the ratio of 70 percent grant and 30 percent loan and reverse may be the case for the States having higher per capita income than the all-States' average per capita income. That would be a better way of ensuring adequate share of national resources to backward States. An alternative to this source may be to earmark a part of the total quantum of Central assistance for backward States to be distributed amongst them on the basis of population and backwardness in the ratio of 60 : 40.

Non-developmental programmes also have substantial development component in them. Expenditure on such non-developmental items creates new assets or improve upon existing infrastructures, which together go to serve the objective of overall development. Since development has to be meaningful for the people inhabiting the backward States, balanced regional growth can be really achieved by giving differential treatment to such backward States in the matter of schemes falling outside the plan programmes. Wherever, such projects are beyond the means of a backward State, the Centre should come to help in a generous way by extending grants to aid the completion of such projects. for this would eventually help removal of inter-State inequalities.

5.6 We do not have adequate information on the working and result of special federal fund in Yugoslavia so that it would not be fair for us to comment on the system. Nevertheless, it is clear to us that even though the Constitutions of India and Yugoslavia are federal in character, they differ, often widely, in their essential nature. Their economic and social structure are different. The State of development of different regions in India are not comparable to that of Yugoslavia. The nature of relationship between the federation and the constituent units is not the same as in India.

In Yugoslavia, the State directs economic life and development of the country in accordance with general economic plan, relaying on the State and co-operative economic sectors. Means of production are either the property of the entire people or property in the hands of the State. The position in India is basically different. Fundamental freedoms, guarantee right to property and means of production are not wholly nationalised. Planning unlike Yugoslavia, is not a federal subject in India. Economic and social planning finds a place in the Concurrent List of the Indian Constitution.

The Fundamental Law of Yugoslavia pertaining to the basis of the social and political organisation of the Federal Republic provides for the Federal Economic Plan to set aside for the Federal Government only those financial means which are specified by law and which serve for the conduct of affairs within the sphere of competence of the Federal Government for ensuring the normal development of the economy and for the provision of aid to the insufficiently developed regions of the country.

The situation in India is not the same. The Indian Constitution does not make any provision for direction of economic life of the country in accordance with a national economic plan. Nor does it provide for distribution of resources between the Union and the States in the same manner as has been done in the Yugoslav Constitution.

The dissimilarities in the two countries is in respect of the basic feature of their constitutions. Their economic and social order and institutions, the division of functions and resources between the federal government and the units, would not seem to admit the possibility of fruitfully limitating the provisions of one by the other. Hence, we do not think that creation of a special federal fund would fit in our constitutions frame work of relationship between the Union and the States. As we have already indicated in our reply to Question No. 5.1, we are not in favour of amending the constitution for restructuring the Union-State relations.

Supposing such a special federal fund is established it will have to be out of the resources of the Centre. This would mean that the total kitty of distributable resources will be reduced by the amount transferred to such a fund. This would raise the question of who will decide upon the amount of money to be transferred to the fund and on what priniciples the amount should be fixed and distributed amongst the backward areas. If these issues are left to be decided by the Centre the least we can say is that it would mean another irritant in the Centre-State relations in the country. If on the other hand, these issues are to be decided jointly by the Centre and the State, there are bound to be serious practical constraints in smooth and efficient working of such a fund. Therefore, there has to be an independent expert body to decide both the quantum of money to be transferred to the fund and the principles of distribution amongst the States of the amount out of this fund.

Finance Commission and the Planning Commission are the two bodies which are performing the functions of transfer of resources to the State. It is true that there is not a special fund out of which such transfers take place, but certainly it is mostly out of the funds available with the Centre that the transfer of resources to the States takes place. If the funds so made available to the States is based on principles recognising the specific requirement of backward areas and preferential tratment is given to their needs on objective standards to judge their entitlements, there is no reason why economically underdeveloped area cannot be lifted out of the messes in which they are at present.

In view of what has been stated above, we do not consider it necessary that a special federal fund should be set up. The objective sought to be achieved by establishing such a fund can very well be served by giving the requirement orientation to the principles

determining devolution of resources through the Finance Commission and allocation of plan assistance through the planning Commission.

5.7 There are certain imperatives in the allocation of taxation fuctions to the Union and the States, to which we had occasion to refer while replying to question numbers 5.1 and 5.3. Apart from the well established principles of federal finance, there were certain inexorable factors which influenced the distribution of taxation fuctions between the Centre and the States. There was the force of history which played a crucial role in determing the pattern of Union-State financial relations of which taxation powers constituted a vital part.

When the constitution was being made, the Constituent Assembly had two clear alternatives open before it. One option was to make a clear break with the past and evolve an altogther new scheme of devision of financial powers between the Government of India and the State (as the then existing provinces were being rechristened.). The other option was to retain or follow, as far as possible, the financial plan of the Government of India Act, 1935. Perhaps. the first alternative could not command itself to the makers of the Constitution for the fact that the Indian federal policy was born not as a result of aggregation of sovereign or autonomous units agreeing to establish a federation, but as a result of devolution of powers and functions of what had been unitary State, that is, the Government of India. This basic historical fact has perceptibly imbued the federal character of our constitution.

The Constituent Assembly made a deliberate choice in favour of adopting the division of resources, as contained in the Government of India Act, 1935. for, devising an entirely new system of distribution of resources between the Union and the States would have meant a complete rejection of the continuity of financial arrangement then in vogue.

Therefore, it is not by accident but by a conscious decision that our Constitution established what can be aptly described as federation with a strong Centre. This basic fact visibly characterises the allocation of taxation functions to the Centre and the States. Nonetheless, for obvious reasons the tax powers had to be distributed between the Centre and State Governments keeping in view the federal nature of Union State relationship.

There are a number of recognised principles to govern allocation of tax functions in a federation. One is efficiency of administration, which in other words means that a tax should be imposed and collected by the authority which can best collect and administer it. The other principle relates to the base of taxation. Taxes affecting the national economy as a whole should be allotted to the Central Government on grounds of uniformity and avoidance of conflicts in rates and coverage. Then there is the principle of adequacy which implies that in working out of pattern of revenue sharing arrangements, the functions and responsibilities of the Central and State Governments would be taken into account. Also related is the principle of elasticity which requires that allocation of resources both in nature and quantum, should be consistent with growing needs in future. The principle of equity means that not only both the Centre and the States be free in their own respective spheres, but also they should together contribute to sharing common burdens on an equitable basis.

There is yet another way of looking at distribution of taxes in a federal structure. Previously it was believed that all indirect taxes should be better allotted to the federal government and the direct taxes be reserved for the constituents. The position has now drastically changed and there is increasing support for federalisation of direct taxes. Therefore, on grounds of equity in taxation and fiscal productivity taxes on business and production are now allotted to the federal government. This explains allocation of Corporation Tax and excise duties to the Centre. In fact, a watertight division in distribution of direct and indirect taxes as between the Central and the State Governments is not to be found in the tax system devised by our Constitution.

Perhaps it is needless to carry on the discussion, in the conventional way, on the principles, governing distribution of taxation functions between the Centre and the States. The principles indicated above are relevant considerations, but it is not difficult to discover that the demarcation of taxing powers in many federal constitutions has been determined more by experience and expediency, because no other reason can possibly explain the wide variations in the pattern of division of resources found in different federations. Our Constitution is no exception to this broad rule. One illlustration to substantiate the point is that the resources placed at the disposal of the States do not fully satisfy the criteria of adequacy and elasticity.

The question refers to another imperative contained in Chapter XIII of the Constitution to ensure 'freedom of trade, commerce and intercourse within the country'. Article 301 of the Constitution laid down that subject to other provisions of Part XIII, trade, commerce and inter course throughout the territory of India shall be free. The object is to ensure that the economic unity of the country may not be disturbed or broken by internal barriers. The Articles does not prohibit regulatory measures. As far as taxes are concerned, only such taxes as directly and immediately restrict trade attract the provision of this Article and a tax imposed by a State is not violative of this Article if it does not effect the movement of persons of goods from one State to another. Imposition of a tax on sale or purchase by itself does not offend this constitutional provision unless it discriminates between goods of one State and another or, if the tax is on an article used in inter-State trade, it is so excessive or prohibitive as to become an obstacle in the way of free flow of trade and commerce.

The complete separation of taxing powers between the Centre and the States leaving no room for concurrent jurisdiction in the matter of taxation obviates the possibility of a situation which may impinge on the object of free trade and commerce within the country. Since taxation of business and production is a Central subject, there is little scope of restrictions being imposed by the States.

Article 286 of the Constitution precludes any State from imposing or authorising the imposition of any tax on sale or purchase, where such sale or purchase

925 ISCS/98—8A

takes place (i) outside the State or (ii) in the course of import into or export out of the country. It lies within the competence of the Parliament to lay down principles for determining the nature of sale or purchase so as to attract the provision of this Article. This again, is a sufficient guarantee against any contingency or barriers to free flow of trade and commerce.

The Constitution (46th Amendment) Act, 1982 has amended Articles 286 and 366 to provide that any law of State imposing or authorising the imposition of a tax on sale or purchase of goods declared by the Parliament by law to be of special importance or on (i) transfer of property in goods involved in the execution of a works contract, (ii) delivery of goods on hire purchase or any system of payment by instalments and (iii) the transfer of the right to use any goods for any purchase for cash, deferred payment or other valuable consideration shall be subject to such restrictions and conditions in regard to the system of levy, rates and other incidence of the tax as Parliament may by law specify. Thus, sale and purchase of the nature described above will be subject to uniform restrictions and conditions specified by the Parliament so that inter-State trade and commerce will be free from the fear of restrictive legislative action by different States.

These constitutional provisions seek to buttress the conditions for the inter-State trade and commerce to be free from interference save and except by way of reasonable regulation. And we see nothing wrong in this.

The third point raised by the question is in regard to the use of tax system for reduction of inequalities. There is also a mention of transfer of certain taxes to the States in this connection. In reply to Question No. 5.3 we have explained our view on the question of transferring certain taxes to the Centre and vice versa, so we need not repeat them here.

As regards the role of tax system in reduction of inequalities, it may be pointed out that though it is possible to use the tax system so as to generate redistributive effects, the tax system by itself cannot succeed in achieving reduction of inequalities. If the tax system is progressive, it will tend to reduce inequalities in incomes and wealth. The progressivity of a tax will depend upon its structure, rates of taxation, coverage and may not be greatly determined by the fact which authority imposes the tax. Hence, on this account there seems to be no point in advocating transfer of a tax from the Centre to the States or *vice versa*.

As far as removal of inter-State disparities is concerned, it will really depend upon transfer of resources to the States so as to strengthen their finances to meet expenditure on providing administrative, social and economic services of the people. To transfer some taxes to the States to improve their revenue position is a step which, for many reasons explained in replies to other question, we do not advocate. On the other hand, we are inclined to feel that it would be of greater help to the States if the resources transferred to them are based on a tacit recognition of their needs for achieving a better equalisation of standards.

5.8 In reply to some other qusetions, we have drawn attention to the basic features of the financial plan envisaged by the constitution, according to which division of the sources of revenues has been made between the Union and the States. Consistant with the federal structure, the bifurcation of taxing powers between the Union and the States has been made effecting inter state trade and commerce have been allotted to the Centre, while taxes of local import are left with the States. Overlapping tax jurisdictions have been avoided. The residual powers of taxation have been reserved for the Centre.

The answer to the question posed here has to be sought keeping in mind the pattern of fiscal federalism woven into the scheme of financial relationship between the Union and the States. One element in that relationship is the principle of separation on which the division of taxing powers of the two layers of government has been founded. There are good reasons why the Central Government should collect income tax. If the States were to levy his tax, apart from cost of collection of the tax going up for want of economies of scale, there will always arise conflict between the States as to the basis of taxation. Some may adopt residence while others origin of income as the basis of taxation on income. This would create for the States insuperable difficulties in tax administration, let alone the problem of tax evasion or double taxation. Similarly, corporation tax would create identical problems if the States were given the powers to levy this tax. International trade being the function of the Centre, it is only logical that the Centre should levy custom duties. For many economic reasons, tax on production i.e. excise duties, is a tax which the Centre should rightly continue to levy.

Similarly, the taxes which are on consumption or on localised income and wealth have been rightly given to the States, Taxes on sales and purchases, entertainment, land revenue, duties of excise on liquor and alcohol and so on are levied on the citizens of the States or on economic activities carried on within the limits of a State without interacting on inter-State trade or commerce. Therefore, the taxes allotted to the States have been rightly conceived as sources of revenue exclusively meant for them.

Taking the whole country as a common market and on grounds of cost and efficiency, the taxes mentioned in the question, except sales tax, rightly belong to the Centre and, therefore, should continue to be collected at the national level. If the Constitution has allocated certain taxes exclusively to the States, just as some other broad based and productive taxes were given to the Centre, the framers of the Constitution took a cool, calculated and conscious decision to devise a federal fiscal structure comprising of separation of sources of revenues between the Union and the States to enable them to fulfil the respective function assigned to them in the Constitution. The arrangement made should not justifiably be viewed as denoting a fragmentary approach to taxation. If all significant taxes are reserved for the Centre, the inevitable consequences will be to reduce the States to a position in which they willl be left with practically little resources of their own. Such an arrangement cannot be defended on various grounds of sound public finance, including efficiency and economy in tax administration, and proper allocation of taxing power between the Centre and the States. Above all,

instead of ushering in a happier State of Union State relations, such an arrangement would give rise to recurring irritants causing immense damage to our federal policy.'

The question refers to a view expressed in certain quarters according to which there should be separation between imposition of such taxes and distribution of tax proceeds. According to the earlier part of the question, imposition of major taxes mentioned there should be the responsibility of the Centre. By implication, it would mean that all important taxes would be collected by the Central Government and the proceeds would be distributed amongst the States, their respective shares being determined by a Council for Central and State Finance Ministers.

We have pointed out earlier how imposition of all major taxes mentioned in the question, except sales tax, even now is the responsibility of the Centre and if it is intended that further taxing powers should be made over the Central Government, the idea does not appeal to us for the reasons already explained.

As a corollary to the stand we have taken, there seems to be no need of a council of the nature contemplated by the question. All of the major taxes mentioned in the question (except sales tax), though levied and collected by the Centre, are not divisible. While custom duties and corporation tax proceeds exclusively belong to the Centre, income tax and excise durites are shared with the States, the former on complusory basis and the latter in a permissive way. Estate duty, though Levied and collected by the Centre, is an assigned tax under Article 269 of the Constitution and the proceeds thereof constitute the consolidated Funds of the States. Even though wealth tax on agricultural property is not constitutienally a shared or shareable tax, there has been a long standing practice to transfer as grant the net proceeds of this tax to the States. We do not support the idea of reopening the question of shareability of these taxes or the practice of transferring the net proceeds of wealth tax on agricultural property as grant to the States. We are also not at one with the idea of amending the Constitution to achieve the objective of making all these taxes wholly assignable to the Centre either.

The respective shares of the States in the total divisible pool of these taxes are determined according to principles evolved by the Finance Commissions which have the requisite consitutional authority for the purpose. We do not wish that the shpere of functions of the Finance Commission should be curtailed or its position diluted in any manner. It is an independent body enjoying a constitutional status and so more likely to command the confidence and respect on account of objectivity and impartiality which it can bring to bear on its recommendations than any other extra-constitutional body which entrusted with the task of deciding the principles to determine States share in tax devolution.

Moreover, the distribution of tax by a council of the nature suggested in the questions bristles with many difficulties. Such a council, in the ultimate analysis, may at worst turn out to be another forum for the Centre and the States ventilating mutual grievances and engaging in endless controversies, levelling accusations against each other without achieving concrete results for positive action. The possibilities of the nature described above cannot be discounted in view of the changing political complexion of the governments in the States. At best, it may act as a negotiating body between the Union and the States and, as is well known in any negotiation the spirit of give and take prevails and no one can forecast with any certainty who gives and who takes and in what measure. Obviously, the weaker States will in all probability stand to lose. The experience in Australia in the 1920's and early years of 1930 stands testimony to the play of bargaining element in the termination of grants to the States. It was ultimately realised that such bargaining was not conducive to mutual trust and confidence between the constituents making the federation. It was against this background that the Australian Grants Commission was created. The framers of the Constitution appear to have drawn lessons from this experience and therefore thought of the institution of Finance Commission, a body akin to the Australian Grants Commission.

Supposing the council is given a constitutional authority, there will again arise the question of overlapping of functions between the council and the Finance Commission. Will the council supersede the Finance Commission or will it supplement its efforts ? How their respective spheres will be demarcated ? If the council is thought of as a superior authority capable of doing or undoing the work of the Finance Commission, it is needless to establish such as agency to sit in judgement over the quasi judicial adjustment by the Finance Commission of the issues relating to fiscal transfer to the States. Moreover, it will also result in adding an unpleasant strand to the fabric of Union state financial relations.

If, on the other hand, the council is supposed merely to supplement the efforts of the Finance Commission, it would accentuate the problems caused by overlapping of jurisdictions by creation of multiplicity of agencies charged with the task of transfer of resources to the States. From this point of view, such an agency is not expected to serve any really useful purpose. Over and above everything else, whether the council is supplementary to the Finance Commission or above it, there can be no way to save it from the evil of being reduced to a forum for bargaining which is not desirable for the reasons explained earlier.

Now, we come to the question of sales tax. As we have said earlier, we are not in favour of disturbing the distribution of taxing powers between the Union and the States. Therefore, we do not support the view that tax on sales should be levied by the Centre. The Government of India already enjoy the powers to levy tax on inter-State sale or purchase of goods under the provisions of Central Sales Tax Act, 1956. The States have already made over to the Centre their right to levy sales tax on sugar, taxtiles (other than silk) and tobacco, and the sales tax on these articles has been replaced by additional excise duties, the yields from which are shared with the States in accordance with the recommendations of the Finaance Commission.

It is subject to these limitations that the States have to develop their own sales tax system. A look at the distribution of revenues from States taxes

would show that proceeds from sales tax constituted nearly fifty per cent of the total tax revenue of the States in 1970-71. The dominant position which sales tax has come to occupy in the total tax revenue of the States will be evident from the fact that 1982-83 (BF) it accounted for nearly 59 per cent of the total tax revenue of the States. Thus, sales tax has proved to be the most important single and elastic source of revenue for the States. It is the main stay of the financial strength which the States cannot afford to lose except to the utter impairment of their financial wherewithal. Considering the need of the States for more fiscal resources for keeping their finances on an even keel, there is no case for taking away the States right to levy tax on sales, which is available to them under the Seventh Schedule of the of the Constitution.

5.9 This question raises a number of issues which need to be settled in order to spell out the broad approach to the question posed. The issues are :

(i) Whether only one organisation should deal with all financial transfers plan and non-plan on an assessment of capital and revenue resources ?

(ii) If the answer to (i) is in the affirmative, whether the organisation should be the Finance Commission ?

(iii) Whether the Finance Commission should be a permanent body ?

(iv) What role should be specified for the Planning Commission in case the answers to (i) to (iii) be in the affirmative ?

Taking up the issue mentioned at (i) above, it can be noted that Article 280 of the Constitution provided for the appointment of a Finance Commission once in every five years with the object of making a equinquennial review of the finances and needs of the Union and the States and recommending transfer of resources to the States by way of tax shares and grants-in-aid under Article 275. The Finance Commission, therefore, is a constitutional authority to recommend devolution of resources and, in addition, is empowered to make recommendation in respect of any other matter referred to it by the President in the interest of sound finance. A look at the relevant provisions of the Constitution would show that it is nowhere laid down that the Finance Commission should confine itself to the assessment of non-plan revenue requirements of the States. As the Chairman of the Fourth Finance Commission observed, it is abundantly clear (to my mind) that reference in the main part of clause (i) of Article 275 to grants-in-aid of the revenue of the States is not confined to revenue expenditure only. He went on to say that 'there is no legal warrant for excluding from the scope of the Finance Commission all capital grants, even the capital requirements of a State may properly be met by grants-in-aid under Article 275(1), made on the recommendations of the Finance Commission. In fact, this broad interpretation had been accepted by the Government of India till the end of the Second Five Year Plan.

Thus it would appear that the Constitution conceived of the Finance Commission as an independent body to act as the sole instrument of transfer or resources from the Centre to the States. To a great extent, this position subsisted till the Second Finance Commission period as the first two Finance Commissions recommended financial assistance from the Centre to cover both current and capital requirements of the States. But with the emergence of the Planning Commission and its assumption of the responsibility and function of allocating national resources for development among different sectors of the economy and regions of the country, the position materially changed leading to circumscribing the scope of the recommendations of the Finance Commission to the non-plan account of the States. It is said that as a result of this development, the planning Commission has become the dominant arbiter of transfer of resources to the States.

The respective roles of the Finace Commission and the Planning Commission have always been a subject-matter of intense controversy. The attitutde of the two Commissions towards each other has not been one of comradeship. The Finance Commission on their part, have viewed the presence of the Planning Commission with envy. The little amount of confrontation which seemed to characterise the relationship between the two in the earlier stages appears to have given place to a sense of helplessness on the part of the Finance Commission after the Third Finance Commission summed up the inevitable position by saying that the role and functions of the Finance Commission, as provided in the constitution, can no longer be realised fully due to the emergence of the Planning Commission as an apparatus for national planning. It thought that the Finance Commission, in the circumstances, could do no better than to act as an agency to review the forecasts of revenue and expenditure submitted by the States and to undertake an arithmetical exercise to determine the quantum of devolution, without going into the amounts settled by the Planning Commission under different heads of plan expenditure.

The Fourth Finance Commission, however, thought that the function of a Finance Commission was not merely to recommand such devolution and grants-in-aid as would merely fill up the non-plan revenue deficit as reported by the States, because such an approach would be a mechanical one. Even so, the Commission did not consider it appropriate to take upon itself the task of dealing with the States' plan expenditure.

Subsequent Finance Commissions followed the path of Keeping away from the grounds within the domain of the Planning Commission. The Seventh Finance Commission thought that the freedom of a Finance Commission to evolve its own scheme of transfer for the evolution period was in no way limited except by the four corners of the constitutional provisions. The Commission did not think that dealing out the area of plan investment and Central assistance for State Plan to the Planning Commission was a restraint in any real sense.

The critics of the existing arrangements whereby the operation of the Finance Commission has come to be restricted to the non-plan sphere and planning Commission is entrusted with the task of looking after plan requirements, point out a number of drawbacks in the arrangement. First relates to the

overlap of functions of the two Commissions and the divergent assessments made by them. The duality of channels of transfer of resources and the different ways of making assessment of the States' requirements, it is said, leads the States to present their estimates and forecasts of revenues in two different ways to the two Commissions. How to overcome this situation is the question. It may be emphasised in this connection that the vital aspect of the matter from the point of the interest of the States is not whether there should be one or two channels of canalising resource transfers nor will it be appropriate view the problem as one of distribution of available resources between the Centre and the States, as the as the Sixth Finance Commission observed, but to approach the problem as one of distribution of available resources between the subjects coming constitutionally within the competence of the Centre and those falling within the purview of the States, which substantially means distribution of national resources as between different sectors of development.

The Finance Commission and the Planning Commission may appear to be different in composition adopting divergent ways in their functioning and approach, but it cannot be said that they can shy away from the common objective of working towards the end of seeking economic development of country accompanied with balanced growth of the of the States. If the planning Commission and the Finance Commission develop harmony in their pursuit of the common goal by adopting uniform tests, it would to a large extent, take care of the drawbacks of the prevailing dualism in the matter of resource transfers. Moreover, by a little coordination of the procedures adopted by the two Commissions the practice, as complained, of the States submitting differnet estimates to the Planning Commission and the Finance Commission, could be rendered unnecessary.

In this context, the intimate relationship between the results of what each of the Finance Commission and Planning Commission does should not be ignored. As the Seventh Finance Commission has observed, the developmental process guided and supported by the Planning Commission should result in reduction of economic disparities between the States, and in the poorer States building up their resource potential which the Finance Commission would take into account at the end of a plan period. On the other hand, the Finance Commission's transfers should provide the financial wherewithal for the States to maintain and develop and adequate administrative infrastructure which is responsive to the increasing demands that a developing economy generates.

The intimate relationship and the interdependance between the two Commissions could be made more meaningful by establishing a proper time sequence so that each of them know the consequence of the efforts of the other. The 1980-85 Plan could take into account the recommendations of the Seventh Finance Commission for the First four years.

The Eighth Finance Commission could have the benefit of the Planning Commission's work for 1984-85. It is of crucial significance to establish a proper sequence and adhere to it in order that a harmony is struck between the relationship between the two Commissions.

Another point of criticism has usually been that the sheer magnitude of transfers through the Planning Commission on as compared to the transfers through the Finance Commission has lent a position of dominance to the former in respect of transfer of resources to the States. A related issue raised in this connection is that the Finance Commission, being a statutory and independent body, decides the entitlements of the States on quasi judicial adjudgment of the issues concerning financial transfers whereas the Planning Commission's transfers do not have any statutory basis and so are discretionary in nature.

As regards the relative position of the quantum of transfer of resources through the channels of Finance Commission and the Planning Commission, significant change has taken place in this respect during last few years. With the greater reliance of the Finance Commission on tax sharing as compared to the grant-in-aid with a view to creating non-plan surplus for as many States as possible, the transfers through Finance Commission have increased as compared to transfers through the Planning Commission as will be evident from the table below :

(Rs. in Crores)

	1st Plan	2nd Plan	3rd Plan	Three annual plan	4th Plan	5th Plan	6th Plan
A. Transfer through Finance Commission	429	918	1,590	1,782	5,420	13,079	20,845
B. Transfer through Planning Commission	880	1,344	2,738	1,917	4,900	10,595	13,245
C. Other transfers	104	606	1,272	1,648	4,992	4,054	N.A.
D. Total (A+B+C)	1,413	2,868	3,600	5,347	15,312	27,728	34,090
Percent of A to D	30.3	32·0	28·4	33·3	35·3	47.2	61·1
Percent of B to D	62.3	46.9	48·9	55·9	32.0	38.2	38·9

It will be seen that whereas the transfers through the Finance Commission during the first Plan period constituted 30.3 per cent of the total transfers against 62.3 per cent transfers through the Planning Commission, the respective percentages during the fifth plan period were 47.2 and 38.2. The total quantum of transfers through the Finance Commission as well as the percentage it formed of the total tranfers have further increased during the current plan period. This is a welcome change. There is no reason to think that this process of change in the right direction will be upset of reversed in the coming years.

It may be true that the transfers through the Planning Commission are discretionary in character in as much as the Planning Commission is not founded on constitutional provisions, but it is equally not true to say that the transfers are arbitrary and not related to any set criteria. From 1979, the Planning Commission adopted the well known IATP formula for determining a substantial part of plan assistance to the States and the discretionary assistance placed at its disposal was practically entirely utilised for the benefit of the poorer States. Since 1980, the modified Gadgil formula has been used to determine assistance to States according to which the importance of distribution to States with per capita income below the national average has been raised from 10 percent to 20 per cent. Thus, a salutary change has come about in the principles governing plan assistance to the States and the change has meant relief to the weaker States. In view of these facts, it would not be correct to say that the transfers through the Planning Commission are that much arbitrary or discretionary as they are usually made out to be.

From the foregoing analysis it would appear that whatever difficulties might have been experienced in the past on account of duality in the mechanism of fiscal transfers are not so insuperable as to defy working solution within the broad framework of existing mechanism of transfers through the Finance Commission and the Planning Commission. In fact, the remarkable increase in the total quantum of transfers through the Finance Commission and that too more by way of tax shares should afford sufficient comfort to the States that increasing part of fiscal devolution to them now takes place through the assured channel and on the basis of well considered principles evolved by the Finance Commission.

It is of crucial significance to bear in mind that irrespective of the channel through which transfers take place, it is ultimately the quantum of surpluses with the Centre from which will flow the devolution to the States. Therefore, it would be to the advantage of the States if the finances of the Central Government are properly scrutinised to identify all possible surpluses from which transfer of resources could be made to the States. The Seventh Finance Commission has done important work in this direction in the sense that it reassessed the forecast of resources submitted by the Central Government by applying certain tests of scrutiny and found significant surpluses, which eventually resulted in substantial increase in the total transfer of resources to the States. This served the interest of the States. It is hoped that in future too, the Finance Commissions would continue to subject the forecast of resources of the Centre to the same scrutiny so that the States could expect their share to expand to the utmost extent possible.

There is another factor which has helped the States to benefit from the work of the Finance Commission. While maintaining the informal separation of the scope and functions of the two Commissions, the Government of India asked the sixth and the seventh Finance Commissions to estimate the non-plan capital gaps of the State Governments over the Fifth and Sixth Five Year Plans respectively and to recommend measures to deal with such non-plan capital gaps. This, by implication, means that the Central Government has accepted in principles that the recommendations of the Finance Commissions could embrace the financial needs of the States on non-plan capital account as well. This belief is further strengthened by the fact that the Central Government accepted the recommendations of the Seventh Finance Commission providing both revenue and capital grants to certain States for upgradation of administrative standards in certain specified sectors.

For the account in the preceding paragraphs of the working of the system of fiscal transfer to the States and the developments that have taken place in recent years, certain inferences are clear. Firstly. the Finance Commission and the Planning Commission, working in their respective spheres, have of late refrained from crossing swords with each other, and instead have preferred to devise ways and means of bebefitting from each other's work in their joint endeavour to serve the common objective of promoting economic development of the country accompanied with balanced growth of the States. Secondly, the Finance Commissions, on their own part, have made serious attempts to evolve rational principles of devolution imbued with progressivity, to the extent possible, aimed at meeting the requirements of the States in general and equalisation of standards in particular. Thirdly, the Planning Commission has adopted set criteria and well defined formula to determine plan assistance to the States taking special care for the benefit of the weaker States.

The situation, therefore, is not so desparate as to call for radical measures involving take-over of the functions and responsibilities of both the Finance Commission and the Planning Commission by either of the two. Such was the essence of the two alternatives suggested by the Third Finance Commission, one of which was to so enlarge the functions of the Finance Commission as to embrace the total financial assistance to be extended to the States, whether by way of loans, devolution or revenues, to enable them both to balance their normal budgets and to fulfil the prescribed targets of the plans.

The suggestion made by the third Finance Commission did not find acceptance and possibly for good reasons. The importance of planned economic development is so great and its implementation so essential that any dilution of responsibility in respect of any element of Plan expenditure may well be disastrous. The Planning Commission has been specially constituted for advising the Government of India and

the State Governments in respect of economic and social planning. The Fourth Finance Commission took note of these factors and did not consider it appropriate for the Finance Commission to take upon itself the task of dealing with the States' new Plan expenditure.

The Study Team on Centre-State Relationships of the Administrative Reforms Commission (1967) thought that the suggestion to expand the functions of the Finance Commission so as to bring within its fold what the Planning Commission was doing in the matter of Plan assistance had been rightly rejected because such functions could not be given to a body cut off from the responsibility for Plan formulation and implementation. The argument continues to hold good, hence it cannot be rejected.

As a matter of fact, the Finance Commission and the Planning Commission have so well defined and specified functions to perform that one cannot usefully take over the functions of the other. Their roles have to be different, not the ultimate objective they are together destined to strive for achieving, namely, economic development accompanied with balanced regional growth. The producers adopted by them should be continuously reviewed and adopted to changing demands, in the best interests of harmonious Centre-State relations, in order that on the one hand, the two bodies could function in class co-operation complementing each other and on the other hand, the results of their efforts create widest measure of all round satisfaction.

In view of what has been stated above, we do not subscribe to the view that there should be only one organisation to deal with all financial transfers plan and non-plan on an assessment of capital and revenue resources. It follows, therefore, that the issue mentioned at (ii) at the beginning is accordingly answered in the negative.

Now, we take up the issue mentioned at (iii) namely whether the Finance Commission should be a permanent body. A plea has often been made in certain quarters that even continuing to discharge the functions assigned to it at present, the Finance Commission should be converted into a permanent body. This suggestion is sought to be justified on more than one ground. Firstly, it is said that the Finance Commission, being *ad hoc* in nature, each time has a new personnel, with perhaps entirely new supporting secretariat, so that it has not been able to view the entire gamut of Union State financial relations in such a manner as to lend stability to the system of fiscal transfers to the States.

Secondly, the Commission is just not there after submitting its report, so there is absence of continuity in its thinking and work. Thirdly, it is pointed out that the time at the disposal of a Finance Commission is too short to enable it to evolve an independent methodology so that it is left with little option but to fall back upon one which is readily available. Further, it is said that one consequence of the Finance Commission being set up after five years has been to leaves sufficient scope for discretionary transfers by the Government of India.

Here, it is necessary to bear in mind that if for sake of continuity the Finance Commission is converted into a permanent body, one consequence may be for such a Commission to develop in course of years, certain elements of bias and prejudices in its approach, which would certainly affect it independence and judgement, the two vital attributes which inspire confidence in the august body.

There is another notable aspect of the issue. If the Finance Commission is made permanent, as the Seventh Finance Commission aptly observed, 'there might well be a tendency for the members of the Commission to be regarded as full time employees of the Central Government and this would be unhealthy from the point of view of the Commission's functions vis-a-vis the State Governments'.

Since, considerable changes are likely to take place during the periods between the appointment of two Finance Commissions in the economic and fiscal situation and relative needs and resources of the States, so that every Commission is duty bound to avail of the opportunity for fresh consideration of various problems in the changing circumstances. Such a freshness of approach, free from pre-conceived notions, is possible only in the present system because it permits, as the Seventh Finance Commission observed, the induction of persons with a fresh approach and unbiased minds as members every time a new Commission is set up.

As for the argument that making the Finance Commission permanent would greatly obviate the possibility of growing discretionary transfers by the Centre, the Seventh Finance Commission tightly pointed out that it was difficult to conceive of a system which can altogether eliminate uch transfers in the widely varying conditions and circumstances in which the State Governments may find themselves from time to time. It may be added that giving a permanent status to the Finance Commission will by itself not acceed in doing away with the need for discretionary transfers from the Centre to the States. On the other hand, it will largely depend on building up the financial where-withal of the States, to which Finance Commissions transfers contribute in a significant manner.

There is yet another point made out in support of the suggestion to made the Finance Commission permanent. It is said that one defect of the present arrangement lies in the absence of provision for a continuous review of Union State financial relations. Significant emphasis has been laid, in this connection, on preserving some stability and continuity by necessary changes in the composition and tenure of the Finance Commission, which should be made a standing body. Further, it has been emphasised that for a continuous review of Union State financial relations it would be necessary to collect, compile and analyse, on a continuing basis, date and information relating to various aspect of the finances of the Centre and the States, special features of particular regions and States and the factors affecting their finances and it has been urged that a permanent Finance Commission alone could undertake this task purposefully.

The crux of the matter is, whether a continuous review of Union State financial relationship of the kind contemplated is possible only by a permanent Finance Commission, or an equelly effective arrangement can be devised for ensuring such a review without

disturbing the tenure of the Finance Commission. We have seen earlier how on various considerations, the balance of advantage would very much lie in favour of preserving the present set up of the Commission. In fact, for achieving the objective of a proper review of Union State financial relations, what is particularly significant is to conduct regular studies and collect and analyse all relevant data pertaining to the various aspects of the finances of the Union and the State. If the Finance Commission is made a permanent body merely for conducting such studies and collecting relevent data, it would be sheer waste of time for such an august body because the task can be very well assigned to and performed by a qualified and fully equipped study call set up for the purpose which can assist the Finance Commission by providing ready made materials based on regular studies undertaken and completed by the cell. In fact, all Finance Commissions have laid stress on the usefulness of studies by such a cell.

It was on the recommendations of the first Finance Commission that such a cell was established in the President's Secretariat. But on the recommendations of the Taxation Enquiry Commission, it was later transferred to the Finance Ministry. The Fourth Finance Commission (1956) found that the cell consisted merely of some ministerial staff. The position does not appear to have improved in any significant manner since then as would appear from the observation of the Seventh Finance Commission that the arrangement was inadequate. We feel that the recommendations, which the Commission made in this connection should be implemented in letter and spirit. It said it will be extremely useful to future Finance Commission and greatly facilitate their work if can expert on political agency were to be established by the Central Government and were to perform such functions as the Secretariat of the Commission is expected to perform. The Commission wanted this agency to play a watching and advisory role with regard to Centre-State financial relations generally. The agency should be vested with sufficient authority to call for and be furnished all relevant information from the Union and State Government. The Commission also thought that this expert agency should also be concerned with proper implementation of the accepted recommendgations of the Finance Commission. This agency, on appointment of a Finance Commission, should get merged into its secretariat.

We would very much favour the creation of such an agency in the light of the recommendations of the Seventh Finance Commission, for we feel that if such an agency is built up along the lines indicated by the Commission, it would go a long way towards achieving a purposeful review of Union State financial relations on a continuing basis, and would greatly meet the point which is made out as a ground for making the Finance Commission permanent.

The Seventh Finance Commission did not indicate whether the proposed agency should be located in the Finance Ministry or in the Planning Commission. We are inclined to think that since the Planning Commission is already engaged in research in various fields relating to evaluation of plan programmes, it has a definite orientation towards research by subject matter specialists and experts, it will be the appropriate place where the proposed agency should be located. The present cell under the Finance Ministry can very well be shifted there to take over all the tasks indicated by the Seventh Finance Commission.

In view of what has been explained in the preceding paragraphs, we do not see any need to make the Finance Commission permanent.

In the earlier paragraphs, we have also elaborated our approach to the respective roles of the Finance Commission and the Planning Commission. Since we do not advocate any particular change in the relative functions of the two we do not envisage any significant modification in the role of the Planning Commission either, except emphasising the point of suitable measures to achieve a better Co-ordination between the functions and working of the two Commissions.

5.10 There is no denying the fact that there has been considerable rise in the volume of public expenditure undertaken by the Centre as well as the States. It is also true that the total quantum of resources transferred to the States through the Finance Commission and the Planning Commission have also been going up from year to year. It, however, does not follow automatically from the above stated position that the rising volume of total transfer of funds to the States has resulted in inefficiency or lack of economy in expenditure.

It is true that Finance Commissions have not laid down or applied specific norms to see whether the States are exercising proper economy in expenditure. That does not mean, however, that the Finance Commissions have been accepting whatever expenditure is shown by States in their forecasts of revenue and expenditure for the devolution period. The Commissions have been reassessing the forecast of the State by applying certain considerations, notable among which are suitable rates of growth by which individual items of revenue and expenditure may be expected to increase annually. In other wards, such a methodology provides for a measure of guaranteed against wasteful expenditure.

The Eighth Finance Commission has taken note of the criticism made against the Finance Commissions that the "gap filling" approach adopted by them encourages the loss well managed States to squander resources. It has met this point of criticism by saying that 'it is not as if the Finance Commissions accept the forecasts sent by the States at their face value'. We, like all previous Finance Commissions, have realistically re-assessed the forecasts and applied certain norms. Our approach has been objective both on the revenue and expenditure sides.

Periodical assessment by the Finance Commissions of expenditure of States on non-plan account by applying certain norms holds out a premise that the States would exercise desired care in ordering their expenditure. None the less, it may not be difficult to point out instances of avoidable waste in public expenditure. At the same time, it cannot be contended that such inefficient or wasteful expenditure has been the consequence of transfer of resources through the Finance Commission. One may like to take exception

to certain items of expenditure undertaken by the States, such as that on social services. This, again is a question of value judgment. The growing keenness of States to provide social services on increasing scale is in accordance with public policy accepted by them. Similarly, expenditure on emoluments of staff constitutes another areas where lack of ecomony may be hinted at. However, it should be realised that a predominant part of the States' expenditure on emoluments of staff consists of payment of dearness allowance at Centre rates. Here, it may be pointed out that rise in prices, which is the factor responsible for payment of increasing number of States of dearness allowance, is a matter which is beyond the Control of the States. Moreover, the Centre having shown the way by paying dearness allowance to their employees the States are hardly left with any scope of independent action in the matter, However. this inescapable expenditure incurred by the States cannot be attributed to transfer of resources to them through the Finance Commission.

The valume of expenditure has undoubtedly been growing. The correct perspective, however, would be to recognise that there has been substantial rise in prices during the last thirty years. The volume of public expenditure in real terms, therefore, would be much less than what it is money terms.

Last, but not the least, important factor is the Plan expenditure which also has been increasing from Plan to Plan. Not only development expenditure but also non-developmental expenditure has grown on account of planning, because it has necessitated growth of administrative and other services. The transfers through the Planning Commission to meet the Plan requirements have, therefore, been going up. The priorities of Plan projects having been fixed and the periodical reviews undertaken by the Planning Commission to assess the progress made in achieving the financial and physical targets set in different fields, it cannot be said that the sheer volume of plan transfers leads to inefficiency or lack of economy expenditure.

Fiscal equalisation has not been a pronounced objective of any Finance Commission. It is for the first time that the Eighth Finance Commission has said in explicit terms that it was too late in the day for any one to argue that backwardness should not be a factor in allocating resources between the States. On that promise, the Commission made an advance towards equitable distribution of resources but yet it could not correct the prevailing imbalances in one attempt. The declared goal of planning has been rapid economic development with balanced regionaal growth. But ver thiry years of planning has not succeeded in removal of regional economic inequalities. The phenomenon is well reflected in persistant disparity in public expenditure of States.

The Seventh Finance Commission computed variations in total (Plan and non-Plan) expenditure of States during the span of period between 1961-64 to 1974-77. To cite but a few example of some States, the per capita expenditure of Punjab rose from Rs. 104·58 to Rs. 275·91, that of Uttar Pradesh rose from Rs. 28.62 to Rs. 123·30, and of Bihar it rose from Rs. 27·51 to Rs. 92·75. Despite this rise in per capita expenditure during this period, it was found that the per capita expenditure of Bihar continued to be lowest in both the relevant years. The per capita expenditure of Uttar Pradesh was second lowest in 1961-64, whereas in 1974-77 it improved its position to become the third lowest, the other two being Madhya Pradesh and Bihar in that order. On the other hand, Punjab continued with highest per capita expenditure. In 1961-64, Maharashtra had the fifth highest per capita expenditure of Rs. 50·56 as against the highest per capita expenditure of Rs. 104·58. In 1974-77, Maharashtra not only moved up to occupy the second highest position in terms of per capita expenditure, but also the distance from the highest per capita expenditure (Rs. 275·91) of Punjab was considerably reduced in comparised to the distance obtaining in 1961-64. If we look at the ranking of States in terms of per capita expenditure during the period, we will find that while the position of some States has considerably improved, that of some others has either not improved at all or shown only nominal improvement. In our case, the position has stagnated with lowest per capita expenditure during the whole period.

If we take into account per capita expenditure of States on two important items like education and medical and public health over the last thirty years, we will find sufficient evidence of disparities in expenditure. The per capita expenditure on the aforesaid two items of certain States over the period is shown below :

(In Rupees)

State	Education 1951-52	Education 1980-81 (BE)	Medical and Public Health 1951-52	Medical and Public Health 1980-81 (BE)
Bihar	0.9	33.82	0.5	10.40
Orissa	0·9	41·72	0·5	22·67
U.P.	1·2	29·62	0·5	14·21
Punjab	1·5	71·90	0·7	29·81
Bombay (Now Maharashtra)	2·8	60·71	1·0	25·68
Gujarat	..	53·10	..	21·68
West Bengal	1·3	49·02	1·6	22·70

The table above distinctly reveals the wide disparities in per capita expenditure on the two selected items of public expenditute. That there has been no uniform pattern in the rise in per capita expenditure over the period 1951-52 to 1980-81 in respect of different States also goes to show that the disparities have adversely affected the backward States like Bihar.

Here it may be remembered that there has been considerable rise in prices during the last thirty years. Therefore, the per capita expenditure, if expressed in real terms, will be far less than in money terms. In other words, the improvement in per capita expenditure of States is more apparent than real. It is no wonder, therefore, that inspite of the planning process extending over a period exceeding thirty years, economic inequalities persist unabated and backward States, like Bihar continued to lag behind the more fortunate States in the matter of administrative, social and economic service to the people.

5.11 The present mechanism of transfer of resources consists mainly of two channels, the Finance Commission and Planning Commission. It is said that this duality leads the States to present their estimates and forcasts of revenues in two different ways to the two Commissions. The observation is not entirely without foundation. The reason for presenting different estimate to the two Commissions is that they apply different criteria and arrive at different results.

It has been the practice of the Finance Commissions to relate the quantum of grants-in-aid to the budgetary gaps of the States as the budgetary gaps are taken to reflect the needs of the States. The Planning Commission, on the other hand, assesses the need of the States with a view to identify surplus that can be made available from the non-plan side to be utilised on the plan side. Thus, there is a marked difference in the approaches of the two Commissions. This basic difference in their outlook also explains the possibility of the States presenting two different estimates of revenue and expenditure to the two Commissions.

In order to qualify for the whole Central Plan assistance, a State has to be mobilise its resources to the extent agreed upon in the plan discussions. For this purpose, as State is under compulsion to restrict its non-plan expenditure to the utmost in order to produce a revenue surplus of the order estimated by the Planning Commission. In this context, the revenue surplus as estimated by the Finance Commission is not taken into consideration. But When a State approaches the Centre for any non-plan requirement, its demand is examined by the Central in the light of the recommendations of the Finance Commission and the revenue surplus or revenue deficit assessed by it is taken into account.

This is not only disadvantageous to the States, but it also tends to encourage them to prepare and present two different estimates of revenue and expenditure to the Finance Commission and the Planning Commission. Since the Finance Commissions assess the needs of the States in terms of fiscal gaps, there may will be a tendency on the part of the States in sheer self interest to draw their forecasts in such a manner as to show a revenue deficit on non-plan account. The remedy will be in change of approach of the Finance Commission, so that the budgetary gaps alone are not deemed to truly reflect neads of the States. Instead, objective criteria to assess relative needs of the States in physical terms is likely to considerably reduce the possibility of exaggerated revenue-deficits.

We do not think that the transfer of resources and the manner in which it is effected has inherent propensities to cause financial indiscipline, the transfer of resources under the Finance Commission's recommendations or through the Planning Commission are made in accordance with set principles. Both the Commissions apply rigorous tests to assess the revenue and expenditure accounts of the States and to some extent, States which err on the side of extravagance or financial laxity suffer because they do not always get full credit or excessive expenditure incurred by them. The Planning Commission determines the Plan size of the State keeping in view the States efforts in raising additional resources and failure to achieve the set targets for resource mobilisation affects the plan size. Thus the States are chestened to exercise desirable restraint on extravagant expenditure.

The more fact of the size of transfer of resources can hardly lead to the consequence of financial indiscipline, firstly because most of the expenditure is incurred on earmarked purposes and, secondly, all public expenditure is subject to audit by the Comprtoller and Auditor General of India and also scrutiny by the Public Accounts Committee. The Plan expenditure is to be incurred in accordance with the plan allocations on schemes or projects approved as part of the State Plan. Both the financial and physical performance is constantly under watch of the Planning Commission. These safeguards tend to provide sufficient safeguard against financial indiscipline.

It is not suggested, however, that there is no instance of financial imprudence. All that is intended to point out is that instances of financial impropriety or wasteful expenditure, wherever they occur, are because of the failure of the authority spending public money to observe the rules of financial propriety and should be attributed to the mechanism of transfer of resources.

In the wake of programme of planned development, public expenditure has risen considerably. With the increase in the scale of expenditure of public funds, the changes of leakages or waste are likely to increase if adequate controls are not exercised. There may have been some instance of insufficient control exercised over public expenditure or ignoring or condoning lapses in financial discipline. But these, again, are failures on the part of authorities empowered to direct and control expenditure of public funds and the mechanism of transfer of resources cannot be said to have provided the impulse for such lapses.

What can be called populist measures depends upon the relative importance attached to the various programmes or activities undertaken by the Government. Some would give lowest priority to schemes of social welfare and would invest any programme undertaken in this connection as being populist in nature or unproductive. Every activity has a hard core of real content. If the programme is implemented in right earnest, social welfare schemes add to the enrichment of the lives of the large masses and create a wide measure of satisfaction. Such activities, therefore, should not be regarded wasteful or unproductive. The social benefit that they produce has undobuted value.

It is difficult to establish a definite linkage between adoption of what is called populist measure and the mechanism of transfer of resources. Neither the quantum nor the manner of transfer of resources seems to have a bearing on adoption of a populist measure. If a government is so obvious of its responsibilities towards the people that it loses its sense of priority, it can go about undertaking any measure irrespective of its usefulness or value vis-a-vis other pressing requirements. We have no such instance in view.

5.12 We are in agreement with the broad approach that the bulk of the resource transfer should be by way of devolution of tax shares and the role of grants-in-aid should, as far as possible, be supplementary.

In this connection, it would be relevant to recall that the fifth Finance Commission had expressed the view that the aim of a reasonable policy of transfer of resources should be to minimise the number of States receiving grants so that the State's need for additional resources should be met, as far as possible, by devolution of taxes rather than by grants. Similar views had also been expressed by earlier Finance Commissions too. Similarly, the Seventh Finance Commission reiterated this broad preposition.

In expressing our agreement with this approach, we have two main considerations in mind. Devolution by way of tax shares will always take place on the basis of equitable principles evolved by Finance Commissions and uniformly applied in the matter of distribution of respective share of the States. As such, it will mean assured devolution to the States on this account, also because tax shares will not be dependent upon the budgetary needs as assessed by the Finance Commissions, so that irrespective of whether there is a surplus or deficit in the forecast of resources, the States will get their legitimate share out of the divisible pool of taxes in accordance with the principles decided by the Finance Commission.

Secondly, if bulk of the resources transfer takes place by way of tax shares, it will offer an opportunity to the States to have the benefit of sharing the increasing bouyancy of taxes raised by the Centre and shares with the States. It will be of distinct advantage to a backward State, like ours, which stands in the dire need for additional resources for strengthening its finances to meet the ever increasing responsibilities to provide administrative, economic and social services to its people.

5.13 The principles mentioned above give primacy to bridging of fiscal gaps of States by Grants-in-aid, which would not have been exceptionable if, instead of normative approach followed in making assessment of such gaps by limiting it to budgetary gap alone, there had been an attempt to measure the financial needs of States on the basis of a methodical appraisal of physical standards of the levels of social, economic and administrative services, that could have resulted in exposing in sharp focus the States of economic and social backwardness of States, which really stand in need of assistance.

In fact, we are inclined to hold the view that there is nothing in Article 275 which limit its opration to filling up any gap. The provisions contained in this Article speak of States which may be determined to be in need of assistance, and there is no indication, explicit or implicit, in the said Article that the assistance should be extended only to fill up revenue gap. Therefore, what the Finance Commissions had been doing amounts to attaching restrictive meaning to the provisions of Article 275 in recommending grants to States having regard basically to their revenue gaps left after devolution of their share out of taxes and duties.

Therefore, we would urge that budgetary gap should not be deemed to reflect the needs of States to as to be covered by grants under Article 275. Instead, it would be in keeping with the spirit of the provisions of Article 275 to determine the States to be in need of assistance by measuring their fiscal needs, and distinct from budgetary gaps, based on an assessment of the relative standards of social, economic and administrtive services available in different States. As a consequence, the gap on revenue account of States, should cease to have overriding influence on determination of needs of States for being entitled to Grants-in-aid.

The second principle enunciated by the Seventh Finance Commission will, to some extent, narrow down inter-regional disparities in the level of administrative and other services. However, for this it would be necessary to adopt such a viewpoint in determining upgradation grants as would assure certain basic minimum standards of such services irrespective of State boundaries. It should, at the same time, be realised that equalisation grants alone would not succeed in serving the objective sought to be achieved by this principle. Equally important is to appreciate that the real purpose of devolution is not merely to extend to States a share on the principle of compensation for having joined the union, or, to fill up their revenue gap, but to lend an equilibrium to their precarious finances so that their resource base is strengthened to enable them to become financially capable of generating sufficient surplus for investment in order that the objective of equilisation of standards can be attained.

We subscribe to the principle that grants-in-aid should also be given to individual States to enable them to meet special burdens on their finances because of their peculiar circumstances or matter of national concern. In this connection, we would like to draw attention to certain consideration relevant to this problem. Problem of special nature would entitle States for grants-in-aid, for this purpose, expenditure incurred by a State like ours on floods and droughts, which have verily become a regular feature, should qualify for grants-in-aid. The existing policy and arrangements for financing of relief expenditure does not take full cognisance of this principle and Central assistance is given partly in the shape of grants and partly in the shape of loans. In deference to the third principle laid down by the Seventh Finance Commission, we would urge that the expenditure on floods and droughts cast a special burden on our finances because of peculiar circumstance in which this State is placed on account of recurring floods and droughts. Hence, this State should be deemed entitled to grants-in-aid on this score.

There is another matter to which we would like to draw attention in this connection. States should also be entitled to grants-in-aid to meet burdens cast on tham as a result of policies adopted by the Government of India. We have to incure heavy expenditure on account of payment of DA at Central rates to our employees. This is an unavoidable part of expenditure, caused largely by federal policy, and, the State has little scope for independent action in the matter. Therefore, the full bruden of expenditure on this account should be taken care of by

provision of grants-in-aid. This should be considered as a legitimate claim of the States in the spirit of the third principle laid down by the Seventh Finance Commission.

As we have urged earlier, the Finance Commissions should not interpret the provisions of Article 275 in a restrictive manner so as to narrow its scope to States' needs on revenue account only. We have welcomed to hold the view taken by the Seventh Finance Commission that it was open to it to recommed grant for capital expenditure also apart from grants for revenue expenditure under Article 275. The Commission rightly saw no restiction or bar in the operative part of the provision in the aforesaid Article against making grants for capital expenditure. Such a view was in keeping with the true spirit of Article 275, and, at the same time, grants extended for capital expenditure in accordance with the said view of the impart of the aforesaid Article would tend to help the achievement of the objective of removal of inter-regional disparities.

In our replies to several questions, we have repeatedly stressed the point that the less developed States have a legitimate right not only to catch up with more developed States in respect of social and administrative services and economic development, but also to be constantly in a position to go up along the ladder of economic progress. In keeping with the true nature of federalism, the Union Government has the obligation to enable the backward States to quicken their pace of progress so that eventually regional inequalities cease to exist. From this point of view, we consider that differential aid to poorer States is a wholesome principle and the Government of India would be fully justified in acting accordingly to ensure balanced growth by enabling the less developed States to reach the national level of progress and development.

As we have pointed out above, there is unmistakable evidence of overriding influence exercised by the gapfilling approach in the methodology used for determining the entitlement of States for grants-in-aid. The forecast of revenue and expenditure on non-plan account furnished by the States are re-assessed by the Finance Commissions in the light of certain broad considerations and on the basis of certain assumptions. The finance Commissions insistence on assuming certain rates of return from State Electricity Boards or State Transport Corporations is divorced from realistic considerations and the normative approach adopted in this respect makes the reassessment of States' forecasts unrealistic. While the legitimacy of expecting returns from such pulic enterprises cannot be seriously questioned, at the same time it is hardly justified to totally ignore the realities of socio-political milieu in which these enterprises have been working and the social responsibilities they are expected to discharge. Similarly, irrigation projects cannot be linked to a commercial venture yet they are expected to yield certain rates of returns on investments therein. Assumptions of this nature underservedly inflate the receipts of States in the devolution period so that corresponding reduction in their revenue gap is brought about in an artificial manner.

There is no doubt that the resources of the Central Government and the demands thereon have a bearing on the devolution of funds to the States. But, at the same time, it cannot be forgotten that compared to the States the Centre has at its command high-yielding, broad-based and elastic sources of revenue. Moreover, the Centre does not suffer from the same limitations in the matter of market borrowings as the States do. Above all, the Centre has the exclusive privilege of resorting to deficit financing (This is not to say that the Centre's power to resort to deficit financing has no limits.). Thus, the Centre is endowed with resources with great potential. Similar is not the case with the States, whose own resources are severely limited but their responsibilities are correspondingly great.

Hence, the Finnce Commissions should take a total view of the financial resources of the Centre and in making assessment of the revenue and needs of the Central Government, the same criteria should be applied as is done while assessing the resources of the States. Such an attempt was made, practically for the first time, by the Seventh Finance Commission and the Eighth Finance Commission has continued the practice.

The principles laid down by the Seventh Finance Commission have been endorsed by the Eighth Finance Commission, which has also made it clear that these principles are not intended to be either exhaustive or inflexible. How problems will require new approach and this is probably what the Constitution intended, for, a new Finance Commission has to consider the matter every fifth year. Even having said so, the Eighth Finance Commission has not brought to bear any new approach on the principles followed in dealing with the grants-in-aid question. Its methodology has been in accordance with the traditional lines.

It is in respect of upgradation of grants that this Commission has traversed some new grounds. Till now, the practice has been to allow grants for upgradation of administrative standards only in non-developmental sectors. The Eighth Finance Commission has, however, rightly chosen even developmental sectors, such as education and health, and besides has also allowed grant for training of administrative staff.

According to us, transfer of resources to States by way of tax shares should form a major part of devolution, leaving a residual role for grants-in-aid. However, we would add that it should not be ignored that grants have a constitutional sanction behind them. The constitutional provision made in Article 275 for grants-in-aid of the revenues of such States as Parliament by law determine to be in need of assistance should be viewed in its correct perspective.

It is an accepted preposition both in theory and practice of fiscal federalism that State Governments should be given grants for ensuring to their citizens an objectively determined level of essential public services. For this purpose, the Commission should first identify the essential public services and then proceed to determine the standard level to which such services should be raised. In this connection, we would urge that the standards in such services

prevailing in backward States should be raised to attain the level at least all States average standard of these services. The cost of making up the difference between the existing standards of these services in each State and the desired level to be achieved should be deemed to reflect the need of assistance required by the States and grants-in-aid should be extended to meet the requirement so assessed. The real purpose of grants-in-aid to States can then be better served than by following the present method of extending grants to States for covering their revenue gaps.

5.14 We have made a suggestion to the Eighth Finance Commission that the yield from the Special Bearer Bonds Scheme should be shared with the States. We have pointed out in this connection that the scheme is linked to income tax. In fact, the proceeds of the bearer bonds are primarily out of concealed incomes. Therefore, had the income tax authorities taken effective steps to discover concealed income in time and bring them under the net of income taxation, the amount of tax realised would have, in the normal course, entered the divisible pool of income tax, out of which the States would have received their due share. Hence, if the incomes were concealed and could not be brought under assessment in the relevant year, it was not because of the States that it happened so. Therefore, now that these conceled incomes have been subjected to the schemes, the proceeds should not be treated differently from the yield from the tax on incomes.

Historically, income tax was conceived as a balancing factor and it was believed that share in the proceeds of income tax would adequately balance the States' budgets. However, the importance of the income tax as a balancing factor has considerably diminished over the years, as reflected in the slower buoyancy of the total receipts of income tax on account of several factors, such as, reclassification of tax on income paid by companies in 1959, surcharge on income tax assuming a permanent character, a number of concessions in the structure of income tax including raising of exemption limit all of which cumulatively resulted in retardation of Central Government's efforts in adequately tapping the source of tax revenue.

The resultant decline in the significance of income tax as a balancing factor can also be measured in quantitative terms. While in 1952-53, income tax collections (including surcharge) was of the order of Rs. 143.2 crores as against corporation tax collections of Rs. 43.8 crores, in 1981-82, the income tax receipts amounted to Rs. 1475·5 crores as against corporation tax collections of Rs. 1970·0 crores. The corresponding figures according to budget estimates of 1983-84 were Rs. 1563·0 crores and Rs. 2339·0 crores respectively. The buoyancy registered by growth in the proceeds of income tax has far lagged behind that in the proceeds of corporation tax. On the other hand, the need to widen the base of tax sharing is self-evident and one obvious method by which it can be done is to ensure maximum possible collections by way of income tax. Since the proceeds from the scheme have, in essence, all the attributes of income tax, they should be made divisible. An idea of the extent to which the divisible pool will increase by such a step can be had from the foot that the first period of sale of these Bearer Bonds in 1981 alone resulted in the total subscription amounting to Rs. 395·60 crores.

For these reasons, we have considered it necessary to plead that the proceeds of the Bearer Bonds scheme should be shared with the States.

We have also suggested to the Eighth Finance Commission that the deposits under the Compulsory Deposit (Income Tax Payers) Scheme should also be included in the divisible pool. Under this scheme, a prescribed percentage of the current income has to be deposited for a period of five years. The net deposits, therefore, are available with the Central Government for the said period. It adds to the resources of the Centre in the same way as income tax.

If, however, it is held that it is not a tax but only a kind of saving, like any other scheme of saving, with the only difference that while other saving schemes are voluntary, saving under this scheme is enforced compulsorily, then, in the case too, the total net collections under this scheme can very well be treated at par with small saving collections, and at least a part thereof can be made over to the States. The amount so transferred to the States can be treated as loan in perpetuity as the Seventh Finance Commission had recommended in respect of loans to States out of net small savings collections.

The raising of administered prices by the Government of India affects the finances of the States in several Finance Commissions recommend grants for upgradation of administrative standards in certain sectors and the Eighth Finance Commission also allowed capital grants for undertaking certain building projects. But while making estimates of costs involved in construction of buildings, it assumed fixed costs for the devolution period. On the other hand, increase in administrated prices of iron and steel and coal resulted in inescapable increase in the cost of building materials. The result has been that despite best intentions and efforts, we have not been able to fulfil the physical targets with the given amount of grants. The Central Government has declined to meet the extra costs involved on this account. The only option left to us is to find additional funds to achieve the physical targets, which means unexpected strain on our finances. The alternative of giving up the building projects is limited because the buildings under Construction cannot be left half way and have to be completed. This is really an unenviable position.

For these considerations, we think that suitable modification in the policy relating to administered prices is called for. We are not in a position, for want of information, to say how much of increase in these prices are attributable to excise duties and what part is on account of covering losses being incurred by the undertakings of enterprises of the Central Government. These can be studied and the practice should be reviewed. We, on our part, believe that either the practice should be stopped and the desired objective may be suitable adjustments of usual excise levies on these projects or certain part to the proceeds from the increase in administered prices may be shared with the States according to some wholesome principles.

We are not aware of any other such claims made for sharing the non-tax revenues of the Centre.

5.15 Generally the saving of the community is reflected in the Bank Accounts. Savings also find access to life Insurance Corporation, General Insurance Corporation, Unit Trust Scheme, Debentures, Shares of both Private and Public Undertakings. Presently there does not exist any yardstick on which the resources mobilised by these institutions is shared between the State and the Centre, nor is there any definite criterion for its distribution between Public Undertakings and the Centre even. Presently the distribution of the deposits of the resources mobilised by the Commercial Banks is shared between the Banks and the States through the trend of Credit/Deposit ratio. Similarly the resources mobilised by other Public Undertakings like LIC/GIC etc. is shared between the depositor States and these institutions through a devise which is evolved by the Planning Commission/Ministry of Finance in course of appraisal of the States resources for executing Annual Plans. This is an indirect, rather an oblique way of sharing of the resources which is neither need-based, nor based on the quantum of deposit made by the individual States. Thus, the resources mobilised from the savings through the public Undertakings like Banks and other institutions is not passed on to the State on any set principle. The existing system, therefore, requires modifications in the interest of the State which contributes towards the mopping up of such resources.

5.16 The question seeks to highlight some of these phenomona of Central-State financial relations which eventually culminate in the fiscal imbalance of the States manifesting in their mounting indebtedness. They are : (i) growth of budgetary deficits of the States at a faster rate than that of the Centre, and (ii) because of the increasing deficit of the Centre, a declining trend in the percentage of its revenue receipts being transferred to the States inspite of there being a substantial increase in these transfers in absolute terms.

Growing budgetary deficits of States indicate the fiscal imbalance which has gripped them. Apart from other reasons, the basic cause of such a situation is the lack of correspondence between the resources and responsibilities of the States. The vertical fiscal imbalance in the Indian fiscal system explains the phenomenon of the unstable finances of the States. While the share of the States in the total revenues of the Centre and the States has been around 30 per cent, their share in the total revenue expenditure of the Centre and States has been above 50 per cent. This divergence denoted centralisation of revenue collection at the Centre and decentralisation of revenue expenditure amongst the States. This, in other words, shows the extent of vertical fiscal imbalance with which our federal fiscal system suffers. The increasing trend of budgetary deficits of the States in a logical consequence of the situation in which the States do not have sufficient resources at their command to meet their indispensible expenditure commitments.

Tax devolution has acquired a position of predominance in lending support to the finances of State Governments and the role of grants through the Finance Commission has become relatively unimportant as a source to help to the States. There has been significant increase, in absolute terms, in the total quantum of fiscal transfers to the States. Yet in relative terms, there has been a decline in the precentage of net devolution from the Centre to States to the aggregate receipt of the Central Government. In 1972-73, the net devolution of resources from the Centre to the States formed 33.6 per cent of the aggregate receipts of the Government of India. This percentage has come down to 27.1 per cent in 1982-83 (B.E.). Looked at from another angle, the net devolution of resources from the Centre to States as percentage of aggregate receipts of State Governments has also gone down from 27·2 in 1972-73 to 34·3 in 1982-83 (B.E.). This should mean that the support lent to State finances by devolution of resources from the Centre has diminished over the years.

Chronic disequilibrium in State finances only shows that the lack of correspondence between their resources and responsibilities has not been removed despite large transfer of funds to the States. It is true that fairly large amount of resources on revenue account are available to the States. It can also be said that they have sufficient freedom to further raise resources on revenue account. But the same cannot be said about the capital account of the States. Their freedom to borrow has been restricted to a certain extent in as much as the consent of the Centre is necessary precondition for borrowing by States in base of outstanding Central loans for repayment. Market borrowings play a comparatively modest role in the capital finance account of the States. Therefore, the States have to depend on the Union loans for financing their capital programmes.

Since the States are not able to meet even their normal revenue requirements by their own revenues, it is only inescapable that Central loans have come to play a significant role in financing capital expenditure of the States, which has led to increasing burden of Union loans on the States. Plan loans account for a great deal of indebtedness of the States to the Centre.

We would have the opportunity of offering our comments in detail on mounting indebtedness of the States in our reply to question number 5.17. We would only point out that the observations made by the A.R.C. Study Team on Centre-State Relations about excessive indebtedness of the States still held good.

5.17 We may begin with an attempt to see how far periodical review of the problems relating to growing indebtedness of the States by successive Finance Commissions has succeeded in tackling this problem. The provision for quinquenial review of Union-State financial relations, in all aspects, by a Finance Commission offers a unique opportunity to have a close look at all problems concerning the finances of the Union and the States, including the complexities of indebtedness of the States, in the light of change in circumstances, which might have taken place during the period intervening between the constitution of two Finance Commissions. From that point of view, a periodical review should

be useful for a proper understanding of the implications of developments in this field so as to evolve appropriate correctives to deal with anomalies in the indebtedness of States.

Periodical review by the Finance Commission has obvious utility in the sense that the nature and extent of the problems arising from States' indebtedness to the Centre can be brought out in sharp focus and the relative debt position of States can be studied in the light of changed circumstances and appropriate measures suggested to deal with the matter. Such review can however, be of only limited value of the opportunity is used by the Finance Commission merely to suggest short-term solutions of *ad hoc* nature so that the basic problem is left to perpetuate itself.

The observations of the A.R.C. Study Team about excessive indebtedness of the States still hold good despite the deliberations of past Finance Commissions and remedies suggested by them to deal with this problem. As the Eighth Finance Commission has estimated, the States' indebtedness has doubled in the last five years i.e. from Rs. 18,785 crores at the end of 1978-79, as estimated by the Seventh Finance Commission, to Rs. 37,406 crores at the end of 1983-84. This only goes to show that short-term measures of *ad hoc* nature have proved unequal to the task of tackling this issue on a long-term basis.

It is not unexpected that central loans have also doubled from Rs. 13,463 crores to Rs. 27,059 crores in the last five years. Thus, out of the total debt liability of the States amounting to Rs. 37406.03 crores, the loans from the Central Government constitute more than 72 per cent of the total debt burden of the States. In the case of Bihar, the Central loans constitute about 80 per cent of the total debt liability of the State. Looked at from another point of view, the Eighth Finance Commission has estimated that the Central loans to the States outstanding as at the end of 1983-84 constitute 38.11 per cent of S.D.P. (average for 1976-79). As against this, in the case of Bihar, outstanding Central loan constitute 53.72 per cent of S.D.P. of the State (average for 1976-79).

Thus, a predominant component of the total debt liability of the States is on account of indebtedness of the States to the Centre. The Central loans are advanced to the States both in the form of Plan and Non-Plan assistance intended for development and non-development purposes. An example of loan advanced for non-plan revenue expenditure is the one given to enable the States to clear off their overdrafts with the Reserve Bank of India. Plan loans are intended for development purposes. Then, there are loans provided for non-development programmes like financing of relief expenditure.

The dominant share in the States' indebtedness to the Centre is attributable to central loans for financing development projects and such loans have been accumulating year after year. As the Eighth Finance Commission has pointed out, "the phenomenal growth in the States' indebtedness testifies to the compulsions for financing a large part of the plan outlays through borrowings." As the States' revenue resources have not succeeded in keeping pace with their expanding requirements, they have to be dependent upon the Centre's transfers to meet their requirements. In such a situation, the States have no alternative but to finance their development outlays by borrowings. Their market borrowings being under the control of the Centre, there is a limit which they could raise public debt directly by resort to market borrowings. Hence the consequence that they have to be dependent upon Central loans for financing a large part of their plan expenditure.

We agree with the observations of the Eighth Finance Commission that there was 'nothing basically wrong in the growth of public debt with the expanding public functions, no Government, particularly in developing economy, can undertake large scale programmes of development without recourse to public borrowing.' We also appreciate the point that the relationship between the Union and the States is one of partnership, in which loans constitute an important mechanism for transfer of resources. Yet what causes deep concern to us is (i) the growing volume of States' indebtedness to the Centre, (ii) the mounting interest charges, and consequently, (iii) smaller funds left available for meeting developmental requirements.

Let alone the swelling volume of Union loans, a major cause of constant worry to us has been the increasing debt servicing liability. The total repayment liability (including interest) takes away a sizeable chunk of the total assistance received from the Centre, leaving reduced resource with the State. The actual position can be seen in the table below :—

(Rupees in crores)

	1979-80	1980-81	1981-82	1982-83	1983-84
1. Central Assistance	215·86	257·01	247·86	247·25	
2. Repayment of loans to the Centre . .	51·09	63·54	78·56	44·96	
3. Payment of Interest to the Centre . .	26·99	105·23	83·66	96·05	
1—(2+3)— .	137·53	148·24	85·64	56·24	

It would appear from the above table that the financial burden of Union loans in terms of annual financial transfer from the State budget to the Union budget has set in motion a disquieting trend of resources flowing out of the State to the Centre at a greater pace than the flow in the reverse direction. Consequently, the financial equilibrium of a backward State, like ours, has remained continuously upset owing to heavy repayment liability.

Most of the Union loans have been largely for creating assets. Hence, it is often urged that the States should be able to service their debts out of return from projects which are financed by these loans. It is easier said than done. The States are engaged in discharging the responsibility of providing a large

part of infrastructural facilities for social and economic development. It is needless to point out that investment in such projects is not income-yielding. Even those projects which can be expected to yield returns have long gestation periods and so they do not yield requisite income in time. These are some of the factors responsible for mounting debt obligations of the States.

There is another angle from which we can view the effect of Union loans on the States, particularly weak States like ours. Central assistance for State Plan is composed of 70 per cent loans and 30 per cent grant which means that a major portion of the debt of the States consists of Plan loans from the Centre. This arrangement, though a reasult of good deal of discussion, suffers from many deficiencies, which vitally affect the financial capacity of States generally and adversely impinges on the finances of weaker States in particular. To recount a few shortcomings in the pattern, firstly, it loses sight of the capacity of the borrower to repay. Secondly, it does not take into account the viability of the schemes for which the loans are utilised. Thirdly, it places unequal burden on the States unrelated to their capacity of repayment in as much as the scheme of central assistance tends to accord equal treatment to unequal States as regards the loans and grant components of the assistance. Fourthly, it ignores the fact that the bulk of the Plan outlay has been spent on roads, health, and education, water supply, and power generation and transmission which provide the infrastructure and do not yield corresponding returns to enable the States to discharge their repayment obligations.

The result of all this has been that backward States, like ours, unlike the developed States, have not been able to derive full benefits from the loan portion of the assistance received. As there has been larger outflow from the State budget to the Central budget on account of repayment of loan and interest thereon, the net inflow of Central assistance has shown a declining trend. It is natural, therefore, that we have not been able to make the requisite investment for achieving further economic development and instead have been forced to deploy the resources available on making the critical minimum effort for creation of take-off conditions. Moreover, a fixed ration of loan in the Central assistance for all States, irrespective of their development and financial strength, casts unequal burden on the weaker States and further worsens their position of over-all deficit. Thus, the pattern of Central assistance has failed to serve the end of reducing inter-State inequalities.

Therefore, we consider that one effective way to deal with the problem of States' indebtedness to the Centre would be to substantially reduce the loan component of Central Assistance for financing the State Plans. Fixation of Uniform percentage of loan component, even at a reduced level, for all States would not be capable of enabling weaker States to catch up with more developed States. Hence, we would suggest that a State having per capita income below all-States' average per capita income should be given Central assistance in the ratio of 70 per cent grant and 30 per cent loan and the reverse may be the case for the States whose per capita income was higher than the all-States' average per capita income. Such a pattern would achieve two objectives, namely, of reducing the burden of States' indebtedness and of producing substantial equalising effect by really adding to the resources of the weaker States which can be spent on development purposes.

Another significant part of Union loans consists of loan given to States to enable them to tide over the problem of overdrafts with the Reserve Bank of India. These loans cover a part of overdrafts. We would have adequate opportunity to explain our views on the causes of overdrafts and remedies to deal with the problem in our reply to question number 5.21. It should suffice here to point out that it would be far too sweeping a remark to say that unauthorised overdrafts are a sign of financial indiscipline on the part of State Governments. It is not always so. The A.R.C. Study Team on Centre-State Relationships has pointed out that tight resource position of the States has also made recourse to overdrafts unavoidable to some extent and, therefore, has morally inhibited the application of prescribed correctives by the Central Government or the Reserve Bank of India. Therefore, the Study Team felt that the real remedy lay in revamping the Centre-State Financial relationship on the lines suggested by it so as to allow the States more elbow room, which will not only enable but also compel them to exercise responsibility in matching expenditure to their resources.

We would be making our suggestions to deal with the problem of persistant overdrafts in our reply to question number 5.21. The package of measures suggested would go a long way towards remedying the situation so as to reduce the imperativeness of Union loans to tide over the difficulties created by overdrafts.

Several measures have been suggested by financial experts to deal with the problem of States' indebtedness to the Centre. Finance Commission have also made a number of suggestions to remedy the situation of growing indebtedness of the States. The problems, however, persists. It appears to us that the Eighth Finance Commission has rightly observed that 'so long as the liability for repayments to the third parties is fully provided for, the indebtedness of the States to the Union could contained to grow without any detrimental effect on the national economy.' Nevertheless, we are of the view that effective steps are needed to reduce, as far as possible, to burden of Union loans on the States.

As a short term measure, we would suggest debt adjustment by way of writing-off certain loans made for socially as well as financially unproductive purposes, such as those for drought relief and rehabilitation. Similarly loans given in the past by the Central Government for schemes of modernisation of police and police housing, clearance of overdrafts and such others should also be written off because they do not yield returns.

The Eight Finance Commission expressed the view that in general, it was not in favour of writing off of loans since a write off would reduce the pool of resources available with the Union for re-cycling. Yet, as a matter of fact, it did recommend writing off of loans on certain specific accounts, such as

loans for relief and rehabilitation of displaced persons and has made a recommendation regarding writting off of a part of repayments to be made to the Centre by certain States.

In fact, debt adjustment is a recognised measure adopted in many federations to provide relief to the constituent States. Even in India, a measure of the kind of debt adjustment was suggested by Sir Otto Niameyer as far back as in the year 1935 with a view to extending federal fiscal assistance to the then provinces. He said the following while making his suggestion :

> "Where financial assistance is to be given by a creditor to an existing debter, elementary commonsense suggests that the shortest and simplest method of adjustment is by reducing the claim of the creditor on the debtor".

Therefore, writing-off of unproductive loans should be considered an useful short-term measure to bring debtrelief to the States.

Another accepted short- term measure is rescheduling of the existing loans by extending the period of repayment. Such rescheduling has been recommended by the Seventh and Eighth Finance Commissions.

These short-term measures are necessary to deal with the immediate problem of providing relief to the States and reducing the immediate strain on their finances. The long-term objective, however, should be to determine afresh the period of repayment and rates of interest of different categories of loans having due regard to the relative debt burden of the States and the nature of purpose on which the loan funds are to be spent. Loans for similar purposes should not be given on varying terms. We are also in agreement with the view expressed by the Second Finance Commission that the Union and the States being partners in the big enterprise of national development there is no justification for charging the States more than the cost of borrowing. Therefore, while fixing the rates of interest, the Government of India should not deal with the States as if they were commercial bankers.

Keeping these considerations in mind, we would suggest that in future all Union loans should be classified broadly in the two categories : (i) Union loans for socially productive but financially non-productive schemes, and (ii) Union loans for financially productive schemes. The former may embrace non-plan schemes relating to health, education, welfare of depressed classes, rural roads and such others, on which the States are expected to meet expenditure normally out of their budget. Since there projects do not yield monetary return to the States but they have to be implemented in furtherance of social and economic objectives, large expenditure may have to be undertaken by the States. Therefore, there would be need for Union loans particularly when such schemes are undertaken at the instance of Government of India or as an imperative necessity following acceptance of some national policies in this regard. The Union loans for such purposes should be on long-term basis and the States whose per capita income fall below the all-States' average per capita income should not be called upon to pay any in rest on such loans.

The other category of Union loans, that is, those for financially productive schemes such as generation and supply of electricity, industrial undertakings like road transport corporations etc. may carry rates of interest equivalent to statutory of rate of return otherwise stipulated for each of such projects. The loans, however, should be treated as loans in perpetuity. This concept of perpetual loans has been accepted by the Seventh Finance Commission in the case of small savings loans to the States. The Eighth Finance Commission has observed that "while it is, no doubt, preferable that public debt is discharged through public savings, in the event of such savings being inadequate or required for achieving a better social or economic goal, there is no harm in discharging old debts by taking fresh loans." There is what is envisaged by the philosophy of perpetual loans. In practice too, the Government of India have been advancing loans to States to clear off their past loans. So, the idea of loans in perpetuity should not be looked at as something unprecedented or an anachronism. As a matter of fact, the Union loans extended for being utilised in financing the schemes of the kind mentioned there should be treated by the Government of India as a form of investment which will bring dividend in the form of economic and social development.

As regards small savings loans they should be treated as loans in perpetuity. As only the collection of withdrawals is divided between the Central and the States, the Government of India do not have to pay the share of the State out of their own resources. The Government of India had themselves conceded before the Seventh Finance Commission that small savings loans stood on a different footing from other Union loans. Hence, we do not see any point in not treating small savings loans as loans in perpetuity.

We hope that the measures suggested above should go a long way towards lessening the burden of Union loans on the States. It should also tend to make allocation of Union loans more efficient both economically and socially. Nevertheless, we are also not oblivious of the position that the suggestions will not prove as a final solution to all problems of indebtedness of the States to the Centre. The enduring solution will always lie in strengthening the resource base of the States by making available to them greater financial wherewithal for which it would be necessary to modify the methodology used for assessment of needs of the States. We have had occasions to elaborate our views in this regard in our replies to some of the preceding questions. Hence, we need not repeat them here.

5.18 The State Governments borrow from three sources; Reserve Bank of India, the public and the Central Government. Here we will confine ourselves to the borrowing from the public. i. e. market borrowings of the State Governments. Borrowings from the rest two source have come up for consideration in replies to other questions.

The freedom of the State Governments to borrow from the public is subject to limitations on two counts; firstly, the extent of authority drawn from the constitutional provisions, and secondly the capacity of the State Government concerned to bear

and absorb the burden of borrowings. According to clause (1) of Article 293 of the Constitution, the State Governments can borrow within the territory of India upon the security of the consolidated funds of the respective States subject to such limits as the legislature of the concerned State may impose. The States are also empowered to stand guarentee to loans raised by their subordinate authorities or authorities created by the State legislatures and such guarantee will be subject to legislative control. Thus, the Constitution limits the powers of the State Governments to borrow within the country from the general public, Reserve Bank of India and the Central Government. The State have been debarred from contracting loans from outside the Country.

Clause (3) of the Article 293, imposes another restriction on the powers of the State Governments to borrow. It makes the consent of the Central Government necessary to all borrowings by a State Government if the State has outstanding loans for repayment to the Centre. Such consent may be given on specified conditions as considered appropriate by the Central Government.

Thus, it would appear that the constitutional limitations imposed on the powers of the State Governments in the matter of borrowings comprise of (i) restrictions imposed by the State legislature (ii) the requirement of consent of the Central Govt., on such conditions as it might deem fit to prescribe, to borrowings by the State Government if there be any outstanding loans for repayment to the Centre or any other outstanding loan for which the Central Government had given a guarantee, and (iii) borrowings will be confined within the territory of India.

These constitutional restrictions on the freedom of the State Governments to resort to borrowing are reasonable and we see no ground to take objection to them. The executive authority of the State Governments is subject to control by the State legislatures and so, if the powers of the States to borrow has been made subject to limitations imposed by the State legislatures, it has rightly been done so.

To a limited extend, the freedom of the States to borrow has been curtailed in the sense that the consent of the Central Government has been made a necessary precondition for borrowing in case there be outstanding central loans for repayment or such other outstanding loans which had been contracted on the basis of guarantee of the Central Government. As the Government of India manages the national economy and its fiscal and monetary policies have all-pervading effects on all economic activities in the country, it is only fair that it should oversee the borrowing operations undertaken by the 'States in the interest of avoiding adverse monentary and fiscal effects arising from uncontrolled borrowing powers of the States.

Since external affairs are the responsibilty of the Central Government, it is only logical that the borrowings powers of the State Governments are limited to internal borrowings only. No State can reasonably aspire to transgress its local limits and take any step towards developing any relationship with any foreign power or authority. Hence, they have been rightly debarred from entering foreign markets and contracting foreign loans. Attempts in the past by some States to first negotiate foreign loans and then approach the Government of India to accord approval to such external borrowings practically amounted to extra-territorial activities. Resort to such extra-constitutional methods has been rightly disliked by the Centre and has correctly evoked criticism by the Planning Commission, leading them to warm the States against recourse to negotiating foreign loans in this manner.

Exception cannot justifiably be taken to curbs on the powers of the State Governments as regards borrowing abroad. Experience in Australia before 1929 presents an example how uncoordinated borrowings by the States in foreign markets created political and economic problems for the Australian Government so that the Financial Agreement of 1929 had to take care of this matter. The framers of our Constitution, therefore, rightly foresaw the evil consequences of allowing freedom to the States to borrow abroad and so it was proper on their part to deny the States the right to borrow from foreign countries.

It would thus appear that the constitutional restrictions on the freedom of the State Governments to borrow are based on unexceptionable grounds and are, therefore, basically sound.

Since most of the States are indebted to the Central Government, they are not in a position to borrow without the previous approval of the Centre. This position has remained so practically right from the beginning of the Constitution. As the Reserve Bank of India is the Keeper of the funds of both the Central and State Government and is also responsible, on behalf of the Government of India, for the monetary policy and the public debt policy, it has been functioning as the coordinating agency in the matter of market borrowing policies of the State Governments. Accordingly, it floats the market loans of the States keeping in view general economic conditions prevailing in the country.

Market borrowings are also allocated between the different States by the Reserve Bank of India in consultation with the Planning Commission and the Ministry of Finance. As such, a well-coordinated borrowing policy has evolved. The mechanism operating the market borrowing policy and programme take note of the constitutional provisions and in its working has stood the test of time.

Now, we take up the question of the States' capacity to borrow and the restrictions, if any. The capacity of a State to resort to market borrowings would be dependent upon the extent of the loans raised. In their anxiety to find funds for financing their plans, the State Governments tend to clamour for more market borrowings regardless of their ability to assume the burden caused by increased repayment commitments. It need not be forgotton that the market loans have to be repaid with interest, Further, it is because of unified borrowing policy followed by the Reserve Bank of India that the rates of interest

payable on these market loans are kept at as low level as nearly one third of the ruling market rate of interest. Had the States the opportunity to float loans on their own perhaps the rate of interest payable according to prevailing market rates would have acted as a damper on the desire of many of them to go in for an ambitious market borrowing progamme.

There is another factor which affects the States' own capacity to raise public loans. Generally speaking, the securities of the States are less attractive and do not have the same appeal to the investing public as those of the Central Government. It is common knowledge that the State Governments' market loans are not so much subscribed by private individuals or financial institutions, but are practically made to be subscribed by nationalised banks, L. I. C. and other financial institutions and this is made possible by a statutory requirement for their investment policy.

There is yet another factor which, to certain extent, is likely to act as a restriction on the capacity of at least some of the States to raise public loans. All the States do not have equal access to capital markets. In fact, even leading business centres or headquarters of nationalised banks or financial institutions are not evenly dispersed. This factor presents a practical difficulty in the way of many States and were they to float large-size market loans on their own, disappointment alone would have been in store for them.

One good aspect of the unified policy of market borrowings being followed in our country is that it takes care of many of the inharent weaknesses in the capacity of the States to raise public loans. The arrangements devised have succeeded in keeping the cost of borrowing cheap for the State Governments. Uncoordinated borrowing programmes of various State Governments would have resulted in unnecessary competition amongst them in the capital markets. Above all, in the absence of effective coordination of the borrowing programmes of different States, there was little guarantee against the possibility that uncoordinated borrowings by the States might create difficulties for the working of the monetary policies being followed in response to the needs of conditions prevailing in the national economy.

In view of the foregoing analysis, it cannot be said that the freedom and the capacity of the States have been restricted in any manner which runs counter to the constitutional provisions in this respect or the requirements of the broad monetary and fiscal policies. It may be added here that giving unrestricted authority to the States to compete in the capital markets for open market borrowings would inevitably mean that richer States, which can pay higher rates of interest, would gain at the cost of poorer States, because it is they who would attract the funds and not the weak States, which cannot afford to pay higher interests than what they are now paying on account of unified borrowing policy. The result will be that a poor State, like Bihar, will have to borrow at higher cost which will further impair its already weak financial position.

Therefore, we do not advocate uncontrolled borrowing powers for the States. Our anxiety lies elsewhere. It is with regard to allocation of market borrowings amongst different States. In percentage terms, we have never been favoured with more than 7.05 per cent of total market borrowings during the period 1969-70 to 1978-79. A look at the general pattern of allocation of market borrowings will also show that there is no pre-determined objective or set criteria for such allocation. At least we are not aware of any such concrete criteria on the basis of which allocations are being made.

We would also like to look at the matter from another standpoint. The specially classed States like, Kashmir, Manipur, Sikkim and Himachal Pradesh are being allowed more market borrowings in per capita terms than a State like Bihar. Those States get plan assistance as outright grant, whereas Bihar gets plan assistant partly as loan and partly as grant. It is a cardinal principle that a State which is in a position to repay the loan and bear the burden of interest payments should qualify for higher market borrowings. If an exception is made for the specially classed States and they are allowed higher market borrowings even if it cannot be said that they are in a better position to bear the debt burden, on the same grounds Bihar too deserves higher market borrowings.

Hence, we would only suggest that allocation of market borrowings should be made more rational and for this purpose a well-considered set of criteria should be evolved.

5.19 The Centre charges higher rate of interest than what is pays to foreign lender. For example, in the Development and Credit Agreement (Bihar Rural Roads Projects) between India and International Development Association (Credit No. 10721. N.). The Credit envisages the borrower to pay a service charge @ three-fourth of one per cent (3/4 of 1%) per annum on the Principal Amount of the Credit withdrawn and outstanding from time to time. This service charge is payable semi-annually on Feb. 15 and August 15 in each year. If India, therefore, pays less than 1% as interest on the borrowed money and that also semi-annually, Govt. of India on the other hand releases the Central assistance for externally aided projects on the basis of 7 : 3 as loan and grant respectively.

The expenditure incurred by the State in execution of the programme forms the basis of reimbursement claim. Central Govt. gets loan from the leading institutions by preferring such claims. Amounts so received, by the Central Govt. get transferred to States as Central assistance on externally aided projects. Such assistance is in the proportion of 70 percent as loan and 30 per cent as grant.

Govt. of India realises 10% interest on the loan granted to the States. This, therefore, clearly indicates that the quantum of interest which Govt. of India realises from the States on the amount of external assistance received by them to finance such projects is many times more than what it pay to the lender country. This does not appear sound from the view of the State's resources.

5.20 The question would seem to suggest that Loans Council, set up on the pattern of Australian Loans Council, will take over from the Reserve Bank of India the functions relating to coordination of

market borrowings of the Centre and the States and will fix their borrowing limits. The council will perform this task in accordance with and on the basis of principles approved in this behalf by the National Development Council. To that extent, it is expected to be a better alternative to the Reserve Bank of India.

It will be relevant here to examine the grounds usually advanced in support of the plea for establishing of such a Loans Council. Broadly speaking, the case for a Loans Council is made out on three counts. Firstly, it is urged that under the existing position, the States have practically no say in determination of the total volume of loans raised and shares therefrom allotted to the Centre and amongst the States *inter se*. Secondly, a look at the pattern of allocation of loans to the Centre and the States indicates that there is absence of a set criteria or agreed principles for the division of the loan proceeds, which, in effect, reflects dependence of the States on the Centre. Thirdly, since the Centre has a dominant say in the allocation of loans to the States, there is a distinct possibility of the play of political considerations in loan allocation amongst the States, particularly in the context of changing political complexion of a number of States.

A Loans Council is favoured in the hope that it would be an effective way of dealing with the situation, because it can function independently in the matter of both loan-raising and loan-allocations. We can pause here for a while and dwell upon the factors that will really determine independence of the Loans Council.

Undoubtedly, the Council will be composed of the representatives of both the Centre and the States and, may be, of the Planning Commission. Whether established by or under any law or by an executive order, as in the case of Planning Commission, the Council will have to be appointed by the Central Government. If the States do not lend themselves to a reasonable measure of trust and confidence in the Centres' sense of fairness, the question of selection of members itself would come as a source of discord in Centre-State relationship.

Let us look at the matter from another standpoint. Since the number of States is large, the size of the Council will be unduly inflated if all States are represented on it, so that it can be reasonably foreseen that a limited number of seats on the Council would be available to the States. Naturally, therefore, the States' representatives would have to be selected or elected by the States as the case may be. In any event, the number of representatives of the States in the Council would far exceed the number of the representatives of the Centre including those of the Planning Commission. The inevitable consequence will be that on vital issues there is all the possibility of a constant stalemate if the States take to outvote the Centre. In practice, therefore, the Council does not seem to hold a promise for smooth working.

While independence of the Council is desirable. no less important is the assurance that it functions smoothly in discharging its function of deciding loan allocations between the Centre and the States and amongst the States *inter se*. Considering the fact that all States the backward States more than others-stand in need for development, it is highly unlikely that the Council can arrive at unanimous decisions. The position is apt to be more confused if the States' representatives carry, as in all probability they may, the imprint of the political hue of their State Governments. So, the allocations to the States may, in the ultimate analysis, be a matter of bargaining rather than based on objective considerations.

Needless to emphasise the apparent point that independence of the Council will be practically valueless unless the Council is able to approach the issues involved in deciding upon loans allocations dispassionately. Considering the composition of the Council and in-build propensity towards making unanimous decisions difficult, if not impossible, it seems doubtful that the Council will be really that independent as it is made out to be.

Now, we can examine the point relating to dependence of the States, under the existing position, on the Centre as far as their borrowings are concerned. Constitutional restrictions on the freedom of the State Governments to resort to borrowings are there and they cannot be transgressed. The consent of the Central Government is imperative, on such conditions as it may like to prescribe, to borrowings by a State Government if there be any outstanding loans for repayment to the Centre or any other outstanding loan for which the Central Government had given a guarantee. Therefore, since the States are heavily indebted to the Centre, they have lost their independence in the matter of raising loans largely on account of this factor. It is difficult to imagine how the Loans Council would succeed in retrieving the States from this position. In this connection, it is relevant to point out that the Australian precedent is held out in support of the suggestion for setting up a Loans Council. But then, the fact has to be remembered that even in Australia where all public borrowings of the Commonwealth and the States are centralised in the Council, the Commonwealth Government does extend loans to the States, and these loans fall outside the purview of the Loans Council. One reason why this happens is that the Council cannot always provide sufficient loan funds to the States. The position may not be different in India. The proposed Loans Council may not always succeed in satisfying the needs of the States for loan funds. And where the expenditure commitments of the States will so require, the States will have to approach the Centre and in turn, the Centre will have to come to the help of the States in this field. This possibility cannot be ruled out. And so, the burden of loans on the States or their dependence on the Centre cannot possibly be wholly taken care of merely by a Loans Council.

Now, let us take up the usual complaint that loan allocations between the Centre and the States an amongst the States *inter se*. are hardly determined on set criteria or agreed principles. It is, therefore, suggested that the Loans Council would decide the limits of borrowings of the Centre and the States on the basis of principles to be approved by the National Development Council. At present, the Reserve Bank of India, as the keeper of the funds

of both the Central and State Governments as well as being responsible on behalf of the Government of India for monetary and public debt policies, acts as the coordinating agency in the matter of borrowing policy. Thus, the market borrowings are allocated amongst the States by the Reserve Bank in consultation with the Planning Commission and the Government of India, Ministry of Finance. The pattern of financing of the Plan, including the State Plans, under the auspices of the Planning Commission, the monetary and public debt policies followed by the Reserve Bank, and the fiscal policy of the Central Government should, of necessity, together serve the common end of regulating the national economy in the best interests of the country. Therefore, a co-ordination between the Loans Council and the Planning Commission and the Ministry of Finance would be an imperative necessity. If, for any reason, the Council fails in establishing rapport with these, then an embrassing situation will develop both for the Council as well as the States, whose hopes from the Council will be greatly belied.

Therefore, to us it appears that what is of real significance is not whether there is a Loans Council to act as an authority to decide loan allocations or the resposibility is discharged by the Reserve Bank of India as at present, but the principles and criteria followed in deciding loan allocations. The question envisages that the Loans Council will decide loan allocations on the basis of the principles to be approved by the National Development Council. The States are well represented on the NDC which can, even in the existing situation tackle the problem of absence of set criteria to govern loan allocations, the Reserve Bank being left to coordinate borrowing programme in accordance with the principles so prescribed.

For the reasons explained in the foregoing paragraphs, we do not think that establishment of a Loans Council will be a 'preferable course to adopt. Instead we would advocate that rational principles should be evolved to determine loan allocations by the Reserve Bank of India, and these principles should be laid down by the National Development Council and no departure from then should be permitted except with the approval of the NDC.

5.21 There is no denying the fact that persistent over-drafts, at times of large size, are a matter of serious concern. At the same time, it is also true that the problem is neither a new one nor such as has not attracted attention in the past. If, however, the problem continues and has grown in proportion, it is precisely so because the remedies applied so far have not proved equal to the task of removing the causes and factors that contribute to the continuance of the problem.

Until the year 1950, when the first instance of overdraft of an appreciable size occurred, the States were able to manage their financial transactions within the prescribed limits of ways and means advances. The problem of overdrafts of increasing magnitude came to be felt more seriously after the end of the third plan period. Hence the Fifth Finance Commission was called upon to recommend procedure to be observed for avoiding unauthorised overdrafts of the States with the Reserve Bank of India. The Commission examined the matter at length and made a set of recommendations.

It would not be out of place to recount in brief the reasons given before the Fifth Finance Commission by the States for recurring instances of unauthorised overdrafts and see how some or other of the reasons still contribute to this persistent phenomenon. Broadly speaking, the States had pointed out that relatively more chronic imbalances between their resources and functions, inadequate devolution and the absence of suitable mechanism to deal with unforeseen difficulties accounted for the growing tendency of overdrafts of increasing magnitude.

While examining, the States' complaint regarding imbalance between their resources and functions, the Commission explained how transfer of resources are made to the States and observed that once the decisions are taken on the devolution recommended by the Finance Commission and about Central assistance for plans, the States had the duty to manage their affairs within the resources thus available to them. The Commission, at the same time, recognised that the States may have difficulties in matching expenditure with available resources due to circumstances beyond their control, such as natural calamities or such other new developments necessitating substantial additional expenditure. In such eventualities the Commission exhorted the States to make serious efforts to raise further resources to meet such unforeseen developments or to reduce expenditure instead of running into unauthorised overdrafts. If, however, such efforts did not enable the States to tide over the difficulties of this nature, they should approach the Centre for temporary assistance and the Centre should consider such requests and provide short term loans on suitable terms. But then, the States should endeavour to take measures to balance their budget for the succeeding year so as to avoid recurrence of overdrafts.

The Commission also recognised that substantial non-plan capital deficits experienced by the States have been largely responsible for unauthorised overdrafts in many cases. It, however, expected the States to carefully consider how to guard against occurrence of such deficits and, if even then such deficits continued, the Commission hoped that the Centre should assess the needs of the State in such cases and consider deferring repayment of Central loans falling due during the year to the desired extent. It also recommended that the Central Government should consider suitable modification of the procedure for consolidation of loans to States in order that repayments may be in instalments corresponding with releases of funds by the Centre.

The Commission noted, that, according to the States, apart from mounting burden of Union loans to the States, increasing financial requirements to meet plan expenditure, delay in releases of financial assistance by the Centre, inadequacy of the limits of ways and means advances were some of the other causes of persistent unauthorised over-drafts.

The Fifth Finance Commission had been specifically asked to consider this problem and suggest remedies presumably because it was for the first time that the problem had raised its ugly head conspicuously at the

end of the third plan period so as to attract pointed attention to the evil effects which unauthorised overdrafts were likely to produce. None of the succeeding Finance Commissions has been asked to examine in particular the causes of persistent unauthorised overdrafts and suggest measures to deal with this problem. This, in one sense, may appear to be indicative of acceptance of unauthorised overdrafts as perpetual feature of State finances. All that these Finance Commissions, including the Eighth Finance Commission, were required to do was to make an assessment of the non-plan capital gap of the States and, in this connection, also to undertake a general review of the States' debt position with particular reference to Central loans advanced to them and suggest appropriate measures to deal with them. This did not induce the sixth and seventh Finance Commissions to analyse at length the causes of unauthorised overdrafts.

The Study Team on Financial Administration of the Administrative Refomrs Commission (1967) went into the causes of unautho ised overdrafts and the Study Team thought that overdrafts continuing over long period must be principally attributed to persistant imbalance between resources and outlays of the States.

The Study Team on Centre-State relationships of the Administrative Reforms Commission has stated that a persistent overdrafts (with no extraordinary circumstances such as a continuing drought to justify it) shows the States inability or unwillingness, to balance expenditure against receipts. Where overdraft obviously resulted from lack of willingness on the part of a State to match its expenditure against receipts, the Study Team believed that the scope of invoking legally available measures, i.e. stoppage of payments on behalf of the defaulting St te by the Reserve Bank of India and, in the last resort, the declaration of a financial emergency by the President was subject to severe limitations, because stoppage of payment involved serious administrative problems and declaration of financial emergency was fraught with grave political repercussions. Moreover, the Study Team also thought, the tight resource position of the State has also made recourse to overdrafts unavoidable to some extent and has normally inhibited the application of these correctives. The Study Team, therefore, felt that the re l remedy lay in revamping the Centre-State financial relations along the lines suggested by it so as to allow the States more elbow room, which will not only enable but also compel them to exercise responsibility in matching their expenditure to their resources.

It has thus been realised all through that the imbalance between the resources available to the States and their expenditure commitments on account of ever increasing functions and responsibilities enjoined on them lies at the root of the problem of recurrence of unauthorised overdrafts. Therefore, if the problem has to be effectively tackled, there is the imperative necessity of so restructuring the Centre-State financial relations as to achieve a better correspondence between the resources of the States and their functions and responsibilities. The object can be achieved in several ways; one of the significant methods being to widen the base of statutory resource transfers by (i) including larger number of items of taxes in the scheme of devolution, (ii) fixing the States' share of the divisible taxes at a sufficiently high level, and (iii) bringing about a fuller exploitation of assigned taxes mentioned in Article 269 of the Constitution. We earnestly believe that unless the resource position of the States is strengthened, it will be really difficult to successfully combat this problem of persistent unauthorised overdrafts.

Hence we would address ourselves to answering the points of usual criticism alleging neglect of resources mobilisation efforts by the States and recourse by them to uneconomic or infructuous or wasteful expenditure. We have the testimony of the Seventh Finance Commission to show that in the matter of additional resource mobilisation, the States as a whole have not lagged behind the Central Government and the performance of the States has been on the whole creditable. The percentage of the tax revenue of the States to the total of the tax revenues of the Centre and the States has remained around 31 to 33 per cent between 1968-69 to 1978-79 barring one year, i.e. 1972-73. In our own case we have exceeded the targets of additional resource mobilisation during the current plan period.

Looking at the question of exploitation of avenues of raising resources, it will be seen that the total tax and non-tax revenue raised by the Centre in the total revenue (tax and non-tax) of the Centre and the States amounts to nearly 70 per cent. As against this, the share of the States in the total revenue expenditure of the Centre and the States has generally varied between 51 to 55 per cent. In other words, the share of the States in revenue expenditure is much higher than their share in revenue collections. This divergence between the two shares is also indicative of the distance between the revenues of the States and their expenditure. No doubt, this distance is sought to be covered by Central devolution in the shape of tax shares and grants. Yet, this has not left the States in any appreciably better position, because they have not as yet been able to so build up their financial wherewithal so to meet even their non-plan expenditure out of thier own revenues. In such a situation, the chronic imbalance between their resources and expenditure commitments persists, and so, despite their best efforts to build up their own finances, they are forced to run into overdrafts beyond the prescribed limits. Hence, an enduring solution of the problem has to be sought through steps to strengthen the resource position of the States.

Now, let us examine the expenditure of the States. According to the usual classification followed, the expenditure incurred by the States falls into two parts, some items of expenditure being treated as "developmental", while some others are treated "non-developmental". There is yet another way to classify the expenditure into "plan expenditure" and "non-plan expenditure". While plan expenditure may be wholly taken as developmental in nature, all non-plan expenditure may not be non-developmental, because some part of non-plan expenditure may be on schemes of development not forming part of the State Plan and yet having development component in them. Even though implementation of plan schemes has brought in its wake heavy expenditure by the States, yet because plan schemes and State plan outlay are finalised after clearance from the Planning Commission and the achievement of financial and physical targets set are subjected to regular review by the Planning Commission, it is difficult to contend that some infractuous or unproductive or uneconomic expenditure on this

account has been incurred by the States. All the same, plan expenditure has significantly increased the expenditure of the States.

However, non-plan expenditure is not spared the criticism that States are prone to undertaking some expenditure of doubtful value resulting in waste. Expenditure on social welfare is held out as an illustration of unnecessary expenditure mainly of populist nature and not strictly on economic reasons which has the effect of depleting States' resources. It should be remembered here that economic growth with social justice is the accepted goal of all-round development of the country. Expenditure on social welfare programmes is directed to serve that end. To regard such expenditure as wasteful is a question of value judgement. According to one opinion, improvement in the quality of life, particularly of the relatively backward sections of society, has a definite-development potential and so cannot justifiably be neglected. We subscribe to the view that providing social and economic services to the people is of utmost importance because it makes a definite contribution towards improvement in the living standards of the people. So, the expenditure on social welfare cannot altogether be classed as wasteful or undesirable.

Then, there are two other items of expenditure which have made increasing demands on the States' resources. One is the expenditure incurred by the States on the emoluments of their employees. There has to be periodical revision of pay scales and every time a revision takes place, it results into increase and expenditure on this account. Payment of D.A. at Central rates has further raised the expenditure commitments of the States. The Central Government having set the pace, the States have little freedom of action in the matter and can hardly resist the pressure of their employees to fall in line with the scheme of D.A. of Central rates. This has led to substantial additional expenditure to be borne by the States from year to year. Our experience has shown that the expenditure on this account tends to exceed the estimates because, as the year progresses, more and more instalments of D.A. fall due for payment on account of price rise during the period. This factor has resulted into considerable increase of expenditure of the State putting excessive strain on its finances.

The other item of expenditure to which we will refer here relates to expenditure on relief in the event of natural calamities like floods and droughts. As far as this State is concerned, floods and droughts have become a chronic feature and hardly a year passes when floods do not inundate a large part of the State droughts do not affect large areas, at times both bringing untold miseries simultaneously in different regions of the State. In such a situation, the State Government is called upon to shoulder heavy expenditure on relief operations. Now, this is an extraordinary circumstances which the Study Team on Centre-State relationships of the Administrative Reforms Commission considered as a possible justification for persistent overdrafts. Moreover, during the period of visitation of floods and droughts the incomings of the State Government are severely impaired and the outgoings increase considerably. Since it has become a regular feature every year, it has placed the State finances under constant stress and strain.

The foregoing narrative has dwelt upon two significant causes of persistent overdrafts which, in our view are fundamentally accountable for the problem. First is the chronic imbalance between the resources and responsibilities of the States, which lies at the root of the problem. Inspite of increasing quantum of resources transferred to the States, the imbalance has tended to continue largely uninfluenced in its extent, so that the State finances have not been free from fundamental disequilibrium as a result of increasing expenditure commitments as against inadequacy of resources to meet those commitments. This highlights the second cause responsible for persistent overdrafts, i.e. the burden of increasing expenditure on the States. While accusations of extravagance in ordering expenditure levelled against the States may serve the limited purpose of keeping the erring States on guard against avoiding wasteful expenditure, it should not be foregotton that overwhelming part of their expenditure is inescapable and, howsoever sincere attempts they may try to make, the States may not succeed in reducing to any appreciable extent their expenditure commitments which have devolved on them. For instance, as shown earlier, there is not much scope of substantial economy in expenditure on account of revision of emoluments and payment of D.A. at Central rates to the State Government employees, or on relief where extensive damages by natural calamities have become a regular feature, or on programmes of social welfare.

Needless to add here that the introduction of planning has been the greatest single factor responsible for the increase in expenditure of the States. This is not to suggest that planning has brought no benefits to the people, or that it has served no useful purpose. Yet, it cannot be forgotton that the plans have meant rising expenditure from plan to plan.

Phenomenal increase in expenditure of the States due to plans has created a number of difficulties for them. The emphasis on planning leads to greater emphasis on capital budget and the resultant indebtedness of the States, both to the public and the Central Government (more to the latter), has meant heavy burden on the States on account of repayment of loans and servicing charges. Since substantial portion of Central assistance for the plans consists of loans, the burden goes mounting up from year to year. Interest liabilities have, therefore, added to increase in non-developmental expenditure of the States.

This brings us to one important aspect of non-plan expenditure of the States. Once a plan period is over, the maintenance of schemes taken up during the plan period becomes what is known as the "committed liability" of the States and is borne on their non-plan accounts. Expenditure on committed liability largely consists of establishment charges. On this count, heavy burden has resulted on the State budgets on completion of each of the plans. This is one important factor responsible for substantial additional expenditure undertaken by the States after each plan period is over and has meant considerable strain on their finances.

Thus, heavy plan expenditure with the method of Plan financing and resultant committed liability falling on the States together serve as the third notable cause of ways and means difficulties of the States forcing them to run into recurring overdrafts.

Forthly, we are inclined to the view that the inadequacy of the limits of ways and means advance results in a failure to act as a cushion for fiscal imbalances, so that the States are compelled to take resources to unauthorised overdrafts beyond the prescribed limits. True, the ways and means advances are intended to meet the day to day requirements of States. Nonetheless, it would be unrealistic to ignore the fact of chronic imbalance experienced by the States, practically on a continuing basis, in their receipts and expenditure. The point is demonstrably borne out by the frequency of recurrence of such overdrafts by States over a number of years in the recent past. The Fifth Finance Commission had aptly recommended that having regard to the likely rapid developments in the fiscal situation, periodical reviews of the limits of ways and means advance should be made. It was only recently, that is in the year 1981-82, when after a lapse of considerable time the limits of ways and means advance were doubled. We feel that every time a Finance Commission is set up, it would be called upon to consider the question of overdrafts by States and recommend suitable measures to deal with the problem, because overdrafts exceeding the prescribed limits is a sure manifestation of disequilibrium in States finances and a Finance Commission is entitled to review this aspect of financial transactions of States.

It is our view, therefore, that having regard to the chronic disparities between the receipts and expenditure of States, the limits, so refixed, do not realistically reflect the need for sufficient elbow room to be made available to the States to enable them to operate within the prescribed limits. Hence, further revision of the limits of ways and means advances seems called for.

Having elaborated major causes contributing to the emergence of persistent situation forcing the States to take frequent recourse to overdrafts beyond permissible limits, we would now venture to suggest some measures which, we believe, would go a long way towards remedying the malady.

First and foremost, there is the crying need to so revamp the Centre-State financial relationships as to ensure greater devolution to the States in order that their finances are placed on an even keel, which alone, in the long run, can obviate the necessity for the States to fall upon recurring overdrafts of large size.

Secondly, the scheme of financing the State Plans should be divested of the present anomalous position of establishing a credit-debtor relationship between the Centre and the States in respect of a substantial portion of Central assistance extended to the States for their Plans. The present scheme places unduly heavy burden of outstanding loans and corresponding interest on States, casting a debilitating influence on their finances. This calls for a hard look at the scheme of financing of State plans in order to lessen the rigorous of the arrangement on the financial viability of the States.

Thirdly, both long-term and short-term measures are needed to tackle the problem of increasing debt servicing liability of the States emanating from the swelling volume of Union loans to them. The total repayment liability (including interest) takes away a very large chunk of the total assistance received from the Centre, thus setting in motion a disquieting trend of resources flowing out to the Centre from the State at a greater pace than the flow in the reverse direction. The recommendations of the Finance Commissions in this regard have given *ad hoc* treatment to the problem and have brought temporary relief. The measures suggested to deal with the problem have, however, proved illusive so far in finding an enduring solution. Hence, the need for a penetrating analysis of the impact this problem has exercised on finanancial equilibrium of the States and bold steps for combating the problem.

Fourthly, we suggest upward revision of the limit of ways and means advanced. The Study Team of Financial Administration of the Administrative Reforms Commission had suggested that an important legal safeguard against overdrafts by States would be to impose stautory limit prescribing a certain proportion of current revenue resources of States at any particular point of time and no State should be allowed to exceed that limit. This arrangement would also have the advantage of certain degree of flexibility because with the increase in resources of a State, the permissible limit will also go up automatically.

We are inclined to endorse this suggestion because it proposes to relate the limit of ways and means advance to the scale of resources on which the financial transactions of a State takes place. The present fixed limit is pegged to a point unrelated to and regardless of the volume of financial transactions, which have considerably grown over the years, so that the limit prescribed becomes largely an artificial restraint. At the same time, we also recognise that there should be clear understanding that the limit fixed according to the suggestion should not be taken as relaxable in any case and none should act in the belief that the limit can be exceeded with impunity. Further, such a limit would also better reinforce the moral strength of the R.B.I. and the Central Government to invoke legally available measures against an erring State in the event of recurrent violation of the limit beyond the permissible period of three months.

We are fully aware that the efficacy of the package of measures suggested above rests on strictest economy in public expenditure, whether by the Centre or the States. The States, in particular, should, in their own interest, exercise constant vigil against incurring any expenditure of doubtful value. Every opportunity for observing economy should be fully utilised.

We earnestly hope that given the required resolve and will to combat the problem of overdrafts, aforesaid measures, if implemented, should greatly reduce the possibility of taking recourse to overdrafts beyond permissible limits.

5.22 It would be far too sweeping a statement to say that the States are not exploiting adequately their own sources of revenue. For such a conclusion should be based on a fair appreciation of facts relating to tax efforts of the States. We can do no better than to refer to the observations of the Seventh Finance Commission in this regard. After examination of the total tax revenue of the Centre and the States during the period 1968-69 to 1978-79, the Commission came to the conclusion that the percentage of tax revenues of the States to the total of the tax revenues of the Centre and the States has remained around 31 to

33 per cent except in 1972-73 in which year it had been 29·95 per cent.

Therefore, the Commission observed that in the matter of additional resource mobilisation the States as a whole have not lagged behind the Central Government and the performance of the States has been on the whole creditable. The performance of the individual States in this regard, however, was not found to have been uniform. The Commission attributed this phenomenon not necessarily to the adequacy or otherwise of the tax efforts by the individual States. The differential growth in their tax revenue was partly on account of varying rates of growth of incomes and prices in different States and partly due to varying efforts of mobilising additional resources, tax concessions and withdrawals and such other factors.

The table below will show the picture of total tax revenu of the Centre and the States for the years 1979-80 and 1980-81 (B.E.).

(Rs. in crores)

Year	Total tax revenue (Centre & States)	Centre's tax revenue		State's tax revenue	
		Amount	% to total	Amount	% to total
1979–80	17,683·08	11,973·65	67·71	5,709·43	32·28
1980-81	19,694·07	13,132·59	66·68	6,561·48	33·32

The table above will show that the States have not slackened their efforts for raising revenues from their own taxes. On the other hand, their share in the total tax revenues of the Centre and the States taken together has shown an improvement over preceding years. In fact, if we analyse the figures for the period 1961-62 to 1980-81, we will find that whereas the taxes levied by the Centre increased by 12·5 times, those levied by the States went up by 13·4 times.

Our own tax revenue has gone up from Rs. 203·92 crores in 1978-79 to Rs. 370·14 crores in 1982-83 (RE) and is estimated to be of the order of 439·70 crores in 1983-84. This means more than hundred per cent increase during this period.

As regards our efforts for additional resources mobilisation, at the beginning of the sixth-plan the stipulation was for raising Rs. 600 crores by way of additional resource. As against this, the statement below will show the additional resource raised since 1980-81.

(Rs. in crores)

Year	Additional Resource raised
1980–81	32 38
1981–82	143·75
1982–83	217·57
1983–84 (L.E.)	357·66
1984–85 (Estimated)	418·99
Total	1170·35

Thus, it would be clear that in the matter of additional resource mobilisation too, we have fared well.

Coming to non-tax revenue, the table below gives the picture of the non-tax revenue of the Centre and the States as well as their respective shares in the total.

Year	Centre's non-tax revenue	State's non-tax revenue	Total non-tax revenue (Centre plus States)	Central non-tax revenue as percentage of total non-tax revenue	States non-tax revenue as percentage of total non-tax revenue
1	2	3	4	5	6
1971–72	1,099·9	1,407·2	2,507·1	43·87	56·13
1972–73	1,135·3	1,922·6	3,057·9	37·12	67·88
1973–74	1,177·8	2,084·2	3,262·0	36·10	63·90
1974–75	1,460·2	2,322·4	3,782·6	38·60	61·40
1975–76	2,065·6	2,792·9	4,857·5	42·58	57·50
1976–77	3,171·7	3,323·8	5,494·5	39·52	60·48
1977–78	2,731·8	3,775·5	6,507·3	41·98	58·02
1978–79	2,671·6	4,723·6	7,395·2	36·12	63·88
1979–80	2,771·9	4,552·4	7,324·3	37·84	62·16
1980–81	3,440·8	5,888·2	9,329·0	36·88	33·12

The table above will reveal that the share of non-tax revenue of the States has varied between 56·12 per cent to 63·90 per cent during the year 1971-72 and 1980-81 and correspondingly the share of non-tax revenue of the Centre during the same period has ranged between 36·10 per cent to 43·87 per cent. Moreover, consistently rising trend is discernible since 1978-79 in the share of the States in total non-tax revenue of the Centre and the States taken together.

Our own non-tax revenue has grown from Rs. 83·88 crores in 1978-79 to Rs. 164·89 crores in 1982-83 (RE), representing nearly hundred per cent increase over the period.

The foregoing account goes to show that the States has not lagged behind in the matter of exploiting their own sources of tax and non-tax revenues. Whether the efforts made in this direction are considered adequate is a question of value judgement and depends on how one looks at it. For instance, it may be argued that more revenues could have been raised from the sources which the States have at their command. For many good reasons, such a view would not be appropriate as far as our case is concerned.

The concept of taxable capacity, being dim and not free from confusion, is hardly measurable in quantitative terms with any reasonable degree of exactitude. Even so, national income and its distribution are two basic determinants on which taxable capacity will depend. In both these respects, the conditions prevalent in our State are such would appear to greatly limit the scope of further revenues from internal sources.

The paying capacity of the people of this State is severely limited by their low levels of income. As against per capita national income of Rs. 713·6 (at current prices in 1972-73, the per capita income of the State was only Rs. 480·01 (at current prices), the gap between the two being 32·7 per cent. This gap has further widened over the year as will be evident from the fact that in 1980-81, the per capita national income was Rs. 1537·00 (at current prices) against which Bihar's per capita income was only Rs. 870·00 (at current prices), which raises the gap between the two from 32·7 per cent in 1972-73 to 43.4 per cent in 1980-81.

On the basis of statistics compiled by the N.S.S., in the year 1973-74, 75·26 per cent of people in rural areas and 50·54 per cent in urban areas and 60·76 per cent taking the population as a whole were below the poverty line. The State samples indicate the percentage of population below the poverty line has increased to 75·06 per cent in 1977-78.

The people of this State have been caught in the vicious circle of poverty and backwardness largely on account of their low levels of income, resultant low savings and low capital formation and insufficient outlay on development, so that economic and social development have been slow. Judged against this backdrop, the State's efforts in the direction of raising revenues from its own source should not be rated as inadequate.

5.23 We do not agree that the centre is not assessing and collecting all revenues that it can. We hold that Centre's policy of taxation is growth oriented. The return on capital investment made in public sector is not commensurate largely because of managemnt's deficiencies coupled with increased overhead cost Leakage in central taxation prevails as it is in State's taxation also. However, instead of raising the prices of the products of the Public Sector, the Centre could raise its excise component so that both States and Centre share the resultant increase in the receipt. Similarly, the continued provision of surcharge in Income Tax appears irksome; State gets no share in the receipt from surcharge. Such items which are covered under Additional Excise Duties could be made to yield more revenue. States have a feeling that since the items covered under Additional Excise Duties were under the purview of State's Taxation, the share accruing to them from the returns of the Additional Excise Duties falls short of the buoyancy felt in such items which have continued under the State's Taxation Laws. A Monitoring Committee to regularly review this situation and advise the Central Government accordingly would ameliorate the grievances of the State.

5.24 Our answer is in the affirmative.

We would certainly welcome the establishment of a firm procedure for effective mutual consultation between the Union and the States, on a continuing basis, on all matters affecting the interest of the finances of the States. In fact, we would advocate such consultation to be much more broadbased than merely confined to the taxes and duties enumerated in Article 268 and 269. A large part of the inadequacy in the functioning of Union-State financial relations as reflected in persistent grievances seemingly harboured by the States and the concern expressed by them before different forums could have been taken care of by providing effective means of consultation, on a regular basis, between the Centre and the States on all matters pertaining to financial relationship.

As to the limited point raised in this question, the taxes mentioned in Article 268 are levied under Union laws, but the actual collection is to be made by the States in their respective areas and the amounts so collected are to be appropriated by the States. The taxes and duties mentioned in Article 269 are to be both levied and collected by the Union Government, but the net proceeds are to be assigned to and distributed amongst the States in accordance with the principles that may be formulated by Parliament by law.

Thus, the proceeds of the taxes and duties mentioned in articles 268 and 269 are really sources of state revenue and intended to form part of the Consolidated Fund of the respective states. It is fair and just, therefore, that any variation in their rate structure or a decision to abolish any one of them should be subjected to effective consultation with the states and the views of the states in this regard should be given fullest consideration.

It will not be out of place to recall here the provision made in Article 274 to the effect that no bill or amendment which imposes or varies any tax or duty in which states are interested shall be introduced in either house of Parliament except on the recommendation of the President. One apparent object behind this provision seems to be to bar Private members from initiating any taxation measure so that the financial scheme is insulted against any disturbance by the introduction of private legislation. More than that, this provision should also appear to be indicative of the implied intention that no legislation affecting taxation, either by way of change, alteration, or abolition should be undertaken without effective consultation with the states if it was likely to infringe upon the interest of the states. Even though this Article places no limitation on the President in exercise of his powers in this behalf as different from section 141 of the Government

of India Act, 1935 (to which the provision in Article 274 is analogous) which imposed certain limitation on the Governor General in exercise of the power similar to one given to the President by this Article, really speaking, the President is not free to exercise his descretion conclusively in view of amendments of the Constitution by the 42nd Amendment Act, 1976 and the 44th Amendment Act, 1978, according to which the President is bound to act in accordance with the advice tendered by the Union Council of Ministers. That being the position, the Union government should feel duty bound to enter into consultation with the states before undertaking any measure which imposes or varies any tax or duty in which states are interested.

Unfortunately, in actual experience, we have come across a number of instances in which even though the contemplated measure was likely to have adverse impact on the financial interests of the states, they were not given an opportunity of consultation, and the Government of India proceeded to act unilaterally in the matter. To cite out a few examples, the tax on railway passenger fares was abolished in 1961 without prior consultation, not to speak of their consent, with the states, when the step was going to result in depriving the states of an elastic source of revenues which actually belonged to them. Another instance is provided by amendment of the Constitution brought about in 1959-60 by which the tax on income paid by companies was classed as corporation tax so that it went out of divisible pool of income tax, resulting in reduction of the total kitty available for distribution amongst the states, but they were not consulted before such a step was taken. Imposition of auxiliary excise duties and special excise duties so as to keep their proceeds non-shareable with the states are other examples which can be quoted.

Since the main grievances which the states would seem to harbour lie in the financial field, the foregoing instances have been cited to underline the significance of closer Union-State consultation in respect of all matters which interact on financial relations between the Union and the states. The existing forums—both formal and informal—do provide opportunities for mutual discussions on major policy issues. Conference of Governors, Chief Ministers and, above all, National Development Council have their own utility, but, by their very nature, they mostly deal with particular areas of government and are used more for exchange of views when taking specific decisions. Considering the nature of their deliberations and subject matters which come up for consideration, it is rather too much for them to afford the time required for an in-depth discussion of the vexed issues arising in the course of the working of financial relations between the Union and the States.

One form of informal consultation between the Union and the States has been the usual correspondence with the states, which can at best be a poor substitute for effective consultation. The Fourth Finance Commission had the occasion to consider this matter and referring to Article 274, it observed that "an explicit provision for recommendation by the President should normally entail some mechanism other than the usual briefing and advice from the concerned Ministry at the Centre." It is in this light that we subscribe to the view that a formalised consultative machinery should be established for mutual consultation between the Union and the States, on a continuing basis, on all aspects of matters affecting financial relations between them.

5.25 We are of the view that the assigned taxes mentioned in Article 269 of the Constitution have a vital role to play in strengthening the finances of the states. In fact, they are the courses of State revenue, which except in one or two cases, have not been tapped. Of the seven items listed in this Article, Estate Duty in respect of property other than agricultural land has been levied and the amount has been distributed amongst the States. Another such instance is of Central Sales Tax which the States have been allowed to collect and appropriate the revenues, which means that item 7 in the list in that Article, viz. tax on sale or purchase of goods other than the newspapers where such sale or purchase taxes place in the case of inter-state trade and commerce has been levied. No other tax mentioned in that Article is levied at present.

In fact, even the tax on railway passenger fares, which was levied, was abolished long ago on the supposed ground that it adversely affected the finances of the railways. What was given to the States instead of the proceeds of this tax was a fixed sum grant, which remained pegged since 1966-67 to the valiry sum of Rs. 16.25 crores until 1980-81 (when it has been raised to Rs. 23.12 crores) even though the passenger fare earnings of the railways have been going up from year to year. This is but an example of how the States are being deprived of the proceeds of expanding nature from these assigned taxes under Article 269 of the Constitution.

The Fifth Finance Commission, when called upon to consider the scope of raising revenue from these taxes, thought that, in some cases, practical considerations weighed not in favour of exploiting these sources of revenue and, in other cases, it left the matter for consideration of the Government of India, which has not so far taken any positive step in this direction. Circumstances have materially changed since the Fifth Finance Commission made its recommendations on the subject. Therefore, we have strongly urged upon the Eighth Finance Commission to give a serious thought to the scope of raising revenues through these taxes, because, to our knowledge, this matter has not received the attention it deserves with a view to strengthening the finances of the States.

We would like to emphasis here the point that the Constitutional responsibility enjoined upon the Union Government in this regard has practically remained ignored despite the recommendation of the Fifth Finance Commission in respect of certain measures to be taken with the object of tapping some of the assigned taxes. It was not without purpose or thought that the Constitution made provision for levy of these assigned taxes and omission to honour the Constitutional obligation in this regard can hardly be justified. As a matter of fact, the question was not even referred to the Sixth and Seventh Finance Commissions, nor the Government of India chose to take any initiative in the matter. Now, the Eighth Finance Commission has been

specifically asked to make recommendations on the question of exploitation of these sources of revenue to the States.

It is to be seen what recommendations the Eighth Finance Commission thinks fit to make in this regard. However, we are convinced of the necessity of a comprehensive examination, not hither to made of all the aspects of and different views held about the implications of imposition of these taxes and the likely impact on the economy in general and concerned interests in particular. For keeping the issue aside without an in-depth study of the subject amounts to a casual treatment of the matter inspite of legitimate claims repeatedly made by the states to the proceeds of these taxes which really belong to them.

5.26 We subscribe to the view that this grant in lieu of passenger fares tax should be enhanced in proportion to the increase in the collection of railway fare.

In reply to the earlier question No. 5.25, we have urged that the taxes and duties under Article 269 should be better exploited to strenghthen the resources of the States. A tax on railway passenger fares is enumerated under the aforesaid Article. By implication, therefore, we have suggested re-imposition of the tax on railway passenger fares. The State Government hold the view that there was not ample justification for doing away with this tax.

When the Government of India decided to abolish this tax and merge it with passenger fares with effect from the 1st April, 1961, it was impelled to take this decision apparently on the recommendations of the Railway Convention Committee, which had felt convinced of the submission of the railways about their difficult financial position and the likely adverse impact of this tax on the earnings from railway passenger fares. This plea of the railways could not stand to reason because the continuance of this tax was not likely to add to the bad financial position of the railways nor there was evidence to suggest that because of imposition of this tax there had been a decline in the railway receipts from passenger fares. For earnings from railway passenger fares would depend upon the volume of passenger traffic and there was no reasonable ground to suppose that the number of people travelling by railways was ever going to fall so as to result in reduction in earnings from railway passenger fares. On the other hand, there was good reason to foresee that with greater dispersal of industries, opening up of new areas to rail communication, greater mobility of people, increase in tourist traffic and on account of all round economic progress generally, there was every possibility of the volume of passenger traffic increasing from year to year, more so because railways still continued to be by far the most significant and easily accessible mode of transport for most of the travelling public. in fact, the total passenger traffic has grown from 2431 millions in 1970-71 to 3949 millions in 1982-83 (B.E.) which shows a growth of more than 62 percent over this period. Hence, any presumption of a fall in passenger traffic, which alone could adversely affect railway earnings from passenger traffic, was highly unrealistic and without substance.

The plea of the tax exercising a limiting effect on the scope of raising passenger fares is also not based on sound foundation because the tax alone could not act as a hindrance in the way of enhancement of passenger fares just as levy of surcharge on income tax has not stood in the way of increasing the rates of income. Nor can it be said that unsatisfactory financial position of public enterprises has in any way deterred the Government of India from increasing the incidence of indirect taxes on the products of such enterprises.

As such, the considerations which appear to have weighted with the Government of India in abolishing the tax were not really germane to the issue but entirely extraneous in nature. In fact, as observed by the Sixth Finance Commission, this step of abolishing the tax and substituting it by a fixed grant was not quite in accordance with the spirit, if not the letter, of the provisions of Article 269 of the Constitution.

Moreover, the states were not afforded any opportunity for consultation on the question of abolition of the tax, even though the decision was going to vitally affect the finances of the states, because with one stroke they were deprived of the proceeds of a tax of expanding potential, which, for all intent and purpose, constituted a source of revenue for the States.

For these reasons, we have made a suggestion in favour of reimposition of this tax. If, however, the suggestion is not accepted for any reason, and also for the time till the tax is reimposed in case of acceptance of our suggestion, we would strongly urge the enhancement of the fixed sum of ad hoc grant in view of passenger fares tax.

While recommending abolition of this tax, the Railway Convention Committee had suggested that the State Governments should be paid a fixed grant of Rs. 12.50 crores per year during the quinquennium 1961-66 representing the average of the actual collections for the years 1958-59 and 1959-60. The idea was obviously to compensate the states for the loss sustained by them as a result of withdrawal of this tax. Subsequently, the Railway Convention Committee, 1965 approved the suggestion made by the Railway Board that the grant may be raised to Rs. 16.25 crores in a year, which was done with effect from 1966-67. This annual grant remained pegged to this amount till the Seventh Finance Commission reported inspite of consistent growth in railway passenger traffic during the period, even though increase in traffic during the five years 1960-61 to 1964-65 had formed the basis of suggestion by Railway Board for increase in the annual grant from Rs. 12.50 crores to Rs. 16.25 crores. On the same ground, the ad hoc grant should have been raised from year to year, or at least, long before 1980-81 when again on the basis of recommendation of the Railway Convention Committee, the amount of grant has been raised to Rs. 23.12 crores. During the intervening period, therefore, the states were made to suffer as the principle of compensation of the loss on account or abolition of the tax (which formed the basis for annual grant in lieu of the tax) was not followed.

The state Government are of the firm view that there is absolutely no justification for keeping the amount of the annual grant at the present level. The amount of ad hoc grant, which is supposed to be in lieu of the tax, should not only be related to growth tin passenger traffic but also be proportionate to the increase in the total passenger earning of the railways. And, since the present amount fails to satisfy this condition, there is a self evident case for stepping up the quantum of annual ad hoc grant.

The fifth Finance Commission had been informed that the yield from railway passenger fares tax during three years 1958-59 to 1960-61 constituted 10.03 to 11.69 per cent of the total non-suburban passenger earnings of railways. The average for the three years comes to about 10.7 percent. The Fifth Commission calculated that on this basis the amount payable to the states in lieu of the tax would be of the order of Rs. 25 crores, that is, far more than the amount of grant then payable and also higher than the increased amount of grant of Rs. 23.12 crores effective from 1980-81.

Both the Sixth and Seventh Finance Commissions had said that the amount of grant should be redetermined. The Seventh Finance Commission assumed the same percentage (10.7) of tax component and estimated that the tax collection would have been Rs. 56.21 crores in 1976-77, Rs. 61.17 crores in 1977-78 and Rs. 63.22 crores in 1978-79 (B.E.). As against this, the states cotinued to receive a grant of only Rs. 16·25 crores which works out at roughly one-fourth of what the states would have got had the tax continued in the form in which it was levied.

The Seventh Finance also appreciated the force of the argument but forward by almost all states that a fixed sum was not an adequate replacement of a tax on railway fares, since it did not take into account the considerable buoyancy in the earnings of the railways caused by rapid increase in passenger traffic. Finding that it was not possible to ignore the substantial increase in the extent of passenger traffic since 1961-62, the Commission calculated the growth in non-suburban passenger traffic as reflected by the figures of non-suburban kilometres and came to the conclusion that the traffic had increased by a factor of 1.85 since 1961-62. Applying this factor, the Commission worked out the amount of Rs. 23 crores as representing the amount of grant.

It appears that taking clue from the calculations made by the Seventh Finance Commission, the Railway Convention Committee made its recommendations which were accepted by the Government of India and accordingly the amount of ad hoc grant has been redetermined with effect from 1980-81. Two points need to be mentioned in this connection. Firstly, the Seventh Finance Commission had worked out the enhancement factor of 1.85 taking as basis only the increase in passenger kilometres. It is humbly submitted that this was not an appropriate criterion to adopt for working out (the enhancement factor. The tax. when it was in force, constituted a specific percentage of the passengers fares (the passengers travelling on season ticket and passengers travelling for distance upto 15 miles having been exempted) and was in no way related to net earnings of the railways or to the operating costs. The rates of the tax varied from 5 per cent to 15 per cent depending on the distance of the journey. Therefore, appropriate course would be to work out the quantum of grant on the basis of the percentage the tax element formed of the total non-suburban passenger earnings

Secondly, when the tax was abolished and replaced by a grant in lieu thereof, the wholesome principle of compensation would have been ensure that the states got the same amount every year which they would have received had the tax continued to be in force.

This would require the annual grant to vary with the rise in the total non-suburban passenger earnings from year to year so as to maintain the same percentage, namely 10.7% which was the tax element of the total non-suburban passenger earnings before the abolition of the tax. Assuming the tax element to constitute 10.7 percent of non-suburban passenger fares, the collection for 1978-79 (B.E.) would have been Rs. 63.22 crores, as assessed by the Seventh Finance Commission, so that correspondingly the quantum of grant for the same year should not have been less than Rs. 63.22.

Therefore, even the refixed amount of Rs. 23.12 crores as grant in lieu of passenger fare tax suffers from gross inadequacy.

If the suggestion for enhancement of the annual ad hoc grant is sought to be resisted on the plea of difficult financial position of the railways, it can be rapidly conceded that states too can hold out the argument that difficult financial position is not peculiar to the railways alone and the states are in not very much better placed in this regard. Again, if it is said that the railways have to discharge social obligations, it can be similarly said that the states too have to carry the burden of social obligations not less onerous than those of railways. In fact, railway budgets show that the financial position of railways has been improving gradually, showing a surplus earnings trend since 1976-77. Dividend a General Revenues has gone up from Rs. 224.2 crores in 1978-79 to Rs. 405.1 crores in 1982-83 (BE). Net surplus, expressed as net revenue minus Dividend to General Revenues, has also recorded a rise during the same period. Hence, it would appear that the plea of bad financial position held out as an argument against increasing the amount of grant from time is not related to facts. As a matter of fact, the financial position of railways is not a relevant consideration in determining the sum of ad hoc grant which should bear at least the same proportion to the total non-suburban passenger earnings which the tax element, before abolition of the tax, bore to the earnings from non-suburban passenger fares.

For the foregoing reasons, we are of the firm view hat the quantum of ad hoc grant should be further aised in accordance with the principles elaborated in the foregoing paragraphs, because repeal of the tax was not intended to put the states to loss, which, in fact, has been the inevitable result of the fixed sum grant being kept at low level for years.

5.27 The question relates to Union Territory. This does not relate to the State Government.

5.28 The present policy and arrangements for financing of relief expenditure are based on the recommendations of the Seventh Finance Commission which kept two basis postulates in view, namely (i) that the primary responsibility for relief to the people affected by natural calamities rests on the State Government concerned, and (ii) that there may be occasions when the seriousness of natural calamity would be such as to necessitate extensive relief measures requiring expenditure on such a scale as might be beyond the means of a state, in which case financial assistance by the Centre is called for.

Accordingly, the expenditure incurred on relief would broadly fall in two parts, one to be borne entirely by the state concerned and the other which can qualify for Central assistance by way of grant or loan. All the Finance Commission from the Second onwards have accepted the necessity of providing an amount referred to as the margin money in the expenditure forecast of each state. It was expected that whenever a calamity takes place, a state can draw upon this margin immediately for expenditure on relief measures. Accordingly the amount of margin money has been fixed for each state by successive Finance Commission based on the average of expenditure on relief booked under the relevant head of account for preceding few years. The Seventh Finance Commission took a nine year average and after adding an incremental fifteen per cent worked the margin money for each States. It believed that the margin so computed would enable the states to bear, better than before, the burden of relief expenditure even in calamities of more than moderate severity. The Seventh Finance Commission also recommended that the unspent balance, in any year, of the margin money should be invested in easily encashable securities and not merged in general resources of a state, so that in a year of need it can be possible to draw upon them.

The formula of Central assistance, recommended by the Seventh Finance Commission and accepted by the Govt. of India, makes a distinction between drought and other natural calamities. The state is expected to meet the expenditure on relief to the extent of margin money. In the case of drought relief, the state is required to make a contribution not amounting to more than 5 per cent of its annual plan outlay, which is treated as addition to the plan outlay of the state. This is subject to an assessment by a Central Team and is covered by an advance plan assistance for plan of the state within a period of five years following the end of the drought. It is apparent that this scheme does not invole any additionality from the Central Government and provides only for a kind of temporary advance against the State's contribution from its plan limited, of course, to five per cent of the annual plan outlay of the concerned state.

Additional Central assistance can be available only if the total expenditure requirement, worked out by the Central Team, were such as could not be met by the state contribution, that is, when the expenditure is likely to exceed the five per cent limit. In that case, the Central assistance is half as grant and half as loan.

In regard to expenditure on relief and repair and restoration of public works following floods, cyclones and such other calamities, Central assistance is extended as non-plan grant, not adjustable against the state plan or Central plan assistance, to the extent of 75 percent of the total expenditure in excess of the margin money.

The Seventh Finance Commission also recommended that in case of a natural calamity or rare severity the Central Government should deem it necessary to extend assistance to the concerned state even beyond what is envisaged by the scheme of Central assistance laid down by it.

It is our view that refixation of margin money at a very high level is not so necessary. What is, however of crucial importance is to make the existing procedure of assessment of state's requirements for expenditure on relief more realistic and less cumbersome and time-consuming. It may be pointed out in this connection that even the non-plan expenditure on natural calamities incurred by a state has to be approved by the Government of India for being adjusted against the margin money. This involves fresh appraisal of items of expenditure every year which not only means a repetitive exercise but also leads to the inescapable position that the state government's hands are fettered in respect of items of expenditure out of margin money, because expenditure on a number of necessary items is not allowed to be included in the margin money. We, therefore, consider it desirable that admissible items of expenditure should be listed out so that the state Govt. is certain about them and the Central Team is spared the task of identifying admissible items each time. We would also stress another point in this connection. The Central Teams do not always accept the expenditure incurred on the basis of norms laid down by the State Government. It is needless to point that conditions like, customs and practices, the character of local needs and even prices greatly vary from state to state and a uniform normative approach is difficult to evolve in this respect. Hence, there appears to be little scope to ignore or vary the specific norms accepted by a state, which are based on realistic assessment of prevailing conditions within a state.

The Seventh Finance Commission made a distinction between relief expenditure necessitated by drought on the one hand, and floods, cyclones, earthquakes and such other natural calamities on the other. The distinction was based on the ground that whereas floods, earthquakes, and cyclones are sudden and without prior warning and, therefore, call for speedy relief and prompt measures to provide help and relief which are, in fact, generally of a temporary nature, from before the occurence of the calamity. However, drought last longer and so give reasonable time to the state government to assess the requirements, formulate a plan of action and implement the relief programmes. In other words, certain kinds of relief programme can be taken up as a part of plan programme of the state.

It may be mentioned in this connection that the assumption of a nexus between certain relief programmes in the event of drought and plan programmes is of doubtful practical value. Notwithstanding the size of the total plan outlay, there will be serious problems in adjusting the drought relief expenditure in the plan of the state. Since employment generating

scheme account for very little of the total outlay of the plan and even if expenditure on such relief employment is taken as addition to the annual plan outlay, serious constraints of resources would exercise a definite limitation on such relief employment because a large part of the state plan is prompted by irrigation and power sectors because of their compulsive nature and a considerable portion goes to various infrastructures, which do not necessarily result in creation of services of the nature kin to the employment works required for meeting the drought situation. Moreover it would not be out of place to emphasise the point that when droughts set in, there is not only urgent requirement to provide gratuitous relief, but more than that, it is also essential to provide employment to the large population rendered unemployed temporarily by the calamity. It should not be forgotten that besides able bodied persons there will always be a large number of weak and infirm or old persons, who may not be capable of hand physical labour, yet they do need assistance by way of employment in conditions of distress. Hence the necessity of such employment schemes as could be offered on wages lower than normal wages intended to be only distress wages. Another related point to be borne in mind is that relief expenditure does produce an effect of increased investment on employment oriented works, which in ordinary course the state government might not have undertaken but postponed for a future date had there not been an urgency on account of drought relief. For these reasons, dovetailing relief expenditure in plan programme would entail serious practical limitations.

The recommendations of the Seventh Finance Commission laid down that Central assistance should be made available as a non-plan grant to the extent of 75 per cent of the total expenditure in excess of the margin on relief and on repairs and restoration of public works following floods, cyclones and calamities of this nature. Government of India have, however, restricted such non-plan grants to relief expenditure in the case of floods and cyclones only. It may be pointed out that any distinction between drought relief works and repairs and restoration of public works damaged by floods, cyclones etc. is hardly rational because if such a distinction is made on the presumption that expenditure on relief employment is likely to create durable assets then the presumption is misconceived in as much as in the case of droughts also, the state government has to undertake relief works which are cheaper in terms of wage cost as they do not require skilled manpower so that it is not always that such works create durable assets. Another important point to remember is that since public properties constitute assets created at considerable cost, they should not be allowed to be lost when damaged by natural calamities for want of repairs and restoration. Therefore, the programmes of employment of temporary nature, which of necessity have to be undertaken by the state government in the event of such calamities, should be provided outside the plan.

Our anxiety for a reappraisal of the policy and procedures for financing of relief expenditure arises from the sheer enormity of the problems created for the state by regular occurrence of floods and droughts which has, over the years seriously affected the state's economy and caused severe strain in our finances.

The areas of North and South Bihar are crisscrossed by mighty and trubulent rivers which rise in the snows of Himalayas. These rivers have very st ep slope in the upper regions which gradually grow flatter before draining into the Ganga, whose absorption capacity is limited. The major rivers spill over their banks during and after heavy rains in their catchment areas due to poor outfall conditions. The situation has worsened over the years because of, inter alia, increased encroachment of plains, heavy siltation and deforestation in the catchment areas.

It is not surprising, therefore, that, as the Rashtriya Barh Ayog (1980) found, Bihar accounted for 17 per cent of the total flood affected area in the country and 23 per cent of the aggregate damages in recent years. There has been an upward trend in area affected by floods in the state since 1965 and the increase has been sharper in the seventies. Taking the average damages (at current prices) during the period 1971—78, the Ayog has estimated that Bihar accounted 23·2 per cent of the damage which is highest amongst the stages excepting Uttar Pradesh.

The visitation of drought has similarly been a regular feature, particularly in certain parts of the state extending over the entire plateau of Chotanagpur and Santhal Parganas which covers a total area of 0.80 sqr. KMs. and has a population of 142.27 lacs and this constitutes the drought prone area.

That flood control measures have not succeeded in restraining the extent of damages caused by recurrent floods also finds support from the Sixth Five Year Plan (1980—85) which has noted that while the outlays for successive Five Year/Annual Plans have been increasing and more and more areas are being protected, the estimated value of damage due to floods has been increasing.

Whether aberrations being beyond human control it is not possible to lessen the possibility of occurrence of droughts. Through the implementation of integrated programmes of development in the rural sectors, drought prone areas may be developed, to certain extent, to better meet the adverse effects of droughts. Yet, it has not been possible to reduce, to any significant extent, either the possibility of visitation of droughts or the sufferings caused by them.

So, these aspects of the frequent occurrence of natural calamities like floods and droughts have to be always kept in view while evolving the policy and arrangements for financing of relief expenditure.

Having regard to what has been stated in the preceding paragraphs, we are of the view that there is no point in raising the margin money to any significant extent. However, we feel that margin money should be provided in the annual budgets of the states to take care of natural calamities into plan and non-plan segments, for, as we have indicated earlier, dovetailing any part of relief expenditure in plan expenditure bristles with several practical constraints and may well be counter productive in as much as it may fail to achieve the desired objectives.

Therefore, in the event of natural calamities of extraordinary severity, the Central Team should, in consultation with the concerned state government,

expeditiously make an assessment of the nature and extent of damages caused and assess the total requirement of expenditure on gratuitous relief relief, employment programmes and restoration of damaged public property on the basis of realistic norms of such expenditure, and the total amount required should be given to the state by way of non-plan grant. Distinguishing feature of the financial system laid down in our Constitution is the absence of overlapping taxation powers.

Thus, it would appear that the well conceived distribution of taxing powers is based on recognised imperatives of a federal structure. Other sources of raising resources have also been allotted to respective authorities on similar considerations. For instance, it would be administratively cumbersome for the state government to take upon itself the task of local taxation which has, therefore, been aptly left to the local bodies.

Therefore, it would be pointless to argue that any authority could be vested with plenary jurisdiction in the matter of levying taxes. Taxing powers have to be allotted to respective authorities keeping in view the nature and the base of taxation and in confirmity of with the constitutional structure prescribing limits to taxing powers or the powers of raising resources from other avenues. The authority which can levy and collect taxes with efficiency and economy will be the appropriate authority to be vested with the powers of administering particular taxes. Improper allocation of taxing powers will lead to distortion in the tax system resulting in failure to achieve optimum exploitation of resources of tax revenue. Same can also be said of other avenues of raising public revenue.

For the foregoing reasons, it cannot be said that who collects the funds is immaterial.

Similarly, it cannot be said that how the collected fund is distributed is irrelevant. As has been pointed out earlier, the funds received through various sources of public revenue are meant to meet the needs of public expenditure. Raising of public revenues and managing public expenditure are the two major elements of fiscal policy, which has to serve the paramount goals of achieving economic stability and growth.

Here we would also like to refer to another point. At present, the damages caused by fire are not considered as one caused by natural calamity, perhaps on the presumption that fire is not a natural calamity and is caused by human failure. We would refer to our own experience in the matter. In some parts of our State, particularly during summer season when westerlies blow over most parts of the state, widespread damages are caused by frequent cutbreak of fire on extensive not attributable to the faster of human failure. Such fires at times engulf village after village consisting of clusters of thatched houses belonging mostly to lower strata of people, particularly scheduled castes and scheduled tribes. The damages caused are considerable. Therefore, there is ample justification to treat such damages as caused by natural calamities to qualify for assistance as in the case of drought or hailstorm.

As regards the procedure for extending assistance in the shape of non-plan grants to meet relief expenditure, we do not propose a change in the existing method of on the spot assessment of the nature and impact of the natural calamity and the expenditure requirements by Central Team. However, since we have suggested Central assistance by way of non-plan grant, we see no role of the Planning Commission in the matter and the high-level Committee to consider the report of the Central Team may be headed by the Secretary, Ministry of Finance. Then the high-level committee's recommendations may be placed before the Finance Minister for his approval so that the assistance may be finally decided. In this connection, we are in agreement with the Seventh Finance Commission that the Central Team or the high-level committee should make their assessment with sufficient care and would add that such assessment should be made with promptness and a sense of urgency which the situation in the event of a natural calamity so richly deserves. We also feel that there should be no need to scrutinise the expenditure incurred by the state on relief against the margin money. Further, we do not think that it would be reasonable so much to think in terms of fixing ceilings on different items of expenditure, because such ceilings cannot conceivably be flexible enough to admit of requirements in all possible conditions. More necessary should be to consider, as we have pointed out earlier, to spell out the items of expenditure admissible for assessment of expenditure requirements so that the Central Team may not have to go into various items of expenditure every time to decide their admissibility.

There is another point which deserves to be mentioned here. In case of certain expenditure on relief works as well as expenditure on restoration of damaged property, often it is not possible to confine the expenditure to a particular year because of time taken in completion of procedures of according sanctions etc. and so the programmes undertaken may spill over the next year. At present such spill over expenditure is left out of consideration for the purpose of eligibility of Central assistance. As a result, avoidable burden is thrown on the finances of the state because such expenditure does not qualify assistance. We would, therefore, suggest that such spill over expenditure on relief works should be taken into while deciding entitlements of Central assistance.

We believe that the modifications we have suggested in the policy of financing relief expenditure and the procedure for assessment of expenditure requirements for relief in the event of natural calamities, takes sufficient care against extravagence or waste or expenditure of doubtful value. Assessment by the Central Team in accordance with the procedures.

5.30 It would be risky to make an unqualified statement to the effect that who collects the funds and how the funds are distributed are not very relevant, and it is more important that the funds are prudently spent and the benefits go back to the people.

Who collects the funds and how the collected funds are distributed amongst various spending authorities is equally significant. It is common knowledge that there are various methods of raising resources which constitute public revenues, out of which public expenditure takes place. If, therefore there is excessive

dependence on the source of revenue, to the comparative neglect of other sources of receipts, the result is bound to be disastrous for the economy as a whole as well as the people at large. A wise mix of the sources of revenue is, therefore, always adopted for raising of resources.

Here arises the question of who can be able to raise revenues, and through which sources, efficiently, conveniently and adequately. And, the authorities which would appear more appropriate from these points of view are entrusted with the responsibility of exploiting the sources of revenues, which can be apply allotted to them. Outlined above will mean careful and rigorous determination of expenditure requirements, eliminating the possibility of acceptance of unreasonable claims for expenditure.

Having regard to what has been stated in the preceding paragraphs, we are of the view that there is no point in raising the margin money to any significant extent. However, we feel that margin money should be provided in the annual budgets of the states to take care of natural calamities of localised nature.

It is futile to carry on the discussion in abstraction. The problems of public finance are diverse, for they embrace questions relating to raising of public revenues and deciding upon patterns of public expenditure, consistent with the declared objectives of maximising economic and social welfare of the people. Apart from the complexities involved in devising a system of raising resources with least baneful effects and of public spending in the most beneficial way, an additional factor adding to the complication is the constitutional framework within which the fiscal system has to be operated. Therefore, the power of raising public revenues and ordering public expenditure must form an integral part of the administrative, legislative and financial structure laid down by the constitution.

Our Constitution is federal in character. Hence, there is the presence of two layers of government, namely, the Union Government and State Governments. Our fiscal system, therefore, rests on a division of revenues between the union and the states. The tax system and the distribution of powers to impose taxes and duties have been designed on the mould of the financial arrangements laid down in the Constitution. So where the basis of a tax is country wide, the Union government has been empowered as the authority to impose such a tax. By way of example, we can mention income tax, company taxation, wealth tax, custom duties and such others. As against this, states can tax their own citizens or income generated within their spheres, so taxes like land revenue, agricultural income tax, tax or local sales such others have been placed at the disposal of the states. It may be noted here that one objectives sought to be achieved with the help of an appropriate fiscal policy coupled with suitable monetary policy may include creation of desired levels of savings and investment so as to promote long term growth and at the same time to secure an acceptable. allocation of resources and distribution of income and wealth with a view to stimulating economic development and promoting social justice.

The fiscal policy, therefore, has to aim at achieving the desired objectives. The effects of a fiscal policy would, on the one hand, depend upon the types of taxes imposed, the manner in which they are collected, and the ways in which other measures of raising resources are used, and, on the other hand, the varieties of government expenditure undertaken and the repercussions produced by such public expenditure. Being inseparable elements of the fiscal policy, both public revenues and public expenditure have together to serve the common goals set for the fiscal policy. Both are inter related with each other. If the tax structure is such as to seek equitable distribution of income and wealth to promote social justice, public expenditure cannot have a different aim. Again, if the fiscal and monetary policies are so designed as to stimulate savings and investment, public expenditure has to pursue the same objective.

While the total public revenues set the broad limits of public expenditure, the government spending takes place through different public authorities on different heads of public expenditure. So, one authority cannot take over the spending function of the other. Nor, there is free scope of changing the volume of public expenditure on different items of expenditure falling within the spheres of different spending authorities.

According to the financial plan of the Indian Constitution, while powers of taxation have been clearly demarcated between the Union and the state Governments, the respective responsibilities and the functions of the two all expenditure by them concurrently in same or similar fields. Economic and social planning is a concurrent subject. So, public expenditure on plan projects admits of the possibilities of public spending both by the Centre and the states. Even so, the areas in which they undertake expenditure functions are separated to a significant extent. While it is the state governments which incur expenditure on maintenance of law and order, it is the centre which has the responsibility for expenditure on defence of the country. The examples have been cited merely to emphasise the point that the responsibilities for incurring public expenditure by the Central and the state governments confirm to the constitutional provisions outlining their respective jurisdiction.

All public expenditure, in some form or other, brings benefits to the people. Nevertheless, all public expenditure cannot be undertaken by one public authority, for this will be administratively unsound and economically unproductive. Therefore, division of expenditure functions amongst the Union Government, the state governments and the local authorities meets the requirements of efficient financial arrangements and adds to administrative vitality.

It is necessary that the authority responsible for undertaking particular expenditure functions should also have the requisite availability of resources. It is in this view that distribution of avenues of raising public revenues acquires significance. According to the constitutional provisions, major and elastic sources of revenue are with the Centre, while the states have at their disposal sources of revenue which are comparatively inelastic. Therefore, inspite of demarcation of taxing powers and functions and responsibilities between the Centre and the states,

an imbalance between the resources available with the states and the functions and obligations enjoined on them was inevitable. The framers of the constitution were fully aware, therefore, of the need for appropriate corrective measures to secure better correspondence between the resources and responsibilities of the states, and it was to meet this situation that provision for transfer of resources from the Centre to the states was made in the Constitution.

Hence, the transfer of resources from the Centre to the states serves a definite purpose and its importance cannot be under rated. At the same time, the manner of distribution of the divisible resources amongst the states is no less important, for it must be based on equitable principles so as to strengthen the finances of the states in order to enable them to satisfactorily fulfil their obligations. Broadly speaking, the principles of distribution must aim at rapid economic development of the country and balanced growth of the states.

The foregoing analysis of the different aspects of the issues involved would indicate that who collects the funds and how the distribution of the funds takes place are important ingredients of fiscal policy, and so, consistent with the constitutional framework, should together aim at securing economic growth with social justice. Prudence in public expenditure is incontrovertible attribute of the art of spending by the public authorities. Similarly, using public expenditure as an arm to reach benefits to the people can invite no debate. The cardinal point to remember is that all of these, namely, raising resources, their distribution amongst different spending authorities and on different items of expenditure, and the public expenditure function as such bristle with inter linked problems and only an integrated approach to them would save one from pitfalls that otherwise lie in the way.

5.31 According to the suggestion, referred to in this question, there should be a permanent National Expenditure Commission to assess the nature and quality of expenditure and the need for revenue resources for both the Centre and the States. The crucial point to see is whether there exists a suitable machinery or institutional arrangement to evaluate the usefulness of public expenditure incurred by the Centre and the states and also whether there is a mechanism for assessing their respective revenue requirements.

The authority for government spending flows from the budget. In the case of the Centre the Parliament and in the case of the states their respective Legislatures vote the budget grants and in doing so they exercise basic control on all forms of expenditure. The parliamentary control of public expenditure does not end there. It continues even after the budget grants are voted, the object being to ensure that the funds appropriated by the Parliament, or the Legislature in the case of a state, have been properly utilised for the purpose specified and in the best possible manner.

The instruments of parliamentary control at this stage are the Committees of the Parliament, namely, the Public Accounts Committee and the Estimates Committee. The former is intended to ensure that the expenditure confirms to the authority which governs it and the disbursements have been for the purpose for which voted. The latter *i. e.* the Estimates Committee is concerned with examination of the budget estimates with an eye on securing economy and efficiency in administration and it falls within its duty to suggest suitable modifications if any policy appears it to be defective or such as leading to wasteful expenditure.

Since the time of the Parliament or the State Legislative is valuable, it is these Committees that undertake detailed examination of all expenditure to ensure proper spending of money sanctioned by the Parliament or the Legislative as well as effective implementation of policies and programmes approved by them. There are a number of instances of the reports of these Committees highlighting cases of departure from sound standards of public expenditure and drawbacks of certain policies and programmes requiring modifications.

There is yet another Committee of the Parliament, namely, Committee on Public Undertakings whose duty is to examine if the public undertakings are being managed according to sound business principles and prudent commercial practices. In fact, its functions in relation to public undertakings may include such other functions of the Public Accounts Committee and the Estimates Committee as the Speaker may, from time to time, assign to it. Thus, not only efficiency of expenditure but also of management of public enterprises as a whole falls within the purview of this Committee.

Then, there is the constitutional authority of the Comptroller and Auditor General of India whose duty is to Audit all expenditure from the revenues of the Central and state governments with a view to ascertaining whether moneys shown in the accounts as having been disbursed are legally available for and applicable to the service or purpose to which they have applied or changed or whether the expenditure conforms to the authority which governs it. The appropriation accounts and audit reports prepared by the C. A. G. are placed before the Parliament or the State Legislatures, as the case may be, and form a subject matter of detailed discussion by the PAC with the concerned departments of governments both Central and state–where the propriety of all expenditure are assessed. The Committee of Public Undertakings are furnished with the audit reports of the C. A. G. in respect of public enterprises. Thus, the financial working of these enterprises comes to be subjected to a close scrutiny by this parliamentary Committee.

Thus the parliamentary control over expenditure of the Central and state governments coupled with appropriation and regulatory audit by the C. A. G. provide an institutional arrangement which keeps the public expenditure policy, in all its aspects, under constant review, and the efficiency of expenditure incurred falls under the scrutiny undertaken through these institutional arrangements.

Let us now see how the respective revenue requirements of the Union and the states are assessed. One must look at the question from the angle of union-state financial relations. The Constitution has provided

for a Finance Commission which makes a quinquennial review of the finances of the Union and the states. We are in favour of such a periodical review which affords the Finance Commission a good opportunity to determine the respective needs of the Centre and the states for resources to meet their responsibilities and obligations. True, the Finance Commission confines itself to the non-plan requirements of the states, the plan requirements being left to the care of the Planning Commission. In the process of determining the non-plan need of the states, the Finance Commission makes an in-depth analysis of the revenue and expenditure forecasts of the states for the devolution period and works out the revenue needs of the states. For the purpose of transfer of resources from the Centre to the states, the Finance Commission also makes an assessment of the needs and resources of the Central Government to identify surpluses out of which devolution of funds can take place.

There may be scope for improvement in the methodology adopted by the Finance Commission for the purposes of determining the respective needs of the Centre and the states, and, indeed there is need for some improvement, but it cannot be said that the deficiencies in the methodology are such as warrant a total rejection of the institution of the Finance Commission so that it has become inperative to think of an alternative body to discharge this function.

Coming to plan requirements, it has to be rememberd that planned economic development of the country accompanied with balanced regional growth is accepted national policy and there can be no going back on it. From the point of view of relations between the Centre and the states, it needs little emphasis that planning is an endeavour to achieve nationally accepted goals and objectives with close cooperation and coordination of efforts between the Centre and the States. So, the process of plan, formulation listing out of schemes and projects, fixing of priorities and limits of desired rates of growth are all decided as a result of collective efforts of working groups and the finacial outlays on schemes are determined accordingly after a review of performance in the preceding plan year and taking into account the availability of both physical and financial resources. In this exercise, the focus on needs of the Centre and the states occupied the pivotal positions.

Thus, it would appear that the plan size—both in terms of physical targets and financial outlay is the result of combined efforts of the Centre and the States through the pace set by the Planning Commission and the limits to plan size are set by the constraints of availability of financial resources. Obviously, therefore, the size of the state plan outlay ultimately depends upon the states capacity to raise additional resources for financing the state plan and the availability of funds with the Centre out of which plan assistance can be extended to the states. It is futile to argue that the needs of the states should be determined in absolute terms, independently of these two factors, because neither the states can be expected to bear the burden of raising unduly large additional resources nor the Centre can legitimately be credited with a limitless capacity of finding funds to extend unlimited plan assistance to the states for the plan requirements.

It is against this backdrop that the usefulness or the imperative necessity of a National Expenditure Commission has to be considered. It can be argued that such a Commission is needed to assess the Centre's expenditure and its requirements for developmental and non-developmental purposes with a view to finding out surpluses available with the Centre out of which transfer of more resources could possibly be made to the states. As we have pointed out earlier, functions precisely of the aforesaid nature and discharged periodically by the Finance Commissions. They make a review of the expenditure of the Central and state governments and arrive at assessment of their respective needs for non-plan purposes. The seventh Finance Commission took a welcome step forward in undertaking a close scrutiny of the forecasts of revenue and expenditure of the Central Government and found more surplus than presented by the forecasts. There is no reason to apprehend that succeeding Finance Commissions would not follow the same practice.

The Planning Commission, in consultation with the Central and State governments, does the same for plan requirements. It may be possible to indicate some defficiencies in the methods adopted by the two Commissions, but the same can be removed by suitable modifications in the procedures adopted by them and making them work in close co-operation and harmony, so that each benefits from the Labours of the other hand, in the process, the resultant advantage takes care of the lacuna that may be found to exist in the working of these two Commissions.

A National Expenditure Commission, if established would engage in similar exercise of assessing the needs of the Centre and the states and, to that extent, would traverse the grounds covered by the Finance Commission and the Planning Commission, thus leading to avoidable overlapping the functions at present being performed by the two Commissions. If the proposed Commission is supposed to undertake annual assessment of the respective needs of the Centre and the states, it is difficult to visualise the manner of follow up action on the findings or the recommendations made by it. In what ways its reports would affect preparation of annual budgets of the Centre and the states or the finalisation of annual plans by the Planning Commission is not easy to foresee. The proponents of this idea have not spelt out precisely what exactly will be the role of the proposed Commission *vis-a-vis* the Finance Commission or the Planning Commission. Nor has it been made clear if the needs assessed by the proposed Commission would have mandatory effect on the Planning Commission so that the plan size—both in physical and financial terms—will have to be adjusted accordingly. Similarly, if the needs as assessed by the proposed Commission are to have binding effect on the Finance Commission it would mean taking over of a substantial part of the work of the Finance Commission by the proposed Commission itself. Thus, the inter-action between the functions of the proposed Commission and the work of the Finance Commission and the Planning Commission has all the possibilities of introducing more complexities in the manner of transfer of resources to the states, and may as well result in

acting as further irritant to the Centre-State financial relations.

While suggesting the creation of a National Expenditure Commission, it has been pointed out by some that the total amount allotted to the Planning Commission for state plan outlays is not only inadequate but also the decision of the Union Finance Ministry in this regard lacks objective basis. Looking at this matter realistically, one may ask if there are positive instances of some really good and beneficial schemes suggested by the states which have not been accepted for inclusion in the state plan for the reason that acceptance of such schemes would mean exceeding the total amount available for state plans. We do not think it would be easy to point out such cases. Even if we accept for argument's sake that the total amount available for State plan outlay is inadequate or in deciding the amount on rational principles have not been observed, here is a remedy of which the states can make good use. They can take up the matter in the National Development Council where, if they take a united stand emphasising the merits of their view points, the problem can be dispassionately considered and satisfactory solutions evolved. A National Expenditure Commission may not necessarily be a better forum. Moreover, its recommendations will after all, be subject to acceptance by the Central Government. It is platitudinous to suggest that the interests of the States cannot receive due consideration by the N.D.C. and once the N.D.C. is convinced of the justified claims of the States, there is no reason to suspect that the Government of India will take any different view.

Now let us see what part can possibly be played by the proposed Commission in the matter of evaluating the usefulness of expenditure of the Centre or the States. The Parliament or the State Legislatures, being the authorities to sanction funds, cannot in any sense, be divested of the ultimate control exercised by them over public expenditure. Through their Committees, they can always scrutinise all expenditure incurred by the Government of India or the State Governments and locate infructuous or wasteful expenditure and suggest measures to bring about better ordering of expenditure. The regulatory audit by the C.A.G. can ensure that all expenditure has been undertaken under proper authority and for purposes for which the funds were charged or voted. The Finance Commission will always make periodical review of revenue and expenditure estimates of the Centre and the States to assess possible surpluses with them and their respective needs in order to evolve the scheme of devolution of funds to the States. As such, we do not think that a National Expenditure Commission can take over with some distinct advantage any of the functions assigned to existing authorities concerned with examination and evaluation of propriety and efficiency of expenditure incurred by the Centre and the States. On the other hand, it will mean avoidable duplication of authorities discharging same or similar functions, with practically little tangible gains.

For the reasons explained in the foregoing paragraphs we are not in favour of a National Expenditure Commission.

5.33 The "evaluation audit" can succeed only if the Government has "performance budgeting" system. Both voucher audit and evaluation audit are essential. The twin objectives of audit namely efficiency and promptness can succeed only if evaluation audit also exists besides vouchers audit. Each department executing development programmes should have a small evaluation cell. This cell could make evaluation audit of programmes executed by any other department. Thus departmental evaluation unit should not evaluate the departmental project. Recently the Integrated Rural Development Programme was evaluated by the Planning Commission, though the scheme is being executed by the Ministry of Agriculture. Such sort of monitoring both of progress of expenditure attuned with the achievement of the physical target will help in proper monetary appraisal of any programme.

5.34 The question does not specify the points said to have been made out by Shri Ashok Chandra, Chairman of the third Finance Commission to show that the Comptroller and Auditor General was not doing all that was possible to keep a check on the accounts of the Union and the States. The report of the third Finance Commission does not throw light on observations of Shri Chanda to the effect. One thing, however, seems to be clear. Shri Chanda might have commented upon inadequacy of the duties and functions of the C.A.G. prior to 1971, because till then, the Parliament had not enacted a law under Article 149 of the Constitution defining the duties, powers etc. of the Comptroller and Auditor General, with the result that the Government of India (Audit and Accounts) Order, 1936, as adapted, had continued to regulate the powers and functions and duties of the C.A.G. The 1936 Order, by its very nature, had not conferred on the C.A.G. sufficient powers to perform his duties commensurate with the obligations cast on him by the Constitutional provisions. Perhaps, Sri Chanda intended to highlight the lack of comprehensiveness in the powers and functions of C.A.G.

It would therefore, be useful to point out the areas left uncovered by the functions and duties entrusted to the C.A.G. by the 1936 Order. Broadly speaking, the said order was not comprehensive enough to include within the statutory jurisdiction of audit certain important government activities resulting into considerable expenditure, which had been expanding pretty past in the wake of the plans for economic development. Then local bodies and many authorities or bodies receiving substantial grants or loans from the government fell outside the net of audit by the C.A.G. and had to be brought within his purview by a procedure known as 'audit by consent'. Such audit was, however, not statutorily compulsory.

In specific terms, the functions and duties of the C.A.G., laid down in the 1936 Order, did not extend to certain vital areas which are a spelt out below. While elaborate these particular areas, it will also be shown how fare and to what extent these dificiencies have been made up by the Comptroller and Auditor General (Duties, powers, and Conditions of Service) Act, 1971 (as amended in 1976, and hereinafter referred to as the Act).

Firstly, under the 1936 Order, the C.A.G. was required to obtain prior approval of the President or the Governor, as the case may be, before undertaking the audit of receipts of government or the audit of the accounts of stores and stock maintained by government. Such prior approval is no longer necessary. Section 16 of the Act has made it a duty of the C.A.G. to audit all receipts which are payable into the Consolidated fund of the Union and of each state and to satisfy himself that the rules and procedures in that behalf are designed to secure an effective check on the assessment, collection and proper allocation of revenue and are being duly followed. Similarly, Section 17 of the Act has vested the C.A.G. with the authority to audit and report on the accounts of stores and stock kept in any office or department of the Union or a State. Therefore, it is no longer necessary for the C.A.G. to seek and obtain prior approval of the government before taking up such an audit.

Secondly, the need for audit by consent of local bodies or such other authorities or non-official bodies, which received substantial sums of grants or loans, imposed a limitation on the C.A.G's powers. The Act has made provisions where by these limitations have been removed considerably. Section 14 of the Act empowers the C.A.G. to audit the receipts and expenditure of bodies or authorities financed from the Union or state revenues, provided the amount of grant or loan advanced to such bodies was not less than rupees five lakshs in any year and not less than seventy five per cent of the total expenditure of such a body or authority.

Where any grant or loan is given for any specific purpose from the consolidated Fund of the Union or a state to any authority or body, other than an international organisation, the Act (Section 15) empowers the C.A.G. to scrutinise the procedures by which the sanctioning authority satisfies itself about fulfilment of conditition of such grant or loan, and, for this purpose, the C.A.G. has a right or access to the books and accounts of the concerned authority or body. However, the C.A.G. will not have this right of access to books and accounts of any Corporation, if the law, under which such Corporation has been set up provides for audit by an agency other than C.A.G. except where he is authorised in this behalf by the President or the Governor, as the case may be. Such authorisation can be made after consultation with the C.A.G. and giving the concerned Corporation an opportunity to represent with regard to allowing the C.A.G. the right of access to its accounts.

Then, there are industrial and commercial concerns, which are either government companies or a statutory Corporations, in which substantial government money is invested. There is a self evident case for audit of such government companies or statutory Corporations by the C.A.G. so as to bring them under full Parliamentary control of their expenditure. The position before the 1971 Act was that according to the Companies Act of 1956 the C.A.G. had the right to test check the accounts of the government companies in addition to the audit conducted by professional auditors and thus the Public Accounts Committee was enabled to investigate the working of these companies in the event of malpractices. The position has been recognised by the 1971 Act and it has been specifically provided that the C.A.G. will exercise his powers of audit of the accounts of the government companies in accordance with the provisions of the Companies Act, 1956.

As regards audit of statutory Corporations, Shri Chandra had complained against exclusion of the right of C.A.G. to audit the accounts of the L.I.C. at the time of its nationalisation and had expressed the view that "this constituted a departure from the accepted principle that withdrawal of money from the Consolidated Fund should automatically attract the audit responsibility of the C.A.G." Public Accounts Committee in its several reports, had also concurred with this view that the C.A.G. should have the unquestioned right to audit the expenditure of such concerns, by whatever name called, because they are financed out of the Consolidated Fund.

The Act provides that in respect of corporations (not being companies) established by or under any law made by the Parliament, the C.A.G. can exercise his prowers of audit in accordance with the provisions of the legislation concerned.

According to one view, Sri Chandra's objections have been squarely met by these provisions empowering the C.A.G. to audit the accounts of government companies and statutory corporations in accordance with the provisions of the Companies Act, 1956 and concerned legislations respectively. Another view can also possibility be taken, according to which the C.A.G.'s powers to audit the góovernment companies or statutoty corporations have been made dependent upon provision to that effect in the Companies Act, 1956 and legislations setting up statutory corporations. In other words, notwithstanding the aforesaid provision contained in section 19 of the Act, the C.A.G. may not have jurisdiction to audit the accounts of statutory corporations in the absence of a specific provision to this effect in the laws establishing such statutory corporations. This amounts to conditional exercise of power to audit the accounts of statutory corporations, because the C.A.G. will not be able, on the authority of the provision in the 1971 Act, to audit the accounts of a statutory corporation which may be established in future, unless there be an express provision to that effect in the concerned legislation.

The powers of the C.A.G. to audit the accounts of any corporation established by the law of the legislature of any state are subject to limitation in yet another way, that is, the power can be exercised in case the Governor desires the C.A.G. to undertake such audit, and such a request can be made to the C.A.G. after consultations with him and after giving reasonable opportunity to the corporation concerned to make representation with regard to the proposal for such audit.

Then, there is an enabling provision made by section 20 of the Act. According to it, the C.A.G. can at the request of the President or the Governor, as the case may be, undertake audit of the accounts of any authority or body not otherwise entrusted to him by any law made by the Parliament. Such audit can be assigned to the C.A.G. in Public interest and after giving reasonable opportunity to the concerned. authority or body to make representation with regard to the proposal of audit. There is also a provision in the Act according to which the C.A.G. may, on his own, propose to the President or the Governor, as the case may be, that he may be authorised to undertake audit of anybody or authority not entrusted to him by law, if he is of the opinion that such audit is necessary in view of substantial sums having been invested in any such authority or body. The request of C.A.G. can be allowed in public interest, again, after giving reasonable opportunity to the concerned body to make representation in regard to the proposal of audit.

For exercising desired checks on the accounts of the Union and the state, the Act has cast a duty on the C.A.G., (i) to audit all expenditure from the Consolidated Fund of India and of each state to ascertain whether moneys shown as having been disbursed where legally available for the service or purpose to which they have been applied or changed and whether the expenditure conforms to the authority which governs it, (ii) to audit all transactions of the Union and the states relating to Contingency Funds and Public Accounts, and (iii) to audit all trading, manufacturing, profit and loss accounts and balance sheets and other subsidiary accounts kept in any department of Union or a state, and to submit report on such audit.

The forgoing account of the extent of the powers, functions and duties of the C.A.G. will indicate that the Act of 1971 has gone a long way towards making up the deficiencies in the authority and jurisdiction of the C.A.G., and, except for a little limitation in the case of investment out of consolidated Fund in statutory Corporations (which may, in practical terms, not present a real constraint), he has sufficient authority to exercise his powers of audit to keep a watch on the expenditure of the Union and the States.

5.38 We have explained in our reply to question number 5.31 the reasons why we do not consider it necessary that a National Expenditure Commission should be established.

Moreover, in our reply to question number 5.34, we have explained at length how the Comptroller and Auditor General has been vested with sufficient authotity to exercise his powers of audit to keep a watch on the expenditure of the union and the states and maintain checks on their accounts. Furthermore, the control over government expenditure of the parliament or the state legislature, exercised through Public Accounts Committees and Estimates Committees with the help of the Comptroller and Auditor General, sufficiently meets the requirement of assessment of propriety of expenditure of the Union and the states.

5.39 The State Government feel that clearance of the plans of action of formulated by the States by the administrative Ministry concerned at the Centre becomes irritant only when the concerned ministry assumes the rate of 'big-brother' instead of a co-ordinator.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The shortcomings in the present planning process as listed in the question are generally valid. These can be removed to a great extent by limiting the functions of the Planning Commission and the Ministries of the Govt. of India to, (i) indicating broad national priorities, and frame work for development, (ii) fixing up the national minimum in the various fields of socio-economic activities, (iii) issuing suitable guidelines to the States to achieve them, and (iv) organising appropriate system for monitoring and review of the progress of the implementation the plan programmes in the States. The States should be left free to plan for development on the basis of their specific needs, potentials and priorities keeping in view of course the national priorities. They should also be allowed greater flexibility in making sectoral allocation of approved outlays in accordance with the priorities as perceived by them within the broad guidelines of the National Planning Commission.

6.2 The National Development Council to be more effective must have constitutional and statutory authority. The Constitution of the inter-State Council for achieving effective co-ordination between the States and the Union under Article 263 may be a step in that direction and the Council so constituted could discharge the functions of a National Development of Council also. It is not necessary to have experts as members in the Council, as the Planning Commission is already manned by experts in various fields and the Commission can service the Council. In fact, this will itself bring the Planning Commission within legal frame work and make it more less the Secretariat of the N.D.C. The Council could discuss and approve the broad strategy and the general frame work of the Five Year Plans as well as the allocation of sources between the Centre and States as well as the different constituent States. This implies that it should meet more frequently than the N.D.C. does at present to take stock of the progress in various important fields in the States, and to provide appropriate measures for solution of the problems experienced by the State Governments in development and implementation of the plans.

6.3 The position in this regard is not satisfactory. The Planning Commission, as at present do not have regular adequate inter-action with the State Governments Limited inter-action now takes place once in a year where the annual plans of the States are discussed by the Planning Commission with the State Govt. officials. This also becomes, more or less, an exercise in fund allocation. The Planning Commission should as a matter of fact take greater interest in appreciating the peculiar problems of

each State and finding appropriate remedies in consultation with the State Governments and the Ministries of the Govt. of India and in bringing about necessary policy orientation in the matter of allocation of resources, sanctioning of central projects in the States and getting a better deal for the backward States in various matters including the functioning of central undertakings. They should also devise ways and means to achieve the nationally approved objectives in different States and regions.

6.4 The Commission should act as the Secretariat of the N.D.C. It need not have more Ministers as members, for they may not be able to pay adequate attention or provide requisite expertise to the Commission for working out suitable strategies for the development of the country. The Commission may continue to consist as now of the Prime Minister as Chairman, Finance Minister, Deputy Chairman and one or two eminent publicmen with experience in development as well as a few experts of national standing as members. It should be an independent apex advisory body, free from pressure, political or otherwise. There seems to be no need for appointing any State representatives on the Planning Commission.

6.5 The suggestion made under 6.2 would confer greater autonomy to the Planning Commission. Instead of being a Central Deptt. as at present, it will be an independent expert body under the N.D.C. as envisaged in para 6.2. It is necessary to ensure that the Commission is able to function according to its own needs and has the required expert personnel. It should be enabled to make appointment of appropriate personnel quickly, without going through the various time-taking procedures which a Govt. Department has to follow.

6.6 It is absolutely necessary to ensure incorporation of the national priorities in the State Plans as otherwise in crucial areas for the development of the country as a whole, there may not be any unanimity in terms of priorities or allocation of resources when once Planning Commission has identified the national priorities the State Govts. should be left free to draw up projects and programmes based on local conditions and needs within those priorities, without following any centrally prescribed pattern.

The criticism that the Planning Commission has been examining the State's finances in too great a detail is not valid. This is one of the legitimate functions of the State Govt. The States have necessarily to depend upon the centre for provision of funds and unless the Planning Commission has full and detailed knowledge about the financial position of each State it may be difficult for it to appreciate the needs of the States. The problem is, however, that the P. C. does not share any information with the States as regards the Central resources that may be available for planned development, their deployment as between various sectors and the manner of distribution of the sources as between various regions and State, which is necessary in a federal set up.

6.7 The Central assistance is at present released by the Ministry of Finance, on the basis of the recommendations of the Planning Commission. However, there is no justification for deducting central assistance on the ground that the performance in the earmarked sector has not been as per predetermined targets. This amounts to penalising the financially weaker States. The formula of central assistance (70% loan and 30% grant) has let the increase in the States debt burden. The indebtedness of Bihar rose to Rs. 2,195.48 crores in 1982-83 leaving the State very little surplus from the central assistance after repayment of debt and debt service liability to the centre. As against the central assistance of Rs. 273.15 crores for 1982-83, the repayment of loans to the centre and interest thereon amounted to Rs. 188.97 crores. This is a major factor contributing to the financial imbalances in the States. There is a case for liberalising this formula particularly in favour of the backward States.

6.8 The Gadgil formula and even the Modified Gadgil formula for allocation of central assistance have worked to the disadvantage of Bihar. The Modified Gadgil formula stipulates allocation of assistance on the following basis :—

Population	60%
Per capita income below the national average	20%
Tax efforts	10%
Special problem	10%

The formula seeks to allocate 10 percent of the funds on the basis of the tax efforts made by the States. Naturally the States with weak financial structures are bound to suffer in this account. The criteria for distribution of 10 percent of the total available amount on the basis of special problems lends a degree of arbitrariness in the distribution of the amount earmarked under this criterion. The I.A.T.P. formula used for the limited purpose of distribution of the amount due to the States on account of transfer of centrally sponsored schemes in 1979-83 to the State sector was favourable to Bihar. This formula which stipulated distribution of the assistance on the basis of the population and the inverse of per capita income will be more equitable to the economically backward States. The State would urge that I.A.T.P. formula may replace the modified Gadgil formula. Alternately, the State Govt. would suggest distribution of central assistance on the basis of the following simple and straight formula.

Population	60%
Backwardness	40%

(No. of people below the poverty line or SDP below the national avesage whichever is acceptable).

6.9 The present criteria for allocation of central assistance, as stated above, is disadvantageous to backward States. These States with a weak financial sturcture are unable to mobilise adequate resources to finance their development plans. They have necessarily, therefore, to depend on transfer of resources from the Central Government. But the Central Govt. instead of allocating central assistance on the basis of relative backwardness have been distributing the same on the basis of a fixed formula which aggravates the existing disparities. This

system of allocation of funds has, thus, failed to remove regional imbalances. It has, on the contrary accounted regional disparities, which will be manifest from the fact that the gap between the per capita income of Bihar and the country as a whole which was only 32.7 per cent during 1972-73 has gone up to about 43 per cent during 1981-82. The position of Bihar *vis-a-vis* other State in various spheres of socio-economic activities is also quite unsatisfactory, which will be evident from the enclosed tables. The main reasons for such a situation in the State is that the State's per capita plan outlay has remained the lowest in the country during successive five year plans.

(c) Funds for the tribal sub-plan which is under implementation in the States are provided out of the State Plan. In addition, the Central Govt. sanction special assistance for the sub-plan. The system of earmarking of funds for the sub-plan out of the State Plan has ensured adequate allocation of funds for the tribal development. The system should, therefore, be continued.

6.10 It is true that the State Govt. undertake certain centrally sponsored schemes without much scrutiny simply because of matching funds made available to them by the Centre. Some times there is also pressure from the Ministries of the Govt. of India to undertake such schemes. These results in some distortion of priorities within the State sector and taking up of schemes despite the fact that Govt. does not consider them as schemes of high priority in the local situation. What is more objectionable is that the Ministers suddenly decide to discontinue certain schemes thereby creating a problem for the States in terms of resources. The establishment appointed under such schemes becomes a permanent liability. It is, thus, desirable that such schemes are taken up only when it is absolutely necessary and that too only with full and prior consultations with the State Governments. Provision for creation of new posts under such schemes should be made only after taking into consideration the requirements of the concerned States and the norms and standards fixed by them for creation of new posts.

6.11 The monitoring and evaluating machinery so far established in Bihar is quite inadequate. Most of the Departments do not have a proper monitoring arrangement although the monitoring cells created in some of the Deptts. such as Irrigation have done good work. Such cells remain to be created in all the Departments by creating/readjustment of posts. These cells needs to be equipped with professionally trained personnel. Also, monitoring cells are required to be created at Project and District levels, so that monitoring of projects and programmes could be started from the field level itself. There is also need for establishing a well equipped monitoring cell at the apex level in the Planning & Development Department which could besides issuing guidelines to such cells established in the various Departments and Co-ordinating and reviewing the works done by them can itself undertake monitoring of projects/programmes of importance. As for evaluations, this is an area which has reckoned so far received little attention at the State level. Efforts are being made to remedy the situation.

6.12 Planning in our country by and large continues to remain a highly centralised affair, in which a good deal of initiative and direction lies with the Central Government. Although the country, as a whole, has progressed sufficiently under the present system of centralised planning, it had led to serious regional disparities. It is high time, therefore, that Planning is decentralised at the State level and district levels. The decentralised system of planning has two basic advantages. First proximity of planning to the area of development would help deeper understanding of local problems, the resource avaliability and the felt needs of the people which in turn would help in the formulation of pragmatic and meaningful plans. Secondly, the greater degree of popular participation could be built in the planning process, thereby ensuring greater response from the people. Towards this end, the central plan should only be indicative. The Planning Commission should lay down the national policy and priorities and leave the States free to formulate plans for development of their areas on the basis of local needs and potentials keeping in view the national policy and priorities.

The State Planning Department has been entrusted with responsibility for laying down the priorities and allocation of resources besides approval of plan project/programmes. This responsibility, the Planning Department has been able to discharge to a degree. The Planning Deptt. is, however, yet to be fully strengthened to improve its capability in areas like project/programme appraisal, plan monitoring and implementation. There has to be greater appreciation of the important role a strong and effective Planning Deptt. can play. The personnel in the Planning Deptt. also need training. Further the State Planning Board and the State Planning Deptt. have very little inter-action and some organisational improvements are required. The technical expertise of State Planning Board also needs to be strengthen.

PART VII

MISCELLANEOUS

Industries

7.1 and 7.2 It is true that a large number of industries have been covered by the licence under I.D.R. Act through introduction of these items in the First Schedule to the Act. The process started with only a limited number of industries included in the First Schedule but subsequently from time to time many more industries were added to the list with the result that even such industries get covered which do not actually involve vital public interest or national importance.

Many industries have been added in this list perphaps to ensure that there is no over-capacity in those sectors. The monitoring of over-capacity, however, has not always proved effective as even after the grant of Letter of Intent in some sectors over-capacity has been noticed. In fact, at present there are checks at the demand and supply position in a particular sector at three stages, namely, (i) at the time of formulation of the project by the

entrepreneur, (ii) at the time of issuing Letter of Intent, and (iii) at the time of the sanction of the term-loan by the financial institutions. It may be worthwhile to trust the entrepreneur and the financial institutions regarding the scrutiny of the demand and supply in a particular sector. Therefore, licensing as an instrument for monitoring this aspect could be avoided.

The items in the First Schedule should be limited to those which are of vital public interest and of national importance. These could include industries in the defence sector and other key sectors like steel, fertiliser, petroleum, nuclear energy, aircraft, heavy electricals etc. There is hardly any need for including items like match-sticks, soap, razor blades, paint, varnishes, steel furniture, pottery etc. in this Schedule.

It may be difficult to define as to what is vital public interest and of national importance. Some norms can be developed through practice. There could be periodical exchange of views between the Central Government and the State Government as also between the Central Government and the Associations of Industry regarding the appropriateness of Entries being in the First Schedule.

7.3 The present procedure for industrial licensing and various clearances like those for capital issues, import of capital goods and raw materials and for foreign collaboration are normally decided by the Inter-Ministerial Committees at the level of Central Government. Delegation of powers to Ministries themselves to some extent can be considered. The procedure can be further simplified by Senior officers of the administrative Ministries visiting the State capitals and deciding cases within certain delegated range with the help and assistance of State Government officials.

7.4 State Government is trying to facilitate raw material support and marketing support to small scale industries. This has, however, not been very effective as raw materials and marketing points are really very diverse. Direct intervention by the Government both in the matter of supply of raw material and in facilitating marketing can be done only through sizeable expenditure and considerable financial risk. Infrastructural support could, however, be provided through collection and dissemination of information regarding availability of raw materials, their prices and specifications and through collection and dissemination of information relating to marketing. For very small units, particularly relating to village artisans, a direct role regarding supply of raw materials and purchase and marketing of the products by Government agencies may, in many cases, be necessary and useful.

7.5 National Industrial Financial Institutions have been playing a useful role in providing terms lending to industrialists. It has been noticed, however, that the share of some backward States, particularly that of Bihar, in the total financing of these institutions has been very small, generally from two to three percent. There is a need for some re-orientation in the thinking in these institutions in as much as their role should be encouragement-oriented. This is, particularly, needed in the backward regionsd Certain financial risks are, no doubt, involved in it. Hence, in judging the performance of these institutions, particularly relating to the investment in the backward regions, there snould be some flexibility and relaxation so that these institutions do not have to tread the traditional path of the old orthodox bankers.

7.6 and 7.7 Location of public sector projects and investment in heavy industries should be basically on the norms of techno-economic viability. The need for introducing momentum of growth in backward areas, however, must be kept in view. Considering the constraints regarding transport and the load on our transport system, it may be more prudent to locate heavy industries nearer the site of basic raw materials.

To remove doubts from the minds of the States, the Centre could make available to them the gists of the viability studies of these projects focussing on locational features. The Centre should also welcome dicussions with States on these issues. But ultimate dicision should be based on techno-economic viability alongwith the need for providing nuolist of development in backward areas.

As mentioned above, considering the load on our transport and infrastructure, heavy units should be located as near to the site of basic raw materials as possible.

7.8 The incentives for backward districts have proved to be useful. Regarding the criteria for selection of backward districts, it is sometime seen that merely by the existence of some very old industrial units an area does not come in the 'No-industry' district even though there has been no specific industrial activity beyond some of these very old units. The maximum facilities should not be denied to such areas if these are otherwise industrially backward. In fact, in the State of Bihar, almost all the areas except a few industrial Centres like Jamshedpur, Bokaro, Ranchi, Barauni etc. deserve to get the maximum benefit prescribed for backward areas.

Alongwith incentive for investment in backward areas, what is of utmost importance in the long term is the development of infrastructure in these areas. Therefore, a part of the fund for industries should be allocated to the State under the State Plan specifically meant for development of Industrial infrustructure. The present process of formulating specific infrastructural projects for Growth Centres in 'no-industry' districts may not be very effective. What is needed is that there should be specific allocation in the State Plan for this purpose and that the development of industrial infrastructure should be an integral part of the Annual Plan and the Five-Year Plan of the State.

Further replies to Question on Industries

7.1 Entry 52 in the List 1 of the Schedule enables Parliament to legislate in respect of certain industries if considered expedient in public interest. Keeping the complexity of the country and the stage of development at which different States are, this is a healthy provision. Initially, only some industries which were of vital public interest were included

in the First Schedule to Industrial D.R. Act of 1951 but, through amendments in subsequent years a number of industries have been included in the Schedule which do not prima facie look that important as to be included in the Schedule and an illustrative list of this is mentioned in the question, itself. It will not, however, be quite correct to say that just because some not so important industries have been included, "Industries" has been virtually transformed into Union subject. The provision of the I.D.R. Act is basically related to licensing and control in certain situations and it cannot be said that they have been used to the detriment of the interest of the State. Capacity, creation, safety, interest of small entrepreneurs and artisans etc. are some of the areas which have to be kept in view from a national angle. This aspect has also to be kept in view.

What appears to us is that an Expert Committee may have a look at the industries mentioned in the Schedule whether there is any such industries as need not to be thereafter taking into consideration all relevant materials.

7.2 It will be quite difficult to define or even describe in precise terms what in "National Public interest". In a developing society, the demands of the situation keep on changing and, therefore, what is 'public interest' also evolves. Certain things, however, can be easily seen as in national or public interest. For example, industries connected with defence, civil aviation, pharmaceuticals and drugs, oil exploration and petroleum products, nuclear power are obviously of vital national importance. Similarly, industries which affect larger segments of the society or which are for the benefit of deprieved classes or the backward areas or for environmental control are in public interest. One can thus go on enumerating but it will be difficult to have any fixed or static list of subject in this regard. This is bound to change from time to time depending on the situation.

As regards deleting certain items from the Schedule of the Act, we have suggested above that an Expert Committee may go into this matter.

7.3 What hurts industrially backward States is not on account of producers prescribed in the grant of licences. In fact, they do not get licences as they should. Industrially backward States are handicapped in many ways. Most of them are facing lack of information. By the time these States apply for licence for a particular item, the licences in large number are already granted to advanced States and on the ground of capacity already created, applications for licences from certain States are rejected. In granting licence, therefore, the interests of industrially backward States should be duly safeguarded and an appropriate proportion of desired capacity should be created in these States. Capacity assessment is done by a group on which there is inadequate representation from such States. This is one of the reasons for lack of information with regard to capacity. Assessed capacity should be immediately published by the Government and the financial institutions, as soon as the capacity is assessed in a particular area. Information with regard to that should be given to the State Government and the State level financial institutions immediately. If there is local demand, the licence should not be refused on the ground that the capacity has already been created in a different State. Thus of course, will need constant review and States participation in such reviews is, therefore, essential.

So far, import of raw materials or capital goods is concerned, because of liberalisation of import policy, several items are now covered under open general licence. States like Bihar even do not get due advantage of it, because the local office has very limited powers and practically most of the matters are referred to the Regional Office outside the State. These aspects should be duly looked into. There should be a forum on which the State should be represented and there should be a regular review of the matter at the central level so that the problems are identified, solutions found out and distortions, if any, corrected.

The present procedure for industrial licensing and various clearances like those for capital issues, import of capital goods and raw materials and for foreign collaboration are normally decided by the Inter-Ministerial Committees at the level of Central Government. Delegation of powers to Ministries themselves to some extent can be considered. The procedure can be further simplified by senior officers of the administrative Ministries visiting the State capitals and deciding cases within certain delegated range with the help and assistance of State Government officials. Some reasonable time limit may be prescribed for clearing licences.

The financial institutions should take a liberal view in the matter of debt equity ratio, promoters' contribution etc. so far the medium industries are also concerned. Recently the I.D.B.I. has reduced the debt equity ratio. From 2:1 to 1.5:1 and has raised promoters' contribution by 2½%. It is necessary that the small as well as medium industries are given special impetus, particularly in backward areas where the investment from financial institutions is already low.

7.4 Our small and cottage industries continue to suffer on account of raw material and marketing facilities. We have not been able to organise ourselves sufficiently well to support them. The main reason is the financial constraint.

State Government is trying to facilitate raw material support and marketing support to small scale industries. This has, however, not been very effective as raw materials and marketing points are really very diverse. Direct intervention by the Government in the matter of supply of raw material and in facilitating marketing can be done through sizeable expenditure and considerable financial risk. Infrastructural support could, however, be provided through collection and dissemination of information regarding availability of raw materials, their prices and specifications and through collection and dissemination of information relating to marketing. For very small units, particularly relating to village artisans, a direct role regarding supply of raw materials and purchase and marketing of the products by government agencies may, in many cases, be necessary and useful.

For this it is necessary that the financial base of corporation dealing with raw materials is strengthened. The Central Government no doubt gives a rebate of Rs. 300 per tonne in steel but this is not enough. There is a Corporation dealing with small scale industries in the State. The Central Government undertakings have a vital role in the matter of marketing. Their response, however, is very poor. Although, there are guidelines by the Bureau of Public Enterprises for giving price preference but they are not implemented. The Central Government Organisation dealing with marketing in cottage industries sector should also play a greater role.

7.5 The All India Financial Institutions are generally sympathetic. Their investment, however, is very low. That is primarily because of the lack of the absorption capacity in the State. The response from the banks, however, is very poor and the small scale industries have a very hard time in getting working capital from the banks. This is by and large true even in respect of other industries.

7.6 Location of public sector enterprises has to be done basically on techno-economic considerations keeping in view the overall national interest. It does not seem necessary that there should always be consultation with the State on all such matters. It is, however, necessary that the industrially backward areas get preference in the location of central public sector undertakings. The Oil Refinery at Barauni is one of oldest. Therefore, Barauni deserves setting up of petro-chemical complex. But inspite of all the pursuance by the State Government, the petro-chemical complex is being set up outside Bihar. Similarly, Bihar has very huge coal region. Therefore, large scale coal based fertiliser and chemical industry can be set up in Chotanagpur region. But ignoring the interest of the State of Bihar, Fertiliser, plants have been set up in other States, like Orissa and Andhra Pradesh. The State also has the large reserve of pyrites ore at Amjhore in Rohtas district. Therefore, a fertiliser plant and also a sulphuric acid plant based on pyrites can be set up in Bihar. The proposal has been submitted to the Government of India but without any positive response.

It may further be added that in backward States like Bihar, Assam, Orissa Central Investment should be made on a large scale so that it may catch up with the advanced States and bring an over-all increase in the national per capita income. Special attention is to be paid to the fact that in Bihar basic raw materials like coal, mica, iron ore, lime stone and forest products are abundantly available and this States should be given power to set up such industries. After the Second Five Year Plan, no public sector undertaking has come to Bihar.

7.7 As explained in 7.6 the Central Government's investment should keep techno-economic factors in consideration in making Central investment. The other factors to be kept in view are backwardness of State, regional imbalance etc. From these points of view, Bihar has considerably suffered.

7.8 For purposes of Central Government subsidy and concessional finance from Financial institutions, districts have been categorised as 'A', 'B' & 'C' and difference rates of Central subsidy have been prescribed for these three categories. This categorisation is not on a scientific basis. Sugar industry came up in Bihar, for example, in 1920's and a number of mills were situated in particular districts. Many of them are sick and quite a few closed. Similarly Rice Mills came up in certain districts long back, most of them are now closed. Now, if on the basis of investment made in these industries these districts are disqualified for a higher rate of central subsidy, this will be detrimental to the growth of industries in these areas. The investment by itself should not be the sole criterion. The factors to be taken into consideration should be whether industries are running well, whether employment is being provided and whether income is generated. In absence of these consideration investment, criterion will not be reasonable.

Bihar has some peculiar problems and they have to be appreciated. Almost whole of North Bihar is chronically flood affected, according to the criteria mentioned in the report of National Committee on the Development of Backward Areas in its report on development of chronically flood affected areas. These areas have floods each year, and infrastructure built for industrial development is heavily damaged. Roads, bridges, telephone and telegraph poles are seriously damaged year after year. Such areas, therefore deserve to be treated on a different footing as in respect of hill areas and higher central Government assistance should be available for development of infrastructure in these areas.

It is high time that a distinction is made between a backward area in an advanced State and a backward area in an industrially backward State. Because of historical reasons and socio-economic conditions prevailing over centuries, the ethos in a backward State are different from that in an advanced State. With the same amount of assistance, a backward district in an advanced State will get greater stimulus for growth than that in an backward State. The quantum of assistance in a backward area in a backward State, there should be substantial and reasonably higher than the same in a backward district in an advanced State.

As the National Committee on Development of Backward Areas had suggested, growth centre should be developed. But they should not be confined to category 'A' districts. It should be open to the State Government to select such growth centres in any backward district irrespective of the category in which it may be falling. The reason is that if an area where certain infrastructure facility has already been built up or some other facilities are available is helped it will have a faster rate of growth and a higher spread-over effect. This will help quicker industrialisation of the State while ensuring dispersal of industry. The State will not have commensurate advantages if such growth centres are confied to 'A' category district where infrastructure may be very very poor.

A certain pattern of financing is being practiced for development of growth centres in category 'A' districts. While 1/3rd of the expenditure, of the total of Rs. 6 crores generally, is to come from financial institutions as loan, the rest of the money

is to come as subsidy from the Central Government and investment from the State Government in equal share. State Government resources being limited, it is necessary that this pattern should be changed for backward areas in backward State. The financing pattern may be 10% contribution from the State, 50% subsidy from Centre and 40% loan from financial institutions. The Rs. 6 crores limit is also very low keeping in view the price situation. This should immediately be raised to Rs. 10 crores.

These suggestions are being made as the result of the scheme of the Central Government subsidy and concessional finance has not been as encouraging as it was expected.

In Bihar, District is too large in area. Eeven in advance district, there are extremely industrial backward areas. Therefore, sub-division should be the unit for declaring backward area.

Replies to Supplementary Questionnaire No. 2 on Industries

1. The present arrangement is sound. It is necessary that industries are regulated on an uniform basis throughout the country.

2. The industrial development in the country has not been even. Keeping this in view, it will perhaps be more practial to leave it to the States to earmark industries—whether they be kept in small sector or otherwise.

3. Development of infrastructure and provision of adequate finance are the two important things, among others, necessary for industrial growth. State Governments face serious constraints in developing infrastructure. The Planning Commission, should, therefore, keep certain amount uncommitted in the State Plan to be spent as per local needs. State Governments do not have any say in the Management of Banking institutions and the Banks make their own decisions with regard to investments. In Industrially backward States, banks are shy in advancing money and this arrests the industrial growth of the State. The State Governments should have effective voice in deciding the investment pattern of a bank in the State. It should be thought out how the State Governments can have some control on functioning of banks in the State.

4. Industrially backward States have a greater say in deciding whether a particular industry should be encouraged in the Small or the Medium Sector.

5 & 6. These points have been covered above.

7. Before any change is made in the existing industrial policy, it will be desirable to have deeper consultation with the State Government. This could be given a formal shape and Industrial Development Council could be formed with representation from all States and the view points of the States should be heard before any major change is made in the industrial policy.

8. Not particular. Restrictions under the MRTP are necessary keeping in view larger social objective of dispersal of industries.

Development of small scale industries is vital in our country.

Certain incentives are, therefore, given to this in view, this, therefore, seems reasonable that there is uniform approach with regard to keeping industries in the small scale sector.

The categorisation of industries is with a view to exclude their production in the medium and large sectors. From this point of view also, it is necessary that there is uniformity in this matter all over the country and industries which are reserved for the small-scale sector should be so reserved throughout the country.

State Government can play a bigger role in developing small and medium industries in several ways :

(i) If they have an effective voice in the assessment of capacity of medium industries;

(ii) If they have adequate information about the scope for establishing different types of industries.

There is no harm if some of the industries in the small industries sector are also included in the Schedule I of the industrial Development and Regulation Act and there is no need to remove them from there. Reservation of some of the listed items in the small scale sector only helps the growth of small scale industries if it is in the interest of the State Industrial Growth.

In our view Entry 52 does not in any significant way dilute the authority of the State over industries as it should have industries being in the State List (Entry 24).

Trade and Commerce

8.1. On Trade and Commerce it is proposed that the State Government recommend the creation of a Trade Advisory Council, or a Board of Trade. While at the apex level, this could meet nationally once a year, at the regional level it could meet every quarter, or every six months. The composition of this Council or Boards could include representatives of all State Governments, official as well as non-official, specified either by name or by designation. In addition, representatives of the producers', traders' and consumers' interests must also be included. The Board or Council, at the apex level could have some permanent sub-committees, assisted by a Secretariat, which could meet at frequent intervals to decide and act on matters brought to its notice either directly or through the regional sub-committees.

The national level Board could be subdivided into four or more regional Boards, each with its own secretariat. These Regional Boards could also have permanent sub-committees which would go into various problems and issues at a more localised level, and acting in its wisdom would make suitable suggestions both to the respective State Governments as well as to the apex-level National Board.

While both the National and Regional Boards would function in a purely recommendory or advisory capacity, it would be incumbent upon the concerned

State Governments as also the Government of India to examine all recommedations and take considered judicious action. It is suggested that these Boards be assisted on their secretariat side by suitable Government officers, both administrative and police, who have had direct experience in implementing and enforcing the various control and regulatory mechanisms of the Central/State Governments in respect of trade, commerce and unit supplies.

The proposed Board of trade would be permanent body, apart of course from the State and Central Governments to examine all points pertaining to Trade and Commerce as well as the points pertaining to the enforcement of the Essential Commodities, and others related, Acts (10.2 of the Commission Questionnaire). The questions of taxation, cesses duties, octroi rates, etc., can also be brought within the purview of the Board of Trade by including some financial/taxation exports in the permanent secretariat and permanent sub-committees.

Agriculture

9.1 Since 1967, there has been drift in formulation of State Plans & fixation of targets of agriculture production which is normally fixed at the National level meetings of Planning Commission and also Ministry of Agriculture. On the basis of such recommendations, normally the States fix the targets for different districts, as such the planning process is interlinked between the State and the Centre.

Another significant change has been in the allocation of fertilizers, pesticides and also to some extent seeds for the States. Naturally, the State has no control over supply or allocation of inputs and totally depends upon the Centre.

During aberrant weather situations, even release of relief furds is dependent upon the assessment report by the team of Government of India.

The fixation of statutory minimum price of agriculture produce as also selling price of the major inputs and allocation of agriculture credit is handled centrally. Fixation of uniform statutory minimum price for the whole country sometimes gives rise to local problems. This aspect required further deliberation.

It is felt that the Centre's role is important and the State cannot assume the responsibility because there are many inter-States Coordination problems.

9.2 As per suggestion of the Administrative Reforms Commission etc., Agricultural Development forms part of the State subject. However, major development programmes on the recommendation of the State are initiated by the Centre as centrally sponsored or sectoral schemes which finally form part of the State Plan as per recommendation of the National Commission on Agriculture.

Following points need consideration in this regard :

(1) The developing States or Backward States should get priority in allocation of Plan funds so that more number of development programme could be taken up as sponsored schemes.

(2) Before transferring sectoral schemes/sponsored schemes to State Plan, it may be advisable to evaluate impact of the scheme and its further necessity and only then if required the assistance may be tapered gradually and not suddenly so that it is not a major burden on the State's exchequer all at once.

9.3 There is effective coordination between the Centre and the State. The Working Groups should initiate the dialogue much ahead of the start of the working year, so that annual plans are finalised in time.

Planning bodies at grass-root levels, particularly the Blocks and districts should also be made more meaningful and productive by incorporating location specific problems.

It is felt that there should be more frequent meaningful dialogue between the Centre and the State in course of implementation of various plan programmes.

9.4(a) It is felt that the fixation of minimum or fair price of agriculture produce should be done on sectoral level as conditions throughout the country as also per capita production may not be same for the entire country. Therefore it is suggested that the concerned States may also be consulted while fixing the prices.

(b) No comments.

(c) Normally the critical inputs are allocated on the basis of previous year's consumption and once the supply of a particular input is in short supply due to any reason, the whole chain in subsequent years is dislocated. There should be special consideration in allocation of inputs like fertilisers or credit on the basis of prevalent aberrants weather conditions or crop production requirements.

9.5 (a) In backward and developing States, there should be more number of All India Co-ordinated Research Improvement Projects on the basis of felt needs in different Agro-Climatic Zones.

(b)(a) As regards financing by NABARD, the procedure for financing should be liberalised.

(b) In case of failure of course, NABARD should defer the recovery as per State Government policies.

(c) In respect of advancement by Commercial Banks, there should be some positive consideration of density of population, size and other situations of the State.

Food and Civil Supplies

10.1 and 10.2 The point which must be fundamentally underlined is that whenever any Central Government agency, body or corporation is entrusted with the responsibility of supplies of food or any other essential commodity, it must be clearly specified and clearly understood that there must be apparent and evident a genuine sense of concern towards the problems of the particular State on area in which the Central Government agency is operating. To underscore this, the agency must be clearly responsible for ensuring delivery to the End-point in the distribution chain, be it either the consuming public or the State Government agency responsible. Moreover, in some

manner the State Govt. must have a measure of administrative and operational control over such agencies as that it can be ensured that the agency is performing to the best of its ability in optimizing benefits to the State Government concerned and its citizency.

As regards procurement, where any Central agency is utilized for this purpose, a comprehensive price-support and procurement plan must be drawn up well in advance in consulation with the State Governments to ensure that the primary producer gets a remunerative return on his crops. It must also be ensured that arrangements are made for spot-purchases and spot-payment without unnecessary harassment to the cultivator either by way of transportation, or sampling, or any other storage or avoidable administrative delay. For this prupose, wherever there is no prevalent system of large rural grain centres, effective steps will have to be taken to ensure their opening even for temporary crop-specific periods.

As regards pricing, this needs to be examined in two contexts—one, pricing as pertaining to the cultivator and purchase/procurement of his produce and, secondly, pricinn as pertaining to the issue price of foodgrains and other essential commodities through the Public Distribution Sytem to the consuming public. In the context of procurement/purchase pricing the present system of price fixation by means of the Agricultural Prices Commission of the Government of India is quite adequate. However, for actual benefits to reach the cultivators specially in far flung and inaccessible areas, the existence of a comprehensive location-specific price support and procurement plan (as mentioned in para 6 above) is of vital importance. It will also be essential to consider a variable support price, and this would specially benefit those States or areas where the unit cost of production is higher than the national average.

The question of pricing for issue of the consuming public is another area in which the views of the State Governments have to be considered very seriously. The present national problem of massive foodgrain inventories and poor offtake could, perhaps, be somewhat lessened if a conscious decision were taken to issue foodgrains to the consuming public at a price appreciably lesser than the prevalent market prices in a particular region. This will also have the tangential effect of preventing speculation and hoarding of foodgrains, apart from increasing the offtake through the public distribution system. Constant sale at prices lower than market rates will require frequent adjustments in issue price, and this again must be done only in consultation with the respective State Governments.

Scientific storage of foodgrains is essential to the whole philosophy of a price-support system. In this area, too, the role of the State Governments can be substantially increased not only through direct investment in scientific warehousing facilities but also through associating specified officials of the State Government of a suitable level of responsibility in the matter of periodic inspections of private as well as Central Government agencies, warehouses. This will have the fundamental adavntage of ensuring an end to the common grievance of issue of food-grains not suitable for human consumption, by the responsible agencies.

The question of movement and distribution has been delineated in para 5 of this note. It is imperative that at least one months' revolving buffer stock be permanently maintained in each State in respect of all essential commodities to act not only as a deterrent to price-manipulation by interested parties, but also as a safeguard against any temporary transport bottlenecks resulting in delayed movement.

Education

11.1 It is not correct to say that there is unnecessary centralisation and standardisation in the field of education and too much of Central interference in the initiative and authority of the States.

The State Governments have complete freedom in formulating their own syllabi courses of studies for all levels of education, right from the primary stage up to the University stage. They are also free to appoint teachers in schools and colleges and to sanction grants to them in accordance with the norms fixed by themselves. However in respect of constituent colleges, where UGC scales are sanctioned the State Governments have to go by the standards fixed by the UGC for obvious reasons. This cannot be called in unnecessary interference.

11.2 (a) The UGC's role has generally been healthy in influencing the University eduction. Not only do they prescribe definite standards for educational institutions for clear-cut objectives and facilities, they also ensure that the teachers appointed, against sanctioned posts, are up to certain standards.

(b) The UGC has been some what unduly strict in respect of a few Universities while extending financial assistance. They have a set pattern of extending financial assistance but they also lay down conditions for the Universities to qualify for such assistance. However there have been some instances in which State Governments have felt hadicapped, while taking the usual grants, as the Commission insisted on :

(i) Prior release of funds by the State Government.

(ii) Fulfilment of other requirements.

Undue insistence by the Commission on prior release of fund by the State Government has often led to delay in release of funds by the UGC resulting in non-utilisation of funds within time.

Since the ojectives of the UGC and that of the State Government were some, namely, proper utilisation of financial assistance given by the UGC, it would be better and more workable if the UGC released funds and at the same time lays down guidelines for utilisation of the financial assistance, so as to ensure that the funds released are proper used by the State Government.

11.3 State Government feel that there is no need of any additional institution to be evolved for the purpose. The present system of holding an Annual Conference of State Education Ministers and Secretaries for deciding upon educational policies and

programmes is adequate for the present. Moreover the States get good opportunity for being consulted in the matter of their plan schemes, relating to Education, in the planning Commission and the National Development Council.

11.4 We feel that the constitutional provision Contained in Articles 29 and 30 should be there. But State Government would like to point out that certain instances have come to their notice in which the minority institutions, set up under these articles of the Constitution, have failed to carry out their obligations and conform to the regulations made by the Government, particularly in respect of proper utilisation of funds, quality and standard of teaching staff and due payment to them. Therefore while the minority institutions should have the constitutional right to set up their own institutions, it is necessary to regulate their freedom in such a manner that there are no chances of exceeding the legitimate frontiers of this freedom.

11.5 Nothing particular to mention.

Inter-Governmental Coordination

No reply given.

Statement of Chief Minister, Bihar before the Commission

I am extremely happy to welcome you, Sir, and the Hon'ble Members of the Commission and the officials. I express my gratefulness for the opportunity given to us to express our views before the Commission. The basic question underlining Centre-State Relation is whether we should have a strong unitary system or a system of federalism with the constituent units having enormous freedom. What we have in our country is probably the golden mean and an ideal admixture of the two extremities of an all powerful and autocratic centre on the one side and of a federal system where units are having enormous freedom on the other side. That the system or the set up that we have, is by far the best and the most balanced one has been well evidenced by the fact that this system has stood the test of time and has successfully preserved the unity and integrity of the Nation, so vast in size so diverse in its geographical and climate conditions and a nation with multi-religious, multi-lingual and multi-social set up. There have been attempts, time and again against the unity and solidarity of the country by divisive forces. The recent turmoil in Assam and Punjab can be cited as instances. It goes to the credit of our constitution that it has been able to withstand such turmoils. Our Constitution has built-in flexibility and understanding relationship between the Centre and the States. Absence of rigidity has been its greatest merit. The relation between the Centre and the State has been such that it basically guarantees the unity and integrity of the Nation and at the same time does not neglect the expectation and aspirations of the State as well. Our Constitution has taken proper care of these requirements. In fact with the growing seccessionists trends and tendencies what is required is to strengthen the hands of the Centre.

PART II

LEGISLATIVE RELATIONS

As regards the Legislative Relations, we are definitely of the view that the present arrangements and institutions are adequate to ensure the basic objectives of the Constitution. The scheme that has been formulated in the Constitution was drawn after considerable debate and discussions and in fact had taken into account foreseeable future as well. In fact we should be grateful to the founding fathers of our Constitution to having such foresight. It should be borne in mind that Constitution, however, detailed it may be, can never provide for all the eventualities. A large pool of conventions set created with the passage of time. This has happened in the Indian polity as well.

A point has been raised whether or not before any legislative change is by the Centre undertaken on a concurrent subject, the State should be consulted as provided for in 1935 Act. It should be realised in dynamic and changing state, even minor delays can become disastrous. It would neither be possible nor desirable to go in for a process of cosultation before legislative changes. Besides there exists constitutional safeguard of Article 249 Sub, Art. II which sets limited duration for which such a legislative change can be enacted. The legislative relations as provided for in the Constitution appear to serve the requirement of the present day and possibly for the future as well.

PART III

ROLE OF GOVERNOR

In respect of the role of the Governor, it appears that the present arrangement has been well thought of. The institution of the Governor basically acts as an effective link between the State and the Centre. We have no doubt been a few controversies attached to the said office during the recent past. Such cases have been rather exceptions. The Governor acts as an impartial observer and a shock observer in critical times. The element of criticism that has been attached to the office of the Governor has been more on account of personal aberrations and problems. The Constitution envisages a positive role for the Governor. He reflects the view of the State before the Centre and vice versa. Our experience has been that by and large the role assigned to the Governor in the Constitution and that has come to be expected during the course of time has been performed satisfactorily.

PART IV

ADMINISTRATIVE RELATIONS

Coming to the administrative rêlation, it may be realised that intervention of the Centre in the administrative arena of the State has been envisaged only under the extreme circumstances of different kinds of emergency envisaged in the Constitution.

With the passage of the time certain institutions have grown up which has been alleged as encroachment upon the power of the State. But viewed in the

proper prospective such institutions are very much essential for the trade and commerce, development of water resources, agriculture development. One can reasonably conclude that the legislative provisions in the Constitution have been well conceived and have stood the test of times.

What has been said above is equally true in the field of administrative norms, requirement of law and order and administrative relations where some kind of common approach may be absolutely essential and the Centre in this state of affairs plays at times a complimentary, at times a supplementary and whereever necessary a substitute role as well.

It will be appropriate if I touch upon the question of desirability of having an Inter-State Council. The basic role of such a body is to reconcile the disputes that arise between the States on the one hand and the Union and the State on the other. Setting up of such a Council is perhaps not necessary in view of the fact that there are several other mechanism like the Zonal Conferences of the Chief Ministers, meeting of the Governors and the National Development Council etc. which serve the same purpose.

The most important factor which goes against the setting up of such a Council is such body not have any representative character of democratic base and may even come in clash with the sovereignity of the Parliament. Such a body will not be responsible to the people at large.

PART V

FINANCIAL RELATIONS

We are of the view that both Finance Commission and Planning Commission should continue. As the extent of devolution of fund through the recommendations of the Finance Commission and grant of Central assistance conceived by the Planning Commission have not been able to bridge the gap of economic development between the advanced States and the poorer States like Bihar, it appears essential that the methodology for the estimate of gap in resources so far practised by the Finance Commission should be modified to meet the actual and physical requirements and need of the State's concerned. Unless this is done, the growing regional imbalance in economic development will not be abridged. Finance Commission should be made a permanent body like Planning Commission but its Chairman/Members may change from time to time. In the devolution of the taxes, the principle applied for income-tax should also be followed for Union Excise duties. There should be an uniform yardstick and formula for devolution of receipts from taxes like income-tax, Union Excise duties and additional excise duty. While we admit the requirement of fund for the defence purposes, and therefore do not want that returns from a custom duty should be divisible, but we feel that taxes on the Corporate bodies should come under the shareable pool. Finance Commission estimates the revenue gap of the States and in such estimates it pre-supposes certain return from public undertakings like State Electricity Board, Road Transport Corporation, other Corporations, Cooperative bodies and investment in irrigation projects. Usually such projects are executed to meet the social requirements of the people and to increase their economy. As such these projects do not yield any appreciable return. Yields calculated by the Finance Commission from such institutions create artificial revenue surplus to the States. These are notional surplus and actually States like Bihar has suffered from such erroneous calculation. In this context I would like to point out that though the per capita income of Bihar continues to be lowest in the country it has not been declared a deficit State by the Eighth Finance Commission whereas such States whose per capita income is much higher than Bihar like West Bengal and Orissa, they have been declared as Deficit States. It is, therefore, imperative that the mode of estimates on revenue surplus/gap by the Finance Commission should be made more realistic and should be attuned to the individual requirement of the State for bringing them at par with the economic development of the country.

The Central assistance given by the Planning Commission was the composition as 70% loan and 30% grant. This composition accentuates the burden of indebtedness leaving meagre amount for investment on development works. In the interest of such States whose per capita income is lower than the national average, the Central assistance should constitute 70% as grant and 30% as loan with an end to reduce their volume of indebtedness. Also the grant of loan should be bifurcated in two divisions namely, one which goes for the social cause but is unproductive like expenditure on public health, education etc. and the other which is spent on productive projects like irrigation schemes, energy programmes etc. Such loans which are to be utilised in the execution of social benefiting scheme (unproductive ones) should carry nil payment of interest and recovery of loans in substantially large number of years. Also such loans which are used for productive purposes should bear return of loan and interest either at par with their economic return or should be realisable in perpetuity. I would also like to advocate, as I have already spoken recently in the NDC that the devolution of Central assistance to backward States like Bihar should be on the formula of IATP (Income Adjusted to Total Population). The Gadgil formula may, therefore, require to be accordingly revised. The grant of Central assistance should have the composition of 60% on population and 40% on backwardness.

I also hold the view that the benefits of the Central sponsored schemes have actually not accrued to poor States like Bihar because of their cost over burden. I suggest that the Central sponsored schemes should be under Central plan schemes and should have cent-percent grant in their execution.

We feel that both Planning Commission and Finance Commission should exist as they have immensely benefited the people and hence we do not want that they may be substituted by another agency. We also do not want to create a separate independent agency for distribution of receipts among States as it would be counter-productive and would not be in consonance with the constitutional provisions.

Government of India has discontinued the facility of drawing on overdrafts with effect from 1-10-85. Instead of it has increased the quantum of special ways and means advance. However the quantum is still low as compared to the extent of overdrafts utilised by the States during the Sixth Five-Year Plan. I advocate that the quantum of special ways and means advance should be more or less equal to the extent of overdraft on an average annually drawn by the individual State. This facility, would go a long way to curb likely fiscal imbalance and indiscipline.

States have been utilising deposits in nationalised banks through loan advances but the credit deposit ratio in States like Bihar is quite low as compared to all India average, Steps should be taken to ensure that the CDR gets enhanced to at least 60% for which some explicit formula should be devised. States have been allowed about 33% of the proceeds from the market borrowing. It is not condusive to their requirement. Suitable formula should, therefore, be arrived at so that the State's share in market borrowing gets increased to an appreciable extent.

The devolution of discretionary grants from the Planning Commission should be on the basis of some formula which should be made known to the States. While we want that the divisible pool of Central receipts should increase and should be regulated statutorily under the recommendations of the Finance Commission, we want that the system of grants-in-aid given by the Finance Commission should be minimised. The grants-in-aid should, however, cover special requirements of the States like expenditure on maintenance of bundhs and avoidance of floods. It should also cover such expenditure which are incurred by States to follow the Central pattern of expenditure like payment of additional dearness allowance, bonus, terminal benefits etc.

It has been our experience recently that receipts have increased by lightening the administrative machinery and not by increasing the taxes. We should, therefore, endeavour to strike a balance so as to maximise the return from the existing taxes both in the Central and the States' levels. The volume of taxation need not be enlarged. Neither do we feel that the States' power of taxation should be curbed. What is required at present is that States' fiscal requirement for economic growth should be fully met in the devolution of fund either through Finance Commission or through the decision of the Planning Commission.

Economic and Social Planning

I now come to the Planning process and the questions that have been raised in this regard.

The State Government is of the view that adequate opportunities are available for exchanging views with the Planning Commission. There are opportunities of discussions at the official level and the political level followed by mid-term appraisal also. There could, however be more frequent exchange of views. We would like the Planning Commission to help the State by getting expert studies conducted in various problem areas suggesting solutions and finding ways to implement the same as well. We would like that the Planning Commission should besides formulating the plan, be also given the discretion to distribute grants-in-aid on some formula which may help the States essentially the backward States, so as to achieve the basic objective of removal of regional imbalances and disparities.

It is, however, not necessary for statutory status being accorded to the National Development Council. Its role has been fairly effective even otherwise.

We would like some more freedom to be given to the States in the matter of selection of schemes within of course, the overall national priorities and the given allocations.

In the membership and the composition of the Planning Commission there does not appear to be any need for change.

It is only right that the Commission should examine in detail the States financial plans to ensure that the States are in a position to shoulder the plans and achieve the aims and objectives set up.

As I have observed earlier, central assistance should be available for meeting special problems, specially for the backward States like Bihar. Such assistance should be made available from some discretionary fund that should be made available to the Planning Commission

Planning

We have State Planning Board functioning a the State level on similar lines as of the Planning Commission in the Centre. The State Planning Board prepares prospective Plan, fixes up inter-regional priorities in the States. The State Planning Board has also been saddled with the responsibility of evaluation and monitoring. Thus the State Planning Board functions as the State level counterpart of the Planning Commission and thus it serves as an effective mechanism or instrument in the State Plan preparations in consonance with the national objective and priorities.

Industries

For no industries district financing pattern should be 10% by the State-Government, 50% of the Central and 40% by the Financial Institutions instead of present pattern of the one third of each. The items under IDR Act should be subject to constant review and revision from time to time by an Expert Committee. Growth centres should be allowed to be set up at the discretion of the State Government.

Miscellaneous

Agriculture

In the field of agriculture, a major parameter is the price fixation. While it is desirable that for the sake of uniformity, decisions are taken at the Central level but margin should be provided for local variations in terms of productivity, cost of production etc. Backward States like Bihar are also influenced by lack of infrastructural facilities and

susceptibility to natural calamities which may also be borne in mind at the time of price fixation of various commodities.

Education

In the field of education, it may be pointed out that the States already enjoy autonomy and the role of UGC has been helpful in fixation of norms and improving the quality of education. Education even if non-developmental but from the point of view of financial angle is an investment of far reaching significance. The present system of inter-action between the States and the Centre meets the requirement of the situation. However, it may be mentioned here that in respect of programmes like adult education, non-formal education special emphasis needs be given to the States like Bihar which are admittedly backward and below the national average. Even though we conform to the national policy relating to minority education; we would like to draw the attention to the need and mechanism being devised whereby the privileges and the freedom they enjoy is tempered by certain basic norms in the matter of financial discipline and quality of education as also to qualify for being treated as minority institutions.

In view of the fact that a large number of agencies already exist in various fields of trade like Coffee Board, Jute Corporation of India etc. there appears to be no over-riding necessity to have a separate Board.

We would, however, like to say that the financial institutions should be given some scope to relax basic requirements when it comes to investment in the backward States. Special steps should be taken for development of infrastructure in the areas because the industry is the key to generation of employment which lead to re-generation of the economy of the State.

In conclusion I take this opportunity to thank the Commission for hearing the views of the State Government. Centre-State relations are passings through critical times and, of late, have been subjected to tremendous tensions. The remedy to the problems that have arisen lies not in throwing over-board the well established institutions which have come to stay and by and large worked and served the need of the country but in making them more effective, more meaningful and workable.

The Constitutional Provisions and legislative mechanism already exist and these have been tested by time. What is needed is to make them work in the spirit in which they have framed and devised.

Gujarat

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 Our Constitution cannot be said to be FEDERAL in the strict sense of the term, but it has federal features with several characteristics, creating a strong bias in favour of the Centre.

1.2. It is felt that there is scope of greater autonomy to the States by suitable redistribution of legislative powers. This State subscribes to the view that a "Strong Centre" and "Strong States" are not mutually exclusive. It is, therefore, felt that it is possible to decentralise powers, including in the area of sharing of overall national resources, without sacrificing the principle of a strong Centre. However, this State does not subscribe to the view that appeals to the Supreme Court should be restricted only to Constitutional matters; but the jurisdiction of the Supreme Court in civil matters may be restricted.

1.3 Yes, we agree that there is a need for further decentralisation and for a dynamic review of the powers and functions with a view to enabling the states to reach their development potential to the fullest extent. However, the question of the decentralisation has to be viewed in the light of the national needs. The optimum Constitutional provisions for achieving the same are discussed under relevant heads.

1.4 No.

1.5. We are in general agreement with the view expressed above, and the relationships have been worked in conformity with the spirit and intent of the Constitution over the years but only for short span of the period in the Constitutional history of India such spirit and intent were not observed and adhered to. Difficulties, issues, tensions and problems which arise in the peculiar federal set-up of our Constitution can be resolved within the broad frame-work of the Constitution by the mechanism of the Inter-State Council under article 263 of the Constitution and by constituting an authority under article 307 of the Constitution and wherever required, also by amending the procedures, practices and laws which tend to strain the relations between the Union and States. Other suggestions are made in replies to various questions.

1.6 Yes. The following provisions in the Constitution, in our opinion, have been designed to achieve that end :

(i) Article 3.

(ii) Part II, regarding citizenship.

(iii) Emergency provisions : Articles 352, 356, and 360.

(iv) Integrated judicial system :
Article 217 (i), Article 217(1), Proviso (b) read with Article 124 (4).

(v) Powers of the Union to confer powers, etc. on the States :
Article 258.

(vi) All-India Services : Article 312.

(vii) Article 315.

(viii) Article 355.

(ix) Article 360.

(x) Inter-State Councils : Article 263.

(xi) Power of Centre to give directions :
Articles 256, 257, 365.

1.7 Yes, generally they are reasonable. However, care should be taken to ensure the judicious exercise of the powers of the Centre under the articles referred to in this question.

1.8 We do not agree with this view.

PART II

LEGISLATIVE RELATIONS

2.1 We endorse the view that there is nothing basically wrong in the scheme of distribution of legislative powers. However, there is a growing feeling that, over the years, the Union has tended to touch the State legislative Field by invoking powers available under entries 52, 54, 92 etc. in List I of the Seventh Schedule to the Constitution of India. Some of the instances are :—

(1) Industries (Development and regulations) Act, 1951.

(2) Mines and Minerals (Regulations and Development) Act, 1957.

(3) Rice-Milling Industry (Regulation) Act, 1958.

2.2 The State Government is of the view that it is necessary to review the Lists in the Seventh Schedule to the Constitution so as to confer more legislative powers on the State. Moreover, where the Centre feels necessity to make legislation on the subjects otherwise included in the State List, such enactments should be made only after consultation with the Inter-State Council. The following entries in the List III (Concurrent List) of the Seventh Schedule be transferred to List II of the Seventh Schedule :—

Entry Nos.—

10. Trust and Trustees—

11A. Administration of justice—

28. Charities and Charitable institutions—

43. Recovery of the claims in respect of taxes and other public demands.

A provision should be made in article 201 to provide for expeditious and time-bound decision of the president in the matter of giving his assent to a State Bill reserved by a Governor for the consideration of the President. When the President withholds his assent therefrom, he should be required to record reasons therefor in writing which should be communicated to the State Government.

2.3 Yes.

2.4 The legislation made by Parliament in 'national interest' or 'public interest' on subjects which are within the exclusive competence of the State Legislature should be only for a particular duration subject to periodic review.

2.5 Article 200 of the Constitution does not specify any time limit within which the Governor should make a declaration as to whether he assents to the Bill or withhold assent therefrom or reserves the Bill for the consideration of the President. It is suggested that a time limit of three months should be prescribed for such declaration and when the Governor withholds his assent he should be required to record reasons therefor in writing which should be communicated to the State Government.

It is suggested that for the purpose of article 201 also a time limit of three months should be prescribed within which the president should declare as to whether he assents to the Bill or withholds assent therefrom or directs the Governor to return the Bill to the State Legislature.

PART III

ROLE OF THE GOVERNOR

3.1 (a) The role of the Governor as envisaged by the Constitution is that of heads of the States in whom the executive power of the State vests, which they have to exercise with the aid and advice of the Council of Ministers. Their role is also to act as a link between the Centre and the State. This role assumes effective significance in the context of the Centre-State relations in the event of the imposition of the President's Rule in the State.

(b) The Governors have generally functioned properly as Constitutional heads of the States. However, during the last 34 years, certain occasions have occured creating impressions that in recommending imposition of the President's Rule in a State, in determining the relative strength of a political party after general elections to the State Legislatures for appointment of the Chief Ministers, and at a subsequent stage appointing the Chief Minister without ascertaining such strength on the floor or the State Legislature, some Governors have not at times acted constitutionally.

3.2 In fostering healthy Union-State relations, the role of the Governor should be such as would effectively ensure discharging of duties by him objectively in the best interests of the State and in accordance with the Constitution.

3.3 In the matter of—

(a) making report to the President suggesting action under article 356 (I), the Governor should function objectively and in the best interests of the State in the setting of the paramount national interest ;

(b) making appointment of the Chief Minister under article 164, the Governor should objectively ascertain the relative strength of the political party in the State Legislature. In the event of no single party getting absolute majority as a result of the general elections to the State Legislature, the Governor should first give an opportunity to the Leader of the single largest party to show that it has the total support of the majority in the House. In such a case, the Governor should test the majority, at an early date, on the floor of the House. When, any *Prima facie* question arises as to whether a Government has lost the majority support in the House, the question should be decided solely on the basis of a confidence motion to be moved on the floor of the House, for which a session should be summoned by the Governor within four weeks of the determination by the Governor that a *prima facie* case exists to justify the ascertainment of the continued majority. If necessary, suitable amendment may be made in the Constitution.

(c) Propogation/dissolution of the State Legislature the Governor should, in the normal circumstances, act on the advice of the Council of Ministers.

3.4 Intent and purpose of the Constitution-makers in providing in Article 200 for reservation of Bills by the Governor and in Article 201 for the consideration of the president is to give reflection time to reconsider the Bill by the Lagislature Assembly. The power of reservation by the Governor and consideration of the State Bill by the President is generally exercised in conformity with that intent, spirit and purpose. However, the Gujarat University Services Tribunal Bill, 1985 which has been reserved for the consideration of the President on 1-5-1984 has not yet received the assent of the President. There seems no instance where the Governor has withheld the asssent to a State Bill or reserved it for the consideration of the President without the advice of the Council of Ministers.

3.5 We agree with the above conclusion. No case of undue delay has come to the notice of the State Government.

3.6 (1) Yes.

(2) As per reply in 3.1.

3.7 No.

Under the Constitution, the Governor acts on the advice of the Council of Ministers, except in discharge of his discretionary functions in making a report under Article 356, in appointment of a Chief Minister and dismissal of a Chief Minister in the event of his losing majority support, etc. and not independently

as in the case of a Judge of the Supreme Court/High Court. So the Governor's post does not need any security of tenure or any special procedure of removal.

3.8 When it is brought to the notice of the Governor that circumstances have arisen indicating *prima facie* that the ruling party has not the majority in the Assembly, the Governor should at once ask the Chief Minister to fix a date for summoning the session of the House, so that the House meets within four weeks of such notice. If the Chief Minister fails promptly to advice the Governor on such date, the Governor should summon the Assembly without the advice of the Council of the Ministers, so that the session meets within the aforesaid period of four weeks.

We, however, do not agree to the suggestion that the Governor should himself verify the fact about the majority of the party on the floor of the Assembly as that can conveniently and more properly be decided by the members of the Assembly on the floor of the House.

3.9 Please refer to the reply at 3.3 (b)

We do not agree that the provision like article 67 of the Basic Law of the Constitution of the Federal Republic of Germany should be made as it will not solve the problem.

3.10 In all matters except making of report under article 356 and matters like appointment of the Chief Minister and dismissal of the Chief Minister on proof of loss of majority support in the House, the Governor is supposed, in the present scheme of the Constitution, to act on the advice of the Council of Ministers. Issuing guidelines does not seem to be necessary.

PART IV

ADMINISTRATIVE RELATIONS

4.1 The purpose, function and use of Articles 256, 257 and 365 is to provide for the effective control of the Central Government over the States and for securing and preserving unity and integrity of the nation.

No instance of such directions has occured so far the Gujarat State is concerned.

4.2 We support the view that Article 365 should be retained in the Constitution. The Article provides the only constitutional sanction to articles 256 and 257.

4.3 We agree with the recommendation but would suggest that in addition to informal channels some formal channels like, Inter-State Council, should also be involved. Efforts of the Centre to explore the possibilities of settling points of conflict by issuing guidelines to cover the points of conflict likely to arise may also help in solving conflicts.

4.4 Powers under Article 356 were exercised four times so far as Gujarat is concerned. But the extra ordinary remedial power cannot be said to have not been properly exercised.

4.5 We do not agree with this view as the exercise of the powers under Article 356 being extraordinary should be sparingly used. The period for President's rule could be extended only in the circumstances specified in clause (5) of Article 356. The question of handicap to the efficacious use of the power by the Union Under Article 356 does not arise as it can be used for the total period of 3 years and during that period the normalcy should be restored.

4.6 The present arrangements are working satisfactorily.

4.7 Even though the Central agencies referred in the question and several such agencies deal with the activities relating to the subjects in the State List and the Concurrent List of the Seventh Schedule to the Constitution, it cannot be said that the Union has made undue inroads in the autonomy of the State. The criticism is not justified as such agencies dealing with mostly policy matters can effectively function in accordance with the policies which are formulated for the entire country. The planning and financial provisions are required to be made on the broad basis considering the policy for the entire nation. It is, however, necessary to restrict the role of such Central agencies as much of the functions require to be performed by such agencies can be conveniently and effectively performed by the concerned states. The functions of the Central agencies, therefore, should normally be confined to formulating the policies, preparing the plans, providing finances and advising the States to implement the policies and of a supervisory nature.

4.8 Under article 312 of the Constitution of India the All-India Services are to be constituted if it is necessary or expedient in the national interest. The objective that the creation of such a cadre protects the national interest is by and large fulfilled as the members of such services are drawn from the entire nation. It has helped the integration of the nation and to that extent the All-India Services have fulfilled the expectations of the Constitution makers.

At present, administrative control over the All-India Services is of the concerned State and only in disciplinary matters relating to the major punishments the concurrence of the Union public Service Commission and the Government of India is necessary. To maintain the All-India character of the services and independence, more control of the State over the services is not necessary.

4.9 Under Article 355 of the Constitution of India it is the duty of the Union to ensure that the Government of the State is carried on in accordance with the provisions of the Constitution. This duty includes the obligation of the Union to ensure that the law and order situation is maintained and the Government of the State is not carried in violation of the provisions of the Constitution. In such circumstances to fulfil the obligaiion of the Union, it may necessary to locate and use the Central Reserve Police and other armed forces in aid of the civil power in the State, even *suo motu*. Entry 2-A in List I of the Seventh Schedule of the Constitution clearly confers the legislative competence to the Union for the deployment of such armed forces in any state in aid of civil power. The extent of the exercise of the power

under article 355, however, should be considered in view of the fact that article 257 A which specifically provided for the assistance to the State by the deployment of the armed forces or other forces of the Union is repealed. It means such exercise of *suo motu* power under article 355 should be sparingly used. We are of the view that the Union is, and should be, competent to locate and use its Central Reserve Police and other armed forces in aid of Civil power in the State even *suo motu* in order to discharge its constitutional duty under Article 355.

4.10 Broadcasting and television should continue in the Union List as it is necessary for national integration. Most of the States having limited financial resources and lacking in required infrastructure may not be in a position to effectively implement the programmes. Television is yet in a formative stage in the country and, therefore, a broad based national policy is necessary for the implementation of the programmes. It is, however, desirable that the States should have effective voice in formulating the policy of the broadcasting and television programmes. This can be done even without including the broadcasting and other like forms of communication in the Concurrent List but by formulating the healthy conventions.

4.11 By and large, the Zonal Councils have effectively served the purpose. However, resort should also be had to article 263 which provides for setting up Inter-State Councils whenever necessary.

4.12 Under article 263 of the Constitution, the President has powers to establish the Council. The duties of the Council should be as specified in the said article. As one of the duties is to inquire into and advise upon disputes which may arise between the States, the Constitution of such council would certainly iron out the inter states disputes. Clause (a) of article 263, however, does not provide for inquiring into and advising upon the disputes between the State or States and the Union and therefore, the Council will have no powers in this regard. Under Clause (b) of article 263, the Council will have only the duty to investigate and discuss subjects relating to the common interest of some of the States or all the States and the Union. For such subjects of a common interest, the difference, if any, can be ironed out by the Council. The Council has, under clause (c) of arricle 263, also duty to make recommendations upon any such subject and in particular for the better coordination of the policy and action with respect to such subjects but that duty is only recommendatory and, therefore, it will not be much effective. To make the Council more effective, it is necessary to amend article 263 of the Constitution so as to enlarge the scope of duty and functions of the Council.

It is also necessrary to make provisions that the recommendations of the Council if not accepted by the Union should be placed before parliament for discussion. Over and above the functions specified in article 263, the functions and powers of the Council should be relating to—

(1) The broad principles of the planning in the states or the Zones ;

(2) The power generation and distribution for the Zones ;

(3) Aid by the Union to the States for the calamities like flood, drought etc.

The Council should be presided over by the Prime Minister and Union Finance Minister, Union Home Minister and Union Minister-in-charge of Planning and the Chief Ministers and Finance Ministers of the States should be the members.

The council should be set up on the premanent basis and the composition, powers and functions should be defined. The Council must have as independent Secretariat.

PART V

FINANCIAL RELATIONS

5.1 A review of the working of the mechanism for devolution and examination of the resources transferred by the Union to the States during the last 34 years clearly establishes that while the Constitution-makers has envisaged that the Finance Commission will be concerned with total assistance to be given to the States other than by way of loans this role over a period of time has been diminished to that of an agency concerned mainly with filling up the non-plan revenue gap of the States which was never intended by article 280 of the Constitution. Consequently, transfer of resources by the Union to the states by way of assignment of certain taxes and duties in their entirety and the obligatory and permissive division regarding other taxes and duties has not kept pace with the increasing needs of the states on account of the responsibilities cast upon them by the Constitution.

5.2 Observations of A.R.C. Study Team are still relevant. It will not be possible to increase the resources of the States by complete separation of the federal fiscal relations of the Union and the States and abolition of the scheme of the transfer of resources.

By transfer of more elestic taxation heads to List II, Seventh Schedule the resources of the State can certainly be increased.

All taxing heads/taxing powers should not be transferred to the Union List to form the shareable pool as it will not be feasible and practicable for the Union to impose and collect all taxes. It is also against the basic principles of federal set up.

It is suggested that the following measures be taken to improve the resources of the States :—

(1) Withdrawing of the scheme of levy of additional duties of excise in lieu of Sales tax on textiles, tobacco and sugar and enabling the State Governments to levy sales tax thereon.

(2) Introduction of a tax on consignment transactions to be levied by the Centre and administered and collected by the State Governments on the lines of the Central Sales tax.

(3) Transforming more taxing heads to List II, Seventh Schedule and also empowering the State Governments to levy the following taxes presently covered under article 269 of the Constitution :—

(a) Terminal taxes on goods and passengers carried by railway, sea or air ;

(b) Taxes on railway fares and freights;

(c) Taxes on the sales or purchase of newspapers and on advertisements published therein.

(4) The present ceiling of Rs. 250 per annum in the case of taxes on profession, trades, callings and employments should be stepped upto Rs. 1,000/-.

(5) The State Governments be permitted to levy tax on the consumption of power by the railways as the railways are a commercial organisation.

(6) More central taxes should be brought into the shareable pool particularly the corporation tax, customs duties, surcharge on income-tax and excise, etc.

(7) As far as possible mobilisation of additional resources by the Centre should be by way of revision of rates of taxes rather than by way of revision of prices and that the additional mobilisation by the Centre should not be at the expense of the State enterprises. The Eighth Finance Commission has after careful consideration of this matter stated that an increase in administered price is justified if there is an increase in cost of production, provided that the public sector undertakings are functioning with reasonable efficiency. But, it obtaining revenue is the sole consideration, then the appropriate course is to increase excise duty.

(8) An important source of financing of developmental expenditures is market borrowings. The distribution of market borrowings between the Centre and the States should be in proportion to the distribution of plan expenditure between the Centre and the States.

(9) The amounts raised by the Centre by way of schemes like compulsory deposits, special bearer bonds, etc. outside the scheme of market borrowings should also be shared with the States.

(10) The World Bank and bilateral assistance received by the Government of India for projects included in the plan should be fully passed on to the State which are implementing the concerned projects.

5.3 While strong Centre with more elastic sources of revenue and discretionary powers can speed up the development of the backward states, it may be stated that the economic development is a complex function depending upon a number of factors, only one of which is finance. Therefore, adequate provision of finance for the respective States should be accompanied by a well worked out strategy of growth keeping in view the level of need of advancement of the state concerned.

5.4. State Government would not recommend the deficit financing beyond a certain limit for covering the resources gap. This could be covered by effective and efficient use of the existing power of the Central Government and effective control on the growth of Central Government expenditure including the budgetary support to Central Public Sector Undertakings.

5.5 In our view the Finance Commission should evolve a scheme of resource transfers based on the assessed surplus of the Union generated on account of the economic advantages of the Centralised levies.

As regards the *inter se* distribution of the share of the States in Central levies the factors like population, collection, consumption, per-capita income and various indicators of the backwardness or otherwise, are taken into consideration by the Finance Commission over and above the special factors of problem are likely the desert areas, saline coastal areas, barren hilly areas should be taken into consideration.

The State Government is of the view that *inter se* distribution of the Central assistance for plans of the States should be determined on the basis of the principles that may be decided by the N.D.C.

The Non-Plan assistance to the States consists primarily of share in small savings in the shape of loan equal to 66.2/3% of the net small savings, collections in the States. This may be steppted up to 80 per cent of net collection of small savings as requested in N.S.S. Committee. It is urged that all savings schemes which are akin to small savings such as capital investment bond, special bearer bond etc., should also be shared with the States.

5.6 In the State Government's view almost every State will have to be provided special funds for development of the economically underdeveloped areas to enable them to contribute their share in the development process of such areas. In a situation where there are only slight shades of differentiation of the average levels of development of the different areas in the country and where there are large pockets of backwardness in all the States of the country there seems to be no special advantage in establishing a special federal fund for ensuring faster development in economically under-developed areas relative to the other developed areas of the country. It will also limit the use of funds for restricted purpose instead it would be desirable that larger transfer are made from the Centre to all the States and in formulating the plans of the Central Ministries like Railways, Post and telegraph, industries, etc. Special Schemes are drawn up for providing infrastructural and other facilities in the backward areas of the country.

5.7 As mentioned in reply to question 5.2 the following Central taxation powers can be reasonably transferred to the States :—

(1) Withdrawing of the scheme of levy of additional duties of excise in lieu of sales tax on textiles tobacco and sugar and enabling the State Government to levy sale tax thereon.

(2) Empowering the State Government to levy the following taxes presently converd under article 269 of the Constitution :

(a) terminal taxes on goods and passengers taxes carried by railway, sea or air ;

(b) taxes on railway fares and freights ;

(c) taxes on the sale or purchase of news papers and on advertisements published therein.

5.8. The State Government would agree with the proposal that there should a mechanism for consultation and co-ordination between the Centre and the States in regard to the levy of major taxes like corporation tax, income tax, wealth tax, estate duty, customs duty, excise duty, sales tax etc. which have a profound bearing on the economy of the country as a whole and considerable damage may occur as a result of fragmentary approach to taxation.

The State Government however does not agree to the sales tax being made a central levy. This is because of the following reasons :—

(i) Sales tax is a levy falling to a large extent on transactions taking place within a state. In vast country like India, there are wide differences between States in consumption pattern of the people, economic conditions and the relative importance of commodities, to the local economy. It is only the State Government which can sensitively operate a scheme of sales tax to suit the local needs of the people of each state.

(ii) Sales tax is a tax which is being used as an instrument of development by State Governments. This is done by granting exemptions to raw materials used in manufacture of goods in manufacturing sectors which are important to the economy of the State. This requires close to the ground operations with variations from time to time depending upon the changing situation and can only be carried out at the State Government level.

(iii) in so far as Sales tax on inter-State Trade or Commerce is concerned, Government of India have already fixed a ceiling on the rate of Sales tax which can be levied by the State Governments on major raw materials and goods declared to be important from the point of view of inter-State trade or commerce.

(iv) a regional forum for inter-State consultation in sales tax already exists in the shape of the regional committees where officials of the Government of India and the Finance Departments of the State Government, and their Commissioners of Sales Tax meet periodically.

There is at present no machinery of consultation of the Central Government with the States on the levy of such Central taxes, such consultation could easily be ensured by a Committee of Finance Ministers of States presided over by the Union Finance Minister. This Committee could discuss policy issues relating to the Corporation tax, income tax, wealth tax, estate duty, customs excise, Sales tax and administration of these taxes and other allied matters affecting the Central and State Budgets. The National Development Council cannot fulfil this role as it is largely concerned with developmental issues.

So far as the distribution of the tax proceeds is concerned, sufficient provisions are made in the Constitution and the Finance Commission has ample powers under Article 280 of the Constitution to make recommendations. However, it is necessary that some more Central Taxes should be brought into a divisible pool particularly the Corporation Tax and Custom duties etc.

5.9 While the constitutional position is that the Finance Commission is concerned with total assistance to be given to a State, other than by way of loans, the emergence of the Planning Commission as an important aid given and more importantly as an active agent in determining the long term trend in the expenditure of the State Government has in practice brought about a progressive diminution in the scope and functions of the Finance Commission. Its role has in effect been reduced to that of an agency concerned with the non-plan side of the revenue budget of the States.

In the State Government's view the Finance Commission should make an objective assessment of the total resources and requirement both of the Union and the States and determine the amount of surpluses of the Union which can be transferred to the States by way of tax devolution and grants (Plan and Non-Plan) to enable them to fulfil the responsibilities cast upon them by the Constitution. The Finance Commission may also determine the inter-se distribution. among the States, of the transfer by way of tax devolution and grants under article 275 leaving the inter-se distribution of plan grants to the planning Commission on the basis of such guide lines as may be evolved by the National Development Council. The Planning Commission will also be concerned with the additionality of Central assistance to the States on account of externally aided projects which could be determined at the plan discussions taking into account the overall plan performance of the States and in particular the efficiency with which the externally aided projects/schemes are executed by them. The Planning Commission could also, in consultation with the administrative ministries, determine the patterns of assistance in respect of the Central sector/Centrally sponsored schemes the Centrally overall outlays on such schemes and the inter-se distribution of these outlays among the states.

5.10 In the matter of statutory transfer of resources by way of tax devolution and grants the Finance Commissions have been obsessed with actual/normative non-plan revenue deficits and surpluses of the states. In the State Government's view the assessment of the needs of the States by the Finance Commissions on the basis of the normative non-plan revenue deficits has not only resulted in adequate transfers but has also been unfair to States which paid greater regard to financial prudence and made greater efforts in raising revenues. This is because the gap filling approach implied that the Finance Commissions would virtually under write the normative non-plan revenue deficits of the State budgets regardless of the factors causing such deficits.

As regards the plan assistance to the State since the Fourth Plan this is now determined on the basis of formula wherein a major portion of the assistance is based on population. Factors like per capita income, tax effort, special problem etc. are also taken

into account. This is a great improvement over the earlier practice where the plan assistance was largely based on the gap between the plan outlay and the state resources.

The absolute level of public expenditure is also not a correct criterion for assessing the levels of welfare programmes undertaken by the State Governments. This is because the efficiency of such expenditure and the type of scheme financed by the State Governments are a more important indicator than the figures of total public expenditure.

5.11 The assessment of the needs of the States by the Finance Commission on the basis of the normative non-plan revenue deficits has not only resulted in adequate resources transfers but has also been unfair to States which paid greater regard to financial prudence and made greater efforts in raising resources. This is because the gap filling approach implied that the Finance Commission would virtually under write the normative non-plan revenue deficits of the State budgets regardless of the factors which cause such deficits. Another limitation of the gap filling approach is that since all non-plan commitments as of a given date are taken into account. The balance of the non-plan gap may take place at different levels of expenditure depending on the nature and coverage of non-plan commitment made by the States from time to time. A normative approach in respect of a few items may not make significant impact on the policies of the State Governments as each Commission has adopted its own norms in respect of specific items.

In view of these considerations the State Government would urge that the approach hitherto adopted by Finance Commissions. that grants- in-aid under article 275 should be on the basis of the fiscal gap of the States, should be given up altogether and instead new ground should be given. We would recommend that grants-in-aid may be provided for (i) equalisation of the standards of specific administrative and social services on the basis of nationally accepted programmes: and (ii) to meet burdens on State finances on account of special circumstances or matters arising as a result of national policies.

5.12 The State is in broad agreement with the suggestion of the Seventh Finance Commission that the bulk of the resource-transfers should be done through tax-sharing and the role of grants-in-aid under Article 275, in the scheme of total revenue-transfer should, as far as possible, be supplementary.

5.13 In our view, the grants should broadly be on principle of equalisation of the standard of specific administration of social service on the basis of nationally accepted programmes and also to meet the burden on State finance on account of special circumstances like financing the relief expenditure.

5.14 The receipts from scheme like the special bearer bonds, Compulsory deposit schemes and National deposit scheme should be shared by the Centre with the States on the lines of the National Small Savings Scheme.

As regards the administered prices in a situation of monopoly or near monopoly by the Government of India the distinction between the prices and the tax element gets blurred because the Government of India has the discretion either to increase the administered price or increase the tax thereon. The State Government agrees with the thinking of the Eighth Finance Commission on this subject. The Commission has stated that an increase in administered price is justified if there is an increase in the cost of production, provided that the public sector undertakings concerned the functioning with reasonable efficiency. Also in fixing the administered prices, provision can be made for reasonable profits. But, if obtaining revenue is the sole consideration then it seems that the appropriate course is to increase excise duty.

5.15 The present methods by which the total savings available in the Community are distributed between the public and private sectors and within the public sector between the Centre and the States and their respective public undertakings are not satisfactory as this is determined largely by the Planning Commission and the Central Ministries which attach greater priority to their own requirements vis-a-vis those of the States. It is suggested that a suitable institutional arrangement such a Committee of State Finance Ministers presided over by the Union Finance Minister could, amount other things, consider the sharing of savings, of the community between the Centre and the State and their respective public undertakings.

5.16 Unlike the Central Government, State Governments taken together cannot resort to deficits in their budget year after year. This is because beyond a limit prescribed by the Reserve Bank of India, any budgetary deficit has to be financed out of the overdraft on the RBI and the State cannot be in an overdraft with the RBI for a long period. It is however true that the States finances have been under severe strain and from time to time Government of India provided on an *ad hoc* basis non-plan medium term loans to certain States to tide over their financial difficulties. In the State Governments view the basic problem has been the inadequate transfer of Central resources to the States to enable them to fulfil the responsibilities cast upon them by the Constitution. It is true that in absolute terms the amount of resources transferred from the Centre to the States has gone up but such transfer as percentage to the total revenue of the Centre has shown a marginal decline, as the Central Government has been taking specific measures as a result of which it has been appropriating for itself revenues which would have rightly been shared with the States for assigned to them.

As regards the mounting indebtness of the States this is primarily on accounts of patterns of assistance by the Centre to the States. At present, the loan component of the Central assistance for the State plan schemes is 70 per cent and grant component 30 per cent of the total Central Assistance. The direct financial returns from the schemes included in the State plan are hardly adequate to pay for the interest, charges and repayment of the loans. Apart from this, the Central Government gives loans to the States for non-productive purpose such as meeting a part of the expenditure on natural calamities, clearaance of overdrafts. etc. Such patterns of assistance add to the financial problems of the States which are

subsequently sought to be resolved by *ad hoc* measures like rescheduling the repayment of the Central loans instead of suitably revising the patterns of assistance.

5.17 As has been pointed out earlier, mounting indebtness of the States is primarily on account of patterns of assistance by the Centre to the States. At present, the loan components of the Central assistance for the States Plan Schemes is 70 per cent and grant components of 30 per cent of the total Central Assistance. The direct financial returns from the schemes included in the state plan are hardly adequate to pay for the interest charges and repayment of the loans. Apart from this, the Central Government gives loans to the States for non-productive purposes such as meeting a part of the expenditures on natural calamities, clearance of overdrafts, etc. Such patterns of assistance add to the financial problems of the States which are subsequently sought to be resolved by *ad hoc* measures like rescheduling the repayment of the Central loans instead of suitably revising the pattern of assistance. This problem can be overcome by :—

(i) a significant step in the transfer of resources from the Centre to the States;

(ii) modifications in the pattern of Central assistance to the States. In the case of State Plan Schemes the Central assistance should be present pattern under which 70% of the plan assistance is in the form of loan. Similarly, for non-productive programmes such as natural calamities, etc. the assistance should be wholly in the form of grants; and

(iii) the additional assistance to the States for the externally aided projects included in the State plan should be passed on to the States on the same terms and conditions on which it is made available to the Government of India.

5.18 The State's freedom to borrow within the territory of India is regulated by the provisions of Article 293 of the Constitution particularly clause (3) of this Article which in effect requires that a State may not, without the consent of the Government of India, raise any loan. These constitutional restrictions on the State's freedom to borrow appear to have been made mainly with a view to regulating such borrowing within the monetary and fiscal policies determined by the Government of India. This requirement in effect restricts the freedom to the States to raise such loans despite the capacity of the States to raise and utilise such funds productively. This is because the total quantum of market borrowings and its distribution between the Centre and States is determined by the Government of India, and there has been a decline in the share of the States in the total market borrowings in recent years. The State Government would suggest that as market borrowings is primarily undertaken for development purposes the criteria for allocating the overall market borrowing between the Centre and the States should be ratio of plan outlay of the Centre and the States instead of the position obtaining today under which the amount allocated to the states is the balance amount after meeting the requirements of the Centre.

5.19 The State Government has pointed out to the Government of India that in respect of State Plan Schemes financed with IDA/WORLD BANK assistance, the IDA/World Bank insist on incurring certain order of outlay within a specified period, thereby imposing an additional burden on State Budgets in the plan period whereas the external assistance accurred to the Central budget. Taking the various factors into consideration the Government of India agreed initially to provide to the States extra Central assistance amounting to 25 per cent of IDA/World Bank disbursements in respect of State plan projects assisted by them which was subsequently raised to 70 per cent. The assistance is in the form of loan and grant in the ratio of 70 : 30. In the State Government's view the additional assistance for the externally aided projects included in the State Plan should be given to the States on the same terms and conditions on which the assistance is made available to the Government of India.

5.20 Instead of setting up the Loans Council it is suggested that the Committee of State Finance Ministers presided over by the Union Finance Minister could decide about the borrowing limits of the different States and the Centre on the basis of principles laid down by the Committee.

5.21 The increase in the ways and means limit enjoyed by the State Government with Reserve Bank of India takes care of temporary difficulties arising from the uneven flow of receipts or expenditure. However, this cannot take care of relatively more chronic imbalance between their resources and functions, inadequate devolution and the absence of suitable mechanism to deal with from unforeseen difficulties. The short term difficulties arising from uneven flow of receipts or expenditure could be met by periodical upward revision in the ways and means limits enjoyed by the State Government with the Reserve Bank of India. The latter problem could be remedied only by control over plan/non-plan expenditure and larger devolution of resources from the Centre to the States.

5.22 It is not correct to say that the States are not exploiting adequately their own sources of revenue. The resource mobilisation by the States as a whole has kept pace with the resource mobilisation by the Centre although the State taxes are much less elastic than Central taxes.

5.23 No Comments.

5.24 Yes, the State Government would agree with this view.

5.25 The views of the State Government to augment the resources by exploiting the duties and taxes specified in article 269 are as follows :—

(a) the *ad hoc* surcharge presently being recovered on all railway tickets issued to and from mela stations be converted into a terminal tax on Railway Passengers Tax Act, 1956;

(b) a terminal tax be levied on passengers carried by air on the internal and international flights at the rate of 1 per cent of the air fare;

(c) a terminal tax be levied on goods carried by air at the rate of 1 percent of air cargo charges;

(d) a tax on railway passenger fares be levied at 15 per cent of the fare on air conditioned and first class travel, 10 per cent on second class express/main travel and 5 per cent on second class ordinary travel beyond 100 kms. Second class ordinary fares upto 10 kms. be exempt from this levy;

(e) a tax be levied on the sale of newspapers and periodicals at 10 per cent in the case of newspapers and periodicals costing upto Rs. 2 per issue and 20 percent in the case of more expensive newspaper/periodicals costing more than Rs. 2 per issue and

(f) a tax be levied on advertisements published in newspapers and periodicals on the lines suggested by the Fifth Finance Commission.

The proceeds of the levies be distributed on the principles that it should secure for each State, as nearly as possible, the amounts which it would have itself collected if it had the power to levy such tax or duty.

5.26 The State Government would like to point out that in providing for an impost on passenger fares as on of the taxes to be levied by the Centre and assigned to the States under Article 269 of the Constitution, the architect of the Constitution had intended to give to the States access to a share of the growing revenues of the Railways. This objective has been thwarted by the substitution of the railways passenger fares tax by a fixed lump sum grant which has not grown in proportion to the increase in the revenue from railway passenger fares. The State Government, therefore, urges the reimposition of the tax on railway passenger fares instead of paying a fixed grant in lieu of the tax.

5.27 No Comments.

5.28 The views of the State Government on the working of the present arrangements in regard to provision of Central Assistance to the State for dealing with natural calamities are—

(1) The additional requirement of funds on account of severe droughts, extensive floods, devastating cyclones, etc. should be assessed by a Central Team;

(2) The team should adopt realistic norms of expenditure on relief, rehabilitation and restoration of damage to public properties while making this assessment;

(3) The Government of India should provide non-plan grant under Article 275 to meet the entire additional outlay recommended by the Central Team in the case of such calamities;

(4) The present distinction made between drought relief works and repair and restoration works/under other calamities like floods, cyclones, etc. should be done away with for the purpose of Central Assistance;

(5) For the purpose of eligibility of Central assistance, the out off point of the expenditure on relief, rehabilitation and restoration of damage should not be the financial year but a reasonable period after the close of the financial year taking into account the nature of calamity and the type of expenditure which the State Government is called upon to bear.

In order to ensure optimum utilisation of relief assistance the State should be free to incur expenditure on any item of relief, rehabilitation and restoration subject to the overall ceiling fixed by the Government of India.

5.29 The role of the National Loan Corporation is not clear. If it is to raise funds from the market and then provide them to the States for financing schemes in various fields like agriculture, industrial development, etc. it will only be duplicating the work of existing all India financial institutions like NABARD, RBI, etc. which are competently discharing these functions. In fact, to day the sectors of development are so many and so specialised that it will be impossible for one loan Corporation to do justice to the Loan requirements of all of them. The role of the National Credit Council is also not clear. At present the RBI is discharging the functions of watching the flow of credit into various sectors of the economy. The State Government does not see any particular advantage to be, derived by the establishment of a National Credit Council.

5.30 The State Government generally agrees with the view that the funds should be spent prudently and in such a way that the benefits go back largely to the people.

5.31 This State Government is of view that the expenditure as well as the revenues of the Centre should be subjected to the same degree of rigorous scrutiny by the Finance Commission as those of the States. After the exercise by the Finance Commission, the monitoring of the expenditure by the Centre and the States should be left to the Union. Ministry of Finance in the case of the Centre and the State Finance Departments in the case of States. A national Expenditure Commission although attractive as an idea will be unfeasible as it will cut into the autonomy of the respective Governments.

5.32 The share of the States in Central taxes like income tax, Union excise duties is finalised on the basis of the actual receipts of the respective taxes as certified by the Comptroller and Auditor General. It is observed that because of the time lag in certifying these figures there are arrears in the payment of share to the States which affects their ways and means position. Similarly, in the case of finailisation of Central assistance for the State Plan Schemes, Centrally sponsored schemes and non-plan expenditure on natural calamities, the Central Ministries required audited. figures of expenditure.

There are delays in getting the audited figures mainly because the form in which the accounts are kept do not contain the details required by the Central Ministries.

5.33 No Comments.

5.34 In the State Governments view, parliament has conferred sufficient powers and enjoined adequate

duties on the Comptroller and Auditor General to enable him to keep an effective watch on the expenditure of the Union and the States.

5.35 In the State Governments view that reports presented by the Comptroller and Auditor General to the State Legislature are reasonably comprehensive and accurate to enable the Legislature to take firm views in the Matter.

5.36 These examinations are important instruments. On ascertaining that expenditure are incurred according to the rules and procedure but they cannot be considered sufficient for controlling the expenditure at the Central and in the States.

5.37 The State Government agree with the view that the Estimates Committee can give useful legislative and administrative advice to the administration.

5.38 The assessment of the propriety of the expenditure of the Union and States is best left to the judgement of the Parliament and the State Legislatures and there is no need for an Expenditure Commission for such assessment. The Comproller and Auditor General of India also cannot perform this role as his powers and functions are limited under the Comptroller and Auditor General (Duties, Powers and conditions of Services) Act.

5.39 This Question, we presume, arises in the context of the Centrally Sponsored Schemes. The irritant and delay in the clearance of Plans and action in respect of such schemes are due to vagueness of the Schemes, and unclear guidelines for the implementation of such schemes. This delay could be considerably reduced if the Government of India circulated clear-cut guidelines for the implementation of such schemes and if the State Governments implement the scheme on the basis of such guidelines. Further, they may not be required to submit their plans and action for clearance.

To ensure that the funds released by the Centre for specific purpose are, in fact, utilised for that purpose, by the States, the States may be required to submit the utilisation certificate to the Government of India.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 There is considerable scope for enhancing the quality and the level of participation by State Government in the formulation of National Plans. The meetings of the National Development Council would be even more purposeful if the States are more effectively associated in the process of finalising the agenda of the meetings. As per the present practice the State Governments are not given an opportunity to suggest topics for the consideration of the NDC. Since the Chief Ministers of all the States are members of the N.D.C. it would be in the fitness of things if the agenda for the meeting be prepared in consultation with them. Apart from annual meetings of N.D.C., there is a need for regular forums such as—

(i) Conference of State Planning Secretaries; and

(ii) Conference of State Planning Ministers

to consider the various issues, from time to time, before submitting the same to the N.D.C. These meetings should be held at regular intervals say twice or thrice a year to follow up action on recommendations of N.D.C. and discussing in detail procedural aspects of planning and formulation and review of Centrally Sponsored Schemes. It is suggested that the conference of Planning Secretaries should be held atleast twice in a year, and that of State Planning Ministers at least once in a year, so that States may have adequate chances to give their views on the implementation of Economic Programmes, emerging new economic policies at various levels. The regular conferences of the State Planning Secretaries will help to identify good practices as well outdated procedures, and enable to minimise shortcomings noticed so far, in the working relations between the Planning Commission and the States. Because of the present practice and procedure some States get favourable treatment as compared to others in terms of definition of key elements of Centrally Sponsored and Central Sector Schemes. For instance, it happens that in the last quarter, amounts not utilised by some States are given to a few States which are adept in absorbing more than their allotment. This situation can be effectively dealt with by publication of concepts, definitions and assumptions underlying Centrally Sponsored Schemes and Central Sector Schemes well in advance incorporating the views of State Governments at the time of their formulation and, reduce the imbalances in inter-State absorption of funds by detailed review at the conferences of State Planning Secretaries twice or thrice a year preferably in the first, second or third Quarter of the year, leaving enough time to take remedial action.

6.2 National Development Council deals with the broad policy parameters of economic development based on the directive principles enshrined in the Indian Constitution. The good of the people and the development of the nation depend upon the co-operative attitudes of all the partners in the federal system of the Government. Clothing this august body with statutory powers will bring rigidity in its approach and may even lead to possible legal challenges at various stages. A legal framework is usually not suitable for dealing with rapidly changing situations through a multitude of impl ementing agencies. What is required is flexibility and dynamism in our efforts in tackling the socio-economic problems keeping in view the changing technology, changes in the pattern of demand along with innovative responses to preserve the quality of environment. The meetings of the National Development Council have generally been held for approving the Approach Paper and Draft Plan Document and the agenda is prepared by the Planning Commission without any consultation with the State Governments. Moreover, it is observed that there is no follow-up of suggestions made in the speeches delivered by the Chief Ministers with the result that the N.D.C. meetings tend to be somewhat one-sided concern as they are, at present, exclusively for approving the documents prepared by the Planning Commission.

It is, therefore, suggested that the meetings for the N.D.C. should be held regularly to discuss the issues of national importance with the agenda prepared in

consultation with the State Governments with arrangements for the follow-up action on the points and suggestions made by the State Government, and a system of reporting back to the Council details thereof. A Standing Committee of the N.D.C. or some other suitable machinery may also be constituted which can meet at regular intervals and prepare the ground for the N.D.C. meeting. We are in agreement with the proposal in 6.2 that once the development plan is approved by the N.D.C. the States should be free to implement them as per approved pattern and adequate financial resources should be provided to the States.

6.3 At present, the process of consultation seems to be top-down i.e. States take their draft plans for detailed scrutiny to the Planning Commission, the States have no real say in the Planning for sectors, like coal, steel, cement, petro-chemicals, railways, major ports, airways, tele-communication, etc. All these are Central subjects. But these sectors are vital to the States' progress, given their role as key elements in infrastructure (Railways, P&T) or as critical raw materials (Coal-Steel) for industrial development. Given the vital role these sectors play in the development of the State's economy arrangements for more detailed consultation with States seem necessary. At present there are Advisory Committees in some of the Central agencies such as the Railways and Telephones at State level, but these deal with operative aspects and the day to day functioning of these organisations rather than future direction and intensity of development. It is suggested that there should be intensive consultation between Central and State agencies.

The Central Government should provide detailed information in advance to the States regarding location of the Central projects. In fact, the Central Government should actively call for suggestion from the State Government highlighting the potentialities and technical aspects regarding location of the Central Government projects. This might help to ensure that the choice of investments is made on economic, scientific and technical criterion and safeguard against the possibility of the projects deemed to failure or serious under-utilisation of capacities for reasons of inappropriate location.

Abundant information of State Sectors is provided to the Centre in the various formats prescribed by the Planning Commission as well by the Central Ministries, whereas the information pertaining to various Central Sectors is seldom available to the States. The information is available in some of the formal publications usually limited significance because of a time lag of two to three years. It is suggested that at the official level. Key economic data and features of central plans affecting the States should be properly analysed and disseminated by the Planning Commission ideally, before the proposed conference of State Planning Ministers or Secretaries. This would enable State Govt. to project its economic indicators on the latest data available through this process. As regards the present composition and procedures of the Planning Commission, it cannot be said that they allow for close understanding and consultation with the State Governments as envisaged at the time of setting up of the Planning Commission in 1950. The Planning Commission being a creation of Central Government is placed in close relationship with the Centre. But, as also observed by the Administrative Reforms Commission in its interim report (1967) on the machinery for planning, the Planning Commission should at the same time be independent of the Centre in order that the States may have no cause for dissatisfaction with its working. Over a period of time, the Planning Commission has been well integrated in the organisational frame work of the Centre but it cannot be said that the Planning Commission have achieved close understanding and consultation with the State Govts. From the point of view of the States, the Planning Commission has become a wing of the Central Government. Though its role was intended to be advisory, in actual practice, the Planning Commission has come to discharge certain functions of the executive, it has also assumed the role of final arbiter or decision making authority in many areas of Planning.

We are of the view that the Planning Commission should be an advisory body only. And it should not work in close understanding not only with the Centre but also the State Governments. The Planning Commission should also have necessary independence to advise the Central Govt. and the State Govt. in a technical and professional manner. The composition of the Planning Commission can be enlarged to provide for representation to the States. To this end, the States can be represented by a system of rotation.

6.4 We should support a mix (ii) and (iii) above. The Planning Commission should be a high grade advisory body of economists, statisticians, technologists, experienced practitioners and management experts and free from the pulls and pushes experienced by the normal Government Department. There should be frequent consultations with the State Government. A fair share of experts in the Planning Commission should be drawn from the States, so that their experience at State and Regional Levels could be fruitfully utilised in the National Planning apparatus. There is a danger that experts drawn solely from the academic world and foreign universities might not be sufficiently grounded in the local environments to formulate workable solutions; for this reason experienced practitioners should also be viewed as essential parts of the System.

Many elegantly drawn programmes have floundered on the alter of implementation underlying the need for involvement of experienced practitioner who might bring with them a touch of realism and an insight of working conditions in the field.

It is therefore suggested that atleast half the personnel in the Planning Commission should be picked on the basis of their track record in the field.

It is also suggested that the Planning Commission should include representatives of the States as members by rotation, so that the States are closely involved in the Planning process. The number of such members may be kept at 3 to 4 at a time with a minimum tenure of 2 years. The representatives of States may be chosen amongst academicians, people of high standing in public life, administrators, etc. on the recommendation of the State Governments

6.5 In our view the planning Commission should not have the rigidity of a Government Department. Its role should be to counsel the Governments—both Central and States in regulating the Socio-Economic activities, investment decisions and overseeing the implementation of the plan programmes.

The role of the Planning Commission should not be only for approving plans once in a year and relying on formal reports thereafter, but to stimulate fresh thinking, act as transmission belt for replicating elements of successful operation of key programmes and to look for new factors in implementation that could be built into the formulation of further programmes.

The Planning Commission should be an independent body representing both Central and State Governments. The Planning Commission's proposals for the nation's plan will be subject to the adaptation and approval of the N.D.C.

6.6. In federal system it is essential to incorporate national priorities in the State Plan. 'Economic and Social Planning' being concurrent subject in the Seventh Schedule of the Constitution recognises the vital role of national priorities. The Planning Commission might determine the key national targets and goals. The national norms are based on average, some States may be behind, and few States with potentialities may be ahead. The States lagging behind will, no doubt, have to be brought up; but the States having higher capabilities should also be allowed to go ahead without having to stagnate out of respect of national norms based on the performance of a few large States lagging seriously behind the rest of the country. This is particularly so in respect of the programmes of Minimum Needs. The Planning Commission has espoused the cause of decentralised planning; which has prompted local initiative and participation in the planning process. The Planning Commission's role shouod therefore be to set up national targets and goals but ensure that States are free to draw up their programmes and targets to fulfil the local aspirations as well the national goals.

6.7 The Chief merit of the present system of channelising Central Assistance by way of loans and grants through the planning Commission is that it takes into account the special requirements of hill areas, tribal areas, North-Eastern Council and special category States like Assam, Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalaya, Nagaland, Sikkim and Tripura. For the non-special category States the modified Gadgil formula has introduced objectivity in the matter of allocation of Central Assistance and achieved a judicious balance in the principles of allocation.

The disadvantages of the system are that for most of the States 70 per cent of the Plan assistance is by way of loan and 30 per cent by way of grant. The bulk of the Plan expenditure is incurred on schemes which do not yield a return which can cover the interest and repayment of the loan. Such interest and repayment are subsequently taken into account by the Finance Commissions in assessing the non-plan revenue and capital gaps of the States which are then covered by non-plan grants or rescheduling of the repayment of Central loans. Such a system unnecessarily inflates the revenue and capital budgets of the Centre and States. It is suggested that the entire assistance to the States for the State Plan schemes should be by way of grant-in-aid instead of the present system where 70 per cent of the assistance to most of the States is in the form of loans and 30 per cent in the form of grants.

As regards additional assistance on account of the externally aided projects at present 70 per cent of the IDA/World Bank disbursements are passed on to the States as additional plan assistance. This additionality is also in the form of loan and grant in the the ratio of 70 : 30. In the State Government's view the additional assistance to the States for the externally aided project, included in the State Plan should be given to the States on the same terms and conditions on which such assistance is made available to the Govt. of India.

6.8 & 6.9 In the State Government's view, the present system of determining plan assistance is a great improvement over the earlier system when the Central Assistance was more or less treated as a balancing factor between the resources of a State and its plan size. Under the present system apart from providing special assistance for Hill Areas, Tribal Areas and North-Eastern Council, the requirement of Central Assistance in the cases of Special Category States viz., Assam, Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalaya, Nagaland, Sikkim and Tripura is prompted to enable them to have viable plans. The remaining States are allocated Central Assistance on the basis of the modified Gadgil formula which, *inter alia* assigns 20 per cent weightage in the allocation to backward States having a per capita income below the national average. It is, therefore, clear that the present system does not operate harshly against economically backward States. The provision in respect of Tribal and Hill Areas Sub-Plan in the Sixth Five Year Plan was Rs. 5415 crores. The Special Central Assistance provided during the Sixth Five Year Plan was Rs 40.81 crores, which is only 9.83% of the flow towards Tribal Area Sub-plan. The provision of the Seventh Five Year Plan for Tribal Area Sub-Plan is Rs. 540.01 crores. In the Seventh Five Year Plan Rs. 62.89 crores is likely to be provided as special Central Assistance. This works out to Rs. 11.5 % of the State Provisions towards TASF. With the help of special Central Assistance some vitally important but almost untouched sectors like rehabilitation of displaced tribals and development of forest villages, can be taken up by formulating various schemes. More number of families could be covered from families below poverty line. Considering the above aspects, more funds will be required for the Seventh Five Year Plan period. Special Central Assistance is also used in schemes of infrastructure directly incidental to the family oriented scheme and poverty amelioration. This should be enhanced so as to have more coverage.

The present level of Central Assistance provided is not adequate to take up an individual economic oriented programme for all families below the poverty line and infrastructure incidental to support this

economic oriented programme. The State resources being meagre for the development of this down trodden class, it is necessary that the more Central Assistance should be provided. It is suggested that the scale of assistance should be stepped upto 25% of the total Tribal Area Sub-Plan flow of the State.

At present, the allocation out of the Special Central Assistance is made as per the directions issued by the Central Government. Some more liberty should be given to the State Government to decide the pattern of utilisation of Special Central Assistance, rather than tightening down to the schematic pattern suggested by the Central Government.

So far as the mechanism of earmarking of State Plan Outlays is concerned the comments of the State Government are: The present system of earmarking the State plan outlay for whole of the sector/sub-sector, should be avoided, so as to provide flexibility to the State Government in adjusting the programmes during the course of the year. The earmarked outlay should not be more than 30 to 35 per cent of the toal Plan outlay. The selection of the projects/programmes and the initial earmarking of the outlays should be settled in consultation with the State Government, within the finally agreed sectoral outlays. The initia earmarking of the outlay should be with the agreement of the State Government.

The present system of linking the release of Central Assistance to the full utilisation of earmarked outlays should be dispensed with. Having determined the quantum of Central Assistance as per Gadgil formula, any condition for the release of the Central Assistance does not seem reasonable. By fully utilising earmarked outlays, the State Govt. are not given any incentive assistance, whereas shortfall is penalised by proportionate reduction in the Central Assistance.

In order to avoid loss of the Central Assistance, the State Government has to plead with officials in the Planning Commission to get approval of the revised outlays, involving lot of correspondence and discussions which turn to be irritative, especially when the large portion of the plan outlay is financed by the States' own resource. Therefore, it is suggested that release of the Central Assistance should not at all be linked with the utilisation of earmarked outlays.

6.10 The State Govt. is of the view that the criteria laid down in 1979 by the N. D. C. are, by and large, relevant to the choice of centrally sponsored schemes. The criteria laid down by the N.D.C. are as follows:—

(a) Centrally Sponsored Schemes should relate to demonstration, pilot projects, Surveys and research; or

(b) they should have a regional or inter-State character; or

(c) they should be such as to require lump-sum provision to be taken down territorially; or

(d) they should have an overall significance from the All India angle.

In 1979, the number and coverage of centrally sponsored schemes was considerably reduced. However, as the years pass by the number of schemes has increased substantially, particularly on sharing basis. Introduction of such schemes in the mid-Plan period, tend to distort State Plan priorities. In the absence of Information it is very difficult for the State Government to verify whether the resolution of the N.D.C. in 1979 has in fact been strictly adhered to. The State Government is of the view that the broad agreement on the nature and scope of the schemes should be arrived at the beginning of the Five Year Plan period. The details of the schemes should be published in advance and discussed in the forums of Planning Secretaries. The Schemes should be of relevance of national level and need not be exclusively in favour of selected areas/States. The discipline of the Five Year Plan should apply to all agencies whether Central or State for this purpose. Planning Commission views each Annual Plan as a part of the Five Year Plan. State Govts. find it especially difficult to fulfil such Annual Plans, if large sized participatory Centrally Sponsored Schemes are initiated in the intervening period.

6.11 The monitoring and evaluation machinery, need to be streamlined and strengthened with the induction of experts and availing of consultancy services. The system of monitoring by having quarterly returns of expenditure and physical targets have not been entirely adequate, though this primary aspect of monitoring is important and useful and should continue. The focus of monitoring system is on the utilisation of budgetory provision without its linkage with physical performance. Monitoring should also cover such aspects as the unit cost of services. The efficiency of a programme should be judged not only from the point of view of utilisation of outlays; but on the efficiency and the level of services. Progressively computerisation might have to be introduced in this process in turn, the data base will have to be strengthened by providing training at the District level, so that the flow of information should be purposeful. The reporting system should be more effective and timely if monitoring is to be meaningful.

Apart from the capital intensive programmes for which unit cost studies would be necessary; it is also desirable to undertake impact studies on the relevance of programmes for alleviation of poverty and their impact in bringing up the levels of income of the targetted groups. Evaluation of Plan Schemes should be taken up on a large scale. Evaluation studies should be completed in time so that the results are available to the Planners who can review and if need be improve the content of schemes to make them more purposeful. For quick evaluation instead of relying on limited departmental efforts, the services of independent agencies of repute could be engaged.

6.12 We are in favour of decentralised planning. In the process of decentralised planning, Gujarat is already in the forefront. The system of discretionary and incentive outlays placed at the disposal of the District Planning Boards has been effective and popular. This system has induced public participation and involvement of people in decision making process and the implementation of the programmes at local level. The States should be directly and actively associated in the process of determining national goals and targets and in developing the approach and strategy for the plan. Once the appr cachand guidelines

are so formulated in mutual consultation, the States can have a free hand in chalking out the Plan Programmes with reference to the needs and ambitions of the people.

6.13 The States have acquired experience in the Planning progress and have developed the system of plan formulation and implementation. The State Planning Board with experts as members provides the direction and guidance and coordinates the State's planning process. Consultations with research and academic institutions within the State and at national level have enabled the State Governments to enhance Planning capabilities. The State Government is of the view that the national plan should be progressively indicative, giving adequate scope to States to chalk out their programmes, within the national objectives. It is suggested that the members of the Planning Commission and senior officials should associate themselves with the State Planning Boards as observers or better still as members and actively participate in deliberation of the State Planning Boards. Such a showing of views and expertise, on a regular basis, at State capitals would go a long away in overcoming some of the inadequacies in the extent of participation by State in the Planning process in the country.

PART VII

MISCELLANEOUS

Industries

7.1 We do not agree with the view that enlargement of the Schedule to the Industries (Development and Regulation) Act, 1951 has worked to the deteriment of public interest. However, it has been noticed that in the enforcement of the Act, certain avoidable difficulties have arisen. There are many instances of rejection by the Central Ministries of the proposals of Units, which are recommended by the State Governments for the manufacture of particular items on the ground of excess licenced capacity in the country. Such a view often does not take into consideration how long the present holders of licencee would take to start actual production and on this account a decision to deny an opportunity to a late comer to enter that industry does not seem to be quite appropriate.

Many adverse decisions in respect of granting a licence for a particular product has been taken on the perception of the Central Government that a particular product has excessive or adequate capacity for production in relation to demand. The basis of this perception is not shared with State Government and so, the conclusions based thereon tend to appear arbitrary. In some cases, licenced rather than actual capacity is taken as the basis of calculations. In other cases, adequate capacities are deemed to exist even when imports of that product continue. The tendency of some business houses to corner Letters of Intent and Industrial Licences with a view to pre-empt others from entering the industry is well known.

Two examples may be given to Central Public Sector Units, the location of which is Gujarat was regarded suitable, but, nevertheless, they were finally approved for other States. These are : Electronic Switching Factory with an investment of Rs. 100 crores. This factory would well have been sited at Baroda or Gandhinagar in Gujarat, but was finally approved for Gonda in U.P. The Railway Coach Factory, with an investment of Rs. 50 crores, might have been suitably located at Dahod/Gandhinagar/Kashipura in Gujarat, but was finally approved for Punjab. There have also been occasions, when industries located in Gujarat have been required to go to other States for their expansion or diversification projects although the enterprises had repeatedly pointed that managerial and technical overheads for doing so would render the unit uneconomic. Examples of such decisions include the following cases :—

1. **Messrs : Asian Paints, Item : Phthalic enhyiride 9000 TPA.**

At present located in Ankleshwar, Bharuch District in Gujarat, this unit was directed to go to a backward area in M.P. for issue of a Letter of Intent for the above project although the facilities at Ankleshwar can easily be extended to include this project at much lesser cost.

2. **M/S. Hi Temp Glass Conductors :**

The unit had applied for a location in Himatnagar district for manufacture of 1200 TPA Hi Temp Glass Covered Conductors, but they were asked to shift this project to a No Industry District somewhere in Northern India, although economic, technical and other criteria fulfilled the location in Gujarat.

3. **M/S. Tube Investment of India Ltd. :**

The unit had applied for a location in a backward area in the State of Gujarat for manufacture of (i) Tie Rodwands (ii) Pistons, Piston Pins, Piston Rings, and (iii) Engine valves, but was asked to go to a No Industry District somewhere in Northern India in place of their original application for a location in Gujarat.

Further, the efforts of the State Government to encourage the production of offshore drilling equipment through a reputed private sector enterprise has been rejected on the ground of excess capacity, although it is known that many of the public sector undertakings, in which the capacity is alleged to have been exceeded have hardly the capabilities for meeting the demands for this product in the foreseeable future.

In short, barring industries dealing with defence or products of strategic importance, only economic and technological criteria should prevail in decision making rather than reliance on licensing mechanism.

7.2(i) Some of the norms or criteria governing 'national public interest' might include the following :

Industries based on scarces and rapidly depleting raw materials,

Industries based on strategic raw materials, such as Uranium, etc.,

Industries relating to ordinance or national defence;

Industries which have a pervasive effect on the national economy-such as manufacture of power plants, components for atomic research, space research, etc.

7.2(ii) A list of items that can be deleted from the First Schedule to Industries (Development and Regulation) Act, 1951, on the ground that they are not really crucial to national or public interest are as follows :

I. Metallurgical Industries :

Ferrous.

1. Iron and steel castings and forgings.
2. Iron and steel structurals.
3. Other products of iron and steel.

II. Electrical Equipment :

1. Equipment, transmission and distribution of electricity including transformers.
2. Electrical Motors.
3. Electrical Fans.
4. Electrical Lamps.
5. X-ray equipment
6. Electronic equipment.
7. Household appliances such as electric irons, heaters and the like.
8. Storage batteries.
9. Dry cells.

III. Telecommunications :

1. Radio receivers, including amplifying and public address equipment.
2. Television sets.

IV. Transportation :

1. Motor-cycles, scooters and the like.
2. Bicycles.
3. Others, such as fork lift trucks and the like.

V. Industrial Machinery :

General items of machinery used in several industries, such as the equipment required for various "Unit processes".

1. Size separation units-screens, classifiers and the like.
2. Centrifugal machines.
3. Evaporators.
4. Distillation equipment.
5. Crystallisers.
6. Driers.
7. Power-driven pumps-reciprocating, centrifugal and the like.
8. Fire-fighting equipment and appliances including fire engines.

VI. Agricultural Machinery :

Agricultural implements.

VII. Earthmoving Machinery :

Bulldozers, dumpers, scrapers, loaders, shovels, drag lines, bucket wheel excavators, road rollers and the like.

VIII. Miscellaneous Mechanical & Engineering Industries :

1. Plastic moulded goods.
2. Hand-tools, small tools and the like.
3. Razer Blades.
4. Pressure cookers.
5. Cutlery
6. Steel furniture.

IX. Commercial, Office and Household Equipment :

1. Calculating machines.
2. Airconditioners and refrigerators.
3. Sewing and Knitting machines.
4. Hurricane lanterns.

X. Medical and Surgical Appliances :

Surgical instruments—sterilisers, incubators and the like.

XI. Industrial Instruments :

1. Water meters, steam meters, electricity meters and the like.
2. Indicating, recording and regulating devices for pressure, temperature, rate of flow, weights, levels and the like.
3. Weighing machines.

XII. Scientific Instruments : Scientific instruments.

XIII. Mathematical, Surveying & Drawing Instruments :

XIV. Chemicals (Other than Fertilizers)

1. Fine chemicals including photographic chemicals.
2. Paints, Varnishes and Enamels.
3. Man-made fibres including regenerated cellulose rayon, nylon and the like.
4. Insecticides, fungicides, weedicides and the like.

XV. Fermentation Industries.

1. Alcohol.
2. Other products of fermentation industries.

XVI. Food Processing Industries.

XVII. Vegetable oils and Vanaspathi.

XVIII. Soaps, Cosmetics and Toilet Preparations.

XIX. Leather, Leather Goods and Pickers.

XX. **Clue and Ghlatin.**

XXI. **Glass.**

XXII. **Ceramics.**

XXIII. **Timber Products.**

7.3 Although many steps have been taken for streamlining the procedures for industrial licences and central clearance for import of capital goods, etc. there is considerable scope for place in the form of :

(i) increasing considerably the financial and administrative powers of regional offices of concerned central agencies, such as Joint Chief Controller of Imports & Exports, the branch offices of the National Small Industries Corporation, MMTC, Coal India Ltd., Indian Oil Corporation, Area Superintendents of the Railways etc.; and

(ii) adopting a time-bound procedure for decision making, whereunder an application is deemed to have been granted, if no reply is forthcoming from the concerned governmental agency within the time limit. Such a procedure is in vogue in respect of grant of permission of conversion of agricultural land to non-agricultural land under the Bombay Land Revenue Code.

To cite an example, the National Small Industries Corporation, which deals with hire purchases, assistance in marketing etc. to small scale industries, has only a Junior Officer posted at Rajkot in Gujarat (far away from the State capital) with powers only upto Rs. 1 lakh for sanction of plant and machinery. Any items beyond this limit have to be referred to the Bombay office for a decision. Even this office has powers only upto Rs. 4 lakhs. All other cases, upto Rs. 20 lakhs have to be sent to Delhi for a decision.

Similarly, though Gujarat produces 60 per cent of the total salt in the country and has over one-third of country's coast line, the Salt Commissioner continues to be located at Jaipur in Rajasthan. The Deputy Salt Commissioner, only recently sanctioned and located at Ahmedabad, has very restricted financial powers or approval of welfare schemes meant for improving the lot of salt workers. So also, a decision with regard to critical raw materials, such as, alcohol, molasses, coal, steel etc. continues to be taken at Delhi. Many of the central agencies have no offices at many State capitals, in case where they have, the powers of officers are very limited and hardly in proportion to the requirements of the bulk of the beneficiaries in the State.

There is, thus, a case for location of more branches of appropriate central agencies and sub-Units of Central Corporations at the State capitals so that the procedural formalities, documentation, etc. in respect of majority of cases from small and medium enterprises are decided at the State capital itself.

7.4 Gujarat has a fairly good net work of organisations for the development of village and cottage industries and providing them financial support. The Directorate of Cottage Industries and the District Industries Centres have played a significant role in channelising bank finance for traditional cottage industries in the recent years. The Handloom Development Corporation and the Handicraft Development Corporation have taken several steps for improving the production practices of craftsmen in their respective areas. The Gujarat State Forest Development Corporation has also played a significant role in improving the incomes and skills of adivasis in gathering, storing and processing various products.

The Rural Technology Institute, set up a few years ago in Gujarat, has also tried to modernise the methods of production processes in selected activities.

The Gujarat Small industries Corporation has assisted in many ways the marketing of products of S.S.I. sector in the State. The State policy on purchases for the Government also is weighted in favour of the products of S.S.I's and cottage industries. Marketing of products of cottage industries, such as ready made garments, footware, woodwork, etc. has also been facilitated in recent years through the efforts of Gujarat Industries Marketing Corporation. This Organisation has also tried to assist the marketing of salt produced by small scale cooperative agencies and individual salt workers, producing salt on a very small scale.

Almost all these activities have Apex Central Organisations, which meet once or a twice year. There is no reason why some of these items of modernisation could not be discussed in detail at these forums and appropriate central assistance not provided to induce states to take up the critical elements in this modernisation.

While the State Government has attempted to provide service to the small scale and village industries, to the extent feasible, it is to be remembered that the vital aspect of raw materials is controlled by the Central Government on which State Governments have no control whatsover. This applies to the supply of pig iron, steel, cement and coal. The difficulties relating to such scarce raw materials arise in respect of quality, quantity, price and uncertainties of supplies and transportation. There are significant time lags between the emergence of critical shortage in such raw materials and a decision to import. Even in the case of imports, decisions relating to waiving or reducing customs duties, etc. on items exclusively meant for small scale industries and import through the Small Scale Industries Corporations often take its own time. It is as important as to take care of existing small scale industries, through supplies of scarce raw materials in adequate quantity and at reasonable price, rather than the excessively concerned with the setting up of more scale industries. Since the entrepreneurs in charge of small scale industries are too small to make the kind of representation as can top managers in medium and large industries, the corporation of Central Government in assuring, in all the facets indicated above, industrial raw materials to small industries is of utmost significance. Very often, the small scale industries are worst sufferers in respect of supply of these raw materials, as compared to DGTD units. The level of satisfaction appear to be much higher in the case of D.G.T.D., as compared to small scale industries for various scarce raw materials.

7.5 The Centrally controlled financial institutions have generally played a useful part in financing medium and large enterprises and in re-financing appropriate activities of financial agencies in the State. Some agencies such as Industrial Development Bank of India, Industrial Finance Corporation of India have regional offices in the State at Ahmedabad, their presence has been very helpful in many ways especially in cases where joint financing of units has been necessary. Their representatives are also conveniently placed to attend various meetings convened by State Financial Institutions and offer expert advice and counsel. This process of providing regional offices should be extended to other central financial institutions so that similar benefits could flow from them.

It must be emphasised that these central financial institutions should be left entirely free to make decisions based on financial and technical criteria and not bound by any directives with regard to preference for any particular region. Such references are already built into decisions in various other forums and they should not be replicated in institutions of this kind, who would base their decisions entirely on technical and financial considerations.

To enable them to play a more useful part in financing medium and large enterprises, the following suggestions are made :--

(i) The present limit of I.D.B.I. refinance should be raised to cover the project cost upto Rs. 5 crores, so as to be in line with the limit of D.G.T.D. Registration.

(ii) The automatic refinance limit should be raised to Rs. 30 lakhs.

(iii) There is a need for a single window approach with regard to documentation and clearance of project proposal. Even now, despite all calims, there is still room for effective coordination amongst the All India Financial Institutions, in terms of sanctions, documentation, etc.

7.6 There is a feeling that locational decisions on central investments in public sector are not always taken in a manner that appears fair to all the States. It is of course, not possible to satisfy all the States at the same time, but due opportunity for being heard and where practicable, publication of criteria for selection, might greatly help in reducing the extent of such criticism.

Quite often, the location of the central public sector projects do not appear to be based purely on techno-economic considerations. In some States, there has been preponderance of public sector projects possible, without consideration of availability of raw material or nearness to the market, while in the case of others, they are deprived of projects which can be based on the availability of local raw material. For instance, in Gujarat, except for those public sector projects, which have necessarily to be located in Gujarat on the consideration of availability of local raw materials, such as refinery and petro-chemicals complex, hardly any worthwhile investment has taken place in Central public sector projects, which are in the foot loose category such as projects in heavy industry category. Ultimately, the cost to the nation in terms of such sub-optimal location will be higher.

7.7 In addition to what has been stated in Answer to Question No. 7.6 much of this criticism possibly flows from the fact that so little information is available in such matters. If the decision making process is some what more open and the criteria for decision making known in advance, quite possibly, the extent of such criticism could be brought down.

7.8 The methodology adopted for identification of industrially backward districts is not adequate. In the first place, districts are hardly the suitable unit for identification of backwardness because there are many talukas which are large enough to cover the area of a district even in advanced districts, there are many talukas without any industry at all and conditions of which compare favourably with the industrially most backward districts in the country. In Gujarat the presence of a modern dairy for processing milk in some of the backward districts, has been sufficient to ensure their exist from the list of 'No Industry Districts'

The only district recognised as 'No Industry District', in Gujarat, is the district of Dangs. This is predominantly a district covered with forests. Under the new policy for preservation of forests, the State Government has to approach the Central Government for permission for taking over even very small area of land under the forests for development projects such as power projects and industrial projects. In this way, what is being sought to be encouraged as 'No Industry District' by one agency of the Central Government (Ministry of Industrial Development) is being taken away by another agency viz. Agriculture Ministry/Forest Ministry.

Similarly, development of mining and mineral based industries has also been atrophied in some backward areas on account of the contiguous forest lands, requiring Central Government approval. The procedures for getting permission for release of various lands for mining purposes also take considerable time, often coming in the way of rapid development of these industries in backward areas.

A procedure for compensatory forests planting of equal or even double the number of trees in adjoining areas in lieu of what is proposed to be cut down could vary well be the basis of a creative solution. Despite remarkable advances . Gujarat State has made in the matter of social forestry and farm forestry, it finds itself in serious difficulties in acquiring even very small areas of forests for bonafide industrial and economic development projects on this account.

It is for this consideration that the Government of Gujarat has been pressing for adoption of Taluka as a 'unit' for backwardness. An Expert Committee, under the Chairmanship of Dr. I. G. Patel, former Governor of Reserve Bank of India, has also recommended that talukas be adopted as a 'Unit'

for promotion of industrial development. An investment of Rs. 30 crores or above, at a particular location in a taluka could be taken as a criteria for identification of a taluka as industrially developed and not more than two units of such a size be permitted to come up in the same taluka.

The various fiscal and financial incentives have been given mostly for fixed assets such as land, buildings, plant and machinery. This has led to acquistion of much larger extent of land than necessary, construction of over size building and choice of more sophisticated plant and machinery, often to displace labour. Such incentives do not help to promote employment of local people or training in industrial skills. At least a part of the subsidy should be linked to the wage bill or towards training costs incurred by the industry.

A part of the incentive, at least is towards compansating industrial unit for absence of various elements of social infrastructure such as schools, technical institutions, roads, drinking water supply, public health facilities and housing for industrial workers. In many cases it has been seen that these elements have hardly developed inspite of large subsidies to units in backward areas. Even where a few elements of these items of a social infrastructure have been developed, they have always been almost exclusively for the workers within the factory premises, severely curtailing access to these facilities to the general population in the neighbourhood. Thus, the effets of industrial development on the neighbourhood has often been minimal in spite of hopes that industrial development would help in trigger general economic development of the neighbourhood. To this extent, it may be worth while to think in terms of earmarking a certain proportion of the Central Subsidy, say 25% or 33% towards provision of social infrastructure in the neighbourhood, in association with the District Planning Boards for specifically earmarking these funds for the development of an area within a specified radius of the industrial units in the backward area.

Trade and Commerce

8.1 Authority, as contemplated in Article 307, should be for the purpose as specified as that would help the freedom of trade and commerce of the States and also restrictions which may be imposed for such inter-State trade and commerce. It is suggested that the report of the authority should be placed before both the Houses of Parliament so that the Members of Parliament representing the States will have opportunities to discuss and represent the view point of the respective States.

Agriculture

9.1 The State Government fully agrees with the view expressed by the Administrative Reforms Commission on Centre-State Relations (1967). The position with regard to agriculture including animal husbandry, forestry and fisheries has not materially changed since 1967 and if anything, there seems to be an increase in the Central sector and Centrally sponsored scheme in agriculture. Since development in agriculture and allied pursuits is dependent on the diverse agro-climatic conditions prevailing in different parts of the country, the State Governments, are better equipped to implement schemes, in these areas, keeping in mind the local factors. On the other hand, the Central sector schemes and centrally sponsored schemes by their nature tend to be stereotyped with very little flexibility. The State Government is, therefore, of the view that the substantial responsibility for implementation of schemes in the field of agriculture should be that of the State and the role of the Central Government should be that of supporting one.

9.2 The State Government agrees with the view expressed by the National Commission on Agriculture regarding Central and Centrally sponsored schemes. In the few of the State Governments the number of Central Sector and Centrally sponsored schemes should be kept to a minimum and they should be confined to only innovative schemes. Even such schemes should be formulated in consultation with the State Government so that maximum flexibility can be provided.

Since the major responsibility for preparation and implementation of schemes in agriculture and allied pursuits will be that of the State Government, adequate provision in the State Plan should be made.

9.3 It is the view of the State Government as expressed earlier that the number of Central and Centrally sponsored schemes should be to a minimum and funds meant for such schemes should be provided in the State Plan. However, wherever Central Sector Schemes are to be launched, the same could be done after consultation and with consent of the State Government so that the actual requirement on the field is taken into consideration. While there is a dialogue between the Centre and State Governments on the implementation of the schemes there is actually no effective voice of the State Government in any decision making on the Central sector scheme.

Further such Central sector schemes should only lay down broad guidlines about the objectives target growth and outlay leaving further details like inter-sectoral allocation, etc. to the State Government.

9.4 The present practice of fixing uniform support and procurement prices for agriculture products for the entire country is irrational as it does not take into account the regional variations affecting cost of the production. Censequently, the State Government has to very often declare support prices at levels higher than the prices fixed by the Government of India, so that the farmers in the State can get reasonably remunarative returns. Therefore, the views of the State Government regarding the cost of production of various agricultural items and the recommendations for support prices, deserve to be given a greater weightage.

The present arrangements for strategic inputs including credit like seeds, fertilizers and pesticides seem to be working fairly satisfactorily. However, with regard to availability of credit the State Co-operative Institutions often face difficulties on account of Central directions to the National Banks and Agriculture Financial Institutions. Since Agricultural credit requirements in the State are being

met substantially by Co-operative Institutions, their requirements should be fully met by the Financing Institutions. So far as the forestry policy and administration are concerned, the involvement of the Centre in the decision making process of the State comes to light only with regard to the Forest (Conservation) Act, 1980. According to this Act, lands designated as reserved forests cannot be transferred for any purpose by the State Government without the prior concurrence of the Government of India. This restriction has considerably curtailed transfer of lands to traditionally demanding departments like Irrigation and Industry (for Rehabilitation, Submergence, Mining etc.) In a forest poor State like Gujarat the Conservation Act has definitely had a positive effect, in that land reserved for forests cannot now be easily transferred for non-forest use.

In the matter of day to day administration no particular implication of Union Government's involvement is felt.

9.5 No problem is faced in the sphere of Centre and State relations with regard to role of agricultural research. However, with regard to National Bank for Agriculture and Rural Development, its developmental role which is more crucial than more credit disbursemen role is yet to manifest itself by way of new initiatives. A development Agency like NABARD has to establish closer links between the State Government and the Nationalised Banks, issue guidelines for better implementation of Agriculture and Rural Development Programmes, study and analyse the local problems and bring out solutions keeping the special local problems in view and generally work as a catalyst for Rural Development. NABARD cannot and is not expected to become a more refinancier to the commercial and co-oparative banks. A greater qualitative involvement, in the rural development process is expected from NABARD.

Food & Civil Supplies

10.1 We feel that there is some scope for improving Centre-State liaisen in the above areas. Out comments/suggestions are as follows :—

Distribution of foodgrains, etc. :

At present, the allocation of State quotas of foodgrains and edible oil and generally made on *ad hoc* basis by the Centre from time to time. Since this is done considering various factors such as availability in the Central Pool, production in various States, special requirements arising out of drought and other natural calamities, it may not be possible to adopt any set formula for allocating these quotas. We however, feel that this does not permit the States to plan their distribution policy on sound footing. We suggest that the quotas should be decided on an accepted formula taking into account State's population, deficit supply on trade account, etc. This formula should be made public in order to dispel doubts about unequal treatment among the States. Based on certain variable parameters discussions can be held with the States after commencement of marketing season of the concerned commodity and allocations can be decided. Allocations can be made known to other State Governments. For special circumstances like natural calamities, special quota can be allocated, which should also be more or less automatic and should not be left to the discretion of the concerned Central Ministry.

In case of edible oil, it will be easier to adopt such formula because the Central Pool consists of imported quantities. Import programme can be drawn up in advance and since the availability is also known in advance the State should be earmarked definite quantities based on their requirements.

Procurement Pricing Policies :

Considering the wide variations in production of essential commodities like foodgrains, oil seeds, etc. amongst different States levy, procurement, movement and prices have got to be planned and regulated at National level and can be regarded as in larger interest of the country as a whole. However, there are certain minor matters which can be left to the discretion of the State Governments without affecting the overall policies and programmes at the National level. Following can be cited as instances of such matters :—

(i) In the pulses, Edible Oilseeds and Edible oil (Storage Control) Order of 1977, issued by the Ministry of Civil Supplies & Co-operation, Government of India (as amended in 1978), there is a clause 7(A) providing for granting exemption in sum special cases either generally or for any specified period. Even, for using these powers of giving special exemption in cases of hardship or for any just and sufficient reason previous approval of the Government of India is to be obtained.

(ii) Similarly, while issuing the levy on rice, wheat etc., there are normally similar provisions empowering the State Government to give exemptions or make minor modifications as may be warranted by special circumstances. Here again prior concurrence of the Government of India is obligatory.

One more area is grant of such credit by the R.B.I. for procurement of coarse grains. When the State Government desires to procure coarse grains for distribution through P.D.S., the R.B.I. has to be approached for cash credit facilities for the purpose. It, in turn, insists on the coarse grain programme to the approved by the Ministry of Food or Agriculture. Since, there are no Central Pool operations for procurement of coarse grains and since there is no national policy or programme excepting support price operation in the case of coarse grains, purchases by the State Government agencies are not likely to interfere into any of the national foodgrain policy operations. Thus, this control cannot be regarded as warranted by overall national considerations. The State Government should, therefore, be allowed the freedom of availing R.B.I. cash credit for procuring coarse grains for their P.D.S. The Government of India can always intervene, if situation so demands, by directing the R.B.I. or the State Government to tailor their programmes so as not to cause any adverse effect or any other State.

10.2 We do feel that the said arrangements need to be periodically reviewed. The Essential Commodities Act is designed for the control of the production, supply and distribution of various commodities in the interest of the general public. The State Government have passed various regulations under the said Act. Formally these regulations are in tune with the Essential Commodities Act but may sometimes differ from State to State. It may happen that a particular regulation in a particular State may harm the interest of the neighbouring State or may come into conflict with the interests of that State Government. Sometimes, it is also necessary that the Centre reviews the arrangements made by different State Governments for administering the Essential Commodities Act and other such regulatory Acts. This can be done by seminars and workshops in addition to regular meetings.

Education

11.1 Gujarat does not share the view that there is unnecessary centralisation and standardisation or that there is too much of Central interference. There has of course been an emphasis on following of a national policy of or re-structuring of education. Thus, the 10+2+3 pattern bringing about common structure was suggested on the basis of recommendation of Commission, keeping in view the basic requirement of relating the world of learning with that of working. The State Government after due deliberations had accepted the recommendations. The Central Policy directives have not restricted any initiative or authority of the State. On the other hand, it has given the State Government the much needed advice and perspectives in this field. It is true that looking to the vastness of the country and the various cultures and different levels of development, it is not possible to fit the education pattern into a straight jacket and any such attempt would even otherwise lead to failure ; but the Central Government has not imposed any such policy.

11.2 (a) At present University Grants Commission exercise only indirect influence on the decision of the State Government for starting a new University. It has practically no significant authority in regulating the functions of the existing Universities. As a rule under Universities should be treated as autonomous organisations in their academic pursuits but the way higher education has been shaped it would be desirable to have national policy in this regard.

(b) University Grants Commission motivates and encourages the Universities to introduce new subjects/courses by a liberal grant-in-aid pattern. Thus it helps bringing about diversification in courses. However, all new courses are not necessarily need based not they are finalised in consultation with the users namely industries, commerce and other establishments or the State Governments. Many times courses are started without adequate infrastructure. Ultimately such courses leave a heavy and avoidable burden on the limited resources of the State Government in a non-priority area.

11.3 There is of course a need to evolve consensus among States and Centre in the field of education through the process of discussion, consultation and pursuation. Such consenses is normally developed at the meetings of the State Advisory Board of Education and at the annual meetings of the Ministers of Education and Secretaries of Education. The Planning Commission provides another forum where a review and coordinated view is taken both at the stage of formulation of annual plans and the finalisation of the 5 Years Plans. Such discussions could be frequent and could be also institutionalised.

It is also necessary to see that there is provision in the Central budget on education for specific programmes to be implemented in the State. Even in simple matters like allotment of paper at concessional rates which is a genuine demand of State Governments they were never satisfied in time. The Government of India should take the State Governments into confidence on the obstacles of rapid development of educational sector. Appointment of a National Commission of teachers should not generate undue demands on State Governments and their recommendation should be adequately backed up by financial assistance from the Centre.

11.4 Articles 29 and 30 which guarantee the rights of the minorities to preserve their identity and culture through establishment and management of educational institutions fulfil a genuine need of minority communities. However, an institution though managed by a minority group should be subjected to the same rules and conditions which apply to general institutions, especially when all of them are governed by same grant-in-aid rules. The rights of minority to shape and maintain educational institutions should not be exercised in a way to deny fair and equal treatment to citizens at large. The rights of the employees working in the minority institutions should also be protected. The minority institutions should fulfil the minimum basic requirements of qualifications of teachers, syllabus and fair policy of admission, etc. and these should not be considered as unreasonable restrictions. Care, however, will have to be taken to see that the minority rights are not used specially in the field of education as a means to perpetuate a different system without specific academic benefits.

11.5 There have been no specific area of conflicts or issues between the Central and this States in regard to problem of education development. As stated earlier, education policy is not one which can be operated within straight jacket formulation and conflicts or issues can arise when in the formulation policy specific needs of different areas are not adequately taken into account. To the extent that flexibility is available within the system to make such changes there should be no fear on this ground.

Inter-Governmental Co-ordination

12.1 In view of the exhaustive specific provision of the powers of the State and Centre in the Constitution and the jurisdiction of the Supreme Court under Article 131 of the Constitution and provisions for establishing the Inter-State Council under Article 263, the Finance Commission under Article 280 and the authority under Article 307, Constitution of India, we do not think it necessary to have an Institution like the A.C.I.R. in U.S.A.

GOVERNMENT OF HARYANA

Replies to the Questionnaire

Haryana

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 Yes, our Constitution can be termed as federal inspite of its embodying unique features not found in other federations.

1.2 Allotment of more tax resources in list II to the State and abolition of appeals to Supreme Court except in constitutional matters are only favoured.

1.3 We agree. Existing Constitutional provisions duly safeguard the State interests.

1.4 No, as far as we know.

1.5 Formation of consultative body or bodies envisaged in Article 263 of the Constitution of India would rectify the deficiency. A reasonable time should be given for taking decision on the recommendations of the consultative body. If no decision is taken within this period, the dispute should be automatically referred to the Supreme Court for decision.

1.6 Yes. There are numerous provisions in the Constitution which adequately safeguard the integrity of the country.

1.7 Yes.

1.8 No. Article 3 of the Constitution does not require reconsideration.

PART II

LEGISLATIVE RELATIONS

2.1 There are certain powers in the field of industrial licensing, and levy of additional excise duty in lieu of sales tax which should properly vest in the States.

2.2 Allocation of river waters should be a concurrent Subject.

2.3 Yes.

2.4 Under Art. 249 of the Constitution, such laws remain in force for a period not exceeding one year. This provision is satisfactory.

2.5 There should be a provision in the Constitution to the effect that once the Centre has agreed with the States to introduce a particular legislation, such legislation should be brought before the Parliament within six months.

PART III

ROLE OF THE GOVERNOR

3.1 The Governor have acted, by and large, in accordance with the Constitution.

3.2 A Governor should work strictly in terms of his constitutional authority, keeping in view welfare of the State. He should keep himself above party politics.

3.3 The present practice should continue.

3.4 There has been no instance where the assent to a Bill has been withheld by the Governor.

3.5 Yes. There was never any undue delay by the Centre while granting presidential assent to Bills promulgated by Haryana State Assembly.

3.6 Yes.

3.7 The existing provisions are adequate. However, a convention might be established that all Governors submit their resignations on a change in the Central Government.

3.8 We do not agree.

3.9 The existing system is working well already. No change is, therefore, suggested to be made in it.

3.10 Guidelines are called for and should therefore be issued.

PART IV

ADMINISTRATIVE RELATIONS

4.1 There has been no case where directions have been issued under threat of invoking Art. 365. Article 256 does not empower the Union to interfere in any matter pertaining to the exclusive concern of the State. If the Central Government issued any directive to a State in the exclusive State sphere, such directive shall not be binding upon the State. Issuance of directions aforesaid does not give rise to any justifiable cause of action in favour of the State for declaration or injunction. Nor has a private party any cause of action arising out of default on the part of a State to comply with any direction of the Union under Article 256 of the Constitution of India.

4.2 Haryana State support retention of Article 365 in the Constitution because it is a consequential enabling provision. The provision should be invoked in suitable cases, such a non-execution of the Sutlej Yamuna Link canal project by the Punjab Government.

4.3 Recommendation of the Administrative Reforms Commission is sound and may, therefore, be accepted. In fact this is the normal practice.

4.4 Power under Article 356 of the Constitution has generally been exercised fairly.

4.5 Existing periods set out in clauses (4) and (5) of six months and a year are adequate.

4.6 Arrangements are working satisfactorily hence no comments.

4.7 There should be a representative of the State Government on the Agricultural Prices Commission. The working of the other agencies has not caused any serious inroads into the State autonomy. There should be provision of arbitration between the Food Corporation of India and the States, in case of disputes. There should be one director from each of the States which make significant contribution to the foodgrains procured by Food Corporation of India.

4.8 Parliament and Central Government should consider constituting more all-India Services e.g. Engineering, Education, Medical and Higher Judiciary.

The All-India Services have largely fulfilled the expectations of the Constitution-makers. The control of the State Government over the All-India Services appears to be adequate.

4.9 For preserving the unity of the country and upholding the Constitution, the C.R.P. could be deployed in States by the Centre suo-moto.

4.10 Broadcasting and television should be included in the Concurrent List.

4.11 The Zonal Councils have promoted better understanding among the States, in a spirit of mutual give and take. These Councils have generally not worked on party Lines. These could, however, be made more effective.

4.12 Such a Council should be established to resolve inter-State disputes. Representatives of the States concerned as well as of the Centre should be on the Council. The Council should be formed for a specific period for deciding specific issues.

PART V

FINANCIAL RELATIONS

5.1 No. The scheme of devolution as practised by the Union Government has not come up to the expectations of the States at least of Haryana.

A detailed note is attached.

5.2 The observations of the A.R.C. Study Team on Centre-State relations seem to be by and large valid even today that the Centre is the Giver and the latter the Receivers. However, some of the States are able to raise resources adequate to meet their non-plan expenditure. Substantial modification in the existing constitutional provisions and the devolution schemes is called for. Either some of the heads should be transferred from the Union List to the State. List in the Seventh Schedule or more of the receipts of the Union Government accruing through the taxing heads in the Union List be shared with the State Governments and in a larger measure. Specific mention needs being made of the revenues accruing from the Corporation tax, the surcharge on income-tax and the union excise duty etc. The proportions of States' share needs also to be increased.

There have been occasions where the Central Government has shown keenness on measures which would lead to further erosion of the States' taxing base. The suggestion to replace sales-tax by additional excise duty, restriction on licensing of distilleries and bottling of potable liquor which are major sources of revenue to the State Governments are some such examples.

5.3 Certainly the Centre has the major responsibility for removing regional inequalities and for attaining social and economic justice. However, the taxing powers of the Union Government are alredy wide and, in the ultimate analysis, since the residual powers vest in the Union Government one would consider that the resource raising capacity and the legal powers of the Central Government are unlimited. The suggestion to share some of the existing financial powers of the Union with the States would not make any serious dent on the capacity of the Central Government in this behalf.

The concept of the rich and poor States also needs to be spelt out more clearly. The constraint of resources of some of the States in the country is not because they are poor in resources, human or material, but because they have not fully exploited their potentials. On the other hand, States like Haryana have gone all out to realise their potential and have taxed their citizens rather heavily. In such a context, showing undue consideration to deficit States may even mean putting premium on inefficiency while efficiency will go at a discount.

5.4 The alternatives suggested by the Commission in the body of the question are not mutually exclusive. The objective which has been set forth in question No. 5.3 can be attained by a judicious mix of additional taxation, better control over expenditure better collection of taxes due and partially by deficit financing. The Commission would be aware that there are very heavy income-tax arrears, which are almost as much as the total income-tax revenue in one single year. Even if 50% of these arrears are collected by the Central Government and distributed to the States, this would help them substantially.

The suggestion regarding subventions from richer States to the poorer States is unacceptable. While financially well managed States like Haryana may be able to meet their non-plan expenditure out of their resources, they need substantial funds for their plan expenditure. Since the size of our development plans is inveriably fixed on the basis on the likely available resources in a given year, transfer of resources from one State to the other would mean unwarranted reduction in the size of the development plans of that State. Such an arrangement will be most unfair and against equity.

5.5 The suggestion that the methods of devolutions through the Finance Commission and the Planning Commission do not appear to bridge the gap in resources between the poorer and richer States is not correct. On the contrary, through the recommendations of the Finance Commission the shortfall in resources of a State in meeting the non-plan expenditure is covered. Similarly, in the case of plan grants also larger share goes to the poorer States. In fact the States who are unable to cover even their non-paln expenditure, their total plan is met through Central assistance. As such States like Haryana are already placed at a disadvantage.

The devolution of funds from the Centre to the States and the plan assistance should take into account the tax efforts made by the respective States as well as the efficiency and economy in management exhibited by them. The principle of uniform per capita devolution of resources needs to be adopted while determining assistance to the States.

5.6 We think the agency of the Finance Commission and Planning Commission are adequate. If a funds is to be created, it should be financed as a Central Scheme from the Centre's non-shareable resources.

5.7 The need for transferring some of the taxing powers of the Centre to the States has been felt from time to time. In fact, this need has already been acknowledged to some extent by way of declaring procurement transactions, works contracts etc. as 'sale' to enable the States to tax these transactions. Steps are being taken to introduce sales-tax on consignment transfers. In addition, the power to impose excise duty on some more items like mollasses and sugar could easily be transferred to the States without causing much problem on production or movement of these commodities. The Commission may consider the desirability of authorising the State Governments to levy their own corporate tax on companies whose factories are located in the States. Also please refer to the detailed note in Answer to Q. 5.1.

5.8 We agree that such a Council would be useful or imposition and distribution of major taxes.

5.9 From the over-all national point of view, it looks better if there is one single organisation which could handle on a permanent basis the responsibility discharged by the Finance Commission and the Planning Commission. Naturally, it would be a permanent body and not a periodic phenomenon like the Finance Commission. From the point of view of the States also, it would be better to place all their cards before one body rather to argue their case with the separate bodies having separate objectives which are not always identical.

5.10 It is difficult to say that the recommendations of the Finance Commissions have promoted efficiency and economy in expenditure because these are not aimed at these objectives. They have not encouraged tax efforts of the States either.

5.11 Yes. We agree with the views which have been quoted in the question. For corrective measures please refer to the detailed note in answer to Q. 5.1.

5.12 The views expressed by the Seventh Finance Commission were correct and wholesome. More weightage must be given to resource transfers through tax sharing and the role of grants-in-aid under Article 275 should be restricted to the minimum. Unfortunately, the principles enunciated by the Seventh Finance Commission were abandoned by the Eight Finance Commission to the detriment of the State like Haryana.

5.13 In addition to the principles cited above, the Seventh Finance Commission had also averred that consideration should be given to the tax efforts made by the individual State, the economy in expenditure consistent with efficiency and prudent management of public sector enterprises. The gap filling approach has put the surplus States at a disadvantage because a substantial part of the total divisible pool is consumed in filling the gap of the deficit States, which could otherwise be distributed among the States as larger devolution. The tax efforts of States and the success achieved by them in curbing the non-plan expenditure should be rewarded instead of being penalised.

5.14 The revenue and yield from measures like the Special Bearer Bonds Scheme and the administered prices of petroleum and coal etc. should be brought within the divisible pool. Similarly, the collections accruing from the Compulsory Deposits Scheme for Income Tax Payers should also be brought within the divisible pool. The justification is obvious. These are resources raised by the Centre through the contribution of the citizens all over the country living in different States. In the case of the administered prices of petroleum and coal, etc. these are in the nature of excise duty. If excise duty had been imposed on these items, it would have been shared with the States.

5.15 The savings effected by the Community should be shared by the Centre with the States. In the case of small savings at present 2/3rd of the net savings collection in a given year are reimbursed to the States as long term loan. It has been felt that this scheme should be transferred to the State Govt. for raising its own resources.

The premia of Insurance and the contribution towards the Employees Provident Fund Scheme are also deposits in the nature of savings. Presently, the lion's share is retained by the Central Government. There should be a larger and more substantial sharing of these resources with the States. In fact the Employees Provident Fund Scheme should be transferred to the States.

5.16 and 5.17 It is a fact that the percentage of Centre's resources being transferred to the States has declined. It is also a fact that the fiscal imbalance of the States has been increasing and their indebtedness is also rising. As a consequence, the net blow of resources from the Centre to the States in a given year now is minimal.

The reasons for the mounting indebtedness primarlily are limited resources of the States and heavy demands on the State's resources. This situation can be remedied in the following manner :

(i) Larger devolution of funds from the Centre to the States;

(ii) Conversion of a substantial part of old loans into grants;

(iii) Substantially re-scheduling the remaining loans.

The difficulties of the States have also arisen because of the Central Assistance formula which is 70 % loan and 30% grants. If the ratios is inverted it would help the States substantially. Even if there is a 50 : 50 mix between grant and loan, it would put a lesser strain on the States' resources in future years. Yet a third aspect is regarding locking up States' resources in the projects of the State Electricity Boards. Since very heavy assistance is extended by the States to the Electricity Boards and the Boards have not been able to repay the debts to the States, it is suggested that the repayment of loans by the States to the Centre to the extent of loans advanced to the State Electricity Boards be deferred for a reasonable period, say for 10 years. The Electricity Boards are a public utility service like the Railways and they do not operate only for the people of the State much less for the State Government.

5.18 The criticism is well-founded. The States' option for raising loans has been severely limited. In regard to market borrowing, the trend has been overwhelmingly in favour of the Central Government. While in the Third Plan period the share between the Union and the State was 37% and 63% respectively, it was totally reversed in the Sixth Plan period to 77% and 23%. Obviously, the Central Government has been appropriating unduly larger share of market borrowing while the States have been starved of funds. It is suggested that a reasonable ratio say 50 : 50 be fixed for market borrowing by the State and Central Governments if the earlier ratio of 2/3 and 1/3 in favour of the States is not restored.

5.19 The allegation is correct in regard to some loans. The Centre should not charge a higher rate of interest from the States. They may however retain a certain portion of these borrowings for their own budgetary requirements.

5.20 We have no comments on the suggestion to have a loans council on the pattern of Australian Loans Council because we have no information in reagard to the latter. However, as has been stated in reply to Question No. 5.18 above, it is reiterated that the States' share in market borrowings needs to be substantially raised. The policy of the Government of India and the Reserve Bank in this behalf would have to be made more liberal.

5.21 The primary reason for the States' exceeding the limits of ways and means advance is inadequate resources in contrast to mounting obligations. The problems of States like Haryana have also multiplied on account of factors like natural calamities, increase in the administered prices of petroleum products and coal etc. and release of additional D.A. instalments by the Central Government to their employees with similar release being required to be paid by the State Government. In this background it is quite natural for the States to exceed their ways and means advance limit. While we agree with the view taken by the Government of India that the ways and means advance and the special ways and means advance are not a resource yet they do act like one and for that ceiling needs being raised. The present ceiling of ways and means advance for Haryana is only Rs. 12 crores and an additional special ways and means advance is Rs. 6 crores, making a total of Rs. 18 crores. This should at least be doubled if not raised to Rs. 50 crores.

5.22 No. It is not fair to suggest that states like Haryana are not exploiting adequately their own sources of revenue. On the contrary, we have been trying to raise resources in all possible manner. In fact, Haryana is one of the most heavily taxed States in the country.

5.23 We agree with both the points made. The public sector of the Central Government made substantial profits in 1982-83 but have slumped in performance in 1983-84. It may be added that the over-all performance of the public sector units of the State Governments is hardly any better. There is also substantial leakage of revenue mainly in income tax and Central excise and customs duty. The arrears are also mounting. These must be effectively and quickly realised. If that is done, both the Union and the States stand to gain.

5.24 It would be a sound principle for the Union to consult the States while imposing fresh duties or taxes or while varying the rates of duties and taxes enumerated in Articles 268 and 269. However, it may not always be possible for them to do so in practice.

5.25 Yes. We are in agreement with this view.

5.26 The view expressed on behalf of certain States is quite correct. Had the tax not been abolished there would have been a substantially larger accrual under this head as compared to the grant of Rs. 23.12 crores being given to the States. As per calculation made in 1978-79 it would have been Rs. 63·22 crores. By now it would have exceeded Rs. 100 crores. Either the tax should be reimposed or the grant should be raised proportionately.

It may be added that it is not only in this regard but also in the matter of imposition of 'Additional Excise Duty in lieu of sales-tax that the States have suffered heavy financial loss. The disbursement of revenue receipts on tobacco, textiles and sugar under additional excise duty in lieu of sales-tax have been a fraction of what would have accrued to the States had the States continued to levy sales-tax.

5.27 No comments.

5.28 Haryana experiences hailstorms very frequently causing extensive damage to its valuable crops. But the relief given for hailstorms is not recognised by the Central Government for assistance alongwith other calamities like floods, cyclones, droughts etc. As the damage due to hailstorms is very heavy and very frequent this should also qualify for such assistance.

Whenever the natural calamities occur the State Government is to undertake some unforeseen expenditure for the welfare of the people which are best seen by the States in the local context. But the expenditure incurred out of the State's margin money for some essential items which are not covered under the schemes prepared by the Centre are not accepted

by them as qualifying expenditure. The States should be at liberty to spend the margin money keeping in view the local expediency.

In case of droughts the advance plan assistance given does not in real sense benefit the States as it is adjusted towards the later year's allocation. The plea that expenditure incurred on drought relief works is of normal-plan nature only is not tenable because the funds for the expenditure incurred for creating some assets at the place of calamities are diverted from other places where for it was meant.

The schemes submitted by the States in its memorandum for relief should not be altered in nature and principle except that some of the schemes may not be taken up for want of resources. The plea is that the States are in the best position to judge the suitability of scheme to benefit its people in a particular situation.

5.29 As has been discussed in reply to earlier questions, the matter regarding devolution of funds and Central Assistance should be decided by one single agency, combining the functions of the Finance Commission and the Planning Commission. Also that such an agency will be a permanent body and not periodical in nature.

In regard to the credit needs of States both in the public and private sectors for industrial projects etc., a more coordinated approach is certainly called for. If a centralised National Agency is set up representing not only the States but also representing industries interests like FICCI and AIEI and the apex public sector financing institutions, that would help. Such an agency can monitor and look into the difficulties in implementation of the letters of intents and licences issued by the Government of India and also take care of the needs of various States and the units being set up in each State.

5.30 We do not agree with the view expressed in the first part of the question. Who collect the funds and how these are shared is a very substantive matter. Of course, there cannot be any disagreement with what has been stated in the second sentence of the question. Though it has been noted that in some schemes the benefit which flows to the beneficiaries is not commensurate with the investment which has been made in implementing the schemes.

5.31 The way the finances of the Union Government are being managed, there is a sound mechanism for the audit of both the revenue and expenditure of the Union Government by C. and A. G. and as such a periodical assessment by another agency does not seem to be necessary. Government at the Centre is also responsible to the people as the Government in the States are.

The impression is by and large correct. While we would not like to be specified for obvious reasons, it has been noted that some of the States have embarked on schemes and projects which are very costly and could, perhaps, have been avoided on consideration of sound economy.

No. National Expenditure Commission seems to be necessary. The Centralised National Agency, referred to in reply to the earlier question, should also reserve as a wing, which would scrutinise the schemes both of the Union Government and the States having sufficient implications. Broadly, it may be stated that any scheme involving an expenditure of Rs. 10 crores in case of the State Government and involving expenditure of more than Rs. 100 crores in the case of Central Government, may be scrutinised by this Agency.

5.32 The procedures that have been devised and the conventions which have been established are of a nature which cannot be regarded as detrimental to a healthy relationship between the Centre and the States.

5.33 No comments.

5.34 No comments.

5.35 We have no comments in the matter.

5.36 We think that the present system is adequate and provides for a sufficient check on expenditure by the States. We have no comments in regard to the system of expenditure checking in the Union Government.

5.37 Even under the present arrangement the Estimates Committee is not precluded from making recommendations to the State Government.

5.38 No comments in view of our reply to Question 5.31 (c).

5.39 No specific difficulty or undue interference has been noted by us. Hence no modifications are suggested.

(Note referred to in replies to questions Nos. 5.1, 5.7 and 5.11)

The successive Finance Commissions, while recommending non plan grants to the States under Article 275, have been following the revenue gap filling approach which has worked to the detriment of the revenue surplus State like Haryana. We have received no Central assistance on this account. In case of devolution of Central taxes to the States the Finance Commissions have not been following a progressive approach. Surcharge on Income Tax and the Corporate Income Tax have been kept out of the shareable pool. The size of divisible pool in case of Central Excise Duties has also been restricted to forty per cent. This needs to be expanded. Further the Central Government have been encroaching upon the already meagre resource raising powers of the States. Due to the levy of Additional Excise Duties on textiles, sugar and tobacco in replacement of sales tax on these items earlier levied by the States, States like Haryana have suffered heavy financial losses. Though the entire net proceeds of Additional Excise Duties are assigned to the States, our share in these is much less than the proceeds of sales tax, had the sales tax on these items been in force. Next, the grant in lieu of tax on Railway passenger fares given to the States is too meagre as compared to the tax proceeds had this tax been levied by the States. Thus

the imposition of these Central levies in place of the State levies has led to the erosion of the States' resources. The share of the States in the public sector market borrowings has been sharply declining. With the passage of years the Centre has been appropriating more and more share of these market borrowings.

The revenue gap filling approach adopted by the successive Finance Commissions has led to the pursuance of financially imprudent policies by various States and bred financial laxity. As averred by the Seventh Finance Commission the role of grants-in-aid in the total transfer of resources should, as far as possible, be residual and the attempt should be made to make bulk of transfer of resources through tax sharing. Even in the case of tax sharing due weightage should be given to tax effort and economy in expenditure.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The National Development Council is the highest forum for policy formulation regarding planned development. In this forum the view expressed by the Central Government take into account the requirement at the national level and the views expressed by State Governments take into the account the requirements at the State Level. Thereafter a broad policy framework is prepared. The present system of consultations is appropriate.

The involvement of the Centre should be confined to providing guidance and broad monitoring of programmes. Working groups tend to dictate the scope and coverage of programmes falling within the jurisdiction of States. This can distort the developmental coordinates within the State. The role of the Central Government should be advisory and not decisive under such programmes.

6.2 We do not agree with this proposal. However, the existing N.D.C. could meet more frequently to discuss specific issues.

6.3 Yes.

6.4 We would support the first view.

6.5 We do not agree.

6.6 We have been drawing up our plans keeping in view that State's priorities and requirements without any interference by the planning Commission. There has never been an instance where national priorities have come into conflict with state priorities rather these state's resources are necessary to avoid overdrafts but determination of the size, scope and phasing of physical programmes should be left to the State.

6.7 Grants/loans for schemes in the Central sector and Centrally Sponsored schemes are linked with performance. However, State should have greater leaverage and flexibility in allocating resources for other schemes in the States. The Centre should also allocate as grants larger sums for relief on account of natural calamities.

6.8 The present formula of fixing the Plan size of the States is not harsh to the poorer States. In fact, through the channel of Finance Commission the poorer States have been gaining at the cost of the better managed States. The modified Gadgil formula and IATP formula also give sufficient weightage to poverty and backwardness.

6.9 The Central assistance is given on the basis of certain criteria which do not take into consideration the potential for growth. Allocation of Central assistance for removal of regional imbalances and poverty is important but at the same time the maximum utilisation of physical resources and potential for growth of linking Central assistance with earmarked outlays should be dispensed with. Although the earmarked outlays cover economic development and minimum needs sectors which should receive the priority, yet if due to any reason the States are unable to spend the earmarked outlays the Central assistance should not be reduced. The quantum of Central assistance once determined should be treated as a State resource. Suitable premium should be given to better management by States.

6.10 No distortion has taken place in the plans of Haryana.

6.11 The monitoring and evaluation machinery is not adequate at present. The Central Government has been encouraging expansion of this machinery by providing 2/3rd of the expenditure on staff in the Planning Department. The expansion of the activities in the Planning Department will mean additional feed back from implementing departments. Therefore, the system of Central assistance be extended to all departments concerned with planned development.

6.12 Between the Centre and the States the system of decentralised planning already exists. Plan formuation and implementation is the responsibility of lStates. The system of scrutiny of State Plans by the Centre is, however, necessary as otherwise the States will find it very difficult to determine sectoral outlays within the available resources. For this purpose an agency outside the influence of the State Government is necessary. However, the present system of "summary trials" by the Working groups needs to be made equitable in favour of the State's view point.

6.13 The Planning Boards are in a position to take stock of the existing situation, potential for growth, regional requirements, etc. They can give proper direction to the development process in different areas. As a coordinating body it can determine the outlays for different activities within the given resources. They can also exercise better control over the implementation process and effectively monitor the development policy of the State Government.

As far as the States are concerned, the national Plan is even now indicative. Rather it includes the requirements and perspectives of different states and areas. Real difficulties arise only when final shape is given to the Five year/Annual Plan in terms of outlays and physical targets.

PART VII

MISCELLANEOUS

Industries

7.1 The First Schedule to the Industries (Development and Regulation) Act as pointed out included only a few industries which were of vital public interest and national importance. During the period since the implementation of industrial policy Resolution, 1948, a number of additions have been made in the First Schedule of this Act. These additional items included cannot strictly be termed as of vital public interest and national importance. It is well known that items of common usage by the public which are not very critical need not be grouped under the first schedule of this Act. This would help such industries to come up in different areas. It is well known that it takes considerable time to get an Industrial Licence for setting up industries, Besides, one has to make considerable efforts. Keeping this in view, it would be useful and necessary for such industries which are based on local demand or based on local raw materials to come up without any constraint.

7.2 (i) There should be norms, but there should be no legislation on the subject of norms. The guidelines will also require change from time to time.

(ii) The following items can be considered for deletion from First Schedule :

1. Electric Fans.
2. Electric Lamps.
3. House-hold appliances such as electric iron heaters.
4. Bicycles.
5. Fire Fighting equipment and appliances.
6. Plastic Moulded goods.
7. Hand tools.
8. Razor blades.
9. Pressure cookers.
10. Cutlery.
11. Steel Furniture.
12. Sewing and Knitting Machines.
13. Hurricane lanterns.
14. Sterlizers, incubators.
15. Paper board and Straw board.
16. Malted foods.
17. Flour.
18. Vegetable oils including solvent extraction oil.
19. Soaps.
20. Perfumery.
21. Leather and leather goods.
22. Oil stoves.

7.3 It would be useful and necessary to decentralise, particularly with reagard to giving clearance for import of capital goods and raw materials for industries wherein the percentage of capital goods to be imported to the Total value of capital goods is less than say 15% and percentage of raw material to be imported to the total value of the finished products is less than 10%. This procedure of decentralising would expedite setting up of new industries.

7.4 The State Government have taken sufficient steps to support small sector and to ensure raw-material supply of such materials as are available at fair rates to small scale industrial units. Haryana State Small Industries and Export Corporation looks after the raw-material supply and provides marketing assistance to small and tiny units. However, supply of essential raw materials depends on Central canalising agencies or public sector units.

7.5 Central financial institutions do not provide loans in the State Plans, but they provide loan for industrial projects to be set up in the State. Financing of Industrial projects is supplemented at the State level by the assistance granted by the SIDCs and SFCs (HSIDC and HFC) in our State. The resources of State institutions for providing assistance for Industrial projects are the refinance being made available by IDBI and the funds allocated by the State. Central institutions raise resources from the market by way of bonds while no such facility is made available to the State institutions. It would be desirable if a part of the market borrowings is allocated to the State institutions to augment their resources for industrial development in states. This could be done by sharing of total market borrowings allowed under the yearly plans between State and Central institutions and all India Institutions could give a share of their bond quota to the State institutions and thus help them in accelerating the pace of development.

7.6 The criticism does not appear to be justified. It is not possible to locate a central sector unit in a State without taking the State into confidence.

7.7 Since the matter is of great interest for the State, the Government of India should circulate the proposals to all the States for their comments and the States may like to support their claims. Then the Government of India should decide/finalise the proposals, preferably associating the interested State governments by calling them to a meeting.

7.8 The new list and policy regarding Centrally notified backward areas was announced on 1-4-83 while indentifying industrially backward district/areas, State Government was not consulted. Certain areas which the State Government considers quite backward have not been included in the Central list of backward districts.

There is no doubt that Central incentives for industries in backward areas have succeeded in dispersal of industry in backward region but still more could be done.

It is suggested that only the amoumt of subsidy may be earmarked only by the Central Government and the State Government could decide its policy for promotion of backward areas. Individual State governments are better aware of their problems and could formulate their policies according to their needs and situation prevailing in the State.

PART VIII

TRADE AND COMMERCE

8.1 We do not consider such a body is necessary at the present stage.

PART IX

AGRICULTURE

9.1 The working of the Government as enshrine in the constitution of India is based on the principle of "Co-operative federalism" under which there is scope for inter-action between Union and the State governments for the achievements of various goals. Agriculture is one sector which requires maximum initiative at the national level. Therefore, there is no harm if the Union Government take initiative in agricultural matters by exercising certain powers entrusted to it under the "Union and concurrent List". However, this does not mean that the constituent State lose all initiative for tackling the problems connected with the agricultural sector, which entirely depend on local conditions. By and large the Union and State governments have been working within the above framework and no problem has been faced in this regard. As a matter of fact, the Central initiative has always served as a helping hand and it has never run contrary to the interests of the State. Similar views apply to forestry, animal husbandry and fisheries.

9.2 The ultimate inclusion of Central and Centrally sponsored schemes within the State sector largely depends upon the availability of resources within the State Plans. More than that, it is felt that certain important Central and Centrally sponsored schemes can not be brought within purview of the State sector because of the resource gap. The additionality of funds which devolve upon the States through Centrally sponsored schemes are not linked with the State Plan resources. Therefore, there should be no hard and fast rule regarding transfer of Centrally sponsored schemes in the State sector.

9.3 It has become a normal practice that nominee of the State governments are represented on the working groups of the Central and Centrally sponsored schemes and by and large, the views of the representatives of the States are given due consideration while finalizing the recommendations of such working groups. These working groups also take into account the resources available in the State Plan for implementation of such schemes within States either through 100% central assistance or on sharing basis. To sum up, there also exists an effective cooperation between the Centre and the States on this aspect. However, in the preparation/formulation of Centrally sponsored/Centrally assisted schemes, the State Governments are not consulted which is against the recommendations of the National Commission on Agriculture, 1976 wherein it has been suggested that the Centrally sponsored schemes should be formulated in consultation with the State Governments and the work should be done by a joint working group.

(a) Fixation of minimum Fair Prices of Agricultural Items :

9.4 No doubt the views of the State Governments are sought by the Agricultural Prices Commission before fixing support prices of various agricultural commodities, there is a common feeling that the cost of production as worked out by the States is by and large not accepted by Union Government. This results in fixation of almost non-remunerative Prices. In agriculturally advanced States like Haryana, the farmers are highly advanced, progressive and they by and large adopt recommended package of practices including application of costly inputs on their crops. The initiative of the farmers results in higher yields but the benefits accruing to them in form of support prices are not commensurate with the high cost of cultivation because of costly inputs. The State Government feels that there should be some system of payment of bonus to the farmers for every additional unit of yield contributed by the farmers. In the present system of fixation of prices at the level of Government of India, these factors are perhaps not taken into account.

The State Government should also be compensated for providing cheap electricity and water to the farmers at subsidised rates, e.g. electricity is supplied for agricultural use at about @0.20 paise per unit, while the cost of production is about 0.60 paise per unit. In addition the Board subsidises the energisation of tubewells. All these subsidies should be reimbursed by the Central Government to the State Government. Permanent arrangements should be created for this purpose.

(b) Irrigation (including inter-state aspects) :

There are serious inter-state difficulties in the distribution of river waters. These arise from the fact that river waters are not a central subject. There should be a national council with Prime Minister as Chairman to decide finally over the inter-state distribution of river waters.

(c) Provision of strategic inputs, including credit :

Fertilizer is one input where the allocation to various states are made by the Government of India under the Essential Commodities Act and quite often the states are allocated fertilizers from manufacturing plants situated at far off places within the country. On the other hand, allocation from the Major manufacturing plans within the state are made for other states. Sometimes because of shortage of railway wagons etc., the movement of fertilizers from one state to another is greatly hampered. Therefore, it is suggested that although such allocations are made at the level of Government of India, as far as possible efforts should be made to allocate fertilizer from the plants situated within the state or in the neighbouring states only. In addition there is need to decentralize the quality control regulations. At present, the quality control of fertilizer is regulated through Fertilizer (Control) Order 1957, which is a central legislation. By passage of time it has become necessary to make drastic change in the Fertilizer (Control) Order but the same are not coming through because of cumbersome procedure involved in amendment at the central level. It is felt that states should be given powers to amend the Fertilizer (Control) Order, 1957 in so far as it relates to its application within a particular state.

(d) Forestry Policy :

Adequate powers should be delegated to State Governments for permitting felling of forest trees for the sake of development works. Certain safeguards could however be provided.

9.5 No problem worth mentioning is being faced in the sphere of Centre-State relations with respect to the role of agricultural research and financial institutions.

It is suggested that ICAR may formulate need based projects depending upon the problems and requirements of the states. The financial institutions like NABARD should make substantive allocation for the development of inland fisheries.

PART X

FOOD AND CIVIL SUPPLIES

10.1 There is scope for improving Centre-State liaison in the areas of procurement, pricing, storage, movement, distribution of foodgrains and other essential commodities. The Constitution envisages food to be a State subject but by the Central policies on the aforesaid matters, very little initiative/options are left to the States. As a result, Govt. of India seems to have powers without responsibilities and the State governments have responsibility without adequate powers. One way to restore the balance in the national interest is to create a standing committee at official level for taking a composite and integrated view on matters relating to procurement and distribution of foodgrains and another standing committee for other civil supplies. The adhoc consultations resorted to do not serve much purpose, and leave a lot of scope for further improvement. In particular, levy of sales tax on foodgrains, imposition of quality cuts., reimbursement of incidental etc. are constant areas of difference between the State and Centre. The Central Government/FCI should provide funds in advance to the State governments for purchase of foodgrains. The States supplying foodgrains and crops to the Centre should be compensated for the subsidy given by the States to the farmers in the shape of cheap electricity and water.

10.2 Yes, such a periodical review must take place and constant monitoring should be done. To start with a complete review of the existing Acts/ Rules should be undertaken by a Committee, in which the government of India, concerned Ministeries, a few State governments and a few experts may participate, which should complete this exercise in 6 months or so. Thereafter a standing Committee meeting every 6 months could meet emergent needs and situations.

PART XI

EDUCATION

11.1 The Government of Haryana feels that there is hardly any justification for the criticism regarding centralization and standardization in the field of education. Inspite of the fact that education has been brought on the concurrent list, there is no Central interference and the State governments are free to take any initiative for the spread and promotion of education. The State governments are also free to formulate any programmes and policies with regard to improvement of education standards.

11.2 Universities of the State are of the opinion that no difficulty have ever been experienced with regard to UGC exercising its influence over various areas of higher eduction.

It is the statutory obligation of the UGC to lay down procedures and guidelines for the improvement of standards of higher education and research in universities system. The policy frame of the UGC enjoins on it the improvement of the quality of New University education making expansion of educational facilities both by way of opening Universities, centres for post-graduate studies and new colleges. The policy framework for the functions assigned to it is laid down by the various education commissions on the advice of the specialist panels and after the same has been examined in depth and approved by the regional conference of the Vice-Chancellors. This ensures uniformity of approach regarding the various academic and administrative matters to be dealt by the universities such as the reservation of seats for weaker sections, restructuring of courses of study at the undergraduate stage etc. Therefore, it can be concluded that the influence exercised by the UGC on the institutions of higher education, as central agency helps in the development of higher education by bringing the needed transformation and to remove the regional disparity in the length and breadth of this country. It ensures uniformity and planned development. As such we feel that UGC is crucial for the development of higher education.

(b) UGC extends greater cooperation in the form of financial assistance for the development of higher education. Both the Universities of the state are satisfied regarding the cooperation of UGC in releasing the grants within its 'policy frame work'. Even then at certain levels it is desired that UGC should critically identify the real development needs of the institutions of higher education and assign them relative priorities for making available financial assistance out of the funds placed at its disposal. The developing universities/institutions should be allocated more development grants as compared to the developed ones. The real financial needs of the areas should be determined on the basis of various survey studies and reports of the specialists panels. Financial assistance in the form of matching grant is given to the colleges for the following development purposes:—

1. Books and journals.
2. Various equipments including library facilities.
3. Extensions/construction of coollege buildings.

The share of the UGC for the above mentioned purposes in the form of assistance is 75% for items at Sr. No. (1) and (2) and 50% for the item at Sr. No. (3). Rest of the share is met by the State government or by the managing committee as the case may be. But it has been observed that UGC share of the matching grant is usually delayed and is not sanctioned before the end of the financial year with the result that the proper utilization of the

grants becomes difficult. It is suggested that UGC should take steps to ensure that their share of financial assistance to government/private colleges is sanctioned upto June of every year.

11.3 Central Advisory Board on education can be of much help in arranging discussions and consultations on the various issues concerning the field of education. Education Ministers and education secretaries conference organised, at the national level can take up various educational issues of mutual interest and evolve consensus in initiating action as per need of the society and the nation.

11.4 It is felt that the institutions run by the religious & language minorities should be subject to the regulations of the education department in all matters except those which have a bearing on religion or language. For this purpose Article 30 of the Constitution of India should be amended.

11.5 The relationship between the state and the centre in the field of education has always been cordial and that of mutual understanding and amity. The goal is common and there is no question of any conflict between the State government and the Central government.

PART XII

INTER-GOVERNMENTAL COORDINATION

12.1 There is no necessity of having a separate body for this purpose. The National Development Council can be entrusted with the necessary powers to deal with such problems.

GOVERNMENT OF HIMACHAL PRADESH

(a) Replies to the Questionnaire

(b) Memorandum

Himachal Pradesh

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 It is our view that the Constitution cannot be termed federal in the strict sense because it provides for the division of powers in such a way that the Central and the State Governments are each within their spheres not substantially independent of the other. In addition, it may be mentioned that only one of the six major ingredients of a Federation as specified by the Administrative Reforms Commission are met in the case of our Constitution. It is, therefore, our basic approach that the country is a Union, being an indissoluble partnership on States, with the Centre playing a more prominent role by virtue of its all India coverage and responsibilities and its primary task of cementing the links among the States and itself, and strengthening their sense of national identity.

1.2 The Rajamannar Committee has urged for greater autonomy for the States by a re-distribution of the legislative powers in the three lists of the Seventh Schedule; and has suggested deletion, revision or substantial modification of certain provisions such as Articles 251, 256, 257, 348, 349, 355, 356, 357, 365 etc. As far as the Government of Himachal Pradesh is concerned, our comments with regard to the Rajamannar Committee recommendations are as follows:—

(a) No changes are required in respect of Articles 251, 256 and 257 of the Constitution.

(b) It is our recommendation that the Articles 348 and 349 should be kept intact.

(c) It is also our view that the Article 355 is absolutely necessary so as to shield the country from external aggression and internal disturbances.

(d) No changes are required in Articles 356, 256 and 257 of the Constitution as also in Article 355 as also in Entry 52 of List-I.

1.3 The present constitutional provisions provide the optimum balance. No changes are, therefore, necessary.

1.4 It is our belief that today there does not exist any federation of the traditional type wherein national and regional Governments are co-ordinate and absolutely independent within their respectivte jurisdiction. The nearest approach is that of the United States but even there the federal role has increased tremendously over the years.

1.5 It is our view that the Constitution is basically sound and flexible enough to meet the challenge of the changing times.

1.6 We agree that the protection of the independence and ensurance of the unity and integrity of the country is of paramount importance. It is our view that the Preamble, Article 3, the Articles concerning with fundamental rights and directive principles of State Policy and the Articles dealing with the administrative relations between the Union and the States, trade, commerce and interçourse within the territory of India, services under the Union and the States and the Emergency provisions as provided by the Constitution have been designed essentially to achieve this end.

1.7 We have already commented about the Articles mentioned in this question. The Articles are eminently reasonable.

1.8 We do not think that Article 3 of the Constitution requires any changes.

PART II

LEGISLATIVE RELATIONS

2.1 We feel that there is nothing basically wrong with the scheme of distribution of legislative powers between the Union and the States.

2.2 Strictly from the standpoint of Himachal Pradesh we have the following suggestions to offer :—

(a) Article 288(2) be so amended as to ensure that the Legislature of a State may impose a tax in respect of any water or electricity stored, generated, consumed, distributed or sold by any authority whether subservient to the Central or State Government.

(b) List-I item 56 be redevised so as to ensure a State's power to control taxation on its hydle potential.

2.3 We do not agree that such a course will be useful.

2.4 It is our view that the present Article 249 of the Constitution which deals with this matter should be kept intact.

2.5 We have no other suggestions to offer.

PART III

ROLE OF THE GOVERNOR

3.1 It is our view that by and large the agency of the Governor has in the context of Centre-State relations been able to show high fidelity to the role assigned to it by the Constitution.

3.2 It is our view that the Governor can be major link between the Centre and the States in terms of fostering healthy Union-State relations Even those

who have disputed the discretionary powers of the Governor are now of the view that Governors have played a positive role in ensuring the stability and progress of their States.

3.3 (a) It is our view that the Governor has been fair and unbiased in exercise of his powers to submit a report on the breakdown or failure of the constitutional machinery.

(b) & (c) The Governors have exercised their discretion in this regard from time to time fairly and objectively.

3.4 The State Legislature may at times legislate in such a manner as to either affect national security, controvert national policies or give rise to considerable national controversy. It is, therefore, our view that powers exercised under Articles 200 and 201 should not be taken away from the Governor and the President of India. However, a reasonable time limit may be prescribed for assent of rejection under Article 201 of the Constitution.

3.5 We agree with the conclusions drawn from the case study conducted by the Indian Law Institute. We agree that assent has been withheld only in very few cases, and that the Article has not acted as a threat to the autonomy of the States.

3.6 The Governor has a dual role to play and his position makes him a major link between the Centre and the States. Governors have generally acted impartially and fairly in accordance with the Constitution and its conventions in discharging their dual responsibilities.

3.7 No.

3.8 We do not agree with the suggestion.

3.9 We feel that such a provision will not be feasible in India.

3.10 We entirely disagree with the view of the Administrative Reforms Commission with regard to formulation of guidelines on the discretionary powers of the Governor. The crisis in a dynamic political situation are so varied that it will not be proper to tie up the hands of the Governors.

PART IV

ADMINISTRATIVE RELATIONS

4.1 It is our view that the purpose of Articles 256 and 257 is to ensure that the States do not in any way impede or prejudice the exercise of the executive powers of Union, whereas Article 365 deals with failure of State Governments to comply with the directions given by the Union Government. It is our view that none of these Articles have been till now misused and therefore there is no point in omitting them. These Articles can be used effectively for ensuring not only high fidelity to national policies and national goals but also to maintain definitive authority in the hands of Union so as to ensure national integrity and national security.

4.2 We support the view that Article 365 should not be deleted and may remain as a reserve provision.

4.3 Since no direction has been issued under Article 256, the question is hypothetical.

4.4 It is our view that this extra-ordinary remedial power under Article 356 has been exercised properly.

4.5 The Forty-fourth Amendment Act, 1978 which restored the original period of six months in Article 356(4) has to a certain extent handicapped the efficacious use of powers under Article 356 by the Union. It is, therefore, our view that the Forty-fourth Amendment should be substituted by the clause specified by the Forty-second Amendment Act of 1976.

4.6 It is our view that the present arrangement regarding census, elections, etc., in which many of the functions of Union Government are being implemented by the State administration are working satisfactorily.

4.7 Central agencies have performed a vital role. Most of them have been helpful in giving a fair deal to less developed and different States.

4.8 It is our view that All-India Services have fulfilled the expectations of the Constitution-makers not only in providing uniformity in administrative quality and procedures and in fostering stability and a broad national outlook amongst the services, but also in promoting national integration. We are of the view that the present control of State Governments with regard to the All-India Services is sufficient.

4.9 It is our view that the Centre's ability under Article 355 to locate and use Central para-military and police forces even *suo motu* should not be hampered in any way.

4.10 It is our view that the present situation in which broadcasting and other like forms of communication are in List-I should continue.

4.11 It is our view that the Zonal Councils have till now been successful to a fairly great extent in collectively pursuing States' interests by cutting across party lines.

4.12 The National Development Council is a forum where all States are represented and where co-ordination regarding policy and programmes can be discussed usefully. This forum has been working effectively and there is no need for any change.

PART V

FINANCIAL RELATIONS

5.1 The scheme of devolution has worked well. There may be a case for a closer look at non-plan expenditure on a sustained basis, so that maintenance and upkeeps of existing assets and schemes do not suffer.

5.2 A complete separation of fiscal relations of the Union and the States is neither desirable nor practicable. Similarly, concentration of all the tax powers with the Union is also not desirable. In the context of planned development, it is necessary to take an overall view of the financial needs of States,

All income taxes (including corporation tax and surcharges) and all excise duties, by whatever name called, should be shareable with the States and the States should get most of the resources transferred through assured devolution but the principles of inter-State distribution should be such that advanced States are not left with large surpluses. There should also be institutional arrangements for more equitable distribution of resources other than tax revenues between the Union and the States. At the same time, the Central resources would be sufficient to meet the Centre's own requirements as also the emergency needs of regions and States, and there should be a surplus left with the Centre to be able to give it to backward and hilly States for bringing their development at par with the rest of the country.

5.3 We agree that in order to reduce regional imbalances the Centre has to be fiscally strong. The scheme of distribution itself should contain elements which lead to removal rather than accentuation of regional disparities.

5.4 It is our view that better control over expenditure would be the basic option available to the Centre. Deficit financing can also be resorted to a limited extent.

5.5 (a) With regard to share of taxes, our suggestions are as follows :—

(1) **Income-Tax**

The share of the States should be increased from the present 85% to 90% of the net proceeds as this minor increase in the States' share would not make much difference to the Centre whereas it could mean availability of some more funds to the States to meet their multifarious responsibilities.

The present basis of distribution *viz.* 90% on population and 10% on contribution basis needs to be changed. The head offices of factories are located mostly in metropolitan cities and the income-tax is deducted from the salaries and dividends/interest at source, even though the employees and shareholders/depositors may be living in other States. Moreover, this basis of distribution is not progressive because the more industrialised State generate higher revenue from sales tax etc. and thus their need for transfer is correspondingly less. The need of such States as have under-developed economies is more and as such the divisible pool of income-tax should be distributed on the following basis :—

(i) 25% for providing equal percentage of surplus to the revenue deficit States;

(ii) 65% on population basis;

(iii) 10% on collection basis.

(2) **Basic Excise Duties**

The sharing of these duties should be made compulsory. The share of the States should be raised to a minimum of 60% to make more resources available to the States.

At present, the share of the States in the divisible pool of excise duties is determined after giving equal weight to the population factor, the inverse of the per capita State Domestic Product, the percentage of poor in each State, and a formula for revenue equalisation.

The high cost of living and peculiar geographical position does not make per capita income a correct indicator of the economic backwardness of the hill States because the higher cost of transporting essential commodities and the larger requirements of the necessities of life due to the climate inflate the money value of income considerably, giving a distorted picture of the standard of living in the hills.

The calorific requirements in the hills are considerably higher than in the plains due to severity of climate and housing, warm clothing and food have also to be on a much more substantial scale in the hills than in the plains.

In the case of such hill States as also happen to be border States so there are always a large number of army and border security forces stationed within their boundaries, with the result that the per capita income of such States is artificially inflated by the expenditure on account of these forces.

Again, consumption of excisable goods if taken as a preponderant factor in the determination of share of individual States in the matter of excise duties is likely to distort the picture since in a State with large area and low population which is also economically backward, consumption of excisable goods may not be much because such a State is often a source of raw materials which are converted into excisable goods and consumed elsewhere, for example resin from hilly States.

Further, the scheme of devolution and transfer should be such as provides revenue surplus to economically backward and revenue deficit States after filling their revenue gaps. This surplus could be used for development purposes.

In view of all these factors, *inter-se* distribution among the States should be :—

(i) 25 percent on population basis;

(ii) 25 per cent for Surplus Equalisation Pool;

(iii) 10 per cent for hill States; and

(iv) 40 per cent for backward States.

(3) **Additional Excise Duties leviable in Replacement of Sales Tax**

The rates need to be restructured so that their incidence reaches 10.8% of the value of clearances of all 3 items (textiles, sugar and tobacco taken together) as recommended by the National Development Council. The ratio of 2:1 between the yield of basic and special excise duties on the one hand and additional excise duties on the other should also be reached.

Sugar, textiles and tobacco are considered items of mass consumption and naturally consumption varies from State to State due to climatic conditions, social and other customs and habits. Thus

the per capita consumption of tea and consequently of sugar is very high in Hill States as compared to the plains and as such it will not be fair to assume that the consumption of any commodity depends on population or sales-tax revenues.

Similarly, it will not be correct to adopt State Domestic Produce as a criterion as it could hide a wide variation of consumption levels and as such it is a very vague indicator at best. Moreover, production is also no indicator of the sales tax revenues accruing to a State if we take into account the fact that the Companies usually have a number of branches and depots at various places and that they transfer manufactured goods to them on self-consignment basis.

Similarly, despatches as a criterion in case of sugar is also not a fair indicator of its consumption because apart from official despatches there are usually despatches on private account of considerable magnitude which also need to be taken into account to arrive at any correct estimation of sugar consumption in any State.

In case of tobacco and textiles, population and per capita State Domestic Product cannot indicate the consumption of these articles a correctly. For example, it would be wrong to conclude that because of higher per capita income, the consumption of tobacco would be higher in Punjab than in a hill State like Himachal Pradesh and as such altitude and climatic conditions as well as habits of local population also need to be taken into account. A 20 percent additionality over the per-capita Domestic Product should be given to the hill States because of their cold climate which results in larger consumption of tobacco and textiles.

(4) **Passenger Tax**

Being dealt with against Question No. 5.26.

(5) **Plan Assistance**

In national interest the Central Government should provide extra financial help outside the plan/ to States with hydro-electric potential to tap all the viable hydel power projects.

Similarly, the Central Government should fully meet the loss of revenue on account of the imposition of a total ban on felling of trees in the Himalayan region. It should also finance the afforestation of these areas on a crash basis outside the plan.

Non-Plan Assistance

In addition to covering the revenue gap of the deficit States the non-plan assistance in the shape of grants under Article 275 should be provided in such a way that it leaves such deficit States with a surplus equal to 25% of their non-plan expenditure. Further, such grants should also be given to cover the increasing expenditure by the States on the payment of Additional Dearness Allowance to employees. For drought and rehabilitation purposes, Central assistance should be in the form of outright grants instead of loans as these are for financially unproductive purposes.

5.6 The establishment of a "special federal fund" for ensuring "faster development in economically under-developed areas relative to other developed areas of the country" is a good idea, as the Finance Commisson and the Planning Commission have to look after the needs of all the areas of the country, whether developed or under-developed.

5.7 No change in the existing scheme of taxation powers is advisable in view of the principles mentioned in the question. What has been recommended by this State is : —

(i) Increase in the share of States in the divisible Central taxes.

(ii) Change in the principle of their *inter-se* distribution among States.

(iii) Making sharing of basic excise duties mandatory.

(iv) Bringing corporation tax into the divisible pool.

5.8 It is no doubt true that a fragmentary approach to the taxes should be avoided and that taxation should not be so undertaken as to damage the economy or cause harassment to trade and industry. The taxation should be simple and the collection should be efficient. From this point of view, there is no justification for developing the taxation powers of income-tax, corporation tax, wealth tax, estate duty, customs duty, excise duties etc.

5.9 We agree that difficulties arise on the side of non-plan under the present system. We suggest that there should be a non-plan wing in the Planning Commission to ensure that non-plan needs are balanced with plan needs.

5.10 So far as Himachal Pradesh is concerned, the transfers, both statutory and discretionary, from the Union to the States, on the advice of successive Finance Commissions or otherwise have promoted efficiency and economy in expenditue on the one hand and narrowed down the disparities in expenditure among the States on the other hand to some extent. Yet they have not been able to wipe out the disparities totally.

5.11 It is true that the present mechanism of transfer of resources has some inbuilt propensities towards financial indiscipline and improvidence. This is because the Finance Commissions were largely following the procedure of filling revenue gaps. Increasingly, Finance Commissions have been adopting standard to be attained—for example the minimum returns to be earned over a period of 5 years by Road Transport Corporations and Electricity Boards etc. Similar standards have to be adopted in a variety of other cases also through continuous studies. While States which have indulged in improvident expenditure are not to be encouraged, States which have implemented programmes in accordance with the directive principles of State Policy or the nationally accepted programmes should be assured of adequate resources.

5.12 If this broad proposition is agreed to, it would not be possible to fulfill the laudable principle laid down by the Seventh Finance Commission

itself as enumerated in Question No. 5.13 and the backward hill States are likely to suffer.

5.13 There is nothing to dispute so for as the principles are concerned. So far as the methodology is concerned it needs to be deliberately weighted in favour of backward hill States keeping in view the peculiar nature of their problems, like sparse population, large distances, high cost of living, lack of infrastructure, high cost as compared to the plains of providing and maintaining such infrastructure, poor revenue base, etc.

5.14 We do not agree with these suggestions.

5.15 The suggestions as given in reply to Question No. 5.20 and 5.29 should go a long way towards removal of imbalances.

5.16 & 5.17 There is no doubt about the increase in the fiscal imbalances of the States and about the growth in their indebtedness. The causes specially in backward hill States like Himachal Pradesh are that their tax base is limited and most of their tax resources are inflexible. Again there is little scope for indirect taxation. The hill States, keeping in view peculiar nature of their problems like sparse population, long distances, high cost of living, lack of infrastructure and high cost as compared to the plains of providing and maintaining such infrastructure, lack of industries, high cost of transportation, peculiar climatic conditions, etc.. have to invest a lot in the basic infrastructure so that development could start in a meaningful way. A major chunk goes toward the construction of roads which in a hilly State do not contribute directly to the generation of, the State's resources. The vast distance and poor means of communications further complicates the matters. Even the provision of basic administration costs much more due to large areas, long distances and lower density of population. Such a backward hilly State as Himachal Pradesh has further to incur considerable expenditure on or socially productive but financially non-productive purposes like drought and rehabilitation, expansion of health and education facilities. construction of rural roads, the Central assistance which is to a certain extent in the form of loans.

Unless and until economic development (for which massive financial doses are a pre-requisite) becomes a self-sustaining process in such backward hilly states where a major part of the population depends on agriculture and horticulture for their livelihood and where the area under cultivation is only 15% of the total area, and unless massive resources are pumped in by the Centre for construction of power projects the income from which is given over to the State, there is little hope of any improvement in this regard, and the State is likely to continue to have a large deficit in its budget in in the foreseeable future.

5.18 We do not favour any major change in the policy relating to market borrowings. For, if States are left free to raise loans from the market, only the richer States would benefit.

5.19 The payment system is adequate.

5.20 The present arrangements is satisfactory.

5.21 The tax base of the States is limited and most of their taxation resources are inflexible. Again there is little scope for the States for indirect taxation. The backward hill States have to depend mostly on transfer of resources from the Centre either from the divisible pool of Central taxes or in the shape of grants and sometimes the delay in the release of such transfer leads to Way and Means difficulties.

The question of large over drafts generally arises from the third year of the plan period in the case of those States which do not have a sufficient revenue surplus as a result of the recommendation of the Finance Commission. While the requirement of funds increases with the progress of schemes and the rising costs during a plan period, the States find that there is a substantial erosion in their resources due to grant of instalments of Additional Dearness Allowance and other items of expenditure related to rise to costs. Since there is no corresponding increase in Central Assistance to the State plans, the State's resources are squeezed between the increasing demands both on the non-plan and and plan sides leading to over drafts.

During the course of a year, the over drafts are also due to the fact that a considerable part of the Central assistance to the Contrally sponsored schemes, externally assisted schemes etc. are released towards the latter part of the financial year. Though considerable improvement in payment through instalments have been made in recent years, since these schemes form a large part of over all plan outlay in a State, the effect of payment, based on claims filed after expenditure is incurred on the State's Ways and Means position is quite adverse.

5.22 So far as Himachal Pradesh is concerned it would not be correct to suggest that it is not exploiting its own revenue sources. There is not much to exploit in a backward hill State like Himachal Pradesh. Given its peculiar geographical conditions and lack of communications, the per capita tax burden in Himachal Pradesh is already quite high.

5.23 No comments.

5.24 We are of opinion that any move which may effect the financial interest, existing or prospective, of the States should be introduced in the Parliament after consultation with the States. This is already being done in many cases.

5.25 So far as Article 269 is concerned, out of the seven taxes enumerated under it, the Central Government has chosen to impose taxes only in two, namely, the estate duty in respect of property other than agriculture land and the tax on railway fares. Regarding tax on railway fares it is being dealt with in reply to Question No. 5.26. The remaining five taxes yet remain to be exploited by the Centre. Naturally, if the Centre imposes the remaining five taxes it would go to some extent towards improving the resources of the States.

5.26 The earlier Finance Commissions had recommended distribution on the basis of passenger earnings from non-urban traffic of each zone as

indicated by the actual route length in each State. The Seventh Finance Commission suggested that it should be in proportion to the non-suburban passenger earnings from traffic originating in each State. These criteria discriminate against the States who have very small length of railway lines, but which nevertheless contribute to railway passenger traffic to a large extent. The population of hill States, travels in the railway systems in the neighbouring States, adding to the passenger earnings in those States considerably. This is because in the absence of broad gauge rail lines in hill States, the people of such States generally go to the junctions in the neighbouring States to board the trains. Since route lengths in various States is unevenly distributed due to historical reasons, it would be only fair that the grant in lieu of railways passenger tax is distributed entirely on the basis of population in each State.

5.27 No comments.

5.28 It is our view that the margin money made available to the States should be increased, after applying a growth rate of 7% in view of the recurrent nature of these calamities. Also a State Relief Fund may be set up for relief of distress arising out of natural calamities. Funding for this may be on a statutary basis. Relief assistance granted by the Central Government should not be treated as advance plan assistance, to be adjusted in the next 3 annual plans, but as an outright grant. The 25% State contribution should be vaived for deficit States.

5.29 We do not favour these proposals.

5.30 As a broad proposition, one could agree with it. However, the level of collection is also important due to administrative factors.

5.31 (a) The State Government does not agree with the criticism that the expenditure of the Union is not being organised in the best interest of the nation's growth or that there are trends towards incurring of infructuous and unnecessary expenditure.

(b) So far as Himachal Pradesh is concerned it is not true that there has been any indulgence in unnecessary expenditure of a populist nature resulting in depletion of resources available for developmental purposes.

In view of the above there is no need for a permanent or ad-hoc National Expenditure Commission to assess the nature and quality of expenditure.

5.32 None.

5.33 There has recently been a re-organisation and audit and accounts branches have been separated to give more emphasis to audit. Whereas evaluation audit should be extended to cover as many Government activities as possible, routine audit should not be dispensed with.

5.34 The Act of Parliament confers sufficient powers and enjoins adequate duties on the Comptroller and Auditor General to enable him to keep a sufficient watch on the expenditure of the Union and the States.

5.35 In this State, the reports presented by the Comptroller and Auditor General to the State Legislature are comprehensive and accurate.

5.36 The probes into important issues by the Public Accounts Committee and Committee on Public Undertakings, with the help of the Comptroller and Auditor General, are a sufficient check in the matter.

5.37 The State Government agrees that the Estimates Committee is a useful committee.

5.38 The view of the State Government is that there is no necessity for an Expenditure Commission, in view of the existence of the Comptroller and Auditor General and the Public Accounts Committee. This will merely result in duplication.

5.39 The present system is working satisfactorily. Experiences of irritation may be with individual offers, but not with the system.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 In the matter of overall economic policy planning the Centre has to play the leading role. It is wrong to say that the States do not participate in the planning process.

6.2 We do not subscribe to the view that the National Development Council be set up on a statutory basis. The existing system at the Centre is already participative.

6.3 There is no scope for improvement in the system.

6.4 The State Government does not endorse any of the three views expressed.

6.5 The State Government does not subscribe to the view. The Planning Commission's role for over seeing planning at the national level should continue.

6.6 The existing system should continue.

6.7 The State Government has not faced any difficulty with regard to the channelising of Central assistance by way of loans and grants through the Planning Commission. Rather, we feel that there has been a judicious allocation among various States according to the existing principles, at the procedure has worked fairly well.

6.8 We feel that the non-plan resources of deficit States should be assessed on a more realistic basis, so that there is no undue pressure on non-plan expenditure. No other change is necessary.

6.9 In so far as Himachal Pradesh is concerned, the mechanism evolved by the National Development Council for allocating Central plan assistance to

States is considered to be equitable. It has, by and large, contributed significantly to the attainment of the basic planning objectives. We also endorse the specific earmarking of Central assistance for Tribal and Hill Area Plan and the Special Component Plan for Scheduled Castes.

6.10 We do not agree with the view expressed.

6.11 The monitoring and evaluation machinery should be strengthened at Central, State and District levels.

6.12 The State Government agrees with the concept of decentralised planning. It should however be introduced gradually so that we have an adequate data base and infrastructural machinery at the District and Sub-District levels. The Planning Commission is already working on right lines for introduction of decentralised planning below the State level.

6.13 In Himachal Pradesh, a State Planning Board has been set up. Besides, technical staff has been appointed in the form of State Planning Machinery. This staff has helped to develop necessary expertise in the preparation of the State Plan. Steps are underway to strengthen this machinery.

PART VII

MISCELLANEOUS

Industries

7.1 We feel that this view is valid.

7.2 The present situation needs no change.

7.3 The present procedure for licencing is advantageous to a State like Himachal Pradesh which has been declared as an industrially backward State, with 25% Central investment subsidy. The Central policy is an effective method for persuading industrialists to shift to backward and no industry districts.

7.4 Much has been done for Cottage and Village industries, but a lot remains to be done. The DICs need to be developed further as a co-ordinative mechanism, the Boards, Corporations and Cooperations have to assume a bigger role for supply of raw materials and marketing of products, and even the private sector has to be authorised to come forward.

7.5 The Central institutions are working satisfactorily, whereas they do not have an office in Himachal Pradesh, it need to be opened at the earliest. As in the past, the Central Government should continue to lay emphasis on release of funds to backward and hilly States, even by relaxation of standard norms.

7.6 It is not practicable to take the States collectively into confidence on such issues. Several criteria are being followed in taking the final decisions.

7.7 We feel that there is no justification do for such criticism.

7.8 The present methodology is satisfactory.

Replies to the Supplementary Questionnaire on Industry

1. The present system is conducive to the removal of regional imbalance in the context of industrial development in the country. In the absence of central authority regulating the growth of industries, particularly, larger units, the industrial backward areas, especially the hilly regions will continue to remain backward. The present system should continue.

2. We subscribe to the view of uniform Central legistation covering the entire country in the context of reservation of certain categories of industries for the small scale sector. The definition of small scale industry in terms of investment limits and the type of industries should also be with the Central Government. Under the system, the States do have freedom to promote industrial items best suited to the local conditions.

3. The State Govt. plays an important role in promoting the small scale and medium industries. This role consists of provision of infra-structural facilities and financial assistance in the form of subsidies, loans and concessions in the context of States taxation. In so far as, however, the industrially backward States, particularly, the hilly regions, are concerned, they are seriously handicapped in performing their role on account of severe constraint on resources they are confronted with. In case the basic objective of planned development, e. g. removal of regional imbalances, is to be realised in the forseeable future, the outlays for industrial development in the States have to be considerably stepped up. However, again the plan resources of the State Governments are limited. The only way the out-lay for industrial development could be augmented is the increased flow of financial assistances to these States through the National Level Financial Institutions and the Central Govt. by way of making larger provisions for various types of subsidies allowed for the setting up of industries in the industrially backward areas.

4. This view is valid as has been stated in the reply to Question No. 2 above. No item needs to be removed from the list reserved for the small scale industrial sector as it exists.

5. The reply given to Question No. 1 above is relevant here.

6. The Industrial Policy Resolutions announced from time to time are in conformity with the aspirations of the Indian people and for the country as a whole and the industrially backward areas in particular, in the field of industrialisation for a balanced regional development, uniform national policy is a pre-requisite, otherwise for apparent reasons, the regional imbalance will continue to increase.

7. There should be adequate consultations between the Centre and the States before the Industrial Policy is revised/formulated. This can, however, be ensured if the arrangements for such consultations are institutionalised. National level forums both at Government and administrative level should be constituted where all State Governments are represented.

8. The M.R.T.P. Act should not be made applicable to the backward and hilly regions as in the case of State of Jammu & Kashmir. This will attract

larger houses to the hilly regions where they have thus far been shy of making investments. Setting-up of larger units and nucleus plants in such regions, would substantially accelerate the pace of industrial development in these areas.

Trade and Commerce

8.1 A central authority may be constituted for the above purpose.

Agriculture

9.1 It is our view that *status-quo* be maintained in this regard.

9.2 We do not agree with this, as central and centrally sponsored schemes are primarily designed to prime up the development efforts of the otherwise weaker States.

9.3 We agree with both the suggestions given by National Commission on Agriculture in 1976. Those are already being implemented.

9.4 (a) As far as the State of Himachal Pradesh is concerned, fixation of minimum or fair prices of agricultural items is advantageous to us.

(b) No comments.

(c) Union Government's initiatives in this respect have been advantageous to the State.

(d) In terms of forestry policy and administration it is out view that such initiative has been, by and large, advantageous to this State. A greater awareness is needed at the Central level about the fragility of the Himalayan mountain environment and the need to pump in national funds so as to provide a green cover to this entire area, even by clamping a total moratorium on all fellings.

9.5 There are no problems.

Food and Civil Supplies

10.1 Himachal Pradesh would like to have greater allocation of rice.

10.2 A periodic review would indeed be useful. Once in 5 years a National Committee with representatives from the Centre-States and concerned interests could be appointed to review the situation and make appropriate recommendations.

Education

11.1 The criticism is not justified. In fact we require greater standardisation in the matter of predegree and university education considering the need for mobility of students from one region to another, standard examination system which will create parity in the matter of degrees and diplomas issued by various authorities, a broadly unified national calendar for admissions and withdrawals of students and an upgradation of syllabi and curricula in the field of scientific and technological education.

11.2 It is working satisfactorily.

11.3 We have no suggestion to offer.

11.4 We discern no difficulty in this regard.

11.5 No such instance have come to the notice of the Government of Himachal Pradesh.

Inter Governmental Coordination

12.1 It is our view that such an Institution would not be useful in our country, as irritants and problems between the Centre and the States are resolved amicably by a two way consultation process.

Himachal Pradesh

MEMORANDUM

Chapter 1

THE POLICY FRAMEWORK

1.1 India has a hallowed tradition of democratic functioning, especially at the grass roots level. The founding fathers of the Constitution, who were guided by the vision of Gandhi and Nehru, strengthened these hoary traditions. In the result, democracy has become strongly rooted in this country and has stood firm even when democratic regimes elsewhere have failed.

1.2 There have always been elements in the population, however, which are desirous of greater autonomy for the States, and attempt to fan the members of regionalism, provincialism and linguism. The nation has faced many challenges and pragmatic solutions have been found from time to time. In recent years, opposition political parties have come to power in a few States and the controversy on Centre-State relations has naturally acquired a new sharpness.

1.3 The appointment of the Commission on Centre-State Relations is a tribute to the sagacity of our dynamic Prime Minister, Smt. Indira Gandhi, who is a sincere democrat in the true Nehruvian spirit, and who believes in the method of open, unhibited debate on national issues.

1.4 The H. P. Government has approached the key issue of Centre-State relations from two angles. From the national perspective, it believes that a strong Centre is a must, if the country is to survive, evolve and grow. From the standpoint of a small State, mainly dependent on Central assistance, a strong Centre appears to be highly desirable if balanced development is to be achieved.

1.5 The Prime Minister has rightly stated that a strong centre does not necessarily imply weak States. We can try for strength at both levels, the strength of each being nourished and enhanced by the other's.

1.6 India is a large country, inhabited by myriad races, languages and religions, spread over a huge landmass with widely varying agro-climatic conditions. There are two points which become relevant from the constitutional angle. Such a large country cannot be administered in depth or detail from a central point. At the same time, only a strong Centre can keep the centrifugal tendencies in check. We have, therefore, rightly opted for a form of government which has federal features as also unitary elements.

1.7 Historically, the boundaries of the present States have undergone several changes in ancient, medieval and modern times. The map of India has been virtually redrawn twice since independence, once at the time of integration of princely States and again for realignment of boundaries on linguistic basis. The constitution empowers Parliament to legislate regarding the formation of new States and alteration of areas, boundaries or names of existing States. It is good that it is so. Had it been otherwise, it would have been impossible to create a rational, reasonable and pragmatic map of the country as we have done. But it also shows that India is not and cannot be termed as federation of sovereign States.

1.8 Functionally, it is obvious that the autonomy implicit in the division of powers as between the Centre and the States is not so much a conferment of sovereign rights as an administrative convenience. India could have been run from a single point or five zonal centres or twenty state capitals. We have opted for a system in which local initiative is neatly blended with central control.

1.9 In a large country, there is always a danger that disintegration and fissiparous tendencies would rear their ugly heads. Wars, external aggressions and armed rebellions are the normal hazards of any polity. Sometimes, the constitutional machinery in a State fails and the administration is required to be temporarily assumed by the President. Financial emergencies can also arise. One alternative would have been to make no provision for such contingencies and to depend on chance to pull the country through. But the framers of the Constitution wisely decided to create an inbuilt machinery for proclamation of emergency under Article 352, assumption of powers by the President under Article 356 and proclamation of financial emergency under Article 360. Any objective and unbiased observer of the political scene would have no hesitation in concluding that the use of these powers by the Centre has to a large extent, been responsible for preserving the unity and integrity of the country.

1.10 At a lesser level, the same argument applies to the struggle against natural calamities which occur at frequent intervals. It is difficult to foresee where drought, flood, avalanche, earthquake, fire or typhoon will hit next, and with what intensity. It is thus desirable that the Centre have enough resources to be above to rush to the aid of any affected region with speed.

1.11 In the field of socio-economic development also, the Centre has necessarily to assume a coordinating responsibility. Having accepted a planned and mixed economy, where both public and private sectors have a role, it is important that macro-objectives are centrally determined.

1.12 Even in the freer economics of the western democracies, the modern trends in transport, communication, automation etc., have led to a more dynamic and positive role for the federal governments.

1.13 A significant consideration which has to be borne in mind all over the world but more so in the less developed countries is the need for balanced development. People who fall back in the race for a better economic and social status are apt to become willing recruits for revolutionary and violent struggles. As the better endowed States may not be prepared voluntarily to carry along their less fortunate brotheren, it is again the Centre which has to even out the kinks.

1.14 In this context, the Himachal Pradesh Government cannot but applaud the positive role played by the Central Government, constitutional bodies like the Finance Commission and coordinating forums like the National Development Council and the Planning Commission, in giving the smaller, hilly and less developed States their just share of the national cake. Despite having a very high level of per capita tax burden, Himachal Pradesh has so far been deficit in resources and it is the Central grants, loans and subventions which have enabled it to raise the living standards of its people.

1.15 When we analyse the argument adduced by the protagenists of greater powers to the States at the expense of the Centre, their weakness is easily realized. This is not to deny the need for a dynamic resoulation of the conflicts which tend to surface in Centre-State relations from time to time. Conditions change and our institutions have also to evolve constantly so as to maintain the overall equilibrium. This does not, however, imply that each such change would necessitate a constitutional amendment. It needs to be appreciated that constitutional conventions are as important as the written provisions, and it is the development of healthy conventions that should be our constant endeavour.

1.16 In conclusion, we would like to state that the founding fathers of the Constitution deliberately created India as a federation with a unitary strand. The experience of the last 37 years has demonstrated the efficacy and strength of the structure they gave us and we can tamper with the fine-tuned balance in Centre-State relations only at our peril. India needs a strong Centre in order to contain the distintegrative forces, to face emergencies with confidence and achieve a uniform level of development. Gradually, as the weaker States are strengthened and brought nearer the national average, the strength of the States will grow not at the cost of the Centre but through it and because of it. We shall then have a strong Centre and a set of strong States, mutually supporting and reinforcing one another. It is towards the achievement of this goal that all of us have to collectively move.

CHAPTER 2

THE CONSTITUTIONAL ISSUES

2.1 Various points have come up in different forums like the Anandpur Sahib Resolution of the Akalis, the Southern Chief Ministers' Conclave at Bangalore, the West Bengal Government's Memorandum to the Eight Finance Commission, the opposition Conclave at Srinagar and so on.

2.2 At the outset , we would like to state with all the emphasis at our command that India is a single nation and any attempt to propound a thesis of separatism for any group of people should be resisted

firmly, vigorously and with the use of armed force, if necessary. The misuse of religious places for propagation of any political philosophy should be banned effectively.

2.3 All the provisions of the Constitution which provide authority for Central interference at the time of general or financial emergency or in the event of failure of constitutional machinery in a State should be retained.

2.4 The division of legislative powers between the Centre and the States, with Central legislation having a greater force, should not be tampered with.

2.5 There are only two exceptions to this. States like Himachal Pradesh have a tremendous potential for hydel generation. It is felt that if a small State like H.P. has ever to achieve financial viability, it can only be done through exploitation of this vast resource. We would, therefore, press for powers to be given to State Governments to impose taxes on generation of electric power within their own boundaries.

2.6 Secondly, we felt that the acquisition and requisitioning of property which had been brought into the concurrent list by the 1956 amendment should be again included in the State list.

2.7 The powers of the President to grant or withhold assent to certain types of State Bills should not be abridged. However, he may be required to decide one way or the other within one year of the submission of a Bill.

2.8 Governors have a dual role, as heads of State and as links with the Centre. It does not seem to be feasible to place any limitations on the manner of exercise of their judgement in certain situations. The crises in a dynamic political situation are so varied that it will not be proper to tie up the hands of the Governors.

2.9 In conclusion, it may be stated that, by and large, the Constitution has served the country well and we should not alter it, save in exceptional circumstances.

CHAPTER 3

FINANCIAL DEVOLUTIONS

3.1 On the question of financial relations between the Centre and the States, the State Government has already stated its views in great detail to the Finance Commission. No occasion has arisen so far to call for any change in those views.

3.2 In general, we believe that the Centre and the States should have sufficient funds, so as to discharge effectively their respective responsibilities. The allocation of taxes has already been made in the Constitution on the basis of the relative efficiency of Central and State agencies in dealing with individual taxes. There are reasons to believe that some of the items allocated to the Centre have greater elasticity. But it can also not be denied that the States have not fully exploited all the taxes allowed to them.

3.3 The long term objective in this field should be the achievement of financial viability by all the States, so as to obviate the necessity for Central subventions to chronically deficit States. This can be done by expanding the resource base and exploitation of the potential available in each such State. In the intervening period, the Centre should deal in a manner which is positively discriminatory in favour of the less developed States.

3.4 The present distinction between plan and non-plan expenditure sometimes leads to creation of new assets and schemes, without making adequate provision for consolidation of past achievements and proper maintenance of old assets. This entire issue warrants a fresh look at the national level, so that departments like revenue, police, judiciary, prisons, secretariat, legislature, etc. which are the backbone of the administrative system are not starved of funds. One possibility is the constitution of a Non-Plan Wing in the Planning Commission which constantly monitors the non-plan requirements of funds, loan needs and so on along with plan requirements, and keep a proper balance between consolidation and fresh development. Emerging needs on the non-plan front could be met as and when these arise, instead of awaiting a quinquennial review.

CHAPTER 4

PLANNING AND DEVELOPMENT

4.1 In India, we opted for the process of planned development in the early fifties. The experience of the planning era has led to the evolution of effective mechanisms for plan formulation, implementation, monitoring and evaluation.

4.2 At the highest level, the National Development Council represents the collective will of the Central and State Governments. Consultation at this forum are the culmination of a series of discussions held with the States and cannot, by their very nature, be too detailed or elaborate. Nor need the NDC be set up on a statutory basis.

4.3 Much has been made of the fact that the Planning Commission does not have a constitutional status. It is not clear what special advantage the Commission can be expected to derive from an amendment of the Statute. The real strength of the Commission emanates from the diversity of the sources from which it derives its experts-economists, statisticians, subject matter specialists, administrators, politicians and technocrats.

4.4 There can be no dispute about the broad proposition that national priorities and developmental strategies have to be hammered out at the Central level, while the sectoral priorities and implementational tactics are better finalised at the State level. There can be varying shades of opinion as to where exactly the dividing line is. Some people do feel that Centrally sponsored schemes are often cast in too rigid a mould and do not always take into account the vastly different conditions obtaining in various parts of the country. It might also be wished that more State government experts are associated in the discussions of working groups, which need not be

held in such a hurry. Much can be said in favour of a continuous dialogue between Central and State representatives throughout the year, so that there is a constant exchange of ideas and information.

4.5 Himachal Pradesh has not faced any difficulty in obtaining a clear appreciation of its needs as a hilly State. For example, contrary to the accepted national norms, H.P. Plan has always accorded a very high priority to roads and bridges, a sector identified as strategic for hilly areas such as ours.

4.6 The State Government is conscious of the special dispensation which the Central Government has made in respect of plan financing of special category States like H.P. The mechanisms of the tribal sub-plan also work in our favour. The State does not, however, share in the Central funds earmarked for hill areas.

4.7 The decentralisation of the planning process is a laudable objective, which the Central Government has been pursuing with vigour. In principle, the State Government is in favour of such decentralisation. H.P. is, however, a small State and it needs to be considered whether too much decentralisation at too fast a pace might not be counter-productive, unless adequate data base and planning machinery has been created.

Chapter 5

ADMINISTRATIVE RELATIONS

5.1 There are some important points on administrative relations, to which attention needs to be drawn in this presentation.

5.2 The All India Services have played a vital role in preserving the quality, objectivity and national perspective of the higher echelons of the bureaucracy. The existing services should be retailed and more such services need to be created, in the interests of national unity.

5.3 The media of radio and television are powerful communicators of developmental messages. Only under governmental control can they be preserved from the onslaught of commercialisation and retained as vehicles of national viewpoints.

5.4 It is clear from past experience that the Centre should have the unrestricted power to deploy Central police and paramilitary forces in the States, so as to preserve the integrity of the country and maintain law and order.

5.5 The powers of the Central Government to give executive directions under Articles 256, 257, 339(2) and 365 of the Constitution should remain unchanged.

5.6 In the power sector, most of the executive powers under the Indian Electricity Act already stand delegated to the State Governments. As such, it may be more expedient to have separate Electricity Acts for different States, based on model legislation devised in consultation with the Centre.

5.7 In the implementation of projects for generation of power, it would be better if most of the projects are allowed to be set up in the State sector. The Central bodies should perform mainly technical and advisory roles, and may take up inter-State projects only when the State Electricity Boards are found incapable of doing so.

Government of Jammu & Kashmir

Replies to the Questionnaire

Government of Jammu & Kashmir

REPLIES TO QUESTIONNAIRE

Introductory

After the accession of the State of Jammu and Kashmir to the Union of India, the relationship between the State and the Union has been governed by the provisions of Article 370 of the Constitution of India. For the limited purpose of response to the questionnaire of the Commission on Centre State relations' it is not necessary to set out in detail the extent and nature of the constitutional relationship between the state and the union. However, to appreciate the replies of the State Government in true and correct perspective, reference may be invited to the observations made by the Hon' ble Supreme Court of India in a recent case titled Khazan Chand versus State of Jammu and Kashmir A.I.R. 1984 S.C. 762 at 767 wherein it has been held :—

"The Constitution of India, however, does not apply in its entirety to the State of Jammu and Kashmir because that State holds a special position in the Constitutional set up of our country. Article 370 of the Constitution of India makes a special provisions with respect to the State of Jammu and Kashmir. Under sub-clause (c) of clause (I) of Article 370, the provisions of Articles I and 370 apply in relation to that State subject to such exceptions and modifications as the President may specify by an order issued with the concurrence of the Government of that State. Thus, by reason of the application of Article I to the State of Jammu and Kashmir by sub-clause (c) of clause (I) of Article 370, the State of Jammu and Kashmir is one of the States which form the Union of India and by virtue of sub-clause (d) of clause (I) of that Article so far as the provisions of the Constitution, other than those of Article I and 370, are concerned, the president of India has the power, with the concurrence of the Government of the State of Jammu and Kashmir to issue an order specifying which of them shall apply to that State and whether such provisions shall apply in their entirety or subject to such exceptions and modifications as may be specified in that order. Article 370 also envisages the convening of a Constituent Assembly for that State and the framing of a separate Constitution for it. In exercise of the power conferred by clause (I) of Article 370, the president of India, with the concurrence of the Government of the State of Jammu and Kashmir has made the Constitution (application to Jammu and Kashmir) Order, 1954 (C. O. 48). This order deals with the entire constitutional position of the State of Jammu and Kashmir within the framework of the Constitution of India, except only the internal constitution of the State Government to be framed by the Constituent assembly of that State. The Constituent Assembly of the State of Jammu and Kashmir framed its own Constitution repealing and replacing its earliar Constitution. This new Constitution, called the Constitution of Jammu and Kashmir", was adopted and enacted by the Constituent Assembly of that State on November 17, 1956.

After the adoption of Constitution of India, the President of India promulgated "The Constitution (Application to Jammu and Kashmir) Order, 1950 on 26 th January, 1950 in accordance with the provisions of Article 370 of the Constitution and thus the basis for a Constitutional relationship between the Union and the State was defined."

On August 9, 1953, the duly elected popular Government of National Conference headed by Sher-i-Kashmir Janab Sheikh Mohd. Abdullah was illegally dismissed. A series of unfortunate events followed thereafter which are now a part of the History. Amongst other things the aforesaid Constitution (Application to Jammu and Kashmir) Order, 1950 was superseded by the Constitution (Application to Jammu and Kashmir) Order, 1954 which in turn was amended from time to time. A situation of grave political uncertainty coupled with acute administrative inefficiency, corruption and economic stagnation with scant regard for rule of law and democratic norms engulfied the State which caused anxiety and concern in the minds of the Central Leadership Particularly Smt. Indira Gandhi, the then Prime Minister of India, In order to remedy this situation of political stalemate an invitation was extended by the late Prime Minister Smt. Indira Gandhi to Sher-i-Kashmir Janab Sheikh Mohd. Abdullah for holding parleys in order to find ways and means for remedying the situation and strengthening the secular, democratic genesis in the State. Accordingly the representatives of the late Prime Minister Smt. Indira Gandhi and the Sheri Kashmir Janab Sheikh Mohd. Abdullah met several times which culminated in the accord of 1975 which *inter alia* provides :—

4. With a view to assuring freedom to the State of Jammu and Kashmir to have its own legislation on matters mentioned in the State Constitution and like welfare measures, cultural matters, social security, personal law, and procedural laws, in a manner suited to the special conditions in the State, it is agreed that the State Government can review the laws made by Parliament or extended to the State after 1953 on any matter relatable to the Concurrent List and may decide which of them, in its opinion, need amendment or repeal. Thereafter, appropriate steps may be taken under Article 254 of the Constitution of India. The grant of president's assent to such legislation would be sympthetically considered. The same approach would be adopted in regard to laws to be made by Parliament in future under the proviso to clause 2 of that Article. The State Government shall be consulted regarding the application of any such law to the State and the views of the State Government shall receive the fullest consideration.

5. As an arrangement reciprocal to what has been provided under Article 368 a suitable modification of that Article as applied to the State should be made by Presidential Order to the effect that no law made by the Legislature of the State of Jammu and Kashmir relating to any of the under-mentioned matters, shall take effect unless the Bill, having been reserved for the consideration of the President, receives his assent; the matters are :—

(a) the appointment, powers, functions, duties, privileges and immunities of the Governor; and

(b) the following matters relating to Elections, namely, the superintendence, direction and control of Elections by the Election Commission of India, eligibility for inclusion in the electoral rolls without discrimination, adult sufferage and composition of the Legislative Council, being matters specified in sections 138, 139, 140 and 150 of the Constitution of the State of Jammu and Kashmir.

Before proceeding to deal with the Questionnaire we would also like to refer to the Constitution (Application to Jammu and Kashmir) Amendment Order 1986, dated 30-7-1986, for short "the 1986 Order," which *inter alia* provides :—

"2. In paragraph 2 of the Constitution (Application to Jammu and Kashmir) Order, 1954, in sub-paragraph (6) relating to Part XI;

(i) for clause (b), the following clause shall be substituted, namely :—

"(bb) In article 249, in clause (1) for the words "any matter enumerated in the State List specified in the resolution", the words "any matter specified in the resolution, being a matter which is not enumerated in the Union List or in the Concurrent List" shall be substituted.

(ii) clause (d) shall be omitted."

The aforesaid 1985 Order is unconstitutional since it has been passed in violation of the provisions of Art. 370(1)(b)(ii) which read thus :—

"**370** (1) notwithstanding anything in this Constitution;

(a) ....

(b) the power of Parliament to make laws for the said State shall be limited to :—

(i) those matters in the Union List and the Concurrent List which, in consultation with the Government of the State, are declared by the President to correspond to matters specified in the Instrument of Accession governing the accession of the State to the Dominion of India as the matters with respect to which the Dominion Legislature may make laws for that State; and

(ii) such other matters in the said Lists as, with the concurrence of the Government of the State, the President may by order specify.

Explanation .—For the purposes of this article the Government of the State means the person for the time being recognized by the President as the Maharaja of Jammu and Kashmir acting on the advice of the Council of Ministers for the time being in office under the Maharaja's Proclamation dated the fifth day of March 1948."

The definition of the Government contained in the aforesaid explanation to sub-clause (ii) of Art. 370 (1)(b) clearly contemplates the existence of a council of ministers on whose advice alone the Governor of the State could have communicated the 'concurrence of the Government of the State' for application of the aforesaid 1986 Order.

It is significant that on March 7, 1986 the Council of Ministers had been dismissed, the State Legislative Assembly had been put under suspended animation and the Governor was functioning under section 92 of the State Constitution and thus did not fulfil the necessary requirements of the Government of the State as defined in the explanation (ii) of Art. 370 (1) (b) of the Constitution of India and, therefore, the very concurrence of the Government of the State on which the aforesaid 1986 Order is founded being unconstitutional the aforesaid 1986 Order is wholly *ultravires* the Constitution.

Without prejudice to the Constitutional guarantees enjoyed by the State under Article 370 of the Constitution of India and the rights following from the aforesaid accord of 1975, we proceed to deal with the Questionnaire as under :—

ANSWERS

1.1 The Constitution of India as framed can be called a broadly Federal Constitution.

1.2 Article 251 of the Constitution of India applies to the State of J & K in the following modified form :—

251. Nothing in article 250 shall restrict the power of the legislature of a State to make any law which it has power to make, but if any provision of a law made by the Legislature of a State is repugnant to any provision of a law made by Parliament which Parliament has under the said articles power to make, the law made by Parliament, whether passed before or after the law made by the legislature of the State, shall prevail, and the law made by the legislature of the State shall to the extent of the repugnancy, but so long only as the law made by Parliament continues to have effect, be inoperative. It will thus be seen that since Article 249 does not apply to the J & K the Central Legislation can override the State legislation only during the period when and if a proclamation of emergency is in operation.

Article 256 also applies to the State of J & K in the following modified form :—

256. The executive power of every State shall be so exercised as to ensure compliance with the laws made by Parliament and any existing laws which

apply in that State, and the executive power of the Union shall extend to the giving of such directions to a State as may appear to the Government of India to be necessary for that purpose.

"(2) The State of Jammu and Kashmir shall so exercise its executive power as to facilitate the discharge by the Union of its duties and responsibilities under the Constitution in relation to that State; and in particular, the said State shall, if so required by the Union, acquire or requisition property on behalf and at the expense of the Union, or if the property belongs to the State, transfer it to the Union on such terms as may be agreed, or in default of agreement, as may be determined by an arbitrator appointed by the Chief Justice of India."

Articles 348, 349 are contained in part of the Constitution in the provisions of this part apply to the State of Jammu and Kashmir only in so far as they relate to :—

(i) The official language of the Union.

(ii) The official language for communication between one State to another, or between a State and the Union; and

(iii) The language of proceedings in the Supreme Court.

Article 356 applies to the State of Jammu and Kashmir in the following modified form :—

356. (1) If the President, on receipt of a report from the Governor of a State or otherwise, is satisfied that a situation has arisen in which the goverrnment of the State cannot be carried on in accordance with the provisions of this Constitution and provisions or provisions of the Constitution of Jammu and Kashmir, the President may by proclamation :—

(a) assume to himself all or any of the functions of the Government of the State and all or any of the powers vested in or exercisable by the Governor or any body or authority in the State other than the Legislature of the State;

(b) declare that the powers of the legislature of the State shall be exercisable by or under the authority of Parliament;

(c) Make such incidental and consequential provisions as appear to the President to be necessary or desirable for giving effect to the objects of the Proclamation, including provisions for suspending in whole or in part the operation of any provisions of this Constitution relating to any body or authority in the State :

Provided that nothing in this clause shall authorise the President to assume to himself any of the powers vested in or exercisable by a High Court, or to suspend in whole or in part the operation of any provision of this Constitution, relating to High Courts.

(2) Any such Proclamation may be revoked or varied by a subseuent Proclamation.

(3) Every Proclamation under this article shall be laid before each House of Parliament and shall, except where it is a Proclamation revoking a previous Proclamation.is issued at a time when the House of the People is dissolved or the dissolution of the House of the People takes place during the period of the two months referred to in this clause, and if a resolution approving the Proclamation has been passed by the Council of States, but no resolution with respect to such Proclamation has been passed by the House of the People before the expiration of that period, the Proclamation shall cease to operate at the expiration of thirty days from the date on which the House of the People first sits after its reconstitution unless before the expiration of the said period of thirty days a resolution approving the Proclamation has been also passed by the House of the People.

(4) "A Proclamation so approved shall, unless revoked, cease to operate on the expiration of a period of six months from the date of the passing of the second of the resolutions approving the Proclamation under clause (3)" :

Provided that if and so often as a resolution approving the continuance in force of such a Proclamation is passed by both Houses of Parliament, the Proclamation shall, unless revoked, continue in force for a further period of (six months) from the date on which under this clause it would otherwise have ceased to operate, but no such Proclamation shall in any case remain in force for more than three years

Provided further that if the dissolution of the House of People takes place during any such period of (six months) and a resolution approving the continuance in force of such Proclamation has been passed by the Council of States, but no resolution with respect to the continuance in force of such Proclamation has been passed by the House of the People during the said period, the Proclamation shall cease to operate at the expiration of thirty days from the date on which the House of the People first sits after its reconstitution unless before the expiration of the said period of thirty days a resolution approving the continuance in force of the Proclamation has been also passed by House of the People.

"(5) Notwithstanding anything in constitution, the satisfaction of the President mentioned in clause (1) shall be final and conclusive and shall not be Questioned in any court on any ground.'

Article 365 does not apply to "the State of Jammu and Kashmir."

We firmly believe that there should be least possible interference with the running of State Administration through regulations or otherwise of the Central Government in as much as such interference is inconsistent with the Principle of accountability which governs the relationship between the State Government and its electorate.

In regard to the allotment of more tax resources to the states we wish to point out that it is only the taxes of income excluding the Corporation tax which alone has been made divisible between the Centre and the States. Under the present scheme of law even such tax on income which is payable by Companies is not divisible between the Centre and the State under Article 270(1) because such a

tax would fall within the purview of Article 270(4) (a). The entire constitutional scheme regarding collection of taxes by the Union and the States and distributtion of available finances between the Union and States is highly unfair, one side and puts the States in very difficult situation where they find it impossible to meet their growing responsibilities of planning and Development. Apart from making the States hopelessly dependent on the Centre for their share of finances raised through taxes. The Union has other sources of financial assistance at its disposal such as the :—

(a) Nationalised banking section

(b) Life and General Corporations

(c) I.D.B.

(d) Unit Trust of India

(e) Provident Fund Contributions

(f) Foreign aid

(g) Reserve Bank of India.

The hopeless dependence of the states on the centre for the financial allocations stultifies the process of Development and economic growth of the States. We do therefore, urge that the states must be allocated a higher share of financial resources which should be made mandatory by an appropriate amendment to the Constitution.

With regard to the abolition of appeals to the Supreme Court excepting Constitutional matters we agree that considering the nature of judicial system and the problem of enormous arrears it would be a desirable thing to leave the Supreme Court with the task of adjudicating upon the Constitutional matters alone.

1.3 The optimum Constitutional provisions from the stand point of the Question would be the arrangement of the distribution of legislative powers as envisaged by the Constitution (Application to Jammu and Kashmir) Order, 1950. United States of America, and the Swiss Confederation are instances of Federal Governments.

It may be pertinent to extract section 5 of the Constitution of Jammu and Kashmir which reads thus :—

5. Extent of executive and legislative power of the State.—The executive and legislative power of the State extends to all matters except those with respect to which Parliament has power to make laws for the State under the provisions of the Constitution of India.

1.5 The opinion expressed as indicated in the Question under reply are also largely true but certain changes are necessary in light of the experience of the working during the past 36 years particularly in relation to :

1. The position and role of Governor.

2. The financial relationship between the Centre and the States.

3. The role of the Planning Commission the extent of its powers and the manner of their exercise.

4. The role of the Finance Commission.

5. The appointment of Chief Election Commissioner.

6. The appointment of the Chief Justice and Judges of the Supreme Court of India.

1.6 There can indeed be no disagreement on the question that the protection of Independence and ensuring the Unity and Intergrity of the country is of paramount importance. The distribution of legislative powers between the Union and the States as envisaged in part of the Constitution together with the legislative fields of the Parliament and the State Legislatures distributed in the lists of VII Schedule of the Constitution as applicable to the State of Jammu and Kashmir Constitution more than ample safeguards for protection of Independence and ensuring of the Unity and Integrity of the country.

1.7 Kindly refer to the reply to Q. 1.2 contained herein above.

1.8 Article 3 of the Constitution does not apply to the State of Jammu and Kashmir.

2.1 to 2.5 Kindly refer to the replies to Q. 1.2 and 1.6 of Part I contained herein above.

3.1 to 3.3 Under the Constitution of Jammu and Kashmir section 26 contemplates that the head of the State shall be designated as the Governor in whom shall vest the executive power of the State to be exercised by him either directly or through officers subordinate to him. Section 27 provides for the manner of his appointment and section 28 relates to the term of his office. Section 29 specifies qualification for appointment as Governor and Section 30 prescribes the conditions of office; Section 31 prescribes the oath of office, Section 33 provides for the discharge of functions by Governor in contingencies not provided in part V of State Constitution and Section 34 empowers Governor to grant pardons and reprieves etc. Section 35 provides that all functions of the Governor except those Order Sections 36, 38 and 92 shall be exercised by him only on the advice of Council of Ministers. Section 36 relates to the appointment of Ministers. Section 38 relates to the appointment of Deputy Ministers and Section 92 is the provision which deals with a situation of breakdown of Constitutional machinery.

In the context of aforesaid constitutional provisions we believe that the Governor can be a cementing force between the Centre and State but the State has gone through two traumatic experiences are in August, 1953 when the duly elected Government headed by Janab Sheikh Mohd. Abdullah was dismissed and another in July, 1984 when the duly elected Government headed by Dr. Farooq Abdullah was dismissed without testing the rival claims of majority on the floor of the Assembly. Instances from other States are also available to show how the Governors have played a partisan role in the event of rivalry.

We only hope and trust that the Governor would exercise powers under Article 306 of the Constitution of India which correspond to Section 92 of the State Constitution in the same spirit in which article 356 was framed and intended to remain a dead letter in the famous words of the Dr. Ambedkar in

the Constituent Assembly. Dr. Ambedkar, said; "I may say that I do not altogether deny that there is a possibility of this Article being abused or applied for political purposes. But their objections applies to every part of the Constitution which gives power to the Centre to override the Provinces. In fact, I share the sentiments expressed yesterday that the proper things we ought to expect is that such Articles will never be called into operation and that they would remain a dead letter. If at all they are brought into operation, I hope the President who is endowed with this power will take proper precaution before actually suspending the administration of the provinces." It is thus clear that Article 356 or section 92 of the State Constitution exist as necessary evils in the Constitution and any action taken under these provisions cannot be used to deny the democratic aspirations of the people of a State and deprive them of a popular Government.

3.4 to 3.5 Articles 200 and 201 do not apply to the State.

3.6 Kindly refer to the reply to Q. 3.1 to 3.3.

3.7 We urge that a provision similar to Article 124 (4) be incorporated in Section 27 of the State Constitution with the modification that from the words by each House of Parliament "in clause (4) the words by each House of Legislature" be substituted and for the expression "Parliament in clause 5 the expression State Legislature" be substituted. Providing security of tenure to Governors would be desirable.

3.8 It should be made obligatory on the Governor to test rival claims of majority or the claim that the ruling party has lost majoriy only on the floor of the House.

3.10 The Administrative Reforms Commission has made a very valid recommendation and the need for promulgation of guidelines to regulate the exercise of discretion by the Governors is necessary, desirable and urgent as in the same manner and for similar reasons for which the constitution (fifty Second Amendment) Act 1985 was passed.

4.1 to 4.5 Kindly refer to our replies to Q. 1.2 and 3.1. to 3.3. We may also invite reference to the provisions of section 92 of the State Constitution which are reproduced as under :—

Breakdown of Constitutional Machinery

92. Provisions in case of failure of constitutional machinery in the State—

(1) If at any time the Governor is satisfied that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of this Constitution, the Governor may by Proclamation—

(a) assume to himself all or any of the functions of the Government of the State and all or any of the powers vested in or exercisable by anybody or authority in the State;

(b) make such incidental and consequential as appear to the Governor to be necessary or desirable for giving effect to the objects of the Proclamation, including provisions for suspending in whole or in part the operation of any provision of this Constitution relating to anybody or authority in the State :

Provided that nothing in this section shall authorise the Governor to assume to himself any of the powres vested in or exercisable by the High Court or to suspend in whole or in part the operation of any provision of this Constitution relating to the High Court.

(2) Any such Proclamation may be revoked or varied by a subsequent proclamation.

(3) Any such proclamation whether varied under sub-section (2) or not, shall except where it is a Proclamation revoking a previous proclamation, cease to operate on the expiration of six months from the date on which it was first issued.

(4) If the Governor by a Proclamation under this section assumes to himself any of the powers of the Legislature to make laws, any law made by him in the exercise of that power shall, subject to the terms thereof, continue to have effect until two years have elapsed from the date on which the Proclamation ceases to have effect, unless sooner repealed or re-enacted by an Act of the Legislature, and any reference in this Constitution to any Acts of or laws made by the legislature shall be construed as including a reference to such law.

(5) No Proclamation under sub-section (1) shall be issued except with the concurrence of the President of India.

(6) Every Proclamation under this section shall, except where it is a Proclamation revoking a previous Proclamation be laid before each House of the Legislature as soon as it is convened.

We suggest that the scope of Article 356 or section 92 of the State Constitution should be restricted to :—

(i) a situation where all possible methods of forming a Government have failed and the Assembly has been dissolved: here too the maximum period of a proclamation should be three months within which fresh elections must be held.

(ii) a situation of complete breakdown of law and order in a State : the inter-State Council must be consulted before the Centre intervenes.

Stop the practice of leaving legislatures in 'suspended animation'.

The Constitution should be amended to make it obligatory for elections to be held latest within three months of dissolution of State Assemblies or Parliament in the event of such a dissolution.

4.6 to 4.7 We are of the opinion that it would be highly desirable to set up an inter-State Council under Article 263 of the Constitution for making recommendation for remedying the grievances *inter alia* projected by the question under reply. There is a great deal of justification in the criticism on the role of the agencies mentioned in Q. 4.7.

4.8 The demand of permitting greater control to the States over the All India Services is justified.

4.9 On a true and correct construction of Article 355 *suo moto* Central intervention would be justified only in the event of external aggression.

In so far as internal disturbance is concerned Centre must act in consulation with the State Government.

4.10 There is no justification to make the Broadcasting exclusive domian of the Union. It is the right of the people of the States to avail of the benefit of the views of the State Governments as well.

4.11 & 4.12 We maintain that the setting up of an Inter-State Council would far better serve the purposes of reducing frictions and eliminating the mutual grievances between the Union and the States and the States *inter se*. We agree with the recommendations of the Administrative Reforms commission made in its report of june, 1969 and the Bangalore Resolution on Inter-State Council.

It is recommended that :—

(1) The council should consist of the Prime Minister and all the Chief Ministers;

(2) It should discuss matters of national concern.

(3) It should be used as a mechanism in the appointment of key personnel to various offices ane institutions which play a crucial role in Union-State relations such as Governors, the Election Commission, the Planning Commission or the Finance Commission. This particular function, it was recommended, should be performed by a Committee to be appointed by the Inter-State Council consisting of some of its members and other independent personalities to be co-opeted by the Council on the basis of a consensus ;

(4) The Inter-State Council must have an independent Secretariat of its own.

The guiding principle for the freedom Movement of the State against the nutocratic Rule which can collectively be called as the programme for Naya-Kashmir Independence came to be enshrined in Part IV of the State Constitution Section 3 envisages the State to establish a socialist order of society for promotion of welfare of the people :—

Section 15 envisages that the State shall endeavour to organise and develop agriculture and animal husbandry by bringing to the aid of the cultivator the benefits of modern and scientific research and techniques so as to ensure a speedy improvement in the standard of living as also the prosperity of the rural masses.

Section 16 envisages that the State shall take steps to organise village Panchayats and endow them with such powers and authority as may be necessary to enable them to function as units of self-government.

Section 17 envisages that the State shall in order to rehabilitate guide and promote the renowned crafts and cottage industries of the State, initiate and execute well considered programme for refining and modernising techniques and modes of production, including the employment of cheap power so that unnecessary drugery and toil of the workers are eliminated and the artistic value of the products enhanced, while the fullest scope is provided for the encouragement and development of individual talent and initiative.

Section 18 envisages that the State shall take steps to separate the judiciary from the executive in the public services, and shall seek to secure a judicial system which is humane, cheap, certain objective and impartial whereby justice shall be done and shall be seen to be done and shall further strive to ensure efficiency, impartiality and incorruptibility of its various organs of justice, administration and public utility.

Section 19 envisages that State shall, within the limits of its enconomic capacity and development, make effective provision for securing—

(a) That all permanent residents, men and women equally, have the right to work, that is, the right to receive guaranteed work with payment for labour in accordance with its quantity and quality subject to a basic minimum and maximum wage established by law :

(b) that the health and strength of workers, men and women and the tender age of children are not abused and that permanent residents are not forced by economic necessity to enter avocations, unsuited to their sex, age or strength ;

(c) that all workers, agricultural, industrial or otherwise, have reasonable just and humane conditions or work with full enjoyment of leisure and social and cultural opportunities;

(d) that all permanent residents have adequate maintenance in old age as well as in the event of sickness, disablement, unemployment and other cases of underserved want by providing social insurance, medical aid, hospitals, sanotoria and health resorts at State expense.

Section 20 envisages that the State shall endeavour :—

(a) to secure to every permanent resident the right to free education up to the University standard;

(b) to provide, within a period of ten years from the commencement of this Constitution. complusory education for all children until they complete the age of fourteen years; and

(c) to ensure to all wokers and employees adequate facilities for adult education and part-time technical, professional and vocational courses.

Section 21 envisages that the State shall strive to secure :—

(a) to all children the right to happy childhood with adequate medical care and attention; and

(b) to all children and youth equal opportunities in education and employment, protection against exploitation and against moral or material abandonment.

Section 22 envisages that the State shall endeavour to secure to all women—

(a) the right to equal pay for equal work;

(b) the right to maternity benefit as well as adequate medical care in all employments;

(c) the right to reasonable maintenance, extending to cases of married women who have been divorced or abandoned;

(d) the right to full equality in all social, educational, political and legal matters;

(e) special protection against discourtesy defamation, hooliganism and other forms of misconduct.

Section 23 envisages that the State shall guarantee to the socially and educationally backward sections of the people special care in the promotion of their educational, material and cultural interests and protection against social injustice.

Section 24 envisages that the State shall make every effort to safeguard and promote the health of the prople by advancing public hygiene and by prevention of disease through santitation, pest and vermin control, propaganda and other measures, and by ensuring widespread, efficient and free medical services throughout the State and, with particular emphasis, in its remote and backward regions.

Section 25 envisages that the State shall combat ignorance, superstition, fanaticism, communalism, racialism, cultural backwardness and shall seek to foster brotherhood and equality among all communities under the aegis of a Secular State.

It may be recalled that under the instrument of accession the Dominion Legislature was empowered to make laws only in relation to Defence, External Affairs, Communication, Ancillary matters relating to Election to Dominion Legislature as set out in the Schedule to the Intrument of accession. Thereafter in Delhi agreement of 1952 while the necessity of some financial arrangement between the Union and the State was felt but it was left open for a detailed and objective examination.

We believe that out of the alternatives suggested in Part V Q. 5.2 the following combination of factors should be adopted :—

(a) Complete separation of the fiscal relation of the Union and the States, abolition of the scheme of transfer of resources and instead, transferring of more taxing heads to List II, Seventh Schedule.

(b) More Central taxes such as Corporation tax, Customs Duty, Surcharge on Income Tax, etc. be brought into the shareable pool.

(c) Financial resources, other than tax-revenues of the Union, be also distributed between the Centre and the States.

It is also pertinent to refer to the role played by Planning Commission an extra Constitutional authority which in the exercise of its functions is not governed by any legislative parameter or guidelines. Since it possesses enormous financial powers the influence therefore it wields on the administartion of States is all pervasive. It requires the State Government to seek approval and consent for every little item of expenditure and aid and there by it not only controls the formulation but also the execution of plans by the States. Thus apart from highly unfair and one sided distribution of financial resources in favour of the Centre, the procedure for allocation of finances to the States is also highly arbitrary and at times displays remarkable insenstivity to the developmental needs. It is as a result of this financial arrangement between the Union that the dream of Naya-Kashmir set out in Part IV of the State Constitution has remained largely unrealized.

In relation to Economical Social Planning and Industries we believe that entry 52 of List I of the Seventh Schedule has not been worked by the Centre in the true spirit of the Constitution and Industry which basically is a subject for the States have been transformed into a subject of the Union. Under the garb of Public interest nearly the entire Industries have been brought under the control of the Union. For a better and faster Development of the States and towards the fulfilment of their obligations it is necessary to remit greater control to the States.

In the above background we proceed to deal with the questionnaire question-wise as under :—

5.1 So far as the transfer of funds from Centre to the State are concerned, the devolution partly of central taxes and partly by grants-in-aid has worked reasonably well. The 8th Finance Commission has particularly done a commendable job by keeping a side 5% of central Excise revenue for deficit States like ours.

5.2 In a federal democratic set up, the concepts of "giver" and "receiver" are probably misconceived, while fiscal relationship of giver and taker does still hold good, the avenues of revenue which have been assigned to the Centre by the Constitution are for more and elastic of than assigned to the States. It had to be so because of vertical inequities in the regions produced by many factors. The central taxes, major portion of which is collected in a relatively few States and distributed amongst all the States in accordance with the recommendation of the Finance Commission's report is not a

benovalent fund to the poorer State in the Country. It has to be remembered that a poorer State is also a consuming State. The production centre of the Country which are concentrated in a few States only because of their advantageous location survive on the market funding consuming States, and hence are National producting centres. The Consuming States indirectly help in the creation of such production centre. A casual glance at the C.D. ratio of richer States is for more than the National average while as such ratio of backward States like ours is far below. In other words it means that saving of one region provide institutional finance for the development of other regions and production centre created out of such finances should therefore be understood as National Production Centre. So it is no give and take. The poorer States get what is collected from them indirectly.

5.2(a, b) We do not favour the complete separation of fiscal relations of the Union and the States at least till the time vertical economic inequities are removed by balanced and uniform development of all States. We also do not support the transfer of " a few more elastic taxation heads to List II".

5.2(c) We also don't support the idea to transfer all the taxing powers to the Union List and the respective shares of the Union and the State to be specified in the Constitution itself. The States have only a limited power to tax and baring Sales tax, every other tax in the State list is an inelastic one. Certain taxes like sales tax are based on the principles of destination and many distortions will be produced in the shole economy because of cascanding etc. Therefore not much will be gained but on the other hand, it will be a blow to the federal structure of the Country.

5.2 (d,e) Yes, All taxes which are collected in the States should form the divisible pool. There is no justification to keep them out of it. By accepting these out of the central pool, a tendency has developed that surcharges and special duty which are not sharable are increased and the basic duties which are sharable are kept constant.

5.3 If giving more financial powers to States mean that share of elastic sources of revenue should have nexus with the collection, we certainly agree with the view. It has to be remembered that quite a good proportion of tax collection in a State is passed on to consumers outside that State. So the Centre has the obligation to see and cater for the need of the poorer State to remove imbalances and inequities.

5.4 Primarily, the Centre would attain the objective set further in the preceding question by raising more resources through taxation, through subventions from richer States to Central pool and better control over expenditure. Deficit financing should be resorted to only as a last resort and has got to be kept within manageable limits.

5.5 It is a fact that the present mechanism of devolution has not been very helpful in bridging the gap in resources between poorer and the richer States. This is mainly because almost a uniform criteria is followed in allocating share of taxes etc. Backwardness of an area can't just be determined as the basis of per capital income alone. Geographical conditions, cost of development, area, facilities of communication infrastructure facilities are hardly given any weightage. The 8th Finance Commission has itself admitted that cost of creating or maintaining a capital asset in a State like our is 30% more. We would therefore suggest that in determining the devolution to our State, the following factors should also be taken into consideration :—

		Weightage
(a)	per capita income	10
(b)	Area	15
(c)	Geographical conditions	30
(d)	Cost of Development	15
(e)	Facilities of communications	10
(f)	Other infrastructure facilities	0
(g)	Population	10

The Planning Commission has been doing reasonably a good job in the given policy framework. In the case of a poorer States like our, pattern of financing has to change. Our State, though classified as special category State is treated differently. Pattern of financing in the case of special category States, as is well known is in the ratio of 90% grant and 10% loan, but in our case it is 70% loan and 30% grant. Repayments of principal and interest thereon are ever on the increase and are main forces widening our resources gap. This pattern of financing has made our plan stagnent because planning commission is requird to provide for our non plan resources gap also, which is provided entirely at the cost of our plan. This pattern of financing is almost a sugar coated pill for us.

We have made very strernous efforts to raise our revenue. During the fifth and sixth five year plan our average growth rate at base year's tax base of these two plans has been of the order of about 15% and 11% respectively. This effort is an ongoing process and is taken note of by the Planning Commission. But tax efforts of a State like our should not be evaluated on the basis of percentage growth alone. The factors under which tax system in a poor-consuming State like ours operates should be taken into consideration. We are constantly lurking under the fear of diversion of trade because of undercuting of tax is also progressly decreasing because of the way Central Sales Tax and purchase tax levied by the other States have developed.

Efficiency and economy in management of a tax system should be evaluated on the basis of cost of collection alone.

5.6 It is not that the Finance Commission and Planning Commission are not adequate for the purpose but the orientation towards poorer States like ours has to change, if uniform development of the Country is the objectve.

5.7 We dont support the idea of transfer of central taxation powers to States. The present system as very prudently though of by our constitution makes needs to be maintained. There should also be no increase in the we khand policy in respect of its taxation powers under pressure from richer States and thereby contributing to inequities. The development of Central Sales Tax is a typical example in this regard.

The Central Sales Tax was introduced to avoid double taxation and rate of tax was consciously kept as low as 1%. The tax was assisgned to the States which collected it, and the rate being very low, nobody took any notice of it. The manufacturing States soon thought of this tax as a revenue earning devise and pressurized the centre to raise the rates of this tax. Unfortunately, the Centre obliged them and current rates are 4% and 10% depending upon whether the sale is made to registered or unregistered dealer. The yield on account of Central Sales Tax has grown from Rs. 63.10 crores in 1964-65 to Rs. 465.10 in 1976-77. This tax is collected from the manufacturing States from out of State population particularly those living in consuming States like ours. The objective of this tax as was originally conceived has completely eroded. In fact the objective now is just the reverse.

This tax having because a revenue earning devise for manufacturing States has provided an impetus to further increase the vertical inequities between the States. Besides the revenue which manufacturing States derive from out of State consumers, this tax has also reduced our potential to enlarge our tax base both horizently or vertically.

Now the correct the anomoly and in the interests of bridging the gap, 50% of the yield on account of Central Sales Tax should go to the central pool for eventual distribution among poor States like ours, in the alternative the rate of Central Sales Tax should be redueed to 2% and specified in the Constitution itself.

The 8th Finance Commission has kept aside 5% excise revenue for distribution amongst deficit States. Our State is the beneficiary of that provision. Though laudable, it has given us only a marginal gain. Our resources gap for the purposes of grants-in-aid under Article 275 of the Constitution has apparantly been worked out after taking into account the devolution out of that 5% of central excise revenue also. Had such a measure not been adopted by the Finance Commission, the money would have come to us under Article 275. The marginal gain is due to the fact that while grant under Article 275 is fixed, share of tax generally increases because of the bouncy of tax. We would therefore suggest that allocation from this 5% excise revenue should come to us as an additionality with no nexus with our resources gap. This we could spend on developmental projects.

5.8 We have already said that we don't favour any change in the "taxing tasks" of the centre and the States, as laid down in our Constitution. We only want mechanism of devolution to change so as to reduce inequities.

5.9 In this respect also, we prefer the status quo. One can perceive many advantages of a temporary Finance Commission as provided for in the Constitution over a permanent one (if created). The most important of which is relatively less interference. Even the approach given in the question under reference does not define the role of Finance and Planning Commissions in mutually exclusive terms. In such a situation overlapping and interference in each other dominions is but natural.

5.10 When planning the expenditure, the devolution under the Finance Commissions award is always kept in view. But such devolution have not narrowed down the disparities in public expenditure among the State. That is why, we have suggested above, that basic philosophy underlying the devolution to poor States like ours must change.

5.11 It is not correct to say that the system has inbuilt properties for financial indisipline and improvidence in term of exaggerated revenue deficit forecases. It is more of a question of mutual mistrust between the Union and the States. Outdated information system also plays a role in the situation. Changes for better are already discreable with the computerisation of information at various levels.

5.12 We agree with this view, It has in fact already been put in operation by the Eighth Finance Commission. Grant-in-aid should in fact be an additionally over and above the resource gap' as may be determined by the Finance Commission and should be used as a lever to remove disparities between Richer and Poorer States.

5.13 In the light of our response to question (5.12), we are inclined to agree with (ii) and (iii) propositions.

5.14 No revenue, tax or non-tax should be added to the divisible pool, that shall only further widen the gap between the richer and poorer States. There is however a necessity to create a special fund wherein a minimum of 50% revenue earned from Special Bearer Bonds and others (both tax and non-tax heads) not shared till now be pooled and distributed to poor States like ours.

5.15 Yes.

5.16 We don't agree with the view that in terms of percentage, the transfer of revenue receipts from Centre is showing a declining trend. According to a study; Central Government Expenditure published by National Institute of Public Policy and Finance, New Delhi, it is in fact showing an upward trend. It is however a fact that fixed imblance of poor states like ours is on the increase and one of the main reason for that is the pattern of financing by the Centre.

5.17 In own case, it has happened because of pattern of financing by the Centre. As has already been explained that our State has been classified as a special category State, yet the pattern of financing (90% grant and 10% loan) is not applicable to us. During the Seventh Plan period, our State is to repay Rs. 380.50 crores as principal and interest thereon to the Centre. This amount is very close to the quantum of our resource gap (Rs. 438 crores) worked out by the Planning Commission for the 7th Plan period. The gap will be wipped out if pattern of finance (90% grant and 10% loan) is made applicable to us also.

5.18 We don't agree with this view. Reserve Bank of India is in fact doing a good job in this regard.

5.19 If it is so, there is no justification for the centre to charge more than what it is actually required

to pay to a foreign lender. Foreign credit to the State shall be available at the rate at which the finance is made available by the lender.

5.20 We have said earlier that Reserve Bank of India is doing a good job in the direction. There is no need to incur extra expenditure in creating a loan council.

5.21 We don't have any such arrangement with the Reserve Bank of India. We have, however, a Ways and Means arrangement with J & K Bank Ltd. to the extent of 10 crores with the approval of Reserve Bank of India and Government of India and were managing the facility, prudently and efficiently.

5.22 So far as our State is concerned, this view is not correct. It has been our constant endeavour to tap all the available sources of revenue. We have gone to the extent of taxing even services and contracts under our sales tax law much before Forty-seventh Amendment to the Constitution came into being.

5.23 One is inclined to agree on the basis of reports of various Commissions and statements made by the Senior Minister of the Government of India. We are however, satisfied with the way the Union Government is tackling the situation for the last two years. We only hope that these efforts are made on continued basis.

5.24 The collection of duties and taxes enumerated in Articles 268 and 269 do not form part of Consolidated Fund of India but is assigned to State. It is, therefore, necessary that the Union should ascertain the views of the State Government before moving a Bill to levy or vary the rate structure or abolish any of the duties and taxes specified in the above referred Articles of the Constitution.

5.25 Yes, we also feel that this provision of the Constitution has not been tapped to its potential. The fact that net proceeds of the duties under this Article have been assigned to the State is often cited as a cause for the Centre's indifference. Much of the bitterness would go, if serious efforts are made to exploit this Article.

5.26 We fully endorse the view point of the States as enumerated in the question. The fact that this grant has almost remained static, we are in net terms getting less than what we got in late fifties. This should be increased and must have nexux with the increase in railway fare.

5.27 These Union Territories may not be getting the benefit of buoyancy in Central taxes but we cannot brush aside the fact that Central Government spends significant sums in these territories. In fact we have a feeling that these territories are the spoilt children of the Union. Therefore we do not favour any change in this regard.

5.28 The present arrangemement has worked reasonably well. One complaint which has often been heard is the delay in giving relief to suffering people which needs to be avoided. The Centre would do well in believing the States in their estimates of damages caused by natural calamities. Inspections by the Central teams should not be necessary.

5.29 The need of the hour is to Consolidate the existing Institutions other than creating new ones. All the functions enumerate in part 2 and 3 of the question are being looked after at present by different institutions like RBI Planning Commission, NTEPFP and other agencies of Government of India agencies. These institutions need to be strengthened to come upto expectations. We would also think of having a permanent Secteratiat of National Development Council in Delhi having representations from all the States to act as liason Bereau of the State with the Centre in all its problems.

5.30 We agree to the extent that the funds should be spent prudently and the benefits got back largely to the people. We however, do not subscribe to the view that issues like "who collects the funds and how collected funds should be distributed" are not relevant. Our Constitution makes in their wisdom very rightly delineated functions of the Union and States in this behalf. And if they did not specify the mode of distribution in Constitution itself, it is because they were conscious that State will have peculier needs at different times and hence prescribed a Finance Commission to evaluate such needs once in five years.

5.31 (a) We agree that periodical assessment is necessary not only in case of Union but States also. In fact Finance Commission has been doing this reasonably well. The Finance Commission has been laying down even the guidelines for expenditure.

(b) It is not true that expenditure of populist nature is over emphasized. Populism has come to mean many things to many people. In a free democracy, it is impossible to separate politics from economic Planning. After all do not we have a Planning Minister from out of Politicians who is elected by the people and represents an area. The investments made in constituencies of important central leaders during the last twenty years will ractify our view that politics can not be seherited from planning expenditure and it is not right to accouse the States of over spending in "populist" measures.

(c) This is already being done by both Finance Commission and Planning Commission. Our views in this regard as already explained is that no new institution be opened but the existing institutions need to be consolidated.

5.32 The C A G of India is in charge of the audit and accounts not only of the Union but also of the States. The article 150 of the Constitution perpetuates the centralized and combined system that existed prior to the Constitution. There is no provision in the Constitution, corresponding to sec. 167 of the Government of India Act, 1935. under which a provincial legislature had the power to create the office of an Auditor General for that province. There is now no scope, under the Constitution for the appointment of a State Auditor General. The advantages of the centralised system are stated to be uniformity as well as economy.

The greatest disadvantage of a centralized system is a procedural delay involved in each operation. The Accounts be it appropriation account or Finance Accounts of a year are made available to the State

generally three or four years after the close of the year to which it pertains. It then became difficult to take corrective action and questions raised remain under protracted correspondence. The Commission should there consider to decentralize the powers of the CAG.

5.33 The fact that the desirability of 'evaluation audit' is well established, it therefore needs to, be introduced. The 'voucher audit' quite often get bogged down under rules or regulations development of which have not kept pace with the changing times.

5.34 Yes.

5.35 Reporting is generally comprehensive and accurate but are considerably delayed.

5.36. Yes.

5.37 This Committee does act as an watch dog.

5.38 We don't agree with the view that expenditure Commission is needed. The existing institutions need to be consolidated and procedures simplified and streamlined.

5.39 We strongly agree with the view given as the backdrop to the question. The Central team could undertake physical inspections periodically to ensure the proper utilisation of funds.

6.1 The vital role of the Central in undertaking Planning in a national perspective to meet national needs, subscribing to national priorities and co-ordinating the sectoral as well as territorial plains, is recognised by the State Government, procedurally, the Planning Commission prepares the Five Year Plan document which is considered in the meeting of the National Development Council (N.D.C.). After the endorsement by the N.D.C., the Five Year Plans is adopted for implementation. Whereas the procedure is now for the preparation and approval of the Five Year Plans is now established over the last so many years, the shortcoming, pointed out by A. R. C. study team as well other studies conducted by experts have validity. The basic difficulty appears to be that :—

(a) the consultation with the State Governments with a view to involving the task of not only determination of goals but also the implementation of programmes of national priorities whose implementation lies in the State Sector, is inadequate;

(b) the plan documents prepared by the Planning Commission are not received by the State Governments in sufficient time to enable a proper scrutiny to be done with a view to presenting the State's view point in the N.D.C.; and

(c) there being a very large number of Centrally Sponsored Schemes with which the Central Ministries attempt to incorporate programmes of national priority in the State plans.

The above mentioned short-comings can be removed through providing for a more detailed consultation with the States that is presently available at the stage of formulation of the plan, by making available the draft plan document to the States in better time; and by reducing the large number of Centrally Sponsored Schemes. Some of the Centrally Sponsored Schemes could be transferred to States with supporting funds so that these can become a part of the State Plans and the responsibility for implementing such schemes would then become the responsibility of the States.

6.2 Although the present planning process has been evolved and established on the basis of experience gained over the last so many years, the shortcomings of the planning process have been mentioned above in response to Question No. 6·1. Whether the NDC is given a statutory status or not, the shortcomings mentioned in the above paragraph would continue to operate till action is taken to deal with the shortcomings. The NDC should certainly have the opportunity of expressing opinion on matters of national importance; and, for this purpose, the NDC could meet more frequently on issues of critical national importance than is the case now. However, the main shortcomings in the present planning procedure being inadequate consultation with and involvement of the States, the removal of these shortcomings through corrective action assumes the highest importance.

6.3 As mentioned in response to Question 6·1, there are shortcomings in the procedures of the Planning commission that prevents a closer consultation with and involvement of the States. Suggestion for overcomings the shortcomings have also been suggested in response to Question No. 6.1.

6·4 The State Government would support the suggestion at Question 6·4 (ii) above that the Planning Commission should be a high grade advisory body of economists, technologists and management experts. This view is supported because it is only such a body that can prepare a Five Year Plan for the whole country taking into account all the complexities—both techincal and administrative that the preparation of such a plan involves. It is only with the help of a plan drawn up by such a body of experts that the NDC can consider the proposed national effort and indicate the goals and direction that the national planning effort should have.

6.5 As regards the question of making the Planning Commission an autonomous body under the NDC for over-seeing planning investment and decision making at the national level, there are advantages as well as disadvantages in the proposition; the advantage would be that as an autonomous body working under the NDC—and to that extent working as a secretariat for the NDC.—the Planning Commission would acquire more independence and objectivity. On the other hand, the disadvantage is that, keeping in view the federal structure of the country and the changes that may take place in the complexion of the State Governments from time to time, the coherence and direction of Planning Commission may suffer. In addition, the liaison of the Planning Commission with the Central Ministers which are changed with the implementation programme of national importance and are provided substantial funds from the Five Year Plan for this purpose, may also suffer. On the balance, the structure of Planning Commission as presently constituted could continue although

it is important that the short-comings mentioned in the statement in response to Question 6·1 are removed as soon as possible.

6.6 There is need to consider and incorporate national priorities in the State Plans and the States themselves are conscious of this. Procedurally, the incorporation of national priorities in the State plans is sought to be achieved through the consultations that are made before the Five Year Plans are drawn up. In addition, the Planning Commission through the mechanisms of transferring Central assistance to the State, through the procedures for approving Centrally Sponsored Schemes and generally through exercising their role of over-seeing the drawing up as well as implementation of the State plans ensures that the national priorities are incorporated in the State Plans. However, it is also true that through the introduction of a very large number of Centrally Sponsored Schemes and through examining in the great a detail the State's finances and plan, the initiative of the State tends to be eroded and this creates an impression that the autonomy of the States is also being eroded as mentioned in response to Question No. 6·1. Corrective action to over-come the present short-comings of the Planning process would restore the initiative of the States and also remove the complaint that the autonomy of the States is being eroded.

6.7, 6.8 & 6.9 The present system of channellising the Central assistance by way of loans and grants through the Planning Commission to the States attempts to ensure that certain funds are earmarked for development and are not to be diverted by the States for non-developmental purposes. To provide for special handicaps of particularly backward States, there is a system for providing 90% grants and 10% loans for the Special Category States. Nevertheless, it has been noted that the present system operates against the economically weaker States whose resources are small as also against special areas like tribal and hilly areas which face special problems of deprivation and lack of resources and skills. It has also been noted that the object of balanced regional development and removal of poverty has not been achieved to the extent that was desired. In view of this, the arrangements to make special provision for the economically weaker States and for areas that have special problems of development need to be strengthened. The programmes for development of special areas have to be so made that they dovetail with the States plan as well as the Central national plan.

Specific to the J & K State, although it is a special Category State, the present pattern of providing Central assistance is of 70% loan and 30% grant with the liability of loan repayment that this involves. It is necessary to provide Central assistance to J & K State through the pattern of 90% grant and 10% loan as is the case with other Special Category States.

6.10 As laready mentioned in response to Question Nos. 6.1 and 6.6, there are at present a very large number of Centrally Sponsored Scheme which need to be reduced in number. Some of the programmes presently sought to be implemented through the Centrally Sponsored Schemes need to be transferred to the States together with the funds so that they can be incorporated as part of the State plan and implemented as such. If this were to be done, the State plans would incorporate national priorities. And provided that more satisfactory consultations have been made prior to the formulation of the Plan, the State's involvement and initiative would be ensured and the need for more detailed scrutiny of the large number of Centrally Sponsored Schemes would be removed. This would also solve the present problem of the States getting into a dependent relationship with the Central Ministers to get their schemes approved.

6.11 Although the monitoring and evaluation machinery in the Planning Commission as well as in the States over the years, it is still perhaps one of the weakest elements in the planning process both in the States and at the Centre. This is because due importance was not given in the past to the critical part that monitoring and evaluation plays in the processes of plan formulation and implementation. It is necessary, therefore, to give a far greater priority to the strengthening of the monitoring and evaluation machinery in the States as well as at the Centre. Also, keeping in view the large amount of data that has to be collected and collated it is necessary to introduce better management information systems (M.I.S.) and the use of computers in this field.

Where certain projects have been taken up with large investment of funds and have run into special problems of cost and time-over runs, there is need to undertake specially close monitoring of such identified projects. A quarterly or biyearly review of the progress of the critical areas of the plan and particularly large projects by the Planning Commission would also help in strengthening the existing system of monitoring and evaluation.

6.12 Decentralised Planning will certainly promote the involvement of the people and this introduce a spirit of cooperative federalism in the Planning system. District plans as well as plans at the Block level need to be prepared and implemented keeping in view the Development needs at these levels. Whereas it will be for the States to develop the District Plans, as has been successfully attempted in J & K, the Centre could assist through provision of necessary infrastructure, training of the staff and provide financial incentives to the States that undertake to introduce the system of decentralised planning. A criticism is made that decentralised planning being too close to the ground comes under local pressure and thus distorts plan priorities. Although there is validity in this criticism, there is no alternative to introducing the decentralised planning in the States as a means of ensuring people's participation. The problem of local pressure can be resolved through a process of training as well as increasing the sense of responsibility of local level leadership which can only come about if such local level leadership is given the chance to participate in and have experience of decentralised planning.

6.13 The intention behind the setting up of planning Boards was that the State Planning Departments would have the benefit of the advice of experts in various fields. The experience of the State has been that the Planning Boards have not served the intended purpose and very often discussions in the Planning Board have tended to become an academic exercise. In

view of the past experience, it is not possible to recommend that, with the setting up of Plannin Boards, the National Plan shouic necessarily become more indicative. Quite apart from the fact that the monitoring the evaluation system are presently week, it is also true that the planning machinery of the State itself lacks in professionalism and expertise. It is, therefore, important that priority should be given to introducing greater professionalism and expertise in the Planning Department of the States. It is only after the planning monitoring and evaluation machinery of the States has been strengthened and the Planning Boards have gained more experience and are able to serve the purpose for which they were conceived and established that the question of making the National Plan more indicative and less imperative can be considered.

7.1 It is a fact that the First Schedule to the Industries Development and Regulations Act has been expanded so greatly that there is virtually no industrial activity which does not come within its purview. The element of 'vital public interest' and 'National importance' considerations for including the vast majority of items contained in this Schedule is difficult to discern. The underlying considerations for bringing different industrial activities under the licensing fold at different points of time very greatly and so also the grounds for grant of approval or rejection. Consequently, obtaining an industrial license has become a matter of chance. Even for the manufacture of items which are not included in the First Schedule of the Act, the extent of Central regulation in terms of allocation of scarce raw material, grant of import licence etc. are such that 'industries' has indeed become a Union subject. A number of specific instances can be given in support of the argument that industrial licences were denied to J & K on the grounds that sufficient capacity existed in the country, when subsequently additional licences for the manufacture of the same item of manufacture were granted for location in other parts of the country. However, these are not being listed as the detail of licence to J&K was not a part of a deliberate policy but a result of the growing complexity of the entire licensing labyrinth.

7.2 (i) The national public interest sought to be served should be defined. While under changed circumstances the norms for defining the national interest may change, the list of industries regulated should also undergo a change rather than just having more and more industries added into the First Schedule. The reasons for the regulation of a certain industry may differ from the reasons for regulating some other industry. It is worth examination as to whether the same instrument viz. licensing, is the appropriate instrument for regulating all industrial developmental activities. The Industries Development and Regulation Act should regulate only what can be defined as the core industrial sector. This would include such industries which contribute either to the national security or, in turn, provide raw materials or plant and equipment required for other industrial activities.

(ii) under the above definition, the following entries in the First Schedule would be eliminated :

IA	—	(3), (4), (5), (7)
IB	—	(2)
5	—	(2), (3), (4), (6), (7), (9), (11,
6	—	eniire entry
7	—	(5), (6), (7)
8	—	entire entry under B and C.
10	—	11, 12, 13, 14, 15, 16, 17—entire entry
19	—	entire entry other than (1), (2) and (10)
		20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36 and 38.

This is not to say that the industries under the heading of the entries mentioned above do not require any regulation or laws governing them. However, different industries need regulation for different reasons and can be dealt with differently.

7.3 If the industries listed in response to questions 7.2 (ii) are delated from the First Schedule a lot of delay that presently takes place in industrial licensing would be eliminated. Since the IDR Act came into force, the objective situation in the country has changed greatly and the national financial institutions such as IDBI, IFCI etc. can act as more effective instruments for channelling industrial investment into desirable areas than the IDR Act.

For industries not covered by the First Schedule, as proposed to be amended, guidelines can be issued from time to time indicating where foreign collaboration/import of capital goods and raw materials can be permitted. Powers to permit import and foreign collaborations, within the guidelines laid down, should be decentralised by setting up offices of the relevant authorities at least in every State and Union Territory. Only such cases as do not fall within the guidelines should require to be considered by the Union Government at Delhi.

7.4 (a) It is not a question of organisation as much as inadequate availability of raw material, availability of working capital and of adequate purchasing power of the vast majority of the population that hinders the growth of the small sector.

(b) There is an inherent contradiction between "efficiency" (technology) and "equity" (employment generation). There is, therefore, a need for evolving a methodology in terms of norms for balancing these two factors in the evaluation involved determining the "appropriate technology" for an industry at a given point of time. Incentives given for the establishment of industries should take this criteria into consideration.

7.5 As far as J&K is concerned, the functions of the national industrial financial institutions has been positive and satisfactory.

7.6 It would not be necessary to take States into confidence for deciding on the location of public sector investments if the norms for such decisions were clearly laid down and adhered to. Different rationals are given for location decisions taken in respect of different Central investments. It is this that gives rise to criticism. Jammu and Kashmir has been particularly unfortunate in respect of Central Public Sector investments. Only two relatively small

925 ISCS/98—15A

public sector units are located in the State viz. a half a million watch per annum manufacturing unit of the HMT and a one lac telephone instruments per annum manufacturing unit of the ITI.

7.7 Since the public sector is also considered as an instrument for promoting balanced regional growth, such States as cannot have heavy industry located within their boundaries should be compensated by investment in other fields which could be more appropriately located there. In the case of J&K, potential areas for central investment are in the electronic and light engineering fields.

7.8 While Central fiscal and financial incentives for the promotion of industries in the industrially backward districts/areas has, no doubt, contributed to industries being attracted to such areas, there is need for greater discrimination in making available such incentives For instance, industry would obviously prefer to be located in an industrially backward district of an industrially advanced State such as Maharashtra, Gujarat, Karnataka etc. rather than in a similar district of an industrially backward State such as Jammu and Kashmir, Himachal Pradesh or the north-eastern States. This is because with the incentives remaining the same, an industrially advanced State offers better infrastructural facilities. These facilities include industrial work culture, availability of trained manpower and management personnel, telecommunications net-work, roads, power, market outlets etc. In the existing circumstances of industrial licensing, a very important factor for the greater success of certain industrially advanced states is information.

9.2 While the recommendations of National Commission on agriculture is laudable and the long term perspective has to be developed where central and centrally assisted schemes should form ultimately part of the State sector, the State of J&K because of its financial constraints would like the centrally sponsored and centrally assisted schemes to continue on the central sector with a view to providing the financial and technical support at a national level. The special category States like J&K would like to have schemes of national importance to be taken up in a big way with central assistance till such times as the results of such schemes reach desired level.

9.3 The recommendation of the National Commission on Agriculture about the association of the State Govt. to the formulation of the Central and Centrally sponsored scheme is highly laudable. It has been found that at times the schemes do not take into account the local problems and in the agriculture sector in particular, the schemes have to be location-specific, therefore, it should be ensured that such schemes are cleared at the appropriate forum before being implemented. These should take into account the special requirement of the States. It has been also found that some schemes do not have general application and, therefore, States which do not avail the benefits of such schemes, they could take up the schemes which have relevance to their conditions.

9.4 While the policies formulation by the Central Government regarding the fixation of minimum of fair prices for Agricultural products are being implemented on the recommendations of the High Power Committees, the State Governments are being consulted and it is seldom that the recommendations of the State are agreed. The view points of the State Governments should be considered in right perspective.

9.5 While the role of the National Institutions like "Indian Council of Agricultural Research", NABARD etc. in the Agriculture development of the country is laudable, the policies and the detailed frame-work are not evolved in consultation with the State Govt. It would be desirable that the States of various Zones are being associated in rotation for a fixed tenure on these institutions with a view to reflect their view point on the policy formulations and also ensure to have feed back to take the corrective measures wherever required.

10.1 The present arrangement is, by and large, satisfactory. Improvement can, however, be suggested in the matter of proper co-ordination regarding the procurement, pricing etc.

10.2 The arrangements for administering the Essential Commodities Act and other regulatory Central Acts 'affecting States' areas of responsibilities should normally be reviewed periodically because the situations go on developing which need remedial steps which can be decided upon in periodical meetings.

11.1 There is not much of interference from the Government of India in the field of Education. It is, however felt that whatever little improvement is needed could be achieved to a large extent by inclusion of an expert from the State Government on the apex bodies of NCERT/NIEPA etc.

The country has more or less adopted in All India Pattern of Syllabi in all subjects upto Class 12th. While in Science Subjects in All India Pattern is supported for undergraduate courses but in the humanities field there should be a percentage of flexibility in as much as the States should be left to add upto 30% keeping in view the local history, Geographical conditions, environment and the like.

11.2 As has been stated in reply to Question No. 11.1, there is need to include a representative of the States in apex bodies of UGC, NCERT, NIEPA etc. There is already a body in which Ministers of Education of all the State Governments are represented. There is no doubt that the inclusion of the Minister in such bodies will be effective but for co-ordination and discussion the inclusion of experts in the field representing various State Governments can be more useful.

As at present the UGC have restricted College Education to students at undergraduate level by laying a minimum of 40% marks for BA General Arts stream admission; for B.A. Science General stream the minimum percentage is 50% raising this by 10% more for admission to B.A. Honours. On the other hand the pass percentage at Class 12th is between 33 & 34 percents. A question arises as to what option is there for the students who pass a 12th standard with less than 40% marks. The answer

could perhaps be that such students should go in for further education through distant education/ open university system. Here also there is a flaw so far as particularly such students who go in for distant education for LLB are concerned. Such students though possessing LLB Degrees are not allowed to practise law.

It is this kind of problem, which can be discussed in the apex bodies of the UGC etc. in case the experts from the States are given representation there in.

11.3 It has already been suggested that inclusion of experts in the policy framing bodies of various organisations connected with the development of education should be considered so that the difficulties and short coming, if any vis-a-vis the States are pin-pointed at the time of policy framing to ensure speedy implementation of the policy laid down.

There is already a national Apex Body at the level of Ministry of Human Resources Development. There could be another body which should include atleast one expert from each State dealing with the policy, programmes and implementation. The process of decisions, consultation and presentation should be the main work assigned to this body.

11.4 There are no two opinions that the Constitutional guarantees as envisaged in Art. 29 & 30 should continue to remain. The suggestion however is that all such institutions should compulsorily follow the syllabi prescribed by the Government of India/State Governments. In case moral/ religious education is proposed to be imparted, the same should be within the four corners of the Constitutions. The Text Books, if any, prescribed for such moral/religious education need be screened by experts of the Education Department before the same are actually put in practice.

11.5 There is no specific conflict but there is need for closer co-ordination and consultation between the Central and the State Government in regard to formulation of programme for Educational Development.

GOVERNMENT OF KARNATAKA

(b) Memorandum

(c) White Paper on the Office of the Governor

Karnataka

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 Our Constitution can be called FEDERAL as that was the intention of the Constitution makers. No doubt in State of West Bengal Vs. Union of India AIR 1963 SC 1241, the majority has stated "the Constitution of India is not truly Federal in character". In this case Subba Rao J. dissenting from the majority has observed: "The Indian Constitution accepts the federal concept and distributes the sovereign powers between the co-ordinate constitutional entities namely, the Union and the States."

In Atiabari Tea Co. Ltd., Vs. The State of Assam AIR 1961 SC 232 it was said : "It is a federal Constitution which we are interpreting, and so the impact of Art. 301 must be judged accordingly." Again in Automobile Transport (Rajasthan) Vs. State of Rajasthan AIR 1962 SC 1406 it was stated : "The evolution of a federal structure or a quasi-federal structure necessarily involved, in the context of the conditions then prevailing, a distribution of powers and a basic part of our Constitution relates to that distribution with the three legislative lists in the Seventh Schedule".

The observations in the aforesaid earlier cases have not been noticed in AIR 1963 SC 1241.

The historical basis referred to in AIR 1963 SC 1241 only relates to the position which was in British India and does not relate to the sovereign Indian States, though subject to the suzerainty of British Crown. In internal matters the Indian States were treated as foreign states vis a vis British India. Thus the reasoning in the 1963 decision does not appear to be sound.

This question has been discussed by Beg C. J. in State of Rajasthan Vs. Union of India AIR 1977 SC 1361 wherein he has observed : "In a sense, therefore, the Indian Union is federal. But the extent of federalism in it is largely watered down by the needs of progress and development of a country which has to be nationally integrated; politically and economically co-ordinated, and socially, intellectually and spritually uplifted." But Chandrachud J. (as he then was) has at page 1396 (para 108) observed: "I find it difficult to accept that the State as a polity is not entitled to raise a dispute of this nature. In a federation whether classical or quasi-classical, the States are virtually interested in the definition of the powers of the Federal Government on one hand and their own on the other. A dispute bearing upon the delineation of these powers is precisely the one in which the federating States, no less than the Federal Government itself, are interested. The State, therefore, have the locus and the interest to contest and seek an adjudication of the claim set up by the Union Government. The bond of constitutional obligation between the Government of India and the States sustains that locus."

Bhagwati J. on behalf of himself and of A. C. Gupta J., has also at page 1405 (para 136-A) observed; "unconstitutional exercise of powers by the President under Art. 356 Cl. (i) may injuriously affect rights of several persons. It may infringe not only the individual rights of the members of the Legislative Assembly but also the Constitutional right of the State to insist that the federal basis of the political structure set up by the Constitution shall not be violated by an unconstitutional assault under Art. 356 Cl. (1)".

In Karnataka State Vs. Union of India AIR 1978 SC 68 at page 151 (Para 217) Untwalia J. on behalf of himself, Shinghal and Jaswant Singh J. J. has said :

"Strictly speaking, our constitution is not of a federal character where separate independent and sovereign States could be said to have joined to form a nation as in the United States of America or as may be the position in some other countries of the world. It is because of that reason that sometimes it has been characterise as quasi-federal in nature."

In the same case Kailasam J. has after referring to the decision in AIR 1961 SC 232 and the decision in AIR 1962 SC 1406 observed at page 162: "The decision is clear authority for the proposition that the essential structure of Indian Government is of federal or quasi federal character, the units also having certain powers as the Union itself." The learned Judge after referring to the observation in the majority judgement in AIR 1963 SC 1241 has also observed : "But with very great respect the observation that 'the Constitution of India is not truly Federal in character....that only those powers which are concerned with the regulation of local problems are vested in the States' is not in accordance with the decisions of the court in Atiabari Tea Co., Ltd., Vs. The State of Assam (AIR 1961 SC 232) and the Automobile Transport (Rajasthan) Ltd. Vs. the State of Rajasthan (AIR 1961 SC 1406) which is a decision of a Bench of seven Judges of this Court".

At (Para 254) pages 163 and 164 after referring to the observations in Special Reference No. 1 of 1964 (AIR 1965 SC 745), the learned Judge has observed:

"Our Constitution accepted a federal scheme though limited in extent having regard to the regional interests, resources, language and other diversities existing in the vast sub-contient. These facts have been taken into account by the Constitution-makers and a limited federalism was made a part of the Constitution by Article 1 itself providing that India

shall be a Union of States. Effect is given to this intention by separation of the Lists and by providing legislative and executive power to the Union and the States in separate chapters of the Constitution. This principle has been accepted by the Supreme Court in the decision in Atiabari Tea Co., Ltd., Vs. The State of Assam (AIR 1961 SC 232) and the Automobile Transport (Rajasthan) Ltd. Vs. The State of Rajasthan (AIR 1962 SC 1406) cited earlier. The observations made in the West Bengal case (AIR 1963 SC 1241) (supra) which have been referred to already are not in conformity with the otherwise consistent view of the Supreme Court that the Constitution is supreme and the Union as well as the States will have to trace their powers from the provisions of the Constitution and that the Union is not supreme and the States are not acting as delegates of the Union"

At page 164 (para 255) the learned Judge has referred to the decision in Kesavananda Bharati Vs. The State of Kerala (AIR 1973 SC 1461) and has observed : "In Kesavananda's case it was held by the majority that Art. 368 does not enable the Parliament to alter the basic structure on the frame work of the Constitution. Chief Justice Sikki in discussing as to what is the basic structure of the Constitution held that it consisted of (1) Supremacy of the Constitution, (2) Republican and democratic form of Government, (3) Secular character of the Constitution, (4) Separation of powers between legislatures, executive and judiciary, and (5) Federal character of the Constitution" Dr. Ambedkar has also stated that the Constitution is a Federal Constitution-vide CAD Vol. VII-Page 33.

The Constitution of India is, therefore, federal in character which may be quasi-classical.

1.2 In order to ensure autonomy for the States that legislative powers have to be redistributed. As recommended by the Rajamannar Committee more tax resources have to be allotted to the States by expanding List II. The rasiduary legislative power may be included in List II and Entry 97 of List I deleted. Article 248 of the Constitution may be modified to confer the residuary power on the State Legislature. Consequential amendments have to be made in the other Articles. The supervisory powers of the Government of India over the States in the several Articles have to be deleted. It is however necessary to retain appeals to the Supreme Court from the State High Courts on important questions of Law in order to ensure uniformity of law throughout India on such questions.

1.3 We agree with the statement. Provisions of the Constitution which make the Executive and also the Legislature of the State practically subordinate to the executive of the centre, have to be deleted and these State organs allowed to function within their spheres freely, without either getting directions from the Central Executive on seeking approval of legislation by the State from the Central Executive in the form of previous sanction of the President or subsequent assent of the President. In the matter of assent to Bills the President may be made to act on the advice of a Committee of Parliament and not the central executive.

1.4 The United Arab Emirates may be a type of Federation.

1.5 We do not agree with the views expressed in this question. Without specific provisions in the Constitution definitely laying down the independent powers and functions of the State Executive as also the powers of the State Legislature they cannot enjoy any freedom of the powers vested in them.

1.6 The protection of the independence and ensurance of the unity and integrity of the country is no doubt of paramount importance. The establishment of the Federation and vesting in the Federation the subjects relating to Defence, Foreign Affairs, Communications, and the establishment of an independent judiciary, by the different provisions of the Constitution ensure this.

1.7 In the Rajamannar Committee Report the need to modify Articles 251, 256, 257, 348, 349, 355, 357, 365 etc., has been discussed. Articles as they stand at present are not reasonable and have therefore to be modified.

1.8 Article 3 required reconsideration. The proviso to the Article has to be modified making it obligatory to obtain the consent of the Legislature of the State concerned before any Bill affecting that State is introduced in Parliament as in the case of Jammu and Kashmir. Merely sending the draft Bill for the views of a State and proceeding into parliamentary amendment after some time and even if suggestions are made, ignoring them, is inconsistent with the intention of the Constitution-makers as also of the federal character of the Constitution.

PART II

LEGISLATIVE RELATIONS

2.1 The view that there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and the States, is not correct. As already stated more sources of taxing power have to be given to the States.

As regards Acts passed by Parliament under Article 249 of the Constitution, the Essential Supplies (Temporary Powers) Amendment Act, 1950, the Supply and Prices of Goods Act, 1950 and the Evancee Interest (Separation) Act, 1951, have been passed.

2.2 The strength of the Centre and the unity and integrity of the country are ensured by the subjects already included in the Union List (List I). As suggested by the Rajamannar Committee the State may be given more tax resources by expanding List II.

The following other changes may be made in the Constitution.

(1) In Article 31A, the first proviso to clause (1) may be omitted.

There is no reason why the State Legislature should not have the same Legislature Power as Parliament under this Article.

(2) In Article 248 in Clause (1), for the word "Parliament", the words "State Legislature" may be substituted.

(3) Article 249 may be omitted.

(4) Article 252 may be omitted and resolution so far passed under that article may be treated as withdrawn and status quo ante should be restored.

(5) Article 254 may be modified as indicated in comments on Q. 2.5.

2.3 It is necessary to have a specific provision in the Constitution, making consultation with the States obligatory on the lines of the present proviso to Article 3 of the Constitution, whenever any legislation is undertaken in respect of a matter in the concurrent list.

2.4 Article 249 should be deleted.

2.5 In order to ensure the freedom of the Legislative organ of a State, it should not be made subject to the control of either the Executive organ of the State or the Executive organ of the Centre, in the exercise of the legislative powers. Under the Government Rules of Business, even Under Secretaries and Deputy Secretaries to Government can function on behalf of the President and the Will of the State Legislature can be thwarted or controlled by these officers on behalf of the President. But for the control vested in the Executive by provisions in the Constitution, such as those requiring previous sanction or/and subsequent assent by the Executive, whether called the Governor or the President, for legislative measures, the legislative organ would be independent. Just as the judicial organ is independent of Executive and Legislative organs vide Smt. Indira Nehru Gandhi's case AIR 1975 SC 2299, the Legislative organ should be ensured sufficient independence and not made subordinate to the Executive organs of the State and the Centre. In AIR 1975 SC 2299, Beg J. (as he then was) has observed :

"Neither of the three Constitutionally separate organs of State can, according to the basic scheme of our Constitution to day leap on tride the boundaries of its constitutionally assigned sphere or ambit of authority into that of the other".

(2) Since we have a Parliamentary system of Government and since no legislation can be passed without the necessary majority, when once a law in the exclusive field of the State Legislature is passed, it should by virtue of that passage, become the law of the State.

(3) As regards laws which fall within the concurrent field of Legislation which may be repugnant to a Central Law or an existing law in the concurrent field, the only authority which could approve or disapprove the repugnant provision should be Parliament which alone has the power to make the law in the concurrent field in the Centre, and not the Executive of the Centre. As Parliament cannot scrutinise every State Law referred to it for approval, provision may be made for delegating this power to a Joint Committee of both Houses of Parliament, which may meet from time to time and take decisions. In order to ensure that the State Legislature is not made subordinate even to a Committee of Parliament, seeking its approval a time limit may be fixed within which the decision of the Parliamentary Committee should be taken and if no decision is communicated to the State Legislature within the specified time limit, the law should be deemed to have been approved by Parliament.

(4) The following amendments of the provisions of the Constitution have to be made—

(i) In article 201 the existing provision may be numbered as Clause (1) and the following clause shall be inserted at the end, namely:—

"(2) In the exercise of his power under this article and article 213 President shall act on the advice of a Joint Committee of both Houses of the Parliament authorised by a resolution passed by both Houses of Parliament".

(ii) In Article 213 after Clause (1), the following clause may be inserted, namely :—

"(1A) An ordinance falling under the proviso to clause (1) shall be sent to the President and may be disapproved by the President within four weeks, and if it is not so disapproved it shall be deemed to have been approved by the President".

(iii) In Clause (2) of Article 254,

(a) In the proviso, after the word 'Provided' the word "further' may be inserted;

(b) after the clause and before the proviso as amended in sub-clause (a), the following proviso may be inserted namely :—

"Provided that if the approval of the President is not received within a period of one year from the date of its receipt the law shall be deemed to have been approved by the President".

(iv) After Article 254, the following Article may be inserted, namely :—

"254A. *Consultation with State Legislature and Parliament* :—

(1) No Bill with respect to any matter enumerated in the Concurrent List shall be introduced in either House of Parliament unless the Bill has been referred by the President to the Legislatures of the States for expressing their views thereon within such period as may be specified in the reference and the period so specified has expired.

(2) No Bill with respect to any matter enumerated in the Concurrent List shall be introduced in the House or either House of a State Legislature unless the Bill has been referred by the Speaker of the Legislative Assembly of such State to the Speaker of the House of the people for expressing the views of Parliament thereon within such period as may be specified in the reference and the period so specified has expired".

(v) The proviso to Article 31A (1) and the proviso to Article 304 may be omitted. There is no reason why the State Legislature should not have the same legislative power as Parliament.

PART III

ROLE OF THE GOVERNOR

3.1 (a) The role of the Governor as envisaged by the Constitution as stated by the founders of the Constitution, and as laid down by the Supreme Court in several decisions, has been indicated in Part I of the White Paper on the Office of the Governor presented by the Chief Minister to the House of the Karnataka State Legislature.

(b) Our comments/views in regard to the role of the Governor since the advent of the Constitution has been indicated at the end of Part I and in Part II and the conclusions of the aforesaid White Paper.

The Governor strictly has no role in the context of the Centre-State Relations. Both the Founders of the Constitution as stated in the Debates of the Constituent Assembly and the decisions of the Supreme Court do not envisage any such role for the Governor. Instead of elections of the Governor by the State Legislature, involving a lot of expenditure the Constitution-makers considered nomination of an eminent person by the Centre with the consent of the Chief Minister of the State, would be a better procedure and adopted it, without making a specific provision for the consent of the Chief Minister but with the distinct statement in the Constituent Assembly that it would be with such consent. The Supreme Court has also held in Dr. Raghukul Tilak's case AIR 1979 SC 709 that the Governor's Office is an independent constitutional office which is not subject to the control of the Government of India.

3.2 Healthy Union and State relations have to be fostered by close association of the Executive organs of the State and Centre represented by the Chief Minister of the State and the Prime Minister. The Governor should be a purely ornamental functionary as observed by Dr. Ambedkar vide Constituent Assembly Debates, Volume III, page 468. As observed by the Supreme Court the Governor is but a "shorthand expression" for the State Government vide Maru Ram's case AIR 1980 SC 2147 at page 2169. So far as constitutional functions are concerned other than the few cases in which he is required to act in his discretion as he is required to act as per advice of the Council of Ministers, and as he is not a subordinate authority of the Government of India, he has no role and would not have any role in the Centre-State Relations.

3.3. (a) Before making report to the President suggesting action under Article 356(1), the Governor should follow the principles of natural justice. He should first send a notice to the Council of Ministers specifying the matters which according to him has the effect of the Government of the State not being carried on in accordance with the Constitution, when a duly established Council of Ministers is functioning and is carrying on the Government. The Government of India acting as the President will also have to follow the principles of natural justice in similar circumstances. But when a party in power has lost a vote of confidence in the Legislative Assembly by the passing of a no-confidence motion against the Ministry, or a motion of confidence is defeated and there is no person who is supported by a majority of members of the Legislative Assembly, the report can be made without following principles of natural justice, as that would be a clear case of the Government of the State not being able to be carried on in accordance with the Constitution and as there would then be no Council of Ministers collectively responsible to the Legislative Assembly of the State to which a notice can possibly be given.

At present, the principles of natural justice is not being followed in exercising the powers under Article 356(1), presumably because there is no express provision for following that procedure. But the law laid down by the Supreme Court in several recent decisions makes it clear that this principle will have to be followed to supersede the State Government and the State Legislature, as envisaged by Article 356(1) of the Constitution. The condition precedent for the exercise of the power is that the President (which means the Council of Ministers in the Centre) is satisfied that a situation has arisen in which the Government of a State cannot be carried on in accordance with the provisions of the Constitution. In the light of the decision of the Supreme Court in A.K. Roy's case AIR 1982 SC 710, with reference to deletion of clause (5) of Article 356 by the 44th Amendment of the Constitution the President's satisfaction under clause (1) of Article 356 is justifiable. In Mohinder Singh Gill's case AIR 1978 SC 851, the obligation of satisfying the principles of natural justice for the exercise of a power under Article 324 of the Constitution was held to exist. Following that decision in S.L. Kapur's case AIR 1981 SC 136, the supersession of the New Delhi Municipal Committee by the Lt. Governor of the Union Territory of Delhi under Section 238(1) of the Punjab Municipal Act, 1911, as applicable to New Delhi, without giving an opportunity to the Committee to show cause against the proposed supersession was held invalid (the Hon'ble Learned Judge Chairman of the Commission on Centre-State Relations was also a concurring Learned Judge of this Bench of the Supreme Court). It is therefore necessary to make an express provision in Article 356(1) that before a report is made by the Governor to the President he should give an opportunity to the Council of Ministers to show cause why action under the said Article may not be taken. Further, the President when he acts *suo motu* and Article 356(1), or does not agree with the cause shown by the Council of Ministers to the notice given by the Governor, a show cause notice should be given to the Council of Ministers. The right of the people of the State to be governed by their representatives should not be taken away except when there is no person who commands a majority of members of the Legislative Assembly. It is also necessary to ensure that the democratic government in a State is not superseded except when it is impossible to carry on the Government as envisaged by the Constitution. A simple lapse or erroneous action of a Ministry should not result in the democratic government being dismissed, and the Legislature made ineffective or dissolved.

(b) The functions duties of the Governor in the appointment which also includes the dismissal of Chief Minister under Article 164 have been performed primarily either at the behest of the power at the Centre or to ensure as far as possible that the interests of the party in power at the Centre which has its Branch in the State is safeguarded. Instances of abuse of the power vested in Governor under Article 164 have been indicated in Part II of the White Paper. In order to ensure that the democratically elected representatives of the people are not deprived of their Constitutional right, it is very necessary to modify Article 164 making it obligatory for the Governor to appoint a person who commands a majority among the elected members of the Legislative Assembly and it should also be made clear that the Governor cannot dismiss him when he has the majority. It is also necessary to modify Article 163(1) making it clear that the Governor should act in accordance with the advice of the Council of Ministers, except in so far as he is by or under the Constitution required to exercise his functions or any of them in his discretion, even in matters where he exercises his discretion it should be made clear that the discretion should be exercised to ensure promotion of the purpose for which the discretionary power has been conferred and in public interest and not arbitrarily. In Maru Ram's case AIR 1980 SC 2147, at pages 2170, 2171 and 2173, the Supreme Court has observed :

"All public power, including *constitutional power, shall never be exercisable arbitrarily or malafide.*

* * *

The rule of law, under our constitutional order, transforms all public power into responsible, responsive, regulated exercise informed by high purposes and geared to people's welfare".

In Shamsher Singh's case the Supreme Court has stated

"In all matters where the Governor acts in his discretion he will act in harmony with the Council of Ministers. The Constitution does not aim at providing a parallel administration within the State by allowing the Governor to go against the advice of the Council of Ministers".

(c) An Article may be included in Chapter II of Part VI empowering the Chief Minister to sommon and prorogue the House/Houses of the State Legislature.

3.4 (a) According to the Supreme Court the Governor is made a component part of the Legislature of a State under Article 168 because every Bill passed by the State Legislature has to be reserved for the assent of the Governor under Article 200 vide M/s. Hoechst Pharmaceuticals Ltd. case AIR 1983 SC 1019 at page 1048 (Para 88). As the provisions of the Government of India Act, 1935, was followed in the Constitution of India, Articles 200 and 201 have been included in the Constitution. These provisions are basically inconsistent with the supremacy of the Legislature consisting of the representatives of the people in whom the sovereignty of the State vests.

Although as observed by the Supreme Court in Ram Jawaya Kapur's Case AIR 1955 SC 549 quoted with approval in U.N. Rao's case AIR 1971 SC 1002, in the Indian Constitution we have the same system of Parliamentary Executive as in England and the Council of Ministers consisting, as it does, of the members of the Legislature is, like the British Cabinet, "a hyphen which joins, a buckle which fastens the legislative part of the State to the executive part", requiring the assent of the Executive to the laws passed by the Legislature, makes the Legislature subordinate to the Executive. Referring a Bill to the President makes the State Legislature subordinate to the Central Executive, as already stated in answers to questions in Part II of the Questionnaire.

(b) As regards the question whether the power of reservation by the Governor and consideration of State Bills by the President, has been generally exercised in conformity with the intent, spirit and purpose of Articles 200 and 201, it may be stated that except during the earlier years after the commencement of the Constitution when both Parliament and the State Legislatures had an absolute majority consisting of members of the Indian National Congress when State Bills could secure the assent of the President easily, the power is not being exercised in conformity with the object of the provision. In respect of Bills reserved for the consideration of the President, to overcome repugnancy with a Central law in the concurrent field, suggestions are made for amendments in provisions of the Bill falling exclusively in the State field of legislation.

(c) There does not appear to be any case in which the Governor has withheld assent to a Bill.

(d) There have been cases where the Governor has reserved Bills for the consideration of the President contrary to the advice from the Council of Ministers, in spite of the law laid down by the Supreme Court in a series of decisions that he is bound to act in accordance with the advice of the Council of Ministers.

3.5. We do not agree with the conclusion of the Indian Law Institute. There has been undue delay in many cases inspite of repeated reminders.

3.6 The Governor is not "a close link" between the Centre and the State. Since he holds office during the pleasure of the Central Executive, he has been functioning either as a subordinate of the Centre, or a person not answerable to any one, being a holder of Constitutional office as held by the Supreme Court in Dr. Raghukul's case AIR 1979 SC 709. In Part II of the White Paper concrete instances of Governors not acting impartially and fairly in accordance with the Constitution have been stated.

3.7 We do not agree. In the light of the decision of the Supreme Court in Dr. Raghukul Tilak's case AIR 1979 SC 709, it is necessary to make a specific provision that the Governor can be appointed only with the consent of the Chief Minister.

In an article in the Journal of the Indian Law Institute (1981) Volume 23 pages 128-136 the judgement of the Supreme Court in Raghukul Tilak's case has been stated to the unsound and unconvincing. The author of the articles has at pages 135-136 observed :

"The appointment of Governor, dismissal extension either in the same State or other and the transfer from one State to another shows that the Governor owes his entire existence to the Government of India. Is not it sufficient to make the Governor a subordinate of the Government of India, if not, what else? It may be admitted that the Governor may not be under the control of the Government of India in his day to day functi ons but since he holds his office at the pleasure of the President he cannot for long disregard the views of the Centre while discharging his functions. The Governor like a civil servant is required to send his fortnight report about the State administration to the Government of India, which does show that he is servant of the Central Government. The power of dismissal by the President makes the position of the Governor subservient to the Government of India. The way the provision relating to the President Rule has been abused to serve the interests of the party in power at the Centre demonstrates that the Governor is an agent of the Centre and acts at its behest. (See Siwach Politics of President Rule in India (1979)). The Centre may not legally control the Governor in a formal way, yet the fact remains that he is controlled in various informal and subtle ways. He may not be in a position to ignore the various "oral advices" or "oral directions" because otherwise his service as Governor itself may be put in jeopardy. He is nothing but a dignified Civil servant deputed as an agent by the Centre in order to keep a constant vigil and watch on the State Government and to ensure that the Government machinery thereon to be carried on in accordance with the provisions of the Constitution".

The first and foremost provision to be made is to ensure appointment of fair minded men of high calibre and integrity as Governors. If this is done they will surely act efficiently and impartially in the discharge of the limited discretionary functions to be discharged by the Governor. It is not necessary to have a resolution to that effect is passed by the Legislature.

3.8 We do not agree. The power of summoning the Houses of Legislature should vest in the Chief Minister as already stated. The Governor should ascertain whether a person commands a majority in the Legislative Assembly as at present from the Party leaders and the members of the Party as at present.

3.9 A provision like Article 67 of the Basic Law of the Constitution of the Federal Republic of Germany may not work in India, when a Party cracks due to defections, A constitutional amendment disqualifying a member who defects from a party will ensure stability of Governments. When there is stability, there will rarely be occasions for friction. Men of high calibre and integrity will have to be made Governors and such men will act impartially and will not give room for friction.

3.10 Even when the law laid down by the Supreme Court is ignored by Governors, and they act as agents of the Central Government no useful purpose will be served by any guidelines. Specific Constitutional provisions should be made laying down the powers and functions of the Governor. In order to ensure that the Constitutional provisions binding on a Governor is not violated and they can be enforced, the immunity conferred on him by Article 361(1) of the Constitution should be deleted.

In the light of the suggestions made above, the following amendments to the Constitution, other than the amendments suggested in Part II, may be made :

(i) In Article 154, at the end, the following Explanation may be inserted, namely :—

"*Explanation* :—Where any power or function is conferred or vested in the Governor whether ex-officio or otherwise by any law, such power or function shall be exercisable or performed by the Governor in accordance with the Constitution as the executive power of the State".

(ii) For Article 155, the following Article may be substituted, namely :—

"**155. Appointment of Governor** : The President shall, with the consent of the Chief Minister of a State, appoint the Governor of that State, by warrant under his hand and seal".

(iii) For Article 156, the following Article may be substituted, namely :—

"**156. Term of Office of Governor** : (1) The Governor shall hold office for a term of five years from the date on which he enters upon his office;

Provided that :—

(a) the Governor may, by writing under his hand addressed to the President resign his office ;

(b) the Governor shall, notwithstanding the expiration of his term, continue to hold office until his successor enters upon his office".

(iv) For Article 157, the following Article may be substitutsd, namely :—

"**157. Qualification for appointment as Governor** : No person shall be eligible for appointment as Governor unless he—

(a) is a citizen of India ;

(b) has completed the age of fifty years; and

(c) is an eminent jurist, educationist, scientist or an eminent person in other walks of life, other than a politician or a retired servant of the Executive Government".

(v) In Article 163,—

(a) for clause (1), the following clause may be substituted,—

"(1) There shall be a Council of Ministers with the Chief Minister at the head to aid and advice the Governor

who shall, in the exercise of his functions, act in accordance with such advice, except in so far he is by or under this Constitution required to exercise his functions or any of them in his discretion.

Provided that any function exercisable by the Governor in his discretion shall be exercised in an intelligible and intelligent manner integrated with the manifest purpose of the function and in harmony with the Council of Ministers."

(b) for Clause (2), the following clause may be substituted, namely,—

"(2) If any question arises whether any matter is or is not a matter as respect which the Governor is by or under this Constitution required to act in his discretion, the question shall be referred to the High Court, and the Governor shall act according to the opinion of the High Court."

(vi) For clause (1) of Article 164, before the proviso, the following clause may be substituted, namely,—

"(1) A person elected as their leader by a majority of members of the Legislative Assembly of the State shall be appointed by the Governor as the Chief Minister and the other Ministers shall be appointed by the Governor on the advice of the Chief Minister, and the Ministers other than the Chief Minister shall hold office as long as the Chief Minister has confidence in them, and the Chief Minister shall hold office as long as he continues as leader of a majority of the members of the legislative Assembly of the State."

(vii) In Article 165, (1) for the word "Governor", the words "Council of Ministers" may be substituted :

(viii) In Article 166,

(a) in clause (2) for the words "rules to be made by the Governor", the words "rules to be made by the Council of Ministers" may be substituted;

(b) in clause (3), for the words "the Governor shall make rules", the words "The Council of Ministers shall make rules", may be substituted.

(ix) In Article 168, in clause (1) the words "the Governor, and" may be omitted.

(x) In Article 171, for the word "Governor" in the two places where it occurs, the words "Council of Ministers" may be substituted.

(xi) For Article 174, the following Article may be substituted, namely,—

"**174. Sessions of the State Legislature, prorogation and dissolution :** (1) (a) The Chief Minister shall from time to time summon the House or each House of the Legislature of the State to meet at such time and place as he thinks fit, but six months shall not intervene between its last sitting in session and the date appointed for its first sitting in the next session.

(b) The Chief Minister may from time to time prorogue the House or either House.

(2) The Governor may with the consent of the Chief Minister dissolve the Legislative Assembly. Provided that before an order of dissolution is made a reasonable opportunity shall be given by the Governor to the Legislative Assembly to show cause why such an order should not be made, and the cause shown properly considered.

(xii) In clause (1) of Article 202, for the words "the Governor", the words "the Chief Minister or the Minister for Finance" may be substituted.

(xiii) In Article 207, for the words "the Governor", the words "the Chief Minister or the Minister for Finance", may be substituted.

(xiv) In proviso to Article 309, for the words "the Governor of a State or such person as he may direct" the words "the Council of Ministers of a State", may be substituted.

(xv) In clause (1) of Article 356 in the existing proviso, after the word "provided", the word "also" may be inserted, and before the proviso as amended, the following proviso may be inserted, namely,—

"Provided that before a report is sent by the Governor to the President, reasonable opportunity shall be given by the Governor to the Council of Ministers to show cause why such a report should not be sent.

Provided further before a proclamation is made, a reasonable opportunity shall be given by the President to the Council of Ministers to show cause why such a proclamation should not be made and the cause shown properly considered, and

Where the proposed proclamation declared that the powers of that Legislature of the State shall be exercisable by or under the authority of Parliament or dissolves the Legislative Assembly of the State, a reasonable opportunity shall be given by the President to the Legislaive Assembly of the State to show cause why such a proclamation should not be made and the cause shown properly considered".

PART IV

ADMINISTRATIVE RELATIONS

4.1 We believe that Articles 256 and 257 constitute very desirable provisions and ought to be retained, particularly as the extent of the executive power of the Union has been defined in Article 73. We argue, in our reply to the next question, however, that Article 365 ought to be deleted.

There has been no instance of any direction to the Government of Karnataka under Article 256 and 257.

4.2 Article 365 is certainly a consequential enabling clause, but it is not purely that. If it is invoked, then Article 356 is also liable to be attracted. However, if a direction given under Article 256 or 257 by the Union Government is not given effect to by a State Government, then Article 356 is certainly directly attracted (though the invoking of this Article must be done with the greatest circumspection). In this sense, Article 365 is redundant.

The real issue is whether the Union Government may not, in some future situation, invoke Article 365 on a essentially flimsy grounds, and use it to take further action under Article 356. Thus, if there are bonafide differences between the Union and a State Government on whether a direction given under Article 256 or 257 is legitimately within the executive power of the Union, or if there are differences about whether a specific direction of the Union Government has been effectively implemented or not by a State Government, such differences ought not to constitute flimsy pretexts for taking action under Article 356. Such action is more likely if the enabling provision under Article 365 is invoked in transition. In order to ensure that such pretexts for taking action under Article 356 are not constitutionally supported, we recommend the deletion of Article 365. We recognise, however, that no such misuse of Article 365 has yet occurred; unfortunately, with Centre-State political relations in flux, this is inadequate assurance that such misuse will not occur in future.

4.3 We fully support the view of the Administrative Reforms Commission.

4.4 There is a wide spread consensus between jurists, political scientists and constitutional experts that the "extraordinary remedial power" contained in Article 356 has not been exercised properly, indeed has been frankly abused. The Article has been invoked over 70 *times against every* State in the country except Maharashtra. The precondition for invoking the Article is the existence of a situation "in which the Government of the State cannot be carried on in accordance with the provisions of this constitution". It is the vagueness of this expression that has enabled abuse of the Article to occur. It is, therefore, necessary to define the prerequisites of such a situation. We believe that such prerequisites should not generally extend beyond (a) complete failure to induct a Government which can command a *majority in the* legislature; and (b) a *total* collapse of law and order.

The importance of ensuring that Article 356 is invoked only in extreme situations had been emphasised in the Constituent Assembly debates.

Further elaboration of our views is found in the Memorandum of the State Government—pages 15 to 21. Before acting on the provision in Article 356 (1), an opportunity should be given to the Council of Ministers to show-cause why action under the said Articles may not be taken.

While looking at the implications of Article 356, the State Government also feels that Article 163(1) and Article 164 are to be modified so that the democratic Government in a State is not superseded except when it is impossible to carry on the Government as envisaged by the Constitution. The nature of the modification is indicated in the State Government's Memorandum—pages 18 and 19.

4.5 A prolonged period of President's rule under Article 356 is undersirable. Nevertheless, we recognise that in certain exceptional circumstances a continuation of such a situation may be warranted. We suggest, therefore, that the following pragmatic approach be implemented :

(a) A Proclamation will have effect for a maximum period of six months (the present positon).

Dr. B. R. Ambedkar, for instance, had stated that "the proper thing we ought to expect is that such Articles will never be called into operation and that they would remain a dead letter. If at all they are brought into operation, I hope the President, who is endowed with these powers, will take proper precations before actually suspending the administration of the province". Dr. Ambedkar then spelt out specific safeguards against abuse of Article 356 in the following terms : "I hope the first thing he (the President) will do would be to issue a mere warning to a province that has erred, that things were not happening in a way in which they were intended to happen in the Constitution. If that warning fails, the second thing for him to do will be to order an election allowing the people of the province to settle matters by themselves. It is only when these two remedies failed, that he would resort to this Article".

In practice, the invoking of the Article has been more cavalier, and for reasons not contemplated by by the Constitutent Assembly. The Article has typically been invoked on what must be regarded as partisan grounds, or at the behest of the Centre to tide over inner-party problems. In the process an easy path is provided to the Centre to make inroads into the State's political autonomy. We urge strongly, therefore, that Article 356 should be suitably amended and adequate safeguards incorporated to ensure that the intentions expressed in the Constituent Assembly for incorporation of Article 356 are subserved.

(b) This can normally be extended for a further period of utmost six months.

4.6 The existing arrangements are working satisfactorily in Karnataka.

4.7 The agencies listed in the Question have been set up with specific policy intentions. Many of them have been set up with a view to exercise institutional

controls over the private sector, on the ideological premise that unregulated market forces tend to distort economic activity. The crucial issue, therefore, is on the advisability of such intervention by Govenment, and issues of Centre-State relations are frankly of secondary import. Where problems of a Centre-State nature do arise, however, they are best resolved through the instituton of consultative mechanism like the Inter-State Council. The criticism that such consultative mechanisms have not been adequately used has considerable truth.

4.8 We believe that All-India Services have, by and large, fulfilled the expectations upon which they were created. One of the objectives of having such Services was to support National integration and this has been achieved by following the procedure of allotting 50% of the officers every year to States outside their home states.

It is to be pointed out that one of the main features of the All India Services Act was the exercise of Joint control over the Services by the Central and State Governments. In particular the joint control of the Central and the State Government for the regulation of recruitment policies and conditions of service of the All India Services is to be kept in view. However, in actual practice the joint control is found to be not properly observed. This requires a careful examination. Our full views in this matter are given in the State Government's Memorandum—pages 24 to 28.

4.9 Police is a state subject. It is not even in the concurrent list. Yet the Central Government has built up a huge and ever increasing central police force. In the last two decades, the expenditure on central police force has gone up by sixteen times, from Rs. 32 crores to Rs. 510.30 crores, between 1965-66 and 1984-85. Apart from being outside the provisions of the Constitution, the development of the Central police has compounded the problem of effective law and order maintenance is in the States. Instead of developing an effective police force of their own for immediate deployment, the States have been made dependent on the central government for supply of para-military forces and Central Intelligence Services and grants for policing, from time to time.

Even if in spheres like finance and industrial licensing, the states are able to get more powers, the centre's hold on the states law and order machinery is so tight that it could negative even the limited autonomy the states enjoy. As recent events (Andhra, for example) have shown, central forces were deployed purely for political reasons. As R.F. Rustamji has put it, the central forces have been grossly overstrained and have been less than effective.

It is imperative that the existing constitutional position with regard to the police must be maintained. The states must build up their own police force to deal with the law and order problems effectively. There should be no further expansion of the central police force, it should be absorbed in the states or phased out.

4.10 We agree fully that broadcasting and television facilities should be shared between the Union and States on a fair and reasonable basis as both have got equal need for access to these mass communication media for putting across their views to the people. We also believe, however, that the media should not be used for narrowly defined politically partisan purposes, and this danger exists if 'broadcasting' is included in the Concurrent List, with each State Government permitted to set up its own broadcasting system. (There may also result a considerable duplication of functions and a consequent waste of resources). Instead , we suggest that 'Broadcasting could remain within the Union List *Provided* that it is organisationally controlled by an independent' statutory body, very much in the manner of the British Broadcasting Corporation.

The State Government suggests the establishment of a National Broadcast Trust as recommended by the Verghese Committee and such a Trust should administer broadcasting the television facilities. The Ministry of Information and Broadcasting should only take care of information and broadcasting should be removed from its purview.

Further elaboration of this suggestion is found in the State Government's Memorandum—pages 20 to 23.

4.11 The Zonal Councils have served a generally useful purpose, particularly in the years immediately following the coming into force of the State reorganisation Act, 1956. In more recent years, however, their role has been relatively low-keyed.

4.12 We support strongly the establishment of an inter-State Council, as an active forum for securing better working relationships between the Union Government and the State Governments, as well as between State Governments. Its composition could be along the lines suggested by the Administrative reforms Commission and its scope could embrace all issues of Union-State and inter-State relations, it should be a permanent forum for active discussion with its own independent Secretariat. Further, attention is invited to pages 19-20 of the State Government's Memorandum on this subject.

PART V

FINANCIAL RELATIONS

5.1 The scheme of devolution envisaged in the Constitution has not worked well nor has it come up to the expectations of the States. The estimation of the revenue gap between the resources and the fiscal needs of the States to discharge their growing responsibilities and the definitions of 'revenue gap' 'resources', 'fiscal needs' and 'growing responsibilities for the transfer of devolution of resources, partly by sharing the Central taxes and duties and partly by grants-in-aid from the Union, has not provided the desired benefits to the States. The revenue gap should be taken as a total revenue gap of the State and not merely as a gap on the non-Plan revenue account. Similarly, fiscal needs should be identified based on the various programmes taken up by the States which are included in the Plan and the funds required for maintenance of assets created in the previous plans.

The Finance Commission has been subjected to severe constraints. The laying down of the terms of reference in the Notification issued by the President puts shackles on the Commission. In fact, under Article 280(4), the Finance Commision 'shall determine their procedure'. We, therefore, urge that the Finance Commission must be freed from these shackles.

The Finance Commissions as they have functioned in the past have failed to apply the test of fiscal efficiency to the States. Under the present system, fiscal efficiency on the part of any State has become a self hurting process. Therefore, the Finance Commissions have to attempt approximate assessment of the fiscal potential of each State on the basis of certain relevant parameters and evaluate the performance of the States against the potential so determined. A fiscal efficiency criteria should be adopted by the Finance Commission.

The Finance Commission should have greater powers of scrutiny of the expenditures of the Union Government. It is felt that the Planning Commission Provides flexible mechanism for heads of State Governments to have a direct and comprehensive dialogue with the Centre on resources, programmes and policies, which it is important not only to preserve but enlarge. Therefore, the present system of quinquennial Finance Commission and continuing Planning Commission, but with certain changes in their character and functions are recommended.

Our suggestions in this regard are discussed in the State Government's Memorandum pages 34 to 42 and pages 36 to 51.

5.2 The overall position stated by the Administrative Reforms Commission's Study Team on Centre-State Relations still holds. We strongly urge the implementation of the alternatives (b), (d) and (e) indicated in the question. These options will help in augmenting resources of States. At present, three taxes available to the States. which have hitherto been elastic in their revenue yields, are sales tax, State excise and motor vehicles tax. There are limitations on increasing rates of sales tax on most commodities on account of the simultaneous imposition of excise duty on these commodities. In addition, essential commodities also cannot be heavily taxed. There are also grave dangers in seeking higher revenues from State excise as this will act as in inducement to the consumption of illicit liquor and lead to periodic deaths on account of the dangerous quality of such liquor. The soaring costs of motor vehicles (especially of four-wheelers) is depressing demand for such vehicles with a consequent stagnation in the receipts from motor vehicle tax. These examples indicate that such taxes, hitherto believed to be elastic, are proving much less so. There is thus a need for augmenting State resources in the following manner :

(a) transfer of additional taxes (Whose revenue yields are elastic to the State List under the Seventh Schedule;

(b) Central taxes such as corporation tax, customs duty, surcharge on income tax, to be transferred to the divisible pool;

(c) financial resources other than tax revenues of the Union Government to be also distributed between the Centre and the States.

The other two alternatives, (a) and (c) in the question, do not appear desirable. A complete separation of the fiscal relations of the Union and the States, if incorporated in the Constitution, may lead to inflexibility in periodic changes, and revenue yields from different taxes do vary over time. Similarly, transferring all taxes to the Union List can only perpetuate and aggravate the existing unsatisfactory situation. We would therefore not support these two alternatives.

In short, the Divisible Pool must be enlarged by bringing into it all tax revenues except those from customs revenues, which may be for the Union Government. Out of such an enlarged Divisible Pool, 75 percent of the total proceeds should be distributed among the States. This, in effect, the Union and the States in the ratio of 50:50. Such a distribution should be considered as more equitable from the view points of both the Union and the States.

5.3 We disagree strongly with the proposition. Indeed, equity in the distribution of financial resources between States with a view to correcting regional imbalance is best ensured through an independent, statutory agency such as the Finance Commission. If the discretion for transferring resources is instead given to the Union Government, there is the distinct possibility of such resources transfer being based on less than objective considerations which may not subserve equity criteria. The experience of resources transferred by Central Ministries in the past does validate this point.

5.4 Deficit financing to cover the gap is emphatically not in the national interest. It is inflationary and thereby benefits neither the Union or State Governments, nor the individual. It also has deleterious effects on the welfare of the poor and of fixed income groups in the country. In view of this, the only viable alternative open to the Union Government to cover its gap in revenue account (if, in fact, such a gap exists) lies through better control over expenditure and plugging leakages in tax collections.

5.5 We would like to question the very premise of the suggestion that the central function of the Finance Commission and Planning Commission is to bridge the gap in resources between the poorer and richer States. This is certainly one, but one among many, objectives that these Commissions should be concerned with, but to elevate it to being the primary objective is to put a premium on inadequate effort on the part of States in mobilising their own resources; it also encourages higher non-productive expenditure by certain States than would otherwise be incurred.

We suggest, therefore, that excessive reliance on a gap filling approach to the Central devolution of resources is undesirable. Instead, 60 percent of the resources should devolve on a criteria of backwardness built on a composite index as suggested by the Karnataka Government in its Memorandum submitted to the Eighth Finance Commission and the balance of 40 percent of resources should devolve on criteria of the resource mobilisation effort of

State Governments. The Finance Commission should take a total view of all central resource transfers.

5.6 We do not see any particular need to create a Special Federal Fund, as is provided for in the Yugoslav Constitution, if the scope of the Finance Commission is widened as suggested in our reply to question 5.1.

5.7 Taxation powers to levy excise duties and additional excise duties on a number of commodities, which provide substantial revenues, could conveniently be transferred to the States.

5.8 A fragmentary approach to taxation can clearly produce unanticipated effects on the economy, and a well modulated fiscal system must indeed endeavour to be conscious of the incidence structure of each tax and of its possible harmful impact on economic activity. It is doubtful, however whether such a fragmentary approach results primarily from a division of taxation powers between the Centre and the States (such a division being inevitable in a federal economy). Indeed, among the taxes listed in the Question, all but the last (sales tax) are levied by the Government of India and yet it is by no means clear that a well orchestrated approach to taxation has been evolved by the Union Government.

Where different kinds of taxes reinforce one another (as in the case of sales tax and excise duty), consultative mechanisms for assessing and undoing their possible collective harmful impact are desirable.

5.9. No. Elaboration of our views is found in our answer to question 5.1 .

5.10. The statutory and discretionary transfers on the advice of the Finance Commissions have not contributed to the narrowing down of the disparities in Public expenditure among the States, nor has it promoted efficiency and economy in expenditure.

Also, please see our answer to question 5.1.

5.11 The present mechanism of transfer of resources has an inbuilt propansity towards financial indiscipline and improvidence, and it is vital that the transfer of Central resources discourages this by estimating, in a comprehensive manner, the Plan and non-Plan requirements of each State, and taking both the revenue and capital accounts into consideration for giving grants under Article 275. Indeed, the grants under Article 275 should occupy a residuary position in order that the transfers under the sharing of tax revenues take a major and predominent position in the entire transfer mechanism. If this system is adopted, those States which have managed State resources prudently will continue to have an incentive to do so.

5.12. We agree that the bulk of resources transfers should be done through tax sharing and that the role of Grants-in-Aid under Article 275, in the scheme of total revenue transfers, should be supplementary. This will encourage economy in expenditure and also induce greater efforts in resource mobilisation by States Governments.

5.13. The principles enunciated by the Seventh Finance Commission for Grants-in-Aid under Article 275 are broadly acceptable except that the weightage given to the first principle (that grant-in-aid may be given to States to enable them to cover their fiscal gaps, if any, that are left after the devolution of taxes and duties) ought to be considerably diluted, as it discourages tax efforts and economy in expenditure.

5.14. The logic of claiming that non-tax revenues of the Union Government should be shared with the States cannot be uniformly applied for different revenues. Certainly, the revenues from Special Bearer Bonds are in the nature of savings from private individuals and can therefore be shared with States, in much the same way as National Small Savings are. It is more doubtful, however whether the additional revenues from raising administered prices should be shareable, particularly when many Central enterprises are making losses (as in the case, presently, of steel and coal). Where Central enterprises make profits, however, and where these profits are treated as revenues of the Government of India (other than divident payments), the principle that such revenues should be divisible has merit. We would also strongly support the view of the Eighth Finance Commission that rises in administered prices of certain commodities should not be resorted to as a substitute for raising excise duty rates, as the latter revenues are shareable where is the former are not.

5.15. The present methods are not satisfactory, partly because the existing institutional arrangements for appropriating such savings give State Governments an inadequate voice and partly because the Union Government makes a practice of intervening directly to appropriate savings for its own projects with only incidental regard for the impact this would have on the availability of savings for State Government, Checks and balances are, therefore, overdue. Those can emerge if State Governments are represented on the boards of nationalised banks and all other central financing institutions, and if the allocation of savings (negotiated loans and other market borrowings) for funding the Plans of the Union and State Governments is discussed and approved by the National Development Council and the National Credit Council as proposed by us in the state Government's Memorandum pages 48 to 51.

5.16 This appears to be factually correct, and among the reasons for the decline in the growth of Central resource transfers are the increasing fiscal concessions given by the Union Government in respect of divisible taxes, as well as the increasing deficits run by the Union Government. Fiscal imbalance in State Governments is consequently aggravated.

5.17. The increasing indebtedness of States is becoming increasingly critical and the dimensions, of the problem as well as our view on how the States difficulties could eased, are indicated in our reply to Question 6.7. At present, debt servicing commitments of the Karnataka Government to the Union Government amount to almost 90% of the gross loans received from the Union Government, indicating the increasing irrelevance of the Union Government in appreciably contributing to the loan finance requirements of the State Government. We feel that the entire question of the State indebtedness and also that of the Union's debt should be examined by a High Power Body. We therefore suggest the setting up of a National Commission on Debt and such a Commission should determine *de novo* the indebtedness of the

States and also see whether the Union debt is also properly managed or not. The National Debt Commission shall not be a continuing body. Its task will be that of a "one shot" operation. This suggestion is further elaborated in the State Government's Me-andom—pmorages 43 to 46.

5.18. We agree that the States' capacity to borrow has been restricted because market borrowings are fixed every year by the Union Ministry of Finance, on the recommendation of the Reserve Bank of India. The States' capacity to borrow from national institutions is also limited, for reasons indicated in our reply to Question 5.15. Having regard to the basic principles of sound financing, there should be a reasonable and satisfactory level of borrowing permissible for States within the overall ceiling for borrowings by the Public Sector. The limits fixed for these borrowings should be linked to the overall expenditure programmes of each State Governments and the developmental activities which such borrowings would finance.

5.19. The Union Government should charge from the State Governments a rate of interest which it pays to the foreign lender together with any administrative costs. This is particularly significant in the case of soft loans given by the International Development Association (an affiliate of the World Bank) to the Union Government, where no interest is charged (a 3/4% service charge is levied). The Government of India is not a money lender and should not profiteer at the expense of the State Governments.

5.20. We suggest the setting up of a National Credit Council under the aegis of the National Development Council. The Secretariat service for the National Credit Council can be provided by the Reserve Bank of India with such assistance from the Planning Commission's technical staff as may be mutually agreed upon. The composition and functions of the National Credit Council are discussed in the State Government's Memorandum pages 49 to 51.

5.21. Although the Reserve Bank of India (RBI) has doubled the Ways and Means Limits of the States with effect from July 1982, these limits bear little relationship with the magnitude of overall transactions effected by State Governments. Our State Government's transactions exceed Rs. 3000 crores annually, whereas the Ways and Means Limits amount to just Rs. 40 crores. Norms adopted for fixing Ways and Means Limits, therefore, require a thorough review and these should be directly related to the State Government's aggregate transactions with the RBI. If this is properly taken care of, the overdraft problem of the States could be partly eased. There are, however, more fundamental structural reasons why such overdrafts occur, and reflect a fiscal imbalance in the budgets of State Governments. Contingencies like droughts and floods necessitate substantial non-plan expenditure, the maintenance of Government's assets and upgradation of standards of administration need over-increasing outlays if the services provided by Government are not to deteriorate, periodic Dearness Allowance instalments payments need to be made to employees, and yet in their quest for ensuring that the investment effort of State Governments is not sacrificed, the Annual Plan Outlays are projected. These create structural imbalances which result in States drawing on overdrafts from the Reserve Bank of India. More liberal ways and means limits are not a long-term solution for giving relief to States. Instead, a more candid appraisal of the pattern of States' expenditure is needed, and Central resource transfers (and the terms on which such transfers are made) need to be more sensitive to the pattern of States' expenditure.

5.22. This can certainly not be said of the taxation effort in Karnataka, which is among the best in the country. Indeed, as we argued in reply to Question 5.2, the prospects available to the State Government for generating substantial revenues through further tax increases are not optimistic. In addition, there are well-recognised institutional constraints in stepping up non-tax revenues, particularly from power and irrigation. Indeed, the additional taxation of the farming sector bristles with problems of acceptability throughout the country, and a national consensus will be essential if a general taxation of agricultural income is to be introduced.

5.23. We agree. That the returns of public sector investment have been disappointingly low is a matter of well documented fact : that there is substantial leakage in Central taxation in evidenced by the undoubted existence of the "parallel economy".

5.24. We agree that this will constitute a healthy convention, as it will instil confidence in State made after ascertaining their implications for State finances. This can be one of the useful functions of the Inter-State Council.

5.25. We agree with the view.

5.26. We fully endorse the view expressed. Given the substantial increase in railway passenger traffic, the grant in lieu of the passenger fares tax which is now given is an insignificant proportion of the passenger fares tax which would have accrued had the Act under which the tax was being given not been repealed in 1961.

5.27. The present arrangements do not appear to be unstisfactory.

5.28. Our views on the working of the arrangements in regard to the provision of Central assistance to the States for dealing with natural calamities are as follows :

(a) the level of margin money in the State budget ought to be kept at the present level·

(b) Central assistance for relief expenditure should be given outside the Plan

(c) the assistance towards drought relief ought to be given in the loan : grant ratio of 25 : 75; and

(d) Central assitance for floods, cyclones and earthquakes ought to be given as 100% grant.

In order that relief assistance given to State is put to its most effective use, it must be extended in good time in order to alleviate distress. Further, where

physical assets are sought to be created, minimal quality specifications should be ensured, and their subsequent maintenance be provided for.

5.29. While the constitution of such agencies may well serve a useful purpose, we feel that a multiplicity of such institutions may well prove unwieldy from the viewpoint of efficient decision-making.

However, we feel that there is a need for setting up of a National Credit Council under the aegis of the National Development Council. Its composition and functions are discussed in the State Government's Memorandum—pages 49 to 51. This apart, we could urge that the National Development Council and the Planning Commission themselves will have to be restructured to meet the new challenges of the total development process and the future functioning of the democracy. Our suggestions for re-structuring the National Development Council and the National Planning Commission are given in the State Government's Memorandum—pages 46 to 48.

5.30 Prudence in expenditure is clearly vital, particularly when resources are as scarce as they are in our country. However, in a federal system, the allocation of taxation powers and availability of resources for funding programmes at every level of the federation are euqally important. Besides, it is presumably not being argued that the Union Government has been prudent in its expenditure while the State Governments have not; in Karnataka we tend to believe quite the opposite.

5.31 We agree that the pattern and productivity of expenditure incurred by Union and State Governments ought to be periodically examined and assessed.

A National Expenditure Commission would serve this purpose very well. We, therefore, strongly urge the setting up of a National Expenditure Commission. However, such a Commission should be an ad-hoc one and not a standing Commission. This point is further elaborated in the State Government's Memorandum at pages 41 and 43.

As for the review of the Union expenditure annually, the Finance Commission should be able to carry out such a scrutiny. The Union Government instead of determining the terms of reference of the Commission should separately submit a Memorandum to the Finance Commission just as the States are asked to do. The Finance Commission should go into the Union Expenditures more thoroughly on the lines similar to those applied to the States.

5.32. In Karnataka we observe no operational problems. However, a periodic scrutiny of the form in which accounts are kept is generally desirable.

5.33. There is an urgent need to introduce evaluation audit in all major expenditure departments of Government (including Public Works, Irrigation, Industries, Health and Education), and we suggest that the present system of vouched audit be continued only where maintenance functions are largely performed. However, the general quality of audit will also need to be strengthened, and this will necessitate a strengthening of the audit wing in the office of the Accountant General.

5.34. We believe that the law is sufficiently flexible to permit the Comptroller and Auditor General to keep an effective watch on the expenditure of State Govts.

5.35. The reports of the Comptroller and Auditor General which are presented in the State Legislature are comprehensive, reasonable and accurate to enable the Legislature to take firm views in the matter.

5.36. The expenditure control available through the present mechanism of the Public Accounts Committee and the Public Undertakings Committee, with the help of Comptroller and Auditor-General, is satisfactory and sufficient. The effectiveness of the Public Accounts Committee and the Public Undertakings Committee will be greatly strengthened if reports of the C & AG are given to them well in time for their consideration. These bodies are able, if properly assisted and advised in their activities, to act as proper checks on the expenditure functions of the Government at the Centre and the States.

5.37. There is a need for defining more clearly the role of the Estimates Committees of the State Legislature. It would be highly beneficial if they look into wider aspects of policies and programmes and advise the Government on these matters, instead of replicating the role of the Public Accounts Committee of scrutinising Government expenditure.

5.38. The Comptroller and Auditor General of India as a Consititutional authority examines the propriety of the expenditure of the Union and State Governments. The objective of setting up an Expenditure Commission is wider : to look into the need and priorities of such expenditure and to give broad indications of whether certain kinds of expenditure are ultimately desirable.

5.39. Where State Governments are responsible for implementing a scheme, they should be authorised to decide the validity of expenditure under the scheme without the intervention of the Central administrative Ministry. The latter can set out broad administrative, physical and financial guidelines and monitor the working and implementation of such schemes.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The entries in the Union, State and Concurrent Lists in the Seventh Schedule of the Constitution represent a balance of functions and responsibilities between the Union Government and the State Governments. The planning Process would necessarily have to reflect this, and "Economic and Social Planning" is consequently an entry in the Concurrent List of the Seventh Schedule. However, in practice the degree of consultation necessary between the Centre and the States in order to make Planning a joint endeavour has not been forthcoming. The National Development Council has not emerged as an active forum for discussion and debate on the complexities of National Planning, and its deliberations have hitherto largely been reduced to a formal list of speeches made by its members.

In order to reactivate National Planning as a joint endeavour of the Centre and the State we suggest that the National Development Council should become the focal point of the national debate on planning.

We therefore suggest a thorough restructuring of the National Development Council so that it can be more effective. Similarly, we suggest restructuring of the Planning Commission. The restructured Planning Commission should serve as the Secretariat of the National Development Council. Our suggestions for restructuring and the functioning of the restructured National Development Council and the Planning Commission are given in the State Government's Memorandum—pages 46 to 48.

6.2. We agree with the proposal suggested.

6.3 We believe that consultation between the Planning Commission and the State Government in Planning process is very inadequate.

There is need for restructuring the Planning Commission and also set out new procedures for its functioning. Our detailed suggestions in this regard are given in the State Government's Memorandum —pages 47 to 49.

6.4 We believe it would be impractical to adopt the third view listed above making the Planning Commission independent of both the Union and State Governments, for there is then the danger of such a Commission acquiring a sovereignty of its own, unanswerable to either the Union or State Governments. We recognise that the Planning Commission must necessarily continue to remain an arm of the Union Government but must discharge its functions within a federal spirit, conscious of such a responsibility in the preparation of a National Plan. This requires, as already mentioned, the restructuring of the Planning Commission with professional experts and also the representation of Chief Ministers on the Zonal basis. The Prime Minister and the Planning Minister at the Central and also the Finance Minister of the Centre should be the Members. The Planning Commission should have no executive responsibilities in respect of either the Centre or the State Plans. The Central Government and to achieve this purpose its administrative budget should be shared equally by the Centre and the States as a whole.

Further suggestions about the staff of the Commission etc. and an elaboration of our above views are given in the State Government's Memorandum pages 47 to 49.

6.5. Please see our answer to question 6.4.

6.6. We fully endorse the view that national priorities must necessarily be incorporated in State Plans. However, such national priorities emerge as a consensus between the Union and State Governments and it is surely unnecessary for the Planning Commission to scrutinise the details of State Plans in order to ensure scrutiny at present extends to minute details of the specifications of all schemes proposed by the State Government. We would take the broad view that the Planning Commission should examine specific allocations by the State Government only for a few key sectors such as major and medium irrigation, large and medium industry, power and transport, while leaving allocations for other sectors to be determined by the State Government. Such modalities should guide the Annual Plan discussions.

6.7 We believe that the most critical issue in Central resource transfers in the funding of State Plans is the increasing irrelevance of the Government of India in appreciably supplementing State Governments resources for Plan finance, largely on account of the very high debt-servicing commitments which State Governments face. The general pattern of Central financial contributed to an acute debt-servicing problem, as is indicated below :

Debt-Servicing on Central Loans

Category	Unit	Karnataka		All States	
		Fifth Plan (1974-1978)	4 Years of Sixth plan 1980-84	Fifth Plan (1974-78)	4 years of Sixth Plan (1980-84)
Central Loans Received	Rs. Crores	284·0	556·3	5,173·4	12,571·9
Repayment of Principal	Rs. Crores	148·3	309·5	3,468·6	9,718·9
Payment of Interest	Rs. Crores	91·1	189·9	1,791·2	3,870·1
Total Amount paid	Rs. Crores	239·4	499·4	5,259·8	13,589.0
Principal Repaid as proportion of Central Loans received	%	52·2	55·6	67·0	101·7
Total Amount paid as proportion of Central Loans Received	%	84·7	89·8	101·7	108·1

It is apparent that during the first four years of the Sixth Plan the total quantum of Central loans received amounted to Rs. 556.3 crores. During this period the State Government repaid to the Government of India a principal amount of Rs. 309.5 crores and an interest of Rs. 189.9 crores, implying a total debt servicing commitment during this period of Rs. 499.4 crores. Thus, the debt-servicing commitment amounted to almost 90% of the gross loans received from the Union Government. It is also clear that the debt servicing problem is becoming increasingly acute over time and that, for all States put together, such a commitment is in fact more severe, as all States paid back as debt-servicing charges 8% more than they received from the Government of India.

In order to reduce the gravity of debt servicing obligations of the State, it is vital that State Government expenditure be divided into financially unremunerative, though possibly socially remunerative

expenditure on the other. (The former category would include all expenditure on revenue account as well as capital outlay on education, medical and health services, agricultural and industrial infrastructure, roads, and bridges, and irrigation works.) We recommend that the loan component should be in proportion to the financially remunerative expenditure incurred by the State Government. These will be broadly achieved if the loan : grant ratio of Central assistance is altered to 30 : 70.

Also please see our answer to question 5.17.

6.8. We take the view that the requirements of the economically weaker states is being taken care of under the Special Category States categorisation for purposes of determining Central Plan assistance, and that in the absence of a sizable expansion of the aggregate Central Plan assistance to all States, any modification of the existing formula for distribution will have to be determined in consultation with other States.

6.9. The extent to which equity considerations and objectives of balanced regional development and removal of poverty have been subserved by the pattern of Central Plan assistance are clearly difficult to assess in general, indeed the equitableness of the criteria used cannot be evaluated unless norms for equity are first defined. The modified Gadgil Formula has certainly not worked to Karnataka's benefit, as Karnataka has a population density less than the national average and has had a per capita income above the national average (as assessed by the Central Statistical Organisation). Nevertheless, even the most advantageous reordering (from Karnataka's point of view) of the Gadgil Formula is unlikely to lead to very substantial additional central resource transfers in favour of Karnataka, in comparison to the total State Plan size. As such we would like to argue that this issue is much less important than that of the increasing indebtedness of the State Government to the Union Government, as discussed in the reply to Question 6.7.

6.10. We agree with the view expressed. As the Sixth Plan has progressed, the total resources transferred under centrally sponsored and central sector schemes has continued to increase. Thus, as is indicated below, during 1978-79 the total resources transferred by the Union Government to Karnataka on such schemes was Rs. 40 crores, whereas during 1983-84, it is provisionally estimated to be Rs. 120 crores. Indeed, at the commencement of the Sixth Plan it was agreed by the Planning Commission that the total resource transfer under such schemes to Karnataka during the Sixth Plan period would amount to Rs. 61.32 crores. However, the total resources transferred in practice during the Sixth Plan is expected to be Rs. 409.44 crores.

Central Plan Resources Transferred to Karnataka

	Amount (Rs. crores)			Proportion (%)		
	1973-74	1978-79	1983-84	1973-1974	1978-1979	1983-1984
Under Gadgil Formula	35·5	87·5	98·6	40·2	27·5	13·1
For Externally Aided Projects	..	..	22·4	..	..	3·0
Additional Plan Assistance	..	..	..	..	..	..
Total Central Resources for State Plans	35.5	87·5	121.0	40·2	27·5	16·1
(TOTAL STATE PLAN)	(69·9)	(277·)	(630·5)	(79·2)	(87·4)	(84·0)
For Centrally Sponsored & Central Sector Schemes	18·4	40·0	120.0	20·8	12·6	16·0
Total Plan Resource Transfer from the Centre	53·9	127.5	241·0	61·0	40·1	32·1
TOTAL STATE PLAN & CENTRALLY SPONSORED/ CENTRAL SECTOR SCHEMES	88·3	317·9	750·5	100.0	100·0	100·0

At the commencement of the Fourth Plan the National Development Council resolved to limit the Central assistance under such schemes to one-sixth of the quantum of aggregate Central assistance for State Plans, and also felt that these schemes should conform to certain desirable guidelines like constituting inter-State schemes or being significant from a national point of view. At present the Central resource transfer under such schemes equals the Central resource transfer for funding the State Plan. We strongly urge that the intentions expressed by the National Development Council at the commencement of the Fourth Plan be implemented.

6.11 It is doubtful whether the monitoring and evaluation functions are performed with the degree of vigour necessary, in either the Government of India or the State Governments. In Karnataka, however, monitoring of the implementation of Plan programmes has been considerably tightened during the last two years through the institution of a system known as the monthly Multi-level Reviews, which operates at the State; district and taluka levels. However, if monitoring and evaluation are to be organically linked to the working of Government departments, Government departments need to be more strongly aware of the utility of these functions; it is also vital that appropriately qualified professional staff be induced for the purpose.

6.12 We strongly believe that decentralised planning is integral to "cooperative federalism" in our planning system. Indeed, such decentralised planning will have to extend much below the State level. In this spirit, Karnataka will shortly be introducing a Zilla Parishad structure of local government and it is essential that Zilla Parishads are given planning manoeuvreability and do not, for instance find that the Seventh Plan is cast in a mould which takes away flexibility in planning. For the planning process to

be accordingly decentralised, it is necessary for Annual Plan discussions (including the sanctioning of Annual Plans by the Planning Commission) to be responsive to the need for such decentralised planning.

Further elaboration of this point is given in the State Government's Memorandum pages 51 to 54 dealing with Decentralised planning.

6.13 In Karnataka the Planning machinery has been greatly strengthened during the last decade and a number of professionally qualified specialists have been inducted into the Planning Department to assist in Plan formulation, evaluation and monitoring, as well as in conducting special studies which are helpful to the planning process. The Planning Department is headed by a professional economist as its Secretary. The resultant benefits to the planning process at the State level have been considerable. For the expertise so inducted to be more widely beneficial to the State Government, it is now necessary that such specialists participate more directly in the core of decision-making within Government.

Whether the National Plan should become progressively more indicative and less imperative as on issue more contingent on ideology than on the efficacy of the State Planning process. As long as ours remains a mixed economy, the National Plan would clearly have to combine imperative and indicative aspects in relation to different sectors of the economy as well as in relation to the experience of developmental activity as managed by the Union Government, the State Governments and the Private Sector, In any case, much of the National Planning activity today is indicative, with Private Sector investment constituting roughly half the National Plan.

PART VII

MISCELLANEOUS

Industries

7.1 We agree with the view expressed as the addition of a substantial number of industries to the Union List in the Seventh Schedule has considerably diluted the efficacy of policy initiatives of the State Government to induce industrial development within the State. Indeed, the power of licensing has been used by the Union Government in ways which are felt to be increasingly arbitrary, and licences are granted less on techno-economic viability considerations and more on grounds of specific political preferences on the location of industries. Whereas, we believe there should be a wider dispersal of industries throughout the country, such industries will surely build in losses from the outset if they are located on criteria other than techno-economic and financial viability considerations. The following instances indicate that the power of licensing has been used in a manner divorced from sound investment principles and have also been detrimental to Karnataka's interest

(a) The Tata Engineering and Locomotive Company had proposed to set up their third unit for the manufacture of chassis, and had selected Dharwad in Karnataka as their best location, While obtaining permission for this, the Government of India suggested to TELCO that their unit should instead be located in Uttar Pradesh and TELCO were asked to submit their application for a licence accordingly

(b) Glaxos and the Karnataka State Industrial Investment and Development Corporation intended to set up a unit of Texdrose Monohydrate and Allied Products (based on maize) in Bellary District. A letter of intent has been issued. However, the Union Government has been attempting to induce Glaxos to put up the unit elsewhere in the country.

(c) The Tractors India Limited have applied for locating a unit for the manufacture of earth moving equipment in Karnataka. The Company is being asked by the Union Government to put up the plant elsewhere.

(d) A number of entrepreneurs have applied for establishing mini-cement plants in Karnataka. These have been rejected by the Union Government on the ground that Karnataka is already a surplus State so far as cement is concerned. (it should be noted that the cement industry is not a foot-loose industry and has necessarily to be close to areas where limestone deposits are available. Further, the present policy of distribution of levy cement is such that although Karnataka is surplus in the manufacture of cement, it obtains less than a quarter of its requirements from the Government of India.

7.2 (i) We strongly urge that the term "National Public Interest" be more clearly defined in order to circumscribe its scope. We believe broadly that invoking considerations of public interest in the context of national control over an industry is justifiable mainly from the view point of the total capacity which ought to be set up for that particular industry within the country with reference to the demand (including demand for exports) for the product from that industry. Such an interpretation of the term "public interest" in Item 52 of List I of the Seventh Schedule would not take away from the Union Government its existing wide powers to establish defence industries (under item 7 of List I), or to regulate monopolistic tendencies in industrial structure by placing constraints on the future expansion of large business houses Further, the balance between the public and private sectors can continue in the manner envisaged in the Industrial Policy Resolution. What is now being sought is not a dilution of the scope of the public sector but rather of its more efficient apportionment between the Union Government and the State Governments.

(ii) We believe that all items pertaining to household consumption goods can be deleted from the First Schedule to the Industries (Development and Regulation) Act, 1951. These include commodities like matchsticks, soaps, paints, varnishes, weighing machines, sewing machines, lanterns, furniture and cutlery. If necessary, the production of these commodities could be reserved for the small-scale sector.

7.3 We urge strongly that State Governments should be empowered henceforth to issue industrial licences to all industries with a maximum capital investment not exceeding Rs. 20 crores. Such decentralisation of powers to State Governments would continue to be

subject to the Industrial Policy Resolution (which prescribes the areas reserve for the public sector) as well as the assessments made by the Union Government of the desirability of new investments in different industrial sectors (as indicated by the Union Government, for instance, in its annual "Guidelines to industrial Policy").

State Governments should also concomitantly be authorised to sanction imports of capital, raw-materials and technology (though foreign collaboration) required for the establishment of these industries, through a block allotment of a specified quantum of foreign exchange for this purpose. Again, the Union Government would, of course, retain overall policy flexibility through the formulation of detailed guidelines regarding National Import Policy as well as procedures and norms for making such imports.

7.4 We believe that Karnataka has organised itself sufficiently to support the small scale industrial sector in its many aspects of making available raw materials, providing marketing support and ensuring finance availability through the State Finance Corporation and commercial banks. The main constrant in extending further support emanates primarily from the controls exercised by the Union Government. For instance, pig iron, steel, coke, coal, wax and cement are among the main raw materials for small scale industries and these are completely controlled by the Government of India. Further, several infrastructural and handling facilities which industries need are also exclusively controlled by the Union Government and its agencies.

7.5 In certain instances the Union Government has issued directions, formally or otherwise, asking them to delay or deny financial assistance to specified industrial units. We believe that checks and balances ought to be introduced against such directions from the Union Government and for this purpose State Government representatives should be appointed to the Boards of these financing institutions. We suggest the setting up of a National Credit Council, the structure and functioning of which has been discussed in detail in the State Government's Memorandum pages 46 to 48.

7.6 We agree that States are insufficiently consulted in matters of the location of Central investments in the public sector. Indeed, we would go further and argue that even where decisions for locating specific Central investments in Karnataka, have justified on techno-economic grounds Union Government directions have sought to locate such investments outside the State. For instance, the Indian Telephone Industries had proposed the establishments of an Electronic Telephone Exchanges manufacturing unit near Bangalore, in view of the excellent infrastructure for electronics already available there and in order to preclude the displacement of the existing labour force in Bangalore. However, the Union Government decided that the industry should instead be set up in Gonda in Uttar Pradesh where no infrastructural facilities are available.. Similarly, a Final Site Selection Committee had recommended the establishment of an oil refinery at Mangalore and this has been under the consideration of the Union Government for some considerable time. Despite this; we are led to believe that the Union Government has instead decided to set up its next refinery at Karnal in Haryana. Similarly, techno-economic considerations had led to the selection of Hospet as the site for the Integrated Steel Plant to be set up by the Government of India and a foundation stone for this purpose was laid by the then Prime Minister in 1971. However, the Union Government has subsequently decided that Paradeep in Orissa and Vishakapatnam in Andhra Pradesh should be selected as sites for future steel plants, on considerations which we strongly believe to be other than purely techno-economic.

7.7 We agree that there appears to be little rationality in the investment policies of the Union public sector, particularly in heavy industries. We also believe that Karnataka has generally been neglected, despite its strong industrial infrastructure and excellent resource base. We would argue that the main criterion for deciding on the location of central investment should be techno-economic.

7.8 We believe, from the industrial experience of the last 3 decades, that the basis for declaring areas as backward for industrial development should not be the district. Instead we believe that Union Government incentives are likely to be more effective if they are based on smaller areas (like Taluks), with their potential for industrialisation being assessed by the State Government.

Trade and Commerce

8.1 We welcome the constiution of such an authority under Article 307: We recognise that a variety of impediments and restrictions exist on intra-State and inter-State trade, the precise implications of which are sometimes difficult to perceive. It is clear, for instance, that the absence of uniformity in the sales tax leviable on commodities causes avoidable diversion of trade and also leads to a general damper on certain kinds of trade. Octrai taxes similarly hamper the easy movement of goods. The scope of the proposed authority would therefore need to cover issues of Centre-State and inter-State relations in trade and commerce as well as issues arising between Governments collectively on the one hand and private representatives of trade and commerce as well as the individual consumer, on the other.

Agriculture

9.1 We agree with the observations of the Study Team of the Administrative Reforms Commission on Centre-State Relations. The position has, in fact, worsened since 1967 and the control exercised by the Union Ministry of Agriculture in determining agricultural policy at the State level has greatly multiplied, such control is in large measure also exercised through Central resource transfers to States on Centrally Sponsored Schemes.

9.2 We agree with the observations of the National Commission on Agriculture, as viable strategies for agricultural development are acutely sensitive to local conditions and are therefore more appropriately devised at the State level. The responsibility of the Government of India should more appropriately lie in developing the research base for agriculture and in reinforcing arrangements for agricultural inputs supply and marketing.

9.3 Effective cooperation, as envisaged by the National Commission on Agriculture, does not exist at present. There is no prior consultation on association with the State Government during the formulation of Centrally Sponsored Schemes. Generally, such schemes, when devised, are presented to the State Government during the middle of the financial year and the State Government is at that juncture very hard pressed to make the 50% matching contribution necessary for implementing such schemes. It also negates the very purpose of the Annual Plan. Indeed, the only opportunity the State Government gets for discussing such schemes with the Government of India is during the Annual Plan discussions and it does appear desirable that new Centrally Sponsored Schemes for the following year be formulated well before those discussions.

9.4 The Union Government's initiative in fixing the support prices for selected agricultural commodities and of the issues price under the public distribution system (PDS) ensures that little policy manoeuvrability remains with the State Government. This is so because the issue price under the PDS is essentially a mark-up over the support price (which is also the procurement price), the mark-up representing transport and storage costs, as well as administrative costs. Consequently, the only way left to the State Government to raise the procurement price without a commensurate increase in the issue price under the PDS, is by incurring expenditure on subsidies. There are clearly limits to the exercise of such an option. It is, therefore, very essential that the costing of inputs in the production of agricultural crops be sensitively done by the Agricultural Prices Commission and that before support prices are announced there is active consultation with the State Governments.

9.5 The rapid implementation of several agricultural developmental programmes is being continually impeded on account of excessive centralisation both in the ICAR and in NABARD. As much of the research conducted by ICAR adaptive research, its utility and implications for agricultural productivity necessarily depend on flexible coordination with State Government research and extension agencies. Such coordination is at present largely absent, and ICAR institutions located within Karnataka often make recommendations at variance with those made by State Governments agencies, thus sometimes causing embarrassment to field extension staff and confusion to farmers. Similarly, as NABARD his essentially a refinancing agency for cooperative short term and long term agricultural financing institutions within the State (and to a lesser extent for commercial and regional rural banks) the primary assessment of bankability and creditworthiness of an investment is being done by these financial institutions within the State. Any additional technical or financial preconditions imposed by NABARD (some of which require commitments from the State Government) result typically in delaying the financing of schemes and a deceleration in transferring credit to agriculture.

Food and Civil Supplies

10.1 There is considerable scope for improving Centre-State relations in the procurement, pricing, movement and distribution of foodgrains and other essential commodities. Thus, although the entire food procurement of the State Government is handed over to the Central Pool, its quantum appears largely unconnected with the allotment of food-grains to the State Government for the Public Distribution System (PDS). It is desirable that the allotment of foodgrains should be related as much to the procurement effort as to the foodgrains requirement in each State. Similarly, the Union Government unilaterally fixes the issue price of each commodity under the PDS as well as permissible wholesale, retail and other administrative charges, without consulting the State Government. Similarly, storage capacity is built by Central Government agencies like the Central Warehousing Corporation without ascertaining actual-storage requirements from the State Governments.

In all such cases, much greater consultation with State Governments is imperative. As the food situation each year is highly sensitive to the pattern of the monsoon, such consultation should extend to the formulation of an annual food policy merging through a consensus between the Centre and States, such a consensus occurring at an appropriately high-level consultative forum.

10.2 Such periodic reviews appear very necessary.

Education

11.1 There does not appear to be much justification in the criticism that there is too much Central interference in the initiative and authority of the States. The critical constraint in achieving greater progress is rather one of financial resources. Indeed, the need for a national perspective in matters of ensuring uniform and high standards in higher education cannot be lightly brushed aside and the Union Government has a definite role in this.

11.2 Although the University Grants Commission is conceived of as the main agency for determining and coordinating standards for higher education and research, its effectiveness in influencing standards of University Education has hitherto been frankly limited. It has been functioning more as a grant giving body (though even in this its resources are inadequate and its sanctions are received late during the Plan period). It is vital, however, that national policy norms for higher education emerge and strongly influence Universities in all States if differential standards of higher education are not to be further accentuated. Whether the UGC is the most appropriate organisation for fostering such standards or whether, instead, a body with wider specialisations needs to be constituted, would need examination.

Conditions imposed by the UGC for releasing financial assistance to Universities are also often unrelated to the broad intent behind these conditions. Thus, for instance, two new Universities were constituted in Karnataka in 1980, at Mangalore and Gulbarga. These Universities have fulfilled all the conditions imposed by the UGC in matters of minimum assets, staff and facilities for teaching research, and student amenities. However, the Universities Act has not yet been amended in accordance with the suggestions of the UGC (such amendment being a longer drawn out process than the UGC'gives credit for). As a consequence, the 2 new Universities are yet to be declared fit for financial assistance from the UGC,

11.3 The existing forums for consultation and discussion, particularly the Central Advisory Board for Education and the All India Council of Technical Education, should be vastly strengthened and, if necessary, made into statutory bodies. This is particularly necessary in Technical Education, where institutions have proliferated in the country in a relatively disorderly manner, and where the All India Council of Technical Education, being only an Advisory Body, does not have powers comparable to the Indian Medical Council.

11.4 While the rights to Minorities under Articles 29 and 30 need to be enforced, there appears to be insufficient clarity on the precise criteria to be adopted in determining what is a minority educational institution. It is generally accepted that a minority educational institution should be for the benefit largely of that minority community (with some benefits also going to those in other communities). However, as such minority educational institutions possess the right to regulate admissions, many institutions are now run so as to benefit largely those outside the minority community. The impetus for setting up such institutions, therefore, can sometimes be one of commercial exploitation under the cover of minority protection. Such a contingency was perhaps unrecognised when the Constitution was framed, and a suitable amendment to preclude such a contingency seems desirable, through a clearer definition of what constitutes a minority educational institution.

11.5 No specific instances of conflicts or issues exist as far as Karnataka is concerned.

Inter-Governmental Co-ordination

12.1 We feel that the Inter-State Council as suggested earlier by us, should be activated and it should become a forum for discussing problems of Centre-State issues and also the problems among the States. The Inter-State Council, the restructured National Development Council and its Standing Committees should be able to study these problems and sort them out. This point is elaborated in the State Government's Memorandum pages 19 and 20 dealing with Inter-State Council, pages 46 to 48 dealing with the restructuring of the National Development Council, pages 47 to 48 dealing with restructuring of the Planning Commission and pages 49 to 51 dealing with the National Credit Council.

Note of the Government of Karnataka on the proposed Inter-State Council

1. **Formation** : The present proviso for forming an Inter-State Council under article 263 is not satisfactory. It envisages the formation of such a Council as and when the need arises. On the contrary, Karnataka Government proposes the formation of an Inter-State Council as a standing body which shall be continuously at work holding its Sessions at a specific periodicity like once in 3 months.

2. **Composition** : The Inter-State Council should have:--

(a) the Prime Minister as Chairman;

(b) it should have 8 Chief Ministers, 2 to be represented from each of the 4 zones like North, South, East, West. The Chief Ministers will be selected by rotation each year;

(c) Chief Ministers of such States which are involved in the matters that are to be discussed at the meeting of the Inter-State Council shall be invitee members in case they are not already on the Council as members under the rotation principle; and

(d) Ministers of the Central Government dealing with the subjects which are discussed in the Inter-State Council shall also be invitee members.

For the inclusion of the Chief Ministers, alphabetical order shall be followed within each zone.

3. **Functions** : (1) The Inter-State Council can serve as a forum for discussions between the Union and the States on all matters of policies and programmes which involve inter-dependence between the Union and the States.

(2) To discuss the effects of the Union policies on the States.

(3) To provide for consultation in the matter of excise duties which are to be levied by the Union.

(4) To provide coordination of taxation policies between the Union and the States and among the States.

(5) To discuss issues relating to regional imbalances.

(6) To deal with matters of mutual economic cooperation among the States.

(7) To discuss matters of Central investment in the different States or regions.

(8) To assist in the sorting out of problems that may arise in the process of harnessing the natural resources and their development for the benefit of the country as a whole.

(9) To work out the general approach to the problems of Immigration, imposing disproportionate burden on the concerned States and to evolve appropriate measures of assistance from the Centre to such States.

(10) To assist in the solving of national problems which may appear to have a regional base for their origin.

(11) Other subjects which may be proposed by the Prime Minister or the Chief Ministers.

4. **Procedure** : The Inter-State Council shall meet at the different State Capitals on a rotation principle followed in an alphabetical order. While recommendations of the Inter-State Council will broadly be of an advisory nature. The spirit should be one of accepting and implementing the recommendations of the Inter-State Council.

5. **Secretariat :** There should be a permanent and a separate Secretariat for the Inter-State Council. An officer of the rank of the Chief Secretary of State/ Secretary of the Union Government should serve as a full-time Secretary of the Inter-State Council. He should have the assistance of both subject specialists and expert administrators. On the permanent staff there may be about 4 or 5 such officers. Depending upon the nature of the subject to be discussed by the Council, the Secretariat can draft the services of other experts or consultants from outside for a specific assignment and for a specific period. In short, the Secretariat of the Inter-State Council should be competent to prepare exhaustive notes on the agenda after receiving the suggestions regarding the agenda items from the members. It should also serve as a memory of the past decisions and deliberations. The cost of the Secretariat can be shared between the Union and the States in the ratio of 1:2.

Karnataka

MEMORANDUM

General Considerations

The question of federal relations in India needs to be perceived in the largest context of the future of democracy and the Institutional Framework required to ensure its survival in the face of a host of challenges and threats. It is because of this larger concern that the issue of centralization versus decentralization (of which Union-State relations are only one part) has acquired a new resonance. It has to be seen within the larger perspective of a matrix of interlocking issues (i) of the deteriorating economic conditions and marginalisation of millions of human beings; (ii) the political context of a sharp deterioration of democratic institutions; (iii) in terms of the nature and role of the State in India and (iv) in the social context where direct confrontation between the owing classes and castes and those at the lower rungs of society is turning more and more desperate and violent and also where centralisation of power and resources and decision-making is not ceasing at the national frontiers but is making the country 'conform to external calls, criteria, and conditionalities'. It is clear, by now, that both the increasingly anti-people and repressive character of the Indian State and its growing vulnerability *vis-a-vis* the external world, that both the growing marginalisation of the poor at home and the marginalisation of India in the international setting, its internal disunity and its lack of external viability, can be related to the decline of functioning institutions, and the consequent centralisation, arbitrariness, and pathological dependence on dominant individuals.

The Central point in grasping with our political reality is a lack of fit, indeed a major hiatus, between our institutional set-up and the democratic ideology it is supposed to serve. There is a wide and widening-gap between the wielders of power and the people in whose name it is wielded, between the centres of decision-making and groups, communities and regions affected by the decisions.

A Central dilemma informs the nature of democracy in India. The growing expectations generated by the dynamism of democratic politics has led to quickening of mass perceptions without a commensurate increase in elite capabilities. Intense periods of political mobilization of rural areas, the youth and diverse streams of social activists have led to a wide dispersal of awareness and incipient assertion of will against age-old structures. Yet, at the top there is apoplexy, isolation and lack of will and elan. In a word, the superstructure of the polity has been found lagging far behind its base.

Such a lag is mass perceptions and elite capabilities has contributed to widening distance between the rulers and the people and an accentuation of various gaps in the system. While the vast majority of the population is to be found in the rural areas and small and medium size, towns, almost all the decisions that affect them are taken in a few metropolitan centres. It is not surprising therefore that while successive governments at the Centre have announced welfare policies (*e.g.*, in health, education and housing) aimed at reaching the rural masses in the forms they needed and could afford, in reality the distribution of resources and talents has continued to be in the reverse direction.

Nor is it surprising that agricultural prices and other policies that lead to either sudden glut or sudden scarcity of commodities are all influenced far more by urban middle class opinion then by the interests of the producing classes. A little inflation is far more dreaded than massive unemployment and under-employment, agitations of central government employees for D.A. increases are far more successful than demands for fixation of rural wages, pressures for maintaining metropolitan lifestyles are far more effective than arguments for increased investment in rural public works and development projects for raising employment and incomes of the rural poor.

The widening gap between classes and regions and our continuing state of under development have, no doubt, been matters of much concern to our leaders and intellectuals. It has in the past led to two main sets of prescriptions. For quite some time after the discovery of widening disparities in living conditions of our people in the fifties, the main thrust of prescriptions has been redistributive through land reforms, ceilings on incomes and wealth, and fiscal measures without disturbing the general framework of the strategy of economic development.

Towards the end of the sixties a different strand of thinking emerged which, while it did not underplay the importance of redistributive measures, found the development strategy itself faulty, or at any rate necessary to shift. It emphasized the need to move towards an alternative framework of economic policy which, among other things, focussed directly on the creation of employment and incomes of the rural poor. Both the early renouncement after the 'garibi hatao' election of 1971 and the election of March 1977 emphasized the need for an alternative model of economic development (though both kept the redistributive goal alive).

Unfortunately, both the redistributive and the alternative development perspectives, though undoubtedly political in their overall objective are highly a political and technocratic in their policy prescriptions. They both rely largely on policy pronouncements and their legislative and administrative

implementation without however, simultaneously changing the constellation of interest and the distribution of power in society. There is need therefore for a third and more basic approach to the achievement of a just social order which, without detracting from the other two objectives (redistributive policies and an alternative economic strategy aimed directly at improving the condition of the poor), makes them part of a more comprehensive approach to the development process.

In moving towards such an approach, it is essential to grasp that the course of economic development is vitally determined by the structure of political power, that both the general misdirections of development strategy and its inequitous consequences owe a great deal to the immense concentration of authority in a small elite at the apex of the system. This has always been so. It is inherent in our constitutional framework (despite laudable 'directive principles'). Its politically undemocratic and socially exploitative character were held in check in the first long phase of nation-building when an enlightened patternalism at the top (under Nehru) was combined with a significant assertion of authority at lower levels thanks to the considerable stature and popular base of State and local level leaders and the highly open and plural character of the Congress Party.

With the passing of the 'tall men' of Indian politics who occupied positions of authority at so many levels both inside and outside government, and with the gradual closure of the political process within the Congress and the undermining of State and local level and other autonomous institutions, the centralizing tendencies inherent in the Constitution which was based on the Westminster Model came to the force. With this there took place a strong convergence of vested interests that supported such a structure of power the bureaucracy, big business, the professional middle class, police and intelligence agencies, and political upstarts mouthing progressive slogans and in their name constructing an undemocratic, exploitative and repressive structure of State power.

We have a half-hearted democratic framework, a centrally monitored federal set-up, an all India officialdom that over powers representative bodies at all levels and centralizes relations between them, and a highly centralised party hierarchy. Such centralisation of structure of power necessarily produces reactions to it in its own image. The growing tendency of directing popular agitations oppositional politics and groups demands to the government in New Delhi is a direct consequence of the undermining of a plural and multi-tier structure of power.

The local and intermediate level buffers that were earlier available for absorbing tensions of all kinds have been undermined following the rise of centralised politics with the result that just as layalties and accountability are required to be directed to the Centre, resentments and confrontations also get centrally directed. With this the day-to-day load on the Centre has greatly increased, longer term perspectives and policy planning have been at discount and despite the striking infusions of fresh currents with every major election of late—1967, 1971, 1977, 1980—the polity has continued to be basically a stagnant pool.

The heart of the matter is that the entire post 1969 experiment at structuring political power on the basis of a strong central authority, a shift of initiative from a federated and decentralised party system to a unified bureaucratic apparatus, and a political style based on personal charisma with a view to provide identity and legitimacy to the experiment has failed. The last five years have finally established beyond any doubt a proposition that was apparent throughout the seventies and to which attention was drawn by a few but which was not taken too seriously by others. It is that a centralised state modelled on Western style parliamentary democracy in which effective power rests with the executive and within the executive with the Prime Minister (or President) is just not suitable to a highly diverse, socially plural (as against just political pluralism of the West) and culturally multi-centered society like ours which is continental in both size and complexity.

From this proposition follows another critical one namely that the only alternative to a decentralised and genuinely democratic political system in a country like India is the gradual dissipation, erosion and ultimate disintegration of the state as well as the nation. There are already many signs of this—the power of the regional satraps has increased, parochial tendencies of region and caste are very much on the upsurge, at lower levels contractors and wheeler-dealers in money and muscle power are in command. All in all, the authority of the Centre is getting eroded, including that of the office of the Prime Minister.

Such is the overall setting of the basic problematique of Indian politics, namely, the inequitous character of social change in a polity that claims to be democratic. It is against this setting that the issue of State autonomy within an overall framework of political and administrative decentralization needs to be considered. The issue of authonomy at Lower levels of the polity has often been posed in too mechanical a manner, as if it was simply a matter of jurisdictional divisions between different territorial units. This has given rise to uncalled for anxiety even among well meaning people, as if a great share of power and resources by the State will weaken the Centre and devolution of power still further below will encourage 'centrifugal tendencies', or that if some of the large States are split, the result will be disintegration of the country.

Perhaps, the proponents of decentralization have presented their case in a manner that gives rise to such anxiety through a good part of it follows from a leadership steeped in Western values that has not quite understood the compulsions of operating a democratic polity in a socially plural and regionally unbalanced society. What is lost sight of in the latter's understandable concern with preserving 'unity at all costs' is that a unity based on perpetuation of inequity and disparities is phoney and will give way before long.

The real case for autonomy rests not on the claims of territorial rights of juridical entities or political parties but on the comprehension, based on experience

that in a country like India a centralised polity is incapable of dealing with an unjust social order that it is inimical to the democratic political process, and that it is inherently unstable.

The real beneficiaries of centralised polity are those who have little regard for democratic norms (or believe that democracy and adult franchise are unsuited to a poor country) the managerial class, the technocrats, the English language press, large parts of the intelligentia who get both their sense of potency from grandiose symbols of authority and national power. Left to themselves, these votaries of a centralised State would do away with politics as such.

The case for centralisation has been based on a series of arguments most of which happen to be specious. The most clever of these arguments, one that carries weight with many people (especially the intellectuals), is that the Central Government is more enlightened than the State Governments and the State Governments more so than local elected bodies which tend to be dominated by local vested interests and the upper castes. This is a clever argument because it smoothly papers over the vested interests and upper caste character of the elites at the higher levels, it advances a progressive argument for perpetuating the status quo, and it subtly condemns the vast rural hinterland in which eight per cent of our people live to a Hobson's choice; surrender of political rights to higher level elites, or surrender of economic benefits to the local elite. One is reminded of one's colonial past; you can either have self-government or good government, but not both. In the new setting the assumption is that only the Centre can provide good government.

Evidence for this point of view is cited from stories about atrocities on harijans and the extremes to which 'casteism' goes when there is tussle for power in rural areas. The much larger incidence the banality of violence in the cities, the large majority of the victims of which are the poor and the destitute, the systematic segregation of the harijan and lower caste bastis, the dastardly behaviour towards women and the indecencies hurled against the children of the urban poor, the genecidal acts against religious minorities, and the growing number of professional 'goondas' who are hired by the powerful and the well-to-do to terrorize and where necessary bump off rivals and enemies are all forgotten in this display of generosity and fair play towards the rural poor.

The point is that a splashing news story on rural repression fulfils the psychic need of newspaper editors and their patrons far more than does evidence of the rot around them. Also, any systematic analysis of the latter will soon expose their own involvement in a system of privilege and exploitation that pervades the whole society. More important for the analysis presented here is the fact that the position of the poor and the weak in the rural areas will not improve so long as power and decision making remain outside their reach. It is not until the levers of State power move downwards that the poor majorities can aspire to stake a claim in them and use it against their traditional exploiters. Concentration of power and resources at higher levels necessarily limits their availability at lower levels and therefore concentrates them there also.

The same analysis applies to the argument that increase in the power of the States will not improve the condition of the backward regions which is the responsibility of the Centre. Yet, what does our experience show? More than twenty-five years of centralized planning decision making has only widened regional disparities. To think that backwardness of backward regions can be removed without allowing them to take the vital decisions that affect them which—means giving them the power to do so is to fly against all facts. It is simply wrong to expect that disparities in development, whether regional or between classes, can be rectified without involvement and participation of the people concerned.

We can no restate our basic analysis in a set of propositions. (1) The Indian political system has been in a stagnant position for many years and now funds itself in a deadlock. Neither the authoritarian nor the Westminster style parliamentary democracy approach seems to work. The main snag in both is the centralization of the political process; intended and deliberate in one, innate in the other. Nor is restructuring along an alternative framework of development possible without opening up the democratic structure and moving it closer to the base.

(2) The existence of massive poverty has all these years been made (an excuse for concentrating power and resources at the Centre), presumably because it could deal with it better. For some time, failure to do so was ascribed to local vested interests. Later, it was felt that the policies were not right and there was need for an alternative framework of policy. It is now clear that the biggest vested interests emanate from the nature of the Indian State and that no amount of tinkering with policy will change things. What needs to be changed is the nature of the State and the statist assumption that the problems of the people can be resolved through the machinery of the State.

The statist assumption is in turn based on a fundamentally technological view of human problems. This is the view that deep-seated social maladies like the pervasive poverty based on a state of deprivation can be removed by technological means only. We know that this is not true, that the removal of such deep-seated social maladies is an essentially political task, a task in which the people who are most affected participate in making the decisions that affect them. Building such a structure of participation is far more important for the removal of social and economic ills that are development programmes from above, no matter how well-conceived they are.

(3) Such a structure of participation is inherent in the democratic premise on which the Indian polity is supposed to be based. But the pre-existing State did not permit such a polity to evolve. It was a colonial State drawing its authority from the masters and not from the people. This State still survives, even if in an attenuated form. There is a new set of masters in command but many elements of colonial rule still persist and there does exist a measure of colonial relationship between New Delhi and lower down.

(4) To move towards a structure of democratic participation if the type discussed here necessarily involves changing the structure of the State. This

involves a change in power relationships between the Centre, the State and lower down. Without such change, Indian democracy is bound to run into a deadlock and sooner or later flounder. The sway and power of charisma is in direct proportion to the lack of structure and institutionalisation of the political process. Only a decentralized State can provide such institutional safeguards against the cult of personality and role of charisma. Everything seems to point to the need for decentralization. It is indeed an historic necessity.

(5) Is it possible to move towards decentralization without providing greater autonomy and commensurate resources to the States? We do not think so. Merely holding elections of panchayats and municipalities does not mean decentralisation. They need to have significant power and resources to work with and they need to be organised vertically through functional inter-relationships along various tiers reaching out to the State level. But this is not possible without first (or simultaneously) endowing the States themselves with significant power and resources.

(6) There are two opposite temptations that the Centre and the States must respectively avoid. One is the Bismarckian notion of a direct appeal to lower levels without permitting intermediate structures to grow; the modern version of this is populism. The other danger is in the opposite direction namely, the growth of regional overlords through the increased power of the States which is not shared further down. To steer clear of both these dangers, it is essential to agree that greater autonomy for the states is at once part of a larger process of decentralization and an essential pre-requisite thereof.

(7) Two other corrolaries are necessary in the Indian case. First, it is not difficult to provide autonomy at the levels of existing States; in many of them there is need to provide autonomy to important regions within the State. Second, there is a genuine fear that the more prosperous and powerful States will benefit more from the process of devolution. This should at all costs be avoided. Indeed, one of the justifications of greater autonomy at the State level is that it will put an end to the present situation in which advanced States get the better of the others by virtue of their pull at the Centre. The new strategy should be to both allow a large measure of selfreliance at the State level so that hitherto untapped potentials are released— this itself will begin to narrow disparities and at the same time provide transitional correctives by weighted allocations and transfers.

(8) Such corrolaries only underline the ultimate aim of any democratic restructuring: enabling the people to participate in shaping their collective future. Political decentralization is only a means to this and federalism a means to that means. Institutional structures by themselves produce no change; so much depends on the interst, the vigilance and the organization of the people themselves. But in the absence of an institutional structure that responds to people's initiatives it is not possible to mount them. Indeed, institutional innovations designed to respond to historic needs from time to time provide the stuff of a dynamic polity. The difficulty with a functioning democracy is that it so much disarms the people that a revolutionary upheaval becomes difficult to mount. But the great thing about a functioning democracy is that it can itself become a vehicle of revolutionary change through structural change in response to historic needs. And it can do this without upheaval. But if it fails to do this for long , its future is in peril. Indian democracy faces this challenge at the present time.

Having laid out the larger perspective of Union State relations and the specific propositions that follow from it, we can briefly address ourselves to the institutional initiatives/correctives that a healthy federal process calls for.

Legislative Relations

India, according to Article 1 of the Constitution shall be a Union of States. Article 2 empowers Parliament to admit by law into the Union, or establish new States on such terms and conditions as it thinks fit. According to Article 3 Parliament may by law form a New State by separation of territory from any State or by uniting two or more States or parts of States or by uniting any territory to a part of any State. The Parliament may also by law increase or diminish the area of any State or alter it boundaries or name.

While giving the power in article 3 to the Parliament to form new States, it was also provided that no bill for this purpose may be introduced in Parliament except in the recommendation of the President after he has ascertained the views of the legislatures of the States concerned. The constitution provides for consultation with the State legislature but there is nothing which makes it obligatory for the Parliament to accept the views of the legislature of the State concerned. The fact that it is open to the Parliament to alter or even do away with the very existence of a State and to create in its place a number of States or to create another State by amalgamating its territory with some other areas shows that the very existence of the States as also the extent of their boundaries is at the mercy of the Central Parliament and that the latter can tamper with it by passing a Bill with simple majority. There is not even the requirement of a particular number of members in each house of the Parliament, apart from the requirement of quorum, for the passing of such a Bill. Such a law is not an amendment to the constitution. The fact that no Parliament would normally ignore political compulsions and venture upon the rash course of tampering with a State and its boundaries against the wishes of the people therein may be true, but this fact cannot obliterate and hide the constitutional position that under the provisions of the Constitutional as they stand, the very existence and survival of a State as also the extent of its boundaries depends upon the sufference of the Parliament.

In the face of the above constitutional position, it is apparent that the cancept of the State being co-equal of the Union in traditional federal polity does not apply to India. The dependence and subordinance position hereof the States vis-a-vis the Union is highlighted by the provisions of articles 2, 3 and 4.

Article 3 requires reconsideration The proviso to the Article has to be modified making it obligatory to obtain the consent of the Legislature of the State

concerned before any Bill affecting that State is introduced in Parliament as in the case of Jammu and Kashmir. Merely sending the draft Bill for the views of a State and proceeding into Parliamentary enactment after some time and even if suggestions are made, ignoring them, is inconsistent with the intention of the Constitution makers as also of the federal character of the Constitution.

The view that there is nothing basically wrong in the scheme of distribution of legislative powers between the Union and the States, is not correct. More sources of taxing power have to be given to the States.

Article 249 and 252 may be omitted and resolutions so far passed under Article 252 may be treated as withdrawn and *status quo ante* should be restored.

Further, in order the ensure the freedem of the legislative organ of a State, it should not be made subject to the control of either the executive organ of the State or the executive organ of the Centre, in the exercise of the legislative powers. Under the Government Rules of Business, even Under Secretaries and Deputy Secretaries to Government can function on behalf of the President and the will of the State legislature can be thwarted or controlled by these officers on behalf of the President. But for the control vested in the executive by provision in the Constitution, such as these requiring previous sanction or/and subsequent assent by the executive, whether called the Governor or the President, for legislative measures, the legislative organ would be independent. Just as the judicial organ is independent of the executive and legislative organs *vide* Smt. Indira Gandhi's case AIR 1975 SC 2299, the legislative organ should be ensured sufficient independence and not made subordinate to the executive organs of the State and the Centre. In the matter of assenting the State Bills the President may be made to act on the advice of a Committee of Parliament and not the central executive.

Since we have a Parliamentary system of Govenment and since no legislation can be passed without the necessary majority, when once a law in the exclusive field of the State legislature is passed, it should be virtue of that passage, become the law of the State. Whenever any legislation is undertaken by the State or the Centre in respect of a matter specified in the Concurrent List as the case may be the Centre or the States should be consulted.

The 1st proviso to article 31-A(1) and the proviso to Article 304 may be omitted. There is no reason why the State Legislature should not have the same legislative power as Parliament.

Role of the Governor

The Governor strictly has no role in the context of the Centre-State Relations. Both the founders of the Constitution as stated in the Debates of the Constituent Assembly and the decisions of the Supreme Court do not envisage any such role for the Governor. Instead of election of the Governor by the State Legislature, involving a lot of expenditure the Constitution makers considered nomination of an eminent person by the Centre with the consent of the Chief Minister of the State, would be a better procedure and adopted it, without making a specific provision for the consent of the Chief Minister but with the distinct statement in the Constituent Assembly that it would be with such consent. The Supreme Court has also held in Dr. Raghukul Tilak's case AIR 1979 SC 709 that the Governor's office is an independent constitutional office which is not subject to the control of the Government of India.

The Governor should be a purely ornamental functionary as observed by Dr. Ambedker vide Constituent Assembly Debates, Volume III, page 468. As observed by the Supreme Court the Governor is but a "shorthand expression" for the State Government vide Maru Ram's case AIR 1980 SC 2147 at page 2169. So far as Constitutional functions are concerned other than the few cases in which he is required to act in his discretion as he is required to act as per advice of the Council of Ministers, and as he is not a subordinate authority of the Government of India, he has no role and would not have any role in the Centre-State Relations.

Before making report to the President suggesting action under Article 356 (1), the Governor should follow the principles of natural justice. He should first send a notice to the Council of Ministers specifying the matters which according to him has the effect of the Government of the State not being carried on in accordance with the Constitution when a duly established Council of Ministers is functioning and is carrying on the Government. The Government of India acting as the President will also have to follow the principles of natural justice in similar circumstances. But when a party in power has lost a vote of confidence in the Legislative Assembly by the passing of a no-confidence motion against the Ministry, or a motion of confidence is defeated and there is no person who is supported by a majority of members of the Legislative Assembly, the report can be made without following principles of natural justice, as that would be a clear case of the Government of the State not being able to be carried on in accordance with the Constitution and as there would then be no Council of Ministers collectively responsible to the Legislative Assembly of the State to which a notice can possibly be given.

At present, the principle of natural justice is not being followed in exercising the powers under Article 356 (1); presumably because there is no express provision for following that procedure. But the law laid down by the Supreme Court in several recent decision makes it clear that this principle will have to be followed to supercede the State Government and the State Legislature, as envisaged by Article 356 (1) of the Constitution. The condition precedent for the exercise of the power is that the President (which means the Council of Ministers in the Centre) is satisfied that a situation as arisen in which Government of a State cannot be carried on in accordance with the provisions of the Constitution. In the light of the decision of the Supreme Court in A.K. Roy's case AIR 1982 SC 710, with reference to deletion of Clause (5) of Article 356 by the 44th Amendment of the Constitution the President's satisfaction under clause (1) of Article 356 is justifiable. In Mohinder Singh Gill's case AIR 1978 SC 851, the obligation of satisfying the principle of natural justice for the

exercise of a power under Article 324 of the Constitution was held to exist. Following that decision in S.L. Kapour's case AIR 1981 SC 136, the supersession of the New Delhi Municipal Committee by the Lt. Governor of the Union Territory of Delhi under Section 238(1) of the Punjab Municipal Act, 1911, as applicable to New Delhi, without giving an opportunity to the Committee to show cause against the proposed supersession was held invalid the Hon'ble Learned Judge Chairman of the Commission on Centre-State Relations was also a concurring learned Judge of this Bench of the Supreme Court. It is therefore necessary to make an express provision in Article 356 (1) that before a report is made by the Governor to the President he should give an opportunity to the Council of Ministers to show cause why action under the said Article may not be taken. Further, the President when he acts *suo moto* under Article 356(1), or does not agree with the cause shown by the Council of Ministers to the notice given by the Governor, a show cause notice should be given to the Council of Ministers. The right of the people of the State to be governed by their representatives should not be taken away except when there is no person who commands a majority of members of the Legislative Assembly. It is also necessary to ensure that the democratic government in a State is not superseded except when it is impossible to carry on the Government as envisaged by the Constitution. A simple lapse or erroneous action should not result in the democratic government being dismissed, and the Legislature made ineffective on dissolved.

The functions/duties of the Governor in the appointment which also includes the dismissal of Chief Minister under Article 164 have been performed primarily either at the behest of the power at the Centre or to ensure as far as possible that the interests of the party in power at the Centre which has its Branch in the State is safeguarded. Instances of abuse of the power vested in Governor under Article 164 have been indicated in Part-II of the white paper. In order to ensure that the democratically elected representatives of the people are not deprived of their Constitutional right, it is very necessary to modify Article 164 making it obligatory for the Governor to appoint a person who commands a majority among the elected members of the Legislative Assembly and it should also be made clear that the Governor cannot dismiss him when he has the majority. It is also necessary to modify Article 163(1) making it clear that the Governor should act in accordance with the advice of the Council of Ministers except in so far as he is by or under the Constitution required to exercise his functions or any of them in his discretion, even in matters where he exercises his discretion it should be made clear that the discretion should be exercised to ensure promotion of the purpose for which the discretionary power has been conferred and in public interest and not arbitrarily. In Maru Ram's case AIR 1980 SC 2147 at pages, 2170, 2171 and 2173, the Supreme Court has observed.

"All public power, including constitutional power, shall never be exercisable arbitrarily or *mala fide*.

* * * * *

The rule of law, under our constitutional order, transforms all public power into reasonable, responsive, regulated exercise informed by the high purposes and geared to people's welfare".

In Shamsher Singh's case the Supreme Court has stated that :

"In all matters where the Governor acts in his discretion he will act in harmony with the Council of Ministers. The Constitution does not aim at providing a parallel administration within the state by allowing the Governor to go against the advice of the Council of Ministers".

In the light of the decision of the Supreme Court to Dr. Raghukul Tilak's case AIR 1979 SC 709, it is necessary to make a specific provision that the Governor can be appointed only with the consent of the Chief Minister. Provision should be made to ensure appointment of fair minded men of high calibre and integrity as Governors. If this is done they will surely act efficiently and impartially in the discharge of the limited discretionary function to be discharged by the Governor.

The Karnataka Government has issued a White Paper on the Office of the Governor which elaborates some of the principles involved in both contextual and operational detail. The document is annexed as a part of this Memorandum.

Inter State Council

Crucial to a harmonious relationship between the Union and the States and between States, are modes of consultation and consensus-making that reflect and advance the federal spirit. The Constitution provides for an Inter State Council, a provision that has so far not been utilised. In the early decades of national consolidation and democratic and secular institutional building the task of consensus making was performed by one dominent party that (with important exceptions) ruled at both the Centre and the States. Under a cohesive leadership occupying positions of authority at various levels and dominated by a person like Jawaharlal Nehru with strong democratic instincts and a capacity to share power with outstanding leaders at the State and lower levels, perhaps the need for institutionalizing federal relations was not pressing. Now with a more complex and multi-party structure of governance the role of bodies like the Inter State Council becomes vital.

The Inter-State Council can serve as a forum for discussions between the Union and the States on matters where there is need for discussing the effects of the Union policies on the States. Coordination of taxation policies can be facilitated by the Inter-State Council. Issues like regional imbalances, Central investment in the State, mutual economic cooperation among the States and sorting out of any operational problems that may arise in the process of harnessing the natural resources and their development for the benefit of the country as a whole and all the States can be usefully achieved by the Inter State Council.

There is also urgency to think of all-India bodies like, National Developmental Council, Planning Commission etc., as federal institutions with a federal

mode of functioning rather than as mere arms of the executive at the Centre. It is necessary to view these bodies federally for evolving a broad political consensus on basic tasks and challenges as well as for sorting out problems which are in need of proper understanding and equitable solution. A detailed matrix of viewing the whole development process as federal in the context of these All-India bodies is discussed later in the Section of Fiscal and Financial Relations.

Media

Radio and Doordarshan : In the Indian situation, the objective of communication policy must be to awaken the people, inform, mobilize and educate them to be democratic citizens since eternal vigilance is the price of liberty, ensure equity and equality of opportunity, safeguard national values, preserve both unity and diversity, and promote development and accepted national goals.

Broadcasting is a Central subject under List I—Union List Entry 31 in the Seventh Schedule of the Constitution. So are telecommunications services and space facilities on which broadcasting leans. The Radio and, with satellites, television are the only media which are instantly public and international broadcasting as the very name suggests in not a point-to-point communications system like a telephone or postal service. Again, broadcasts range over national borders and therefore impinge on international relations. Likewise broadcast frequencies, being limited, are internationally allocated by the International Telecommunications Union. Allotted frequencies are therefore national assets or scarce natural resources which must be nationally regulated. For these reasons, broadcasting is a Central subject.

Nevertheless, India is a plural society and a Union of States or Federation. Central Control over such powerful and expanding media has endangered political controversy in the past and could conceivably do so in the future. It also has cultural implications in so far as it influences language content, musical expression, and dramatic forms especially with regard to folk music, dance and drama-skills and riches to be pres rved, revived and given a new lease of life in newer formats.

It is, therefore, important that both Radio and Doordarshan should be made autonomous and registered as a National Broadcast Trust as recommended by the Verghese Committee. The Board of Trustees would be appointed in consultation with the Inter State Council.

The Central and State Governments should have reasonable access to the broadcast media to explain official policies. As in the case of the Prime Minister the leader of the opposition in the Lok Sabha should also be accorded facilities for making national broadcast. A similar procedure should apply to facilities for the State Chief Ministers and leaders of the opposition in the State Legislature. These broadcasts should however be distinguished from party political broadcast for which a separate fair code should be evolved.

We would also comment on the recommendations of the Verghese Committee with regard to the vestting of rights for grant of the licenses for broadcasting.

The allocation by the ITU of frequencies to the nations of World entails international negotiation which is Central responsibility. The allocated frequencies being finite, must be regarded as a scarce natural resource whose allocation among different wireless users of which the National Broadcast Trust is only one, the defence forces, police and aviation and shipping authorities being others must vest in some authority. The Central Government is under Entry 31 of List I in the Seventh Schedule the concerned Government for purposes of Licensing, and it is the Wireless Adviser in the Ministry of Communications who grants licences and regulates frequencies under the Indian Telegraph Act.

However, the right to licence broadcasting should not or need not necessarily vest the Government with the right to regulate broadcasts. There is a difference between the fact of broadcasting (the licensing of transmitters) and the act of broadcasting (pogramming). Any confusion here is cleared by reference to the concept of a National Trust, the nation ("we, the people") being represented by Parliament of which the Government constitutes the executive branch. If the people are the ultimate sovereign in a parliamentary democracy then they are entitled to the fullest information and contrasting views and idea so that they might decide for themselves and vote accordingly. A free and autonomous broadcasting system is thus part of the democratic dharma, accountable to the people through Parliament but not controlled by the Government.

Once the National Broadcast Trust comes into being, the Ministry of Information and Broadcasting should shed its direct responsibility for broadcasting and might thereafter appropriately be redesignated "Ministry of Information".

Newspapers and Periodicals

The distribution of newsprint has been used to impose control over newspapers and journals. Due to absolute control of Government over radio and TV, Newspapers and periodicals are the only Independent means of communication.

Fixation of quotas for newsprint should be completetely abolished and the import of newsprint should be put under OGL. This is essential for the development of newspapers and periodicals of different political, cultural and language persuasion without government's interference either at the Central or State Level.

If some of the small newspapers and periodicals want government's assistance for the procurement of newsprint, then their specific request can be serviced by organisations like STC, etc. This must be purely on the basis of initiative by the newspapers and periodicals.

Judiciary

The foremost step required is to reinforce the autonomy and dignity of the judiciary.

One of the ways to ensure the autonomy of the judiciary is to see that it is not infringed through the budgetary control of the Government.

Another measure which has sought to impinge on the autonomy of the judiciary is the question of transfer of High Court Judge by the Central Government. This must be given up and the High Court judges should not be subject to transfer at the will of the Executive. Whether considerations have to be applied about the composition of a High Court in a given State in terms of the background of the judges, the matter must be decided at the time of their appointment.

These suggestions are offered to ensure that the judiciary continues to play an independent role in all its spheres and particularly in the sphere of Centre-State issues which might require resolution at the hands of the courts.

Administrative Services

At the Conference of Premiers held in October 1946 it was decided that it would be desirable to have an all India administrative service which primarily set the requirements of the provinces but from which the Central Government could also draw a given number of officers for meeting its own needs. Under the enabling provision Section 263 of the Government of India Act 1935, the Indian Administrative Service and the Indian Police Services were consequently constituted. This was subsequently included in the Constitution which describes the all Indian services as services common to the Union and the States.

Article 312 of the Constitution of India empowers Parliament to create one or more all-India services including the Indian Administrative Service and the Indian Police Service which existed at the commencement of the Constitution. In exercise of these powers Parliament enacted the All India Services Act in 1951 of which the three main features are :—

(i) the constitution of various all India services of which only the Indian Administrative Service, the Indian Police Service and the Indian Forest Service still exist.

(ii) the Joint control of the Central and State Governments for the regulation of recruitment policies and conditions of service of the all India Services.

(iii) the ultimate authority of Parliament in regard to all rules framed under the Act.

In any consideration of the gamut of factor that have a bearing on central-state relations the concept and functioning of all-India Services also needs to be examined.

One of the main features of the All India Services Act was the exercise of joint control over the services by the central and State governments. In this context there are two relevant provisions of the Act and the rules framed thereunder that require consideration. In the Act itself Clause 3 reads as under :—

"3. **Regulation of the recruitment and conditions of services :**

(i) The Central Government may, after consultation with the Government of the States concerned (including the State of Jammu and Kashmir) (and by notification in the Official Gazette) make rules for the regulation of recruitment and the conditions of service of persons appointed to an all India Services".

"The joint control of these officers by the States and the Union Government and by the location of the ultimate authority over them in the latter provides a measure of remote control which by its very nature is more objective, and which is meant to enable the officers to fulfil their responsibilities without succumbing to stresses and strains of local influences.

However, the implication of the vesting of the ultimate authority in the Central Government is that officers belonging to the All India Services and serving in the States will inevitably owe their loyalty to the centre which is the final arbiter of their service conditions and career. Not only is this theoretically violative of the basic federal structure but in practice has led to very difficult situations particularly in States ruled by parties in opposition to the ruling party at the Centre. Most recently the conduct of senior administrative and police officers in Andhra Pradesh and Jammu and Kashmir has come in for serious criticism for the reason that they acted against the interest of democratically elected state governments and in contravention of the law directly under order of the Governor, who in turn were acting under central direction.

In the political situation as it is now emerging with the growing assertiveness of regional forces the existence of the all India services can further complicate matters and deepen conflict instead of seeking solutions to resolve differences of opinion and interest.

In effect this means giving a political function to the services which are supposed to remain aloof from policies and function in a non-partisan manner and is really an extension of the role of the imperial civil service in pre-independence days.

It appears that during the last few years the Central Government has also been thinking along these lines and taking steps which have further diluted the so-called "joint control" of services and instead strengthened the powers of the central government. During President's rule in Assam consequent upon the regional movement in that state the central government inducted a large number of non-local (non-Assamese) IAS and IPS Officers indicating thereby that even officers of the All India Services who were natives of the State were considered not fully reliable while dealing with a situation involving issus of a regional nature. After the military intervention in Punjab there have been statements (including from the Prime Minister) that the policy of inducting at least fifty per cent 'outsiders' into each State cadre would henceforth be implementead very strictly. For one thing this suggests that the Central Government would like to tighten its control over the State administrative set up even further. Secondly, what is even more pernicious is that implied innuends that "outsiders" would be more amenable to such control

while "insiders" cannot be relied upon as they would come under the sway of 'local influence'. Such an approach is clearly antithetical to the federal principle and will only result in accentuating the hostility between the IAS and the state services as well as the IAS and the political leadership at the state level.

Yet another incursion into the powers of the state government to exercise control over their own state cadre is the recent amendment to Rule 6 of the IAS 'Cadre' Rules which reads as under :

"Deputation of Cadre Officers—(A) A Cadre Officer may, with the concurrence of the State Government or the State Governments concerned and the Central Government be deputed for service under the Central Government or another state Government or under a company, association or body of individuals, whether incorporated or not, which is wholly or substantially owned or controlled by the Central Government or by another State Government". Thus any officer of a particular State Cadre would be deputed for services with the central government or another state government only with the concurrence of the 'parent' government. However, the amendment adds a proviso which reads as under : "Provided that in case of any disagreement, the matter shall be decided by the Central Government and the State Government shall give effect to the decision of the Central Government". As a result of this even if the state government does not agree to release one of their officers, the Central Government will again have the final say. With this amendment even the fiction of dual control over the all India services has been laid to rest. All these changes in the law and practice as it has evolved over the year have fundamentally altered the basic concept and structure of the all India services. They would now appear to have become cadres of administrators who occupy the top level posts in the states but owe their basic loyalty to the centre. Clearly this can have serious implications for the state governments particularly those ruled by opposition parties. It is, therefore, not surprising that some of these state governments have suggested that the all India services be disbanded.

If the originally conceived benefits of these services are no longer real and added to this is the suspicion and hostility that they evoke, there would indeed be a strong case for disbanding the IAS and the IPS. In fact when the All India Services Act in 1951 was passed the intention was that, in addition to the IAS and the IPS, an Indian Service of Engineers, an Indian Forest Service and an Indian Medical and Health Service would also be created. However, only the Indian Forest Service was set up while in respect of the other the idea was abandoned primarily on account of opposition from the State Governments who in turn conceded to the pressures from the corresponding state services. Thus the objective of building up a number of centrally administered services is no longer relevant in the present day context. However, the question of whether to disband the IAS and the IPS requires very careful consideration with a long term perspective. If some of the original purpose can be reinfused there could be advantage in retaining these services as federal services provided the following steps in restructuring are taken .

(i) All matters relating to policy or rules affecting the all India services should first be placed before the proposed Inter-State Council and action initiated only after obtaining the approval of the Council by means of a formal resolution.

(ii) Clause 3 of the All India Services Act should be amended to replace 'consultation' with the States by 'concurrence' of two-thirds of the State Governments.

(iii) The amendment to Rule 6 of the IAS (Cadre) Rules made administrative grievances of officers to avoid delays that normally occur in courts. The selection of members for these tribunals should be subject to the confirmation of the Union Public Service Commission in order to ensure that the tribunals are manned by persons of competence and integrity.

Police

Police is a state subject. It is not even in the concurrent list. Yet the Central Government has built up a huge and ever increasing central police force. In the last two decades, the expenditure on central police force has gone up by sixteen times, from Rs. 32 crores to Rs. 510.30 crores, between 1965-66 and 1984-85. Apart from being outside the provisions of the Constitution, the development of Central Police has compounded the problem of effective law and order maintenance in the States. Instead of developing an effective police force of their own for immediate deployment, the States have been made dependent on the Central Government for supply of para-military forces and Central Intelligence Services and grants for policing, from time to time.

Even if in spheres like finance and industrial licensing, the states are able to get more powers, the centre's hold on the states' law and order machinery is so tight that it could negative even the limited autonomy the states enjoy. As recent events (Andhra, for example) have shown, central forces were deployed purely for political reasons. As R. F. Rustomji has put it, the Central forces have been grossly overstrained and have been less than effective".

It is imperative that the existing constitutional position with regard to the police must be maintained. The states must build up their own police force to deal with the law and order problems effectively. There should be no further expansion of the Central Police Force, it should be absorbed in the states or phased out.

Fiscal and Financial Relations

As in other areas, in fiscal relations also Centre-State relations have been dominated by a trend towards over-centralization in regard to both policy and administration. Constitutional provisions defining the relative spheres of the Centre and the States have been violated; and planning and financial institutions which were to have operated objectively and with a measure of autonomy have been systematically

politicised or emasculated. In the event fiscal and financial relations between the centre and the states, as well as the entire planning process, have become a major source of disharmony in the federal polity.

Since 1951, when planning was accepted as a prime instrument of national economic development, the range and magnitude of developmental responsibilities of the States have increased enormously. But there has not been a commensurate enlargement of the States' access to real or financial resources. Notwithstanding some of the welcome steps taken by recent Finance Commissions to narrow down this yawning gap between states resources and their developmental and non-developmental responsibilities, a mechanical approach has characterised the statutory transfer of funds to states from the common pool of tax and other government revenues. Progressively more and more resource transfers from the centres have become discretionary, resulting in discriminatory treatment of states on political considerations.

Again, over the years, there has been an alarming increase in central government expenditure on subjects which according to the Constitution fall within the States' jurisdiction. Apart from causing avoidable multiplicity and distortion in developmental and non-developmental expenditures, this has eroded the authority as well as effectiveness of State administrations in several areas. In like manner, central incursion into tax and revenue areas earmarked for states in the Constitution has exacerbated the working relations between them.

All of thses tendencies have combined to create an acute imbalance between resources and responsibilities at the state level. The divisible pool from which transfers in accordance with the recommendations of the Finance Commission are made has not taken a shape commensurate with changing federal relations and responsibilites. Likewise, the Gadgil formula for distribution of central assistance to state plans has created new tensions, while seeking to benefit the less developed states. The enormous increase in the debt-servicing burden of states, and the severe restrictions placed on their access to the capital market have also become serious irritants. And solutions to these problems have been rendered difficult by the ineffectiveness of the National Development Council as a policy-making body; by the overlapping roles of the Finance and Planning Commissions; and by the subordination of the Planning Commission, Reserve Bank of India and other national institutions. to central government departments. The consequence of these centripetal forces can hardly be other than pushing centre-state relations to the brink of a crisis.

Any improvement in centre-state fiscal relations will therefore require quick and basic adjustments in attitudes, policies and instrumentalities. And these adjustments have to cover all type of transfers. In matters of resource allocation, there cannot be a hard and fast distinction between "Plan" and "non-Plan", "developmental or non-developmental", "revenure" or "capital" accounts. Rubrics and classifications of this sort are essentially administrative derivatives, and they should not be permitted to interfere with optimality in resource utilisation. Indeed, even the Seventh Schedule of the Constitution, listing the separate and concurrent jurisdictions of the Union and the States, does not establish any exclusive or pre-emptive claim of one list over the other on the national pool of human, material or financial resources. Criteria of equity or efficiency underlying the sharing of resources between the central and state governments cannot be applied differently to different expenditure-headings. Regardless of instrumentalities any reform of the fiscal structure should encompass the entire range of government functions—developmental as well as non-developmental.

Proposals for changes in the respective responsibilities of the centre and the states in regard to general administration, police, law and justice have been made earlier. It is necessary to review here only the economic and developmental functions, in the administration of which serious conflicts between the Union and the States exist.

Division of Developmental Responsibilities

Given the national commitment to economic and social development through planning, governments at both the centre and the states will continue to have heavy planning responsibilities. Some division of these responsibilities between the governments already exists. But this has to be stream-lined and rationalised according to clear principles to avoid ugly and socially disruptive controversies.

What in essence are the principles that should govern such classifications? First and foremost, all these sectors or programmes for which detailed local knowledge is critical for successful planning have obviously to be decentralised to the maximum extent possible. Thus agriculture and allied activities which are both location-bound and natural resource-bound, or infrastructure and social service sectors concerned with universal necessities like health, education, water supply, sanitation and so forth, naturally lie within the jurisdiction of state and local governments. And it is necessary to ensure that the central government does not get involved directly in these sectors.

Secondly there are schemes or programmes where size and geographical incidence should guide the division of responsibilities. On sectors like irrigation, mining energy, transport and higher education, there cannot be any exclusive claim of either the States or the Centre. Manifestly, large-scale projects of inter-state or national importance should be the responsibility of the centre, and the others of the state. In some of these fields, there is, in fact, a case for greater rather than less centralisation. Thus the planning and management of major irrigation schemes (with cultivable command area exceeding, say, 10,000 hectares), major power generation schemes (with capacity exceeding 250 mw) and major universities and research institutions can be centralised with advantage. However, the decision in such cases must be that of a truly objective planning body, and subject to the approval of a truly effective National Development Council and not left solely to the Central Government.

Thirdly, there is the manufacturing sector the planning of which has to be located at every level

because of the great diversity of activities involved. While proximity to raw-materials or markets may influence the location of some industries, many branches of manufacturing are footloose. They are not tied to locational factors; and for many of them, there will be a variety of viable technologies and scales of operation. Manufacturing possibilities have therefore to be explored and appraised all the time at every level. The location of each activity has to be decided on the basis of comparative social advantage of different locations and sizes, and responsibility for planning distributed accordingly among different levels of governments.

Finally, there are sectors or activities which have to be planned and administered for the country as a whole, and the responsibility for planning in these areas has necessarily to vest with the centre. Railways, major parts, national high-ways, tele-communications, oil exploration and production etc. belong to this category, besides the large irrigation projects and the like mentioned earlier.

Admittedly, there will be borderline cases, the responsibility for which has to be specifically decided by a federal body. But there is little doubt that over large areas, central control or sponsoring of plan schemes is neither necessary nor advantageous. With the increasing importance of anti-poverty and employment generation programmes in national development strategy, the share of states in total development spending must increase. And within each state, share of rural development investment allocable by district and block level bodies must also increase. It is totally irrational for anti-poverty schemes to be centrally sponsored. The role of the centre in rural development (including industrial development) should be restricted to providing block funds and laying down some very broad guidelines. Within these parameters, and subject to the constraints of available funds, states and local bodies should be free to decide the allocation of resources among the different activities as also the formulation and execution of projects.

A dynamic federalism of this calibre which permits greater financial autonomy to the states has to be established, ensuring greater financial autonomy to the States has to be established, ensuring greater correspondence between the obligations to spend and the powers to collect taxes or borrow. This balance has been badly upset by the centre and it is necessary to restore it.

Measures which are necessary for the purpose include redefinition of the powers and scope of the Finance Commission, the Planning Commission and the National Development Council, as well as a more rational system of savings and credit allocation through commercial banks and other financial institutions.

The Finance Commission

Financial transfers from the Centre to the States in the form of tax shares, grants and loans are provided for in Articles 268, 269, 270, 272, 273, 275, 282 and 923; and Article 280 provides for the constitution in every fifth year of Finance Commission to review and make recommendations of these. Eighth such Commissions have so far given their award, and despite the effort of some of the recent finance Commissions to redress the balance, the distribution of tax powers as well as the actual sharing of tax and other government receipts it continues to be heavily tilted in favour of the Centre.

Compared to the Central Government, the tax jurisdiction of States is limited mostly to inelastic sources like land revenue, lands and buildings and motor vehicles. Even an item like sales tax has become somewhat inelastic by the manner in which the Centre has weilded excise duties for resource mobilisation. Similarly, the Centre's export policy has impinged adversely on sales tax yields. As against this, surcharges on income taxes, substitution of excise duties by higher prices for products of public enterprises, etc., have diverted a larger proportion of divisible revenues to the Central budget. It is high time that these imbalances are corrected, and a more viable relationship between the budgetary responsibilities and access to tax resources is established.

Free the Finance Commission from Shackles

While the Constitution does not specifically envisage 100 per cent distribution to the States of revenue derived by the Centre from a particular tax-source, it obtains from prescribing any lower percentage. This percentage has to be determined by the President/Parliament after considering the recommendation of the Finance Commission. The Finance Commission has the power to review and recommend changes in the division of specific tax proceeds between the Centre and the States as a whole, as also the inter-state allocation, subject to no constraints whatsoever in as much as it is laid down under Article 280 (4) that the Finance Commission 'shall determine their procedure'. The Constitution does not lay down any guidelines for the Finance Commission or the President/Parliament to follow. The Constitution does not empower the President/Parliament to restrict the Finance Commission's freedom in any manner direct or indirect. The provision in the Constitution which envisages discretionary grants by the Centre for any public purpose cannot be taken to reduce in any way the importance of either the grants-in-aid of revenues or the Finance Commission's powers for developing additional Central funds to the States in need of assistance.

Inspite of all this, successive Finance Commissions have been constrained by the guidelines included in the Presidential Orders appointing them. The terms of reference have become more numerous and more specific from one Commission to another. For the Eighth Commission, the Presidential Order included almost all the terms of reference of the Seventh Finance Commission; and over and above that it asked the Commission to examine the scope for raising revenue from taxes and duties mentioned in Article 269 of the Constitution, but not levied at present and the scope for enhancing revenue from the duties mentioned in Article 268. By laying down certain specific guidelines in the Presidential Order, a continuing attempt has thus been made in the past several years to give a certain direction to the thinking and scope of successive Finance Commissions. But under the provisions of the Constitution, there is no ligation on the part of Centre to issue such specific guidelines.

It may be argued that the Central Government would be well within their rights to request the Finance Commissions to look into any financial problems, which in their view, is a matter of importance. But being an interested party themselves, should the Central Government put forward, as part of the terms of reference, suggestions or guidelines as to how the Commission should approach the r work and what major consideration they should take into account in determining the resource transfers ? It would clearly be appropriate for the Central Government to submit their views and suggestions in a separate memorandum to the Finance Commission, as is now done by the States. If this is done, it would enable the Finance Commissions to carry out their task objectively without any pre-determined framework.

Statutory Transfers

There has developed excessive centralisation in the matter of devolution of resources, despite the recommendations of the Seventh and Eighth Finance Commissions which have facilitated larger resource transfers to the State. A variety of plan and non-plan transfers which are discretionary constitute a source of irritation in so far as some transfers take place irrespective of the record of financial management, development programmes and the tax effort.

Statutory transfers cover both the transfers through Divisible Pool Mechanism as well as the revenue gap grants under Article 275 of the Constitution. In deciding these transfers, the Finance Commissions have generally followed a gap-filling approach although the Eighth Finance Commission has tried to vary this to some extent. In the process, the Commission's dispensations have often led to severe penalising of States which have raised more resources by additional taxation and otherwise, as well as by a very judicious management of their resources. In contrast, wind-fall gains are conferred on States that have grossly mismanaged their finances and have failed in their tax effort. This is highly inequitous and it is important even within the area of statutory transfers, the amount transferred through the automatic mechanism of the Divisible Pool should increase in conformity with the functions and responsibilities of the States. Adjustments necessary to achieve this purpose are indicated below.

Divisible Pool : Need for its Enlargement

At present the Divisible Pool from which tax resources are transferred to the States comprises of the following :

(1) Tax on income other than corporation tax.
(2) Estate duty.
(3) Union excise.
(4) Additional excise.
(5) Tax on goods and passengers.
(6) Agricultural wealth tax.

Corporation tax which was previously included in the Divisible Pool was left out by an amendment to the Finance Act in 1959 by which income tax paid by the companies was excluded from sharing with the States. The Centre has also imposed surcharges on income-tax, the proceeds of which are kept out of the Divisible Pool. States have regularly represented to the various Finance Commissions that these measures have deprived them access to expanding sources of revenue to which they had a constitutional entitlement. The proceeds of the corporation tax which are kept exclusively by the Centre were about Rs. 2,364 crores in 1983-84 as compared to the yield from income tax of about Rs. 1,670 crores. Together with customs duties whose proceeds were about Rs. 5,879 crores in 1983-84, altogether Rs. 8,243 crores are kept out of the Divisible Pool as a result of these reservations. Moreover, in 1983-84, out of the total Divisible Pool Rs. 10,196 crores, Rs. 4,793 crores were transferred to the States. Thus, the States' share in the Divisible Pool came to only 47 percent of the total amount of the Divisible Pool, as against 53 percent for the Centre. Compared to the total revenue of all the States, what comes to them from the Divisible Pool forms only 17 percent. There is therefore every justification for enlarging the Divisible Pool by at least including the corporation tax in it. Out of such an enlarged Divisible Pool, 75 percent of the proceeds should be distributed among the States. With the proceeds of customs duties accruing in its entirety to the Centre, such a scheme would amount to Centre sharing 50 percent of its total revenues with the States by way of devolution of tax revenues. Karnataka Government consider that such a resource transfer is a more equitable one, in the present context of the need for a more balanced allocation among the different States.

Giving Revenue Gap Grants out of Excise Duties un-constitutional

According to the Constitution the deficit of the States after devolution should be made up by the grant-in-aid under Article 275. The Eighth Finance Commission has proposed a new method, viz. utilising 5 per cent of the excise duty revenues for giving grants to make up such deficits. The share of excise duties to be transferred to the States is assumed to have been nationally raised from 40 percent to 45 percent. This is an eye-wash in so far as States are made to feel that there is an increase in the percentage share, but in reality the share has remained at 48 percent as before, because the national 5 percent is intended only for distribution to deficit States. If the deficit States had been given grants out of the Centre's share of revenues, the increase in the States' share of excise duties would have accrued to all the States. The new principle amounts to an earmarking of excise duties for meeting the States' deficits which is unwarranted and un-constitutional and has hurt the States which have managed to have a surplus. The Union Government should not try to find funds for giving Article 275 grants out of the resources which would otherwise accrue to all the States.

Fiscal Efficiency

Under the present system, fiscal efficiency on the part of any State has become a self-hurting process. Economies in expenditure, better implementation resulting in larger resources flows with the minimum of investment, and mopping up of incremental incomes for development purposes have all implied that such States as have acted on these lines lose the benefit of revenue gap grants. States which

have swept aside these considerations are rewarded with revenue gap grants; thus fiscal in efficiency is rewarded whereas fiscal efficiency is severely penalised.

The Finance Commissions have so far not attempted even an approximate assessment of the fiscal potential of each State on the basis of certain relevant parameters and evaluates the performance of the States against the potential so determined. In the absence of such an effort, no scope exists for introducing fiscal efficiency as an important criterion for resource transfers to the States.

It is true that the distribution between plan and non-plan expenditures is somewhat an artificial one; but it does provide a fiscal basis for focussing attention on the development programmes for which resources will have to be harnessed. A suggestion is often made that the Finance Commission itself may function as a single Agency for deciding on the total transfers from the Centre to the States covering both plan and the non-plan expenditures. However such a body could well become administratively too unweildy; and it may not be able to combine efficiently the multi-sectoral perspective necessary for investment decisions with the responsibilities of determining tax devolutions and statutory grants to States. Further, despite all its other shortcomings, the Planning Commission provides a flexible mechanism for heads of State Governments to have a direct and comprehensive dialogue with the Centre on resources, programmes and policies which it is important not only to preserve but enlarge. It is therefore helpful to continue with the present system of quinquennial Finance Commission, and continuing Planning Commission—but with certain changes in its character and functions which we have suggested in a subsequent paragraph.

In defining the responsibilities of the Finance Commissions and the Planning Commission, a plausible line of demarcation is to take all items of capital formation on the plan side, and leave the responsibility for financing recurrent expenditures within the ambit of the Finance Commission. This would help restrain governments from undertaking capital formation outside the plan; and it would provide a more rational basis for classification of Government expenditures both at the Centre and in the States.

National Expenditure Commission

A corollary to this approach would be the need to apply uniform standards of assessment to the recurrent expenditures of both Central and State Governments, with a view to deriving the "savings" out of revenues for financing development outlays. Even the Finance Commission, in its present form, is not adequately equipped to make a thorough review of Central expenditures. As has already been mentioned, Central Government spending on States' items like maintenance of law and order, agriculture, education, health, etc., has continued to grow from year to year. A decision of the National Development Council that expenditure on Centrally sponsored schemes should not amount to more than 1/6th of Central assistance given to the States has been observed more in the breach. Notwithstanding the fact that at the time of the formulation of the Sixth Plan, nearly Rs. 2,000 crores worth of Central schemes were dropped and transferred to the States, within the next four years the expenditures of the Centre on Centrally sponsored schemes has increased by two to three times. The amount now spent on such schemes is even greater than the total amount of the Central assistance given to the States plans. For example, during 1978-79, Centrally sponsored and Central sector schemes in Karnataka amounted to Rs. 40 crores as against Rs. 88 crores given as Central assistance. In 1983-84, Centrally sponsored and Central sector schemes rose to Rs. 120 crores as against Central assistance for the plan of about Rs. 99 crores given to the State under the Gadgil formula.

This is only one component of the total Central expenditures. In other areas like defence, there is hardly any non-departmental scrutiny for ensuring that expenditures are cost-effective. It is high time that an objective assessment of the Central expenditures is made, for obtaining optimal results. Karnataka Government therefore suggest the setting up of a National Expenditure Commission to go into the expenditure of the Centre and State Governments thoroughly and rationalise the basis for assessment of revenue surpluses for the guidance of future Finance Commissions. The National Expenditure Commission recommended there would be an ad-hoc and not a standing Commission.

Market Borrowings

Market borrowings of the States play an important role in financing development programmes. In recent years, inadequacy of States' own resources and the limited Central assistance available for State plans on the basis of the Gadgil formula have continued to increase their need for such borrowed funds.

At present decisions on market borrowings of States are not based on any rational principles. The allocation between the Centre and the States is also highly arbitrary and is disproportionately tilted in favour of the Centre (4:1). This apart, States which have large revenue surpluses or which have received more of institutional finance also happen to get a larger share of market borrowings, while relatively small allocations have been made to the States having deficits or marginal surpluses and smaller loan assistance from other sources. There is thus no equity in the distribution of market borrowings, which should normally serve as a balancing factor in the State Finances.

It is therefore necessary that market borrowings are allocated between the Centre and the States and among the States on an equitable basis. Karnataka Government would suggest a 50:50 sharing of the "bond" market between the Centre and States and the following criteria for inter-state allocation.

Criteria	Weightage (per cent)
1. Debt Management	20
2. Tax effort	20
3. Drought affected population	20
4. Per capita Central Plan assistance	15
5. Availability of institutional finance	15
6. Budgetary position of the States	10
	100

National Debt Commission

The issue of indebtedness of the States to the Centre has received very casual treatment at the hands of the different Finance Commissions. Under the existing pattern of Central assistance for the State Plans, 70 per cent is given as loan and 30 per cent as grant excepting for hill areas like Assam, Jammu & Kashmir, Nagaland etc., for whom a more liberal pattern of 90 per cent grant and 10 per cent loan is adopted. For the hilly areas of Uttar Pradesh, Tamilnadu and West Bengal, the assistance has been in the shape of 50 per cent grant and 50 per cent loan.

This proportion of 70 percent loan and 30 per cent grant has led to States being in a perpetual state of indebtedness to the Centre. For example, in the case of Karnataka, during the Fifth Plan period, the State received Central loans to the extent of Rs. 5,173 crores whereas the State repaid to the Centre by way of principal and interest Rs. 5,260 crores. Again during the 4 years of the Sixth Plan (1980-84) the State repaid by way of principal and interest Rs. 13,589 crores whereas it received Central loans amounting to Rs. 12,572 crores. Thus the State has repaid almost Rs. 1,000 crores more than it has received during the 4 years of the Sixth Plan alone. This is probably true of many other States and it is not surprising that the States' indebtendness has been increasing from plan to plan because of the faulty composition of the grant and loan components.

Attempts have been made in the past to tackle this problem of mounting indebtedness by rescheduling debt or providing some debt relief. This however can only be palliative and not a solution. A more radical approach of scaling down past debt and laying down the guidelines for inter-governmental lending is long overdue. Given the fact that the Centre's resources, like those of the States, are derived from a common national pool, there is no compelling reason why the loan component in Central assistance should be as high as 70 per cent. Only that element dependent on or derived from the Centre's borrowed funds, or Central assistance applied to demonstrably remunerative commercial purposes could logically be treated as loans. When Central assistance is used for development schemes in the area of social services, it is unrealistic to expect such outlays to be self-liquidating or suitable for loan financial on commercial terms. Karnataka Government therefore feel that the present loan/grant component should be radically changed. Of the entire plan assistance, only such portion as is given to the States out of funds borrowed on the domestic or foreign market by the Centre should be treated as a loan. Such rationalisation alone can enable the States to get out of their "debt trap" and breathe a fresh air of financial autonomy.

Even the debt position of Government of India is alarming, in so far as its total debt now forms 41 percent of the national income. Its effects on inflation, interest structure and income distribution have not been analysed objectively so far. It is therefore imperative that an expert body examines the full implications of the national debt as well as the indebtedness of the States to the Centre.

Karnataka Government suggest the setting up of a National Debt Commission to go into the entire question of the debt of Central and State Governments. This Commission should, in the first instance, make recommendations for reducing the existing debt burden of the States; and secondly, to lay down the criteria for future policies for Governments' market borrowing and for inter Government lending.

Some Suggestions on Debt Policy

Without seeking to cover this difficult area fully or in detail, Karnataka Government would suggest the following desiderata :

(a) While the actual amounts of market borrowing by each of the Governments have to be worked out (by the Planning Commission and RBI) on the basis of the budgetary and monetary conditions in that year, the general principles to be observed in regard to the relative shares of the Central and State Governments in market borrowing, interest differentials, sequence of entry into the market etc., should be laid down.

(b) The National Debt Commission should also work out, in consultation with the Planning Commission and the Reserve Bank of India, the conventions that should be observed by the Central and the State Governments when borrowing against dated securities from banks and other financial intermediaries.

(c) The National Debt Commission should further lay down, in consultation with the Planning Commission, the types of lending by the Central Government to State Government for development purposes. In particular, it should define purposes for which Central Government loans to State should be strictly on market-related terms; and purposes in respect of which loans on "soft terms" would be justified. Expenditure on fixed capital assets undertaken by the State Governments for education, health, environmental protection, community welfare and security etc. are some of the purposes which merit "soft lending". How and in what measure the lending terms are to be softened are matters for detailed work out from year to year, in the context of prevailing resource position, urgency of need, interest rates etc.

(d) Government sector borrowing abroad should continue to be undertaken by the Central Government. However, every effort should be made to pass on the benefits of soft-loans fully to State Governments, and to minimise the costs of Inter-mediation in respect of other loans.

Like the National Expenditure Commission, the National Debt Commission is envisaged as a "one shot" operation, rather than a continuing body. Both these Commissions will exist only so long as it takes them to lay down the principles guidelines for other bodies like the Finance Commission and the Planning Commission.

National Development Council

While questions relating to the rescheduling or reduction of the existing debt owed by States to the Centre lie properly within the purview of the National Debt Commission, matters relating to the allocation

of the annual "capital resources"—that is to say, loans and all other receipts of Central and State Governments on "Capital and Public Deposit Account" net of inter-governmental transfers-cannot be assigned to it or to the finance Commission. This task is a continuing one and belongs more properly to the National Development Council aided by the Planning Commission and such other bodies as it may deem fit. The rest of this note deal with this aspect of financial arrangements.

The NDC should be in fact as in name, the highest authority deciding on all matters of policy regarding mobilisation of resources for development and the uses to which these resources should be put.

By its very natures, the NDC will be a large body. However, as of now, it has become totally unwieldy and it is necessary prune it and streamline its *modus operandi*.

Membership of the NDC should be confined to the Prime Minister, the Finance Minister and the Planning Minister at the Centre; the Chief Minister and the Planning Minister of each State. At the official level, those in attendence should include, besides the professional members of the Planning Commission, the Governor of the Reserve Bank, and the Chairman of NABARD and IDBI; the Cabinet Secretary, the Planning Secretary and Economic Secretary at the Centre, and the Chief Secretaries of States. With such a reduced NDC, it should be possible to meet at least twice a year—once before the Central and State annual plans are formulated, and again in September or so when the prospects regarding agriculture, electric power and foreign aid for the year are clearer. It could meet more often, if the need arises.

The NDC cannot obviously discuss and decide on the details of policy or resource allocation. This should be entrusted to a limited number of Standing Committees of the NDC, which should meet every quarter to review progress and make recommendations to the main body of the NDC at each of its sessions. Precisely what Standing Committees should be set up, and for how long, are matters for decision.

These Standing Committees, as well as the main NDC, should be serviced by the Planning Commission. For this purpose it will be necessary to reconstitute the Planning Commission to enable it to function independently of the Central Government. Its functions should also be defined more precisely. While the Prime Minister and the Planning Minister at the Centre should continue to be the Chairman and the Deputy Chairman respectively, the "fully" Commission should have as its member four Chief Ministers elected on a Zonal basis, the Central Finance Minister and not more than five full time "Professional" members appointed by the NDC.

The Planning Commission should have the responsibility of preparing the National Development Plan, specifying the objectives and strategy of development for medium and long-tems plans; national policies for resource mobilization; and broad pattern of investment allocations; the type and extent of institutional change required for the above, etc. in other words, prepare the broad "national plan" within which the shorter period operational plans of both the Central and State Governments ought to be formulated and implemented.

The Planning Commission should have monitoring responsibilities in respect of achievements of plan objectives (as approved by the NDC). But it should have no executive responsibility in respect of either the Central or State plans.

Reconstitution of the Planning Commission will imply that separate boards or authorities should be set up both at the Centre and the States to formulate the constituent plans for each year as well as for the national plan period (five years). It should be the responsibility of these agencies to co-ordinate the activities of functional departments within the corresponding government, and to liaise with the (National) Planning Commission.

In order that the Planning Commission should be formally as well as factually independent of the Central Government, its administrative budget should be shared equally by the Centre and the States as a whole. The share of each State should on the basis of an agreed formula, subject to review by the NDC at the beginning of each plan period. The tachnical staff for the commission should be appointed by the Commission itself, under such conditions and rules at it may decide.

National Credit Conucil

Inasmuch as the NDC will be concerned with national objectives for development, it has to deal with policy and instruments for planned allocation of both 'public' and 'Private' investment. This requires better arrangements than at present for allocation of saving and investment notonly through government budgets but through the financial institutions as well.

For this purpose, arrangements have to be made for solving and implementing nationally-oriented policies, satisfactory to both the Centre and the States. There is at present considerable dissatisfaction among the States in regard to their access to private saving through financial intermediaries. Besides borrowing from the Central Government, States and State agencies have also to borrow from the bond market; and they have to provide for an adequate supply of institutional credit for agriculture, industry and other activities in their States.

Formally, the responsibility for laying down general guidelines in these respects vests with the Reserve Bank of India and the apex banks for agriculture and industry, viz., NABARD and IDBI. These are statutory authorities and are expected to operate autonomously and with complete objectivity subject only to the overriding objectives of national policies. But in reality, these organisations are totally under the control of the Central Government and the States interests are not being properly safe-guarded in such matters as market borrowings, loans and advances to public sector institutions and relative share in total credit.

Currency and banking have admittedly to be on the Union list and policy in this regard cannot be formulated at anything but the national level. But in the formulation of this policy, it is vital

that the regional and State Government's requirements are properly taken into account. Without participation by State Government in decision-making in these areas, regional distribution of these resources will continue to be skewed as at present. The proportion of direct borrowing on the market by States to total public borrowing will continue to be small; and taking into account the increasing resource by the Central Government to "deficit-financing", this inquitable situation will be perpetuated.

To deal satisfactorily with these problems of institutional finance at the same time as the national objectives of optimum saving and optional resources allocation are secured it is necessary to establish under the aegis of the National Development Council, a National Credit Council consisting of representatives of Central and State Governments at ministerial level, the Governor of the Reserve Bank of India, the Chairman of NABARD, IDBI, Export-Import Bank, and the LIC. The Union Finance Minister and the Governor of the Reserve Bank of India should be, respectively, Chairman and Deputy Chairman of the NCC, with either finance or Planning Ministers from States nominated on a zonal basis by the NDC as other ministerial members. The secreteriat service for this body should be provided by the RBI, with such assistance from the Planning Commission's technical staff as may be mutually agreed upon.

It should be the responsibility of the NCC to consider all questions of institutional finance both short-term and long-term. It should meet every quarter, for review of inflation, development finance, banking and credit trends, on the capital market etc., and decide on (a) the short-period adjustments within the framework of national policy as approved by the NCC and (b) changes in policy to be submitted to the NDC, Central or State Governments as may be appropriate. Like the Planning Commission, the NCC should also report regularly to NDC.

All operational questions of banks and other financial institutions should normally be left to the Reserve Bank of India and the other apex institutions, and both the NCC and the governments should refrain from dealing directly from the day-to-day management of commercial and development banking institutions. It is not necessary that State Governments are represented on the boards of directors of individual banks. (Even the Central Government nominees on the board of nationalised banks should avoid interfering unduly with the banks' management).

However, it is necessary that the "Local Boards" of the RBI, IDBI and NABARD (and of the State Bank of India) which now exist only formally should be assigned the specific role of truly conveying and problems and needs of each State covered by them to the Central Board and the top management of these institutions. For this purpose, senior officers of State Governments—such as Commissioners for Institutional Finance should be made members of these Local Boards, whose meetings should be presided over by Deputy Governors of RBI, or their equivalents in other apex institutions. Organisational charges of this type are urgently needed also to ensure that working relations between bank staff and State Government functionaries at all levels are mutually more accommodating and productive than are at present.

Decentralised Planning

Although "Economic and Social Planning" is on entry in the concurrent list of the Seventh Schedule, in practice, the degree of consultation necessary between the Centre and the States in order to make planning a joint endeavour has not been forthcoming. We have therefore made our suggestions in the previous paragraphs for making the National Development Council as a forum for discussion and debate on the complexities of National Planning as well as of Decentralised Planning. We have also offered our views on the restructuring of the Planning Commission to facilitate both effective consultations between the State Governments and the Planning Commission and also the decentralisation process in the sense of planning from below.

If decentralised planning is to take place, it is surely unnecessary for the Planning Commission to scrutinise minute details of all the schemes proposed by the State Government, although national priorities must necessarily be incorporated into State plans. Such national priorities should emerge as a consensus between the Union and the State Governments at the National Development Council. The Planning Commission's scrutiny of State Plans should consequently be confined to only a few sectors such as major irrigation, large and medium industry, power and transport. We similarly view with great apprehension the extent to which the total resource transfers under Centrally Sponsored and Central Sector Schemes and burgeoned in recent years. Currently, for Karnataka, the Central resource transfer under such schemes equals the Central resource transfers for funding the State Plan. We strongly urge that Central assistance under Centrally Sponsored and Central Sector Schemes should be limited to 1/6th of the quantum of the aggregate Central assistance for the State plans. Such schemes should conform to certain desirable guidelines like constituting Inter-State Schemes and being significant from a national point of view.

The finalisation of the State Plan outlays should be such as to permit the States to make lumpsum allocations to the districts to facilitate District and Block Development Planning. This would be possible only when the approval of outlays by the Planning Commission is restricted to a few major sectors of development as mentioned earlier and leave the rest to the States to determine the allocations to the districts on the basis of criteria similar to that of Gadgil formula with such modifications as may be necessary for achieving reduction in regional imbalances within the State.

We believe strongly that decentralised planning is crucial to the success and viability of our planning system. Indeed such decentralised planning will have to extend much below the State level. Just as the Union and the States have to work in concert and harmony cutting across Party and ideological differences and reflecting the yearings and aspirations of the people at large, the same kind of consultation and sharing of power is called for at levels below

the States. The Karnataka Government has itself taken a decisive step in this direction by passing the Zilla Parishad Bill for implementing democratic decentralisation upto the Mandal level. Its implementation is awaiting the consent of the President for the past 6 months.

It needs to be stated that unless decentralisation at lower tires is accepted nationally, only a few States adopting this path will not induce decentralisation. Furthermore in order for this to become possible, there is need to remove some serious anomalies in the present situation. First, elections at Zilla Parishad and lower levels ought to be made mandatory as at Union and States levels and should be conducted by the Election Commission. Second, representation of Local Bodies in State Lagislatures should be made mandatory. Third, Government at District and lower levels should not be viewed as arms of the administration at higher levels but as elected bodies served by administrative services that are wholly responsible to the elected bodies.

Unity in Rich Diversity

In short, the overarching concern of our memoradum is to develop the Union-States relations in such a way as to impart fresh vitality and dynamism to democratic federalism and serve the people, resolve conflicts, arrest confrontationist postures and produce a unity that is rooted in the rich diversity of our society. The broader perspectives call for closing the growing gap between our institutional set-up and the democratic ideology it is supposed to serve. To achieve this, democratic structures have to be respected and be vested with autonomy which carries withit a balanced distribtion of responsibilities, powers and finances.

All the instruments like the legislative procedures, the planning process, political and financial decentralisation, the media, the judiciary, administrative services, the police, the Finance Commission, the Planning Commission, National Development Council, and other All India bodies, have to be geared up with restructuring wherever needed to meet the requirements of the new sociopolitical economic order, consistent with equity harmony, regional balance and dignity of the different States and the people inhabiting them. The Union and the States may have to subject themselves to equal degree of discipline, understanding, unity and sacrifice enthused by a deep sense of the much needed transformation and commitment to resolve issues through democratic means and institutions specially constituted and strengthened for the purpose.

Karnataka

WHITE PAPER ON THE OFFICE OF THE GOVERNOR

Introduction

This House will recall that on 17th August I had promised to prove to the hilt the remarks I had made on Governors of States in my inaugural speech to the Seminar on Centre-State relations in Bangalore on 5th August. I am fulfilling that promise today.

Let me, to begin with, quote my remarks in their entirety, so that the House will appreciate their full import and meaning. I had said "The ultimate objective being the same, the Union and the States must function on mutually complementary and co-operative basis. They are and they should feel that they are equal partners in the great adventure of national reconstruction and development. This naturally requires the recognition of equal importance of both the functions, mutual respect and honour. A super power attitude and show of superiority on the part of the Union, which is the natural consequence of the concentration of powers and resources, has been responsible for generating a feeling of frustration and sense of injustice and discrimination and helplessness on the part of the States which in turn produces the dangerous forces of regionalism. The concentration of power has also distorted the scheme of the Constitution and led to the devaluation of important institutions like the Planning Commission and the Reserve Bank which have become the extended departments of the Executive. Even the Governor has become a glorified servant of the Union. An omnipotent and omnipresent Union that the present Central Government has growing into and withering States are the very negation of the democratic polity".

In thus placing the remark on the Governors in its proper context my intention is not to blunt its sharpness but rather to emphasise the gravity of my criticism in the light of the damage which has been done to the norms of the democracy as well as to the federal principle. My remark had been made after the fullest deliberation.

I was glad to note that the Seminar's conclusions announced in a press release on 7th August were in the same vein. It said, I quote, "An institution of crucial importance, on whose impartiality and integrity the autonomy of the States and the soundness of Union-State relations depend, is the Governor of the State. It is unfortunate that on more than one occasion the Governor has by and large been made to function as an agent of the Union Government. This position is totally violative of the Constitution. In Raghukul Tilak's case, the Supreme Court has said quite categorically that the Governor is 'not amenable to the directions of the Government of India, nor is he accountable to them for the manner in which he carries out his functions and duties. He is an independent constitutional office which is not subject to the control of the Government of India'.

"But on far too many occasions, the actual practice has been contrary to this constitutional position. The Governor's power to appoint the Chief Minister and dissolve the State Legislature has on several occasions been used to flout the expressed will of the people. It is therefore, felt that the Constitution should be amended to ensure the independence of the office of the Governor".

Coming as these conclusions did form a gathering of distinguished people from all parts of the country which included eminent academicians, jurists, journalists, experienced administrators and persons who have distinguishad themselves in various fields, and from which people connected with active politics had been excluded, I had every reason to feel fortified in my remarks.

The issues I raised at the seminar were addressed to the people of the country. As I said in the speech, it is necessary to have a national debate in which various aspects of Union-State relations are considered. Foremost among these is the position of the Governor under the Constitution and the totally different position which is his in actual practice.

I present to the House this White Paper which will describe both with full documentation. I place this document before the people of the country as a contribution to the national debate and in no spirit of confrontation. I shall wellcome opposing view points and, indeed, comments on and criticisms of the White paper itself.

But, as the White Paper itself says, our hopes rest mainly on the surest guarantee for the successful working of our democratic Constitution—an informed vigilant people of our country.

BANGALORE, RAMAKRISHNA HEGDE

September 2, 1983 *Chief Minister of Karnataka.*

Constitutional Position and Political Perversion

There is, perhaps, no other provision of the Constitution of India which received closer attention or a more detailed scrutiny in the Constituent Assembly than the ones which establish the office of the Governor for each State of the Union of India and define the manner of this appointment and his functions and duties. These provisions received particular attention from the great leaders of the freedom movement, Shri Jawaharlal Nehru and Sardar Vallabhbhai Patel, and were the subject of detailed exposition in the Assembly by the Chairman of its Drafting Committee, Dr. B. R. Ambedkar, and his colleagues, Sir Alladi Krishnaswami Ayyar, Shri T.T. Krishnamachari and Shri K.M. Munshi. They were debated at every stage and underwent a radical change. Yet, it is highly significant that the central concept was never seriously in issue. The Governors would be the Constitutional heads of the States in a federation in which both the Union and the States would have a parliamentary form of government.

The office of the Governor is of crucial importance not only for the proper functioning of the federation but also for the success of democratic government in the country.

It is, therefore, a matter of the greatest concern that these very provisions of the Constitution should have been consistently, systematically abused and perverted and the Governor reduced to the rank of "a glorified servant of the Union" in order to serve and promote the interests of the ruling party at the Centre. The result is not only a gross distortion of the federal principle but also a negation of democracy. The issue is not one of the State versus the Union but of the law of the Constitution versus political malpractice.

This White Paper documents, both, the constitutional position of the Governor as it emerged from the labours of the Constitution-makers in Part I and the political perversion of the high office over the years in Part II. It is published in the firm belief that an informed public opinion is the best guarantee for the redress of wrong and the sure foundation of which our democratic Constitution rests.

PART I

The Constituent Assembly met for the first time on December 9, 1946 in conditions of great upheaval. On April 30, 1947, the Assembly adopted a Resolution setting up simultaneously two Committees. One was asked to consider and report on "the main principles of the Union Constitution." Its Chairman was Shri Jawaharlal Nehru. The other was asked to consider and report on "the main principles of a model Provincial Constitution." Its Chairman was Sardar Patel.

The Provincial Constitution Committee first met on May 5, 1947 and adjourned. It met again on June 6, 1947 three days after the Partition Plan had been announced. The very first thing which the Committee discussed was "the question of the functions of the Governor of a Province and the mode of his appointment." (For the minutes of the meeting see B. Shiva Rao, The Framing of India's Constitution. The Indian Institute of Public Administration, New Delhi, 1967; Select Documents; Volume II, page 646).

Opinion was divided between those who suggested that the Governor should, as in the United States of America, wield executive authority and be elected directly by the people and others who preferred that he should be "a Constitutional Head acting on the advice of a Prime Minister" who would be responsible to the legislature and that the Governor should be "appointed by a system of indirect election."

Likewise, some members suggested that "the Central Government should have a wide range of authority over the Provinces and that the Governor should function as a liaison between the Central Government and the Provincial executive and that he should be nominated by the Central Government. In the discussion that ensured on these various suggestions, it was felt that the primary question to be considered was whether India should be a unitary State with provinces functioning as agents and delegates of the Central authority or whether India should be a Federation of autonomous units ceding certain specific powers to the Centre. It was also considered that as this is a point of common interest to the Union Constitution as well as the Provincial Constitution Committees, it would be desirable to have a joint meeting for the purpose of discussion".

Accordingly, a joint meeting of the two Committees was held on June, 6, 1947 under the Chairmanship of the President of the Constituent Assembly, Dr. Rajendra Prasad. Both issues were clinched at this meeting. It was agreed "that the Constitution should be a federal structure with a strong Centre" and that the "Provincial executive should be of the Parliamentary Cabinet type, with such suitable modifications as may be considered necessary in the light of Indian conditions".

The meeting agreed that "there should be a Governor at the head of every Province" and, also, that,

"the Governor should be appointed by the Province, and not by the Central Government". The mode of appointment agreed was "indirect election on the basis of adult franchise through a special electoral college."

On June 8, 1947, Sardar Patel reported the conclusions to the Provincial Constitution Committee which preceded to discuss the Memorandum on the Principles of a Model Provincial Constitution, dated May 30, 1947, prepared by the Assembly's Constitutional Adviser, Sir B. N. Rau. (It envisaged the parliamentry form with the Governor elected by the Provincial Legislature, removable by impeachment and endowed with "special responsibilities.")

On June 27, 1947 Sardar Patel forwarded to the President of the Constituent Assembly the Report of the Provincial Constitution Committee to which was annexed a Memorandum on the Principles of a Model Provincial Constitution. (For the text see Shiva Rao's Volume II, Select Documents, page 656). The Governor was to be elected directly by the people on the basis of adult suffrage and be removable by impeachment. He was to act on the advice of the Council of Ministers except in respect of four matters: "the prevention of any grave menace to the peace and tranquillity of the Province or any part thereof"; the summoning and dissolving of the Provincial Legislature; elections; and, appointment of the members of the Provincial Public Service Commission and of the Provincial Auditor-General.

Submitting the Report to the Constituent Assembly on July 15, 1947, Sardar Patel said that both the Committees had come to "the conclusion that it would suit the conditions of this country better to adopt the parliamentary system of the Constitution the British type of Constitution with which we are familiar."

Analysing the four discretionary powers, he pointed out that elections would be the charge of a Commission appointed by the President (the Election Commission) while the appointment of members of the Public Service Commission is generally made on the recommendation of the Cabinet. Therefore, "practically the only powers left to the Provincial Governor is the power to report to the Union President when a grave emergency arises threatening menace to the peace and tranquillity of the province and the summoning and dissolving of the Provincial Legislature". (Constituent Assembly Debates; Volume IV, page 579).

The Assembly adopted the Report. In October 1947, Sir B. N. Rau prepared a Draft Constitution embodying the Assembly's decisions. The Draft was then considered and thoroughly revised by the Drafting Committee which submitted a Draft Constitution to the President of the Assembly on February 21, 1948. The Draft was published to elicit public reactions. (For texts of the two drafts vide Shiva Rao; Select Documents, Vol. III, pages 1 and 509, respectively).

A major change in the Draft was in respect of the election of the Governor. Article 131 of the Draft suggested two alternatives; one was appointment by the President from a panel of four candidates elected by the legislature and the other was direct election by the people of the Province. The reason was that some members of the Drafting Committee were of the view "that the coexistence of a Governmor elected by the people and a Prime Minister responsible to the Legislature might led to friction and consequent weakness in the adminsitration." It may be noted, however, that the Governor was under the Draft removable from office only by impeachment (Article 137). There was also a Schedule embodying an Instrument of Instructions to guide the Governor in the exercise of his duties.

To examine the Draft in the light of the comments and suggestions received, the President of the Assembly appointed a Special Committee. On April 10, 1948, this Committee recommended that Governors should be directly appointed by the President and it was "not necessary to provide a panel of candidates for such appointment." (Shiva Rao; Select Documents, Vol. IV, page 409). Shri Jayaprakash Narayan was among those who had made suggestions on the Draft and his comment on the appointment of Governors was pointed and perceptive :

"The co-existence of a Governor elected by the people and of the Chief Minister responsible to the Legislature may lead to friction. If the Governor is appointed by the President on the advice of the Federal Government out of a panel of four persons chosen by the Provincial Legislature by means of a single transferable vote, the Federal Chief Minister is likely to choose out of the panel a man of his own party even if the latter had not secured the largest number of votes. Such a situation is not likely to promote harmony in the Provincial Government and may disturb the harmony which must exist between the Federal and State Authorities."

The Drafting Committee's comment on Shri Jayaprakash Narayan's criticism is quoted below :

NOTE : The criticism that the co-existence of a Governor elected by the people and a Chief Minister responsible to the Legislature might lead to friction and consequent weakness in administration will also apply if the Governor is elected by the members of the Legislature of the State and the representatives of the State concerned in the Federal Parliament. To meet the objection to the election of a panel of candidates for appointment to the office of Governor, the special Committee recommended that the Governors should be directly appointed by the President. It has also been proposed that the Governor should act on the advice of his Minister in all matters. This would obviate the possibility of any friction between the Governor and his Ministers.

"**Drafting Committee** : That for article 131, the following be substituted : Appointment of Governor : The Governor shall be appointed by the President by warrant under his hand and seal".

This is the genesis for the provision as finally adopted by the Constituent Assembly. The Governor would be a Constitutional head of State just like the President of India and be governed by identical conventions of the parliamentary system. This was made amply clear by Dr. B. R. Ambedkar in the Constituent Assembly on December 30, 1948 :

"Under a Parliamentary system of Government, there are only two prerogatives which the King or the Head of the State may exercise. One is the appointment of the Prime Minister and the other is the

dissolution of Parliament. With regard to the Prime Minister it is not possible to avoid vesting the discretion in the President. The only other way by which we could provide for the appointment of the Prime Minister without vesting the authority or the discretion in the President, is to require that it is the House which shall in the first instance choose its leader, and then on the choice being made by a motion or a resolution, the President should proceed to appoint the Prime Minister.

Mr. Mohd. Tahir : On a point of order, how will it explain the position of the Governors and the Ministers of the State where discretionary powers have been allowed to be used by the Governors ?

The Honourable Dr. B. R. Ambedkar : "*The position of the Governor is exactly the same as the position of the President* and I think I need not over-elaborate that at the present moment because we will consider the whole position when we deal with the State Legislatures and the Governors." (emphaisis supplied throughout.) (Constituent Assembly Debates, Vol VII, p. 1158).

These provisions to which Dr. Ambedkar alluded finally came up for discussion by the Assembly on May 30, 1949. One of the members of the Drafting Committee, Sir Alladi Krishnaswamy Ayyar, explained the change in the procedure of appointment but while doing so he gave the unhappy analogy of Canada for which he was corrected by a colleague, Shri T. T. Krishnamachari. The episode is instructive.

Sir, Alladi referred to the need for averting a clash between the Governor and the Prime Minister of the Province and avoiding the expense of an unnecessary election. He said "A proper analogy has to be sought for in the Constitution of Canada where a responsible Governor obtains. In Canada, the Leiutenant-Governor of each of the provinces is appointed by the Governor-General, that is by the Governor-General on the advice of the Cabinet. There are many features of resemblance and similarity between the Canadian Constitution and our Constitution which, by some critics, has been considered to be quasi-federal. The system in the main we have accepted is the principle of responsible Government obtaining in the Dominions or in the different parts of the Commonwealth. Nowhere does the system of election of the Governor exist where the institution of responsible Government is the main feature of the Constitution."

On other aspects Sir Alladi's words are very pertinent : "In the normal working of the Constitution I have no doubt that the convention will grow up, of the Government of India consulting the provincial Cabinet, in the election of the Governor. If the choice is left to the President and his cabinet, the President may, in conceivable circumstances, with due regard to the conditions of the province, choose a person of undoubted ability and position in public life who at the same time has not been mixed up in provincial party struggle or factions. Such a person is likely to act as a friend and mediator of the Cabinet and help in the smooth working of the cabinet Government in the early stages. The central fact to be remembered is that the Governor is to be a constitutional head, a sagacious counsellor and adviser to the Ministry, one who can throw oil over troubled waters. If that is the position to be occupied by the Governor, the Governor chosen by the Government of India, presumably with the consent of the provincial Government, is likely to discharge his functions better than one who is elected on a party ticket by the province as a whole based upon universal suffrage or by the legislature on some principle of election.

"One thing I may mention. The point has been raised in these discussions, whether it is wise at all to invest so much power in the Prime Minister or in the President of the Union acting on the advice of the Prime Minister. If you can confide the appointment of the Commander-in-Chief of all the Forces, the Ambassadors in different parts of the world, the Chief Justice and the Judges of the Supreme Court and the appointment of other high offices in a Cabinet responsible to the Legislature, and theoretically in the President, I see no objection to the appointment of the Governor being left to the President of the Union who has necessarily to act on the advice of the Prime Minister and his Cabinet. A convention of consulting the provincial Cabinet might easily grow up. Such a convention, as the House is aware, has grown up in the appointment of Governors in Canada. In Australia too, though under a different constitution, a similar convention has grown up and the Governor of a State is appointed on the advice of Provincial Cabinet........

"In our Constitution we must try every method by which harmony could be secured between the Centre and the provinces. If you have a person who is not elected by province or the State but you have a person appointed by the President of the Union with the consent, I take it, of the provincial Cabinet, you will add a close link between the Centre and the provinces and clash between the Provinces and the Centre will be avoided which will other wise occasionally result".

The next day, on May 31, 1949, Shri Jawaharlal Nehru intervened in the debate : "I think it would be infinitely better if he (the Governor) was not so intimately connected with the local politics of the province, with the factions in the provinces. And, as has been stated by Mr. Munshi, would it not be better to have a more detached figure, obviously a figure that is acceptable to the province, otherwise he could not function there? He must be acceptable to the province, he must be acceptable to the Government of the province and yet he must not be known to be apart of the party machine of that province. He may be sometimes, possibly, a man from that province itself. We do not rule it out. But on the whole it probably would be desirable to have people from outside-eminent people, sometimes people who have not taken too great a part in politics. Politicians would probably like a more active domain for their activities but there may be an eminent educationist or persons eminent in other walks of life, who would naturally while co-operating fully with the Government and carrying out the policy of the Government at any rate helping in every way so that policy might be carried out, he would nevertheless represent before the

public someone slightly above the party and thereby in fact, help that Government more than if he was considered as part of the party machine. I do submit that is really a more democratic procedure than the other procedure in the sense that the latter would not make the democratic machine work smoothly". (CAD Vol. VIII, p. 455).

Shri T. T. Krishnamachari also spoke and clarified "I would like to refer to the arguments used by my respected friend, Mr. Alladi Krishnaswami Ayyar yesterday, in a very elequent speech in which he drew freely from the Canadian example, of the appointment of the Lieutenant-Governor by the Governor-General of Canada. I will ask the House to examine the whole question for themselves, and they will then realize that my honourable friend, Mr. Alladi Krishnaswami Ayyar, had no intention of using that analogy as anything more than an analogy, and he had no intention of asking this House to accept the entire scheme that obtains in Canada in regard to the appointment of the Lieutenant-Governor."

"In regard to Canada where the constitutional position as it was some time back bore some analogy to conditions in this country, there is one particular principle that is in operation on which I would like to lay some emphasis which will have no application to this country at all. It is avowed by every writer on the Canadian constitution that the whole scheme of the appointment of Lieutenant-Governors and the control that the Dominion exercises over the provinces is such that the ultimate control is in the hands of the Dominion Government. Actually under the Canadian Constitution the Cabinet of the Dominion issues instructions to the Leiutenant-Governors; in fact they have exercised their discretion in removing the Governor. Two instances are known in which the Governors have been removed. The Lietenant-Governor in a Canadian Constitution acts as an agent of the Dominion Government. I would at once disclaim all ideas, at any rate so far as I am concerned, that we in this House want the future Governor who is to be nominated by the President to be in any sense an agent of the Central Government. I would like that point to be made very clear, because such an idea finds no place in the scheme of Government we envisage for the future".

He went on to emphasise "our idea is that the Governor will be appointed in the first place on the advice of the Prime Minister, who, in turn, will consult the Chief Minister concerned, which particular person will have a veto and I think conventions have already grown in that direction and the persons so selected will be a person who will held the scales impartially as between the various factors in the politics of this State. The advantages of having a non-party man, a non-provincial man have been amply made out by the Honourable Prime Minister." (C.A.D. Vol. VIII, pp. 459-460).

The concept of the impartiality and independence of the Governor, despite his nomination by the President, could not have been more strongly emphasised by the architects of the Constitution.

It may be noted that all the three leaders who intervened in the debate recognised that the consent of the State's Chief Minister is an essential pre-requisite to the appointment of the Governor by the President. Pandit Nehru : "He must be acceptable to the Government of the Province". Sir Alladi Krishnaswamy Ayyar :"appointed by the President of the Union with the consent, I take it, of the provincial Government"; Shri T. T. Krishnamachari : "Our idea is that the Governor will be appointed in the first place on the advice of the Prime Minister, who, in turn, will consult the Chief Minister concerned, which particular person will have a veto....". It was on this basis that the proision for the appointment of the Governor by the President was adopted by the Constituent Assembly.

Replying to the debate, Dr. Ambedkar remarked "if we are going to have a Governor, who is purely ornamental, is it necessary to have such a functionary elected at so much cost and so much trouble?"

He candidly said, "From a certain point of view I cannot help saving that the proposal of the Drafting Committee, namely that it should be a qualified nomination is a better thing than simple nomination. At the same time I went to warm the House that the real issue before the House is really not nomination or election—because as I said this functionary is going to be a purely ornamental functionary; how he comes into being, whether by nomination or by some other machinery, is a purely psychological question—what would appeal most to the people—a person nominated or a person in whose nomination the Legislature has in some way participated. Beyond that it seems to me it has no consequence". (C.A.D. Vol. VIII, p. 468).

Dr. Ambedkar did not envisage the possibility of a Governor being removed arbitrarily by the President. "What Professor Shah wants is that certain grounds should be stated in the Constitution itself for the removal of the Governor. It seems to me that when you have given the general power, you also give the power to the President to remove a Governor for corruption, for bribery, for violation of the Constitution or for any other reasons which the President, no doubt, feels is legitimate ground for the removal of the Governor. It seems, therefore, quite unnecessary to burden the Constitution with all these limitations stated in express terms when it is perfectly possible for the President to act upon the very same ground under the formula that the Governor shall hold office during his pleasure". (C.A.D. Vol. VIII, p. 474).

The Draft Constitution contained an Instrument of Instructions. On October 11, 1949 the Assembly deleted the Instrument for the reasons stated by Shri T. T. Krishnamachary. "It is felt to be entirely unnecessary and superfluous to give such directions in the Constitution which really should arise out of conventions that grow up from time to time, and the President and the Governors in their respective spheres will be guided by those convention". Like Dr. Ambedkar, Shri Krishnamachari also placed the President on a par with the Governors in regard to the applicability of the

conventions. Dr. Ambedkar supplemented this explanation : "So far as our Constitution is concerned, there is no functionary created by it who can see that the instrument of instruction is carried out faithfully by the Governor. Secondly, the discretion which we are going to leave with the Governor under this Constitution is very very meagure." (C.A.D. Vol. X; pp; 114-115).

To complete the picture, it is necessary to quote the expositions of the d afts men of the Constitution on Article 356 which empowers the President to issue a proclamation assuming to himself the functions of the Government of a State and make certain other provisions, popularly known as "President's Rule" (It was Article 278 in the Draft. Dr. Ambedkar later submitted a revised text).

Pandit Hirday Nath Kunzru put a specific question to Dr. Ambedkar during the debate on August 4, 1949.

"May I ask my honourable Friend to make one point clear? Is it the purpose of articles 278 and 278-A to enable the Central Government to intervene in provincial affairs for the sake of good Government of the provinces?

The Honourable Dr. B. R. Ambedkar : No. no. The Centre is not given that authority.

Pandit Hirday Nath Kunzru : Or, only when there is such mis-Government in the province as to endanger the public peace?

The Honourable Dr. B. R. Ambedkar : Only when the Government is not carried on in consonance with the provisions laid down for the constitutional Government of the provinces. Whether there is good Government or not in the province is not for the Centre to determine. I am quite clear on the point.

Pandit Hirday Nath Kunzru : What is the meaning exactly of 'the provision of the Constitution' taken as a whole? The House is entitled to know from the honourable Member what is his idea of the meaning of the phrase "in accordance with the provisions of the Constitution,."

Dr. Ambedkar referred him to the Government of India Act, 1935 which used the expression in the notorious S-93. He, however, took care to emphasise the limitations :

> "In regard to the general debate which has taken place in which it has been suggested that these articles are liable to be abused, I may say that I do not altogether deny that there is a possibility of these articles being abused or employed for political purposes. But the objection applied to every part of the Constitution which gives power to the Centre to override the Provinces. In fact, I share the sentiments expressed by my honourable Friend Mr. Gupte yesterday that the proper thing we ought to expect is that such articles will never be called into operation and that they would remain a dead letter. If at all they are brought into operation, I hope the President, who is ondowed with these powers, will take proper precautions before actually suspending the administration of the provinces. I hope the first thing he will do would be to issue a mere warning to a province that has erred, that things were not happening in the way in which they were intended to happen in the Constitution. If that warning fails, the second thing for him to do will be to order an election allowing the people of the province to settle matters by themselves. It is only when these two remedies fail that he would resort to this article. It is only in those circumstances he would resort to this article." (C. A. D. Vol. IX; pp. 176-177).

It bears recalling that in the opinion of one of the Assembly's leading members, Pandit Thakur Das Bhargava, "the Constitutional machinery cannot be regarded ordinarily to have failed unless the dissolution powers are exercised by the Governor" (in respect of the legislature) (C.A.D. Vol. IX; p. 161).

All these provisions formed part of an entire federal scheme whose fundamentals were described by Dr. Ambedkar time and again. Moving that the Draft Constitution be taken into consideration, on November 4, 1948, he said "The Draft Constitution is a Federal Constitution in as much as it establishes what may be called a Dual Polity. This Dual Polity under the proposed Constitution will consist of the Union at the Centre and the States at the periphery each endowed with sovereign powers to be exercised in the field assigned to them respectively by the Constitution." (C.A.D. Vol. VII; p. 33).

On August 3, 1949, when the provisions for President's rule in the States came up for discussion, Dr. Ambedkar was at pains to emphasise: "I think it is agreed that our constitution, notwithstanding the many provisions which are contained in it whereby the Centre has been given powers to override the Provinces, nonetheless is a Federal Constitution and when we say that the Constitution is a Federal Constitution it means this, that the Provinces are as sovereign in their field which is left to them by the Constitution as the Centre is in the field which is assigned to them." Hence, the necessity for explicit provisions concerning Union intervention. (C.A.D. Vol. IX; p. 133).

Finally, when the Assembly had completed its deliberations, Dr. Ambedkar replied to the debate on November 25, 1949 and said "As to the relation between the Centre and the States, it is necessary to bear in mind the fundamental principle on which it rests. The basic principle of Federalism is that the Legislative and Executive authority is partitioned beween the Centre and the States, not by any law to be made by the Centre, but by the Constitution itself. This is what Constitution does. The States under our Constitution are in no way dependent upon the Centre for their legislative or executive authority. The Centre and the States are co-equal in this matter. It is difficult to see how such a Constitution can be called centralism. It may be that the Constitution assigns to the Centre too large a field for the operation of its legislative and executive authority than is to be found in any other federal Constitution. It may be that the residuary powers are given to the Centre and not to be States. But these features do not

form the essence of federalism. The chief mark of federalism, as I said, lies in the partition of the legislative and executive authority between the Centre and the Units by the Constitution. This is the principle embodied in our Constitution". (C.A.D. Vol. XI; p. 976).

The Supreme Court of India has had occasion to pronounce on the constitutional position of the Governor.

In Ram Jawaya Kapur vs. State of Punjab (1955). 2 SCR 225, A.I.R. 1955 S.C. 549, the Court said "Our Constitution, though federal in its structure, is modelled on the British Parliamentary system where the executive is deemed to have the primary responsibility for the formulation of governmental policy and its transmission into law though the condition precedent to the exercise of this responsibility is its retaining the confidence of the legislative branch of the State......In India, as in England, the executive has to act subject to the control of the legislature; but in what way is this control exercised by the legislature? Under Article 53 (1)......the executive power of the Union is vested in the President but under Article 75 there is to be a Council of Ministers with the Prime Minister at the head to aid and advise the President in the exercise of his functions. The President has thus been made a formal or constitutional head of the executive and the real executive powers are vested in the Minister of the Cabinet. The same provisions obtain in regard to the Government of States; the Governor......occupies the position of the head of the executive in the State but it is virtually the Council of Ministers in each State that carries on the executive Government."

Similar observations were made in U.N. Rao vs. Indira Gandhi (1971) Supp. S.C.R. 46, A.I.R. 1971 S.C. 1002 and in K.N. Rajagopal vs. M. Karunanidhi A.I.R. 1971 S.C. 1551.

In Samsher Singh vs. State of Punjab A.I.R. 1974 S.C. 2192 a Bench of seven Judges affirmed these pronouncements. cAfter describing how the discretionary powers of the Governor were pruned in the Constituent Assembly, Chief Justice A.M. Ray said : "Articles where the expression 'acts in his discretion' is used in relation to the powers and functions of the Governor are those which speak of special responsibilities of the Governor. These articles are 371A (1)(b), 371A(1)(d), 371A(2)(b) and 371(2)(f). There are two paragraphs in the sixth Schedule, namely 9(2) and 18(3), where the words 'in his discretion' are used in relation to certain powers of the Governor. Paragraph 9(2) is in relation to determination of amount of royalties payable by licences or lessees prospecting for, or extracting minerals, to the District Council. Paragraph 18(3) has been omitted with effect from January 21, 1972" (the provisions concerned the Governor of Nagaland).

He added : "The provisions of the Constitution which expressly require the Governor to exercise his powers in his discretion are contained in the articles to which reference has been made. To illustrate. Article 239(2) states that where a Governor is appointed as administrator of an adjoining Union Territory he shall exercise his functions as such administrator independently of his Council of Ministers. The other articles which speak of the discretion of the Governor are paragraphs 9(2) and 18(3) of the sixth Schedule and Articles 371A(1)(b), 371A(1)(d) & 371A(2)(b) & 371 A (2)(f). The discretion conferred on the Governor means that as the constitutional or formal head of the State the power is vested in him. In this connection reference may be made to Article 356 which states that the Governor can send a report to the President that a situation has arisen in which the government of the State cannot be carried on in accordance with the provisions of this Constitution. Again, Article 200 requires the Governor to reserve for consideration any Bill which in his opinion if it became law, would so derogate from the powers of the High Court as to endanger the position which the High Court is designed to fill under the Constitution.

"In making a report under Article 356 the Governor will be justified in exercising his discretion even against the aid and advice of his Council of Ministers. The reason is that the failure of the constitutional machinery may be because of the conduct of the Council of Ministers. This discretionary power is given to the Governor to enable him to report to the President who, however, must act on the advice of his Council of Ministers in all matters. In this context Article 163(2) is explicable that the decision of the Governor in his discretion shall be final and the validity shall not be called in question. The action taken by the President on such a report is a different matt... The President acts on the advice of his Council of Ministers. In all other matters where the Governor acts in his discretion he will act in harmony with his Council of Ministers. The Constitution does not aim at providing a parallel administration within the State by allowing the Governor to go against the advice of the Council of Ministers."

His conclusion was clear enough. "Our Constitution embodies generally the Parliamentary or Cabinet system of Government on the British model both for the Union and the States."

In Hargovind Pant vs. Dr. Raghukul Tilak A.I.R. 1979 S.C. 709, decided as recently as May 4, 1979 by a Constitution Bench of five Judges, the Court had to consider specifically the constitutional position of the Governor.

"It is no doubt true that the Governor is appointed by the President which means in effect and substance the Government of India, but that is only a mode of appointment and it does not make the Governor an employee or servant of the Government of India. Every person appointed by the President is not necessarily an employee of the Government of India. So also it is not material that the Governor holds office during the pleasure of the President. It is a constitutional provision for determination of the term of office of the Governor and it does not make the Government of India an employer of the Governor.

"His office is not subordinate or subservient to the Government of India. He is not amenable to the directions of the Government of India, not is he accountable to them for the manner in which he carries out his functions and duties. He is an independent constitutional office which is not subject to the

control of the Government of India. He is constitutionally the head of the State in whom is vested the executive power of the State and without whose assent there can be no legislation in exercise of the legislative power of the State."

Indeed, Shri G. S. Pathak, a noted jurist said in a speech on April 3, 1970, when he was Vice-President of India. "In the sphere in which he is bound by the advice of the Council of Ministers, for obvious reasons, he must be independent of the Centre. There may be cases where the advice of the Centre may clash with the advice of the State Council of Ministers". (quoted in Report of the Centre State Relations Inquiry Committee 1971, Government of Tamil Nadu; p. 125). In such cases the Governor must ignore the Centre's 'advice' and act on the advice of his Council of Ministers. This is the clear incontrovertible legal position.

If there is such widespread concern it is because in all significant respects the actual practice bears little relation to the constitutional position of the Governor. This is unanimously accepted by all outside the ranks of the ruling party at the Centre-by academics, publicists, public figures, jurists, administrators and people from different walks of life.

PART II

The decline began shortly after the Constitution came into force on January 26, 1950 and was serious enough a decade and a half later. Shri Sri Prakasa served as Governor for fifteen years in three States— Assam, Madras and Bombay. In his book State Governors in India published in 1966 he referred to the misconceptions about the office which were prevalent even then. "I know of one Governor who thought he could continue to be a member of the All-India Congress Committee even as Governor. I know of other Governors who used to go to their States and undertake political tours"

Fortunately we had as President no less a person Dr. Rajendra Prasad who intervened. "The Governors could not keep such restrictions on themselves, and they resigned." (Meenakshi Prakashan; pp. 68-69). There is, however, no knowing what damage they inflicted on the high office while they served.

A gross instance which he mentions is that of Shri A. P. Jain who was Governor of Kerala when Shri Lal Bahadur Shastri died in January 1966. "Though Governor and as such above party politics, he took active part in canvassing for Shrimati Indira Gandhi for the Prime Ministership as against Shri Morarjibhai Desai, the other candidate for the office. Shri Jain realised the anomaly of his position and sent in his resignation". His Conduct was the subject of severe censure in the press. It is legitimate to ask whether such a politician could have at all acted impartially while he was Governor. In Shri Jain's case the answer is provided by his own conduct in March 1965 when he dissolved the newly-elected State Assembly even before it was duly constituted by the summons to meet and without giving an opportunity to the leader of the largest single party to form a Government. It is needless to add that that was an opposition party, the Communist Party of India (Marxist).

But it is a measure of the tragedy that Shri Sri Prakasa's own conceptions of the office were in total variance with those which the framers of the Constitution consistently expressed. He wrote "A Governor's first duty is to know that he is the representative of the Centre. The Governor's second duty is to look after the interests of the State to which he is assigned" (sic). (Pages 5-6).

This is a total reversal of the constitutional position. The use of the word "assigned" suggests that the duty to the State emanates from the prior claims of the Centre which assigned him to it.

Shri Sri Prakasa was of the view that "Governorship should be really the last lap on the journey of a politician. If Governors can later become Ministers or hold other official positions, then the dignity of the office is marred" (pp. 62-68).

The Study Team of the Administrative Reforms Commission, headed by Shri M. C. Setalvad, in its Report submitted in September 1967 likewise observed :

"There have been instances of persons appointed as Governors continuing their connection with active politics, and in some cases returning to active politics after ceasing to be Governors. We have no hesitation in recommending that there should be a firm convention that no person who is appointed Governor should take part in politics after his appointment as such". (page 286).

The Study Team noted the qualities expected of a Governor and remarked that "many of those who have filled posts of Governors during the last 16 years have fallen short of this standard. It is our considered view that the real reason for this state of affairs is not the paucity of suitable persons, but the lowly place given to the post of Governor in the minds of those responsible for making the appointments.

"Circumstances devalued the post, and with that there was a logical fall in the standard of selection for Governors. The post came to be treated as a sinecure for mediocrities or as a consolation prize for what are sometimes referred to as 'burnt out politicians'. Most of the persons selected were old men of the ruling party at the Centre. All this should not be construed to mean that no suitable men were appointed but that their number was small."

The Administrative Reforms Commission in its Report on Centre-State Relationships submitted in June 1969 made similar observations. (*vide* page 23 of its Report).

The situation has considerably deteriorated since. At least two members of the ruling party who had to resign from office as Ministers following judicial strictures were subsequently appointed as Governors; to wit, Shri M. Chenna Reddy and Shri Ram Lal.

Quite a few Governors have returned to politics; most notably, Shri D. K. Borooah, the Governor of Bihar, who became a member of the Union Council of Ministers and later a President of the Congress Party. Another such case was that of Shri Biswanath Das, Governor of Uttar Pradesh, who later became the Chief Minister of Orissa.

On the other hand, the term of many a Governor has been cut short or extended for political reasons. Governors have been transferred as if they were civil servants and, at least in one case, even removed.

Dr. Rajeev Dhawan in his study "President's Rule in the States" prepared under the auspices of the Indian Law Institute, New Delhi, writes "A Governor should normally be appointed for five years. But this is not always the case. There are various instances where the Centre may have shortened the tenure of a particular Governor for political reasons. Thus in Punjab in 1966, Governor Ujjal Singh was replaced by Dharma Vira, two days before the latter sent his report recommending the imposition of President's rule in Punjab. Again Governor Dhawan of West Bengal went on 'leave' and later resigned as Governor of West Bengal in 1971 well before his tenure expired. This may have taken place because he invited the Communists to prove that they had a majority in the legislature with a view to forming a government, because they were the single largest minority party...." (N.M. Tripathi Pvt.) Ltd., 1979, p. 118).

This phenomenon has also been noted by a distinguished jurist Shri H. M. Seervai in Vol. I of the third edition of his book Constitutional Law of India published in April 1983: "The events leading up to the resignation of Mr. Antulay and the subsequently events including the sanction given by the Governor to prosecute Mr. Antulay have raised important questions about the postition of the Governor. The present position is very unsatisfactory; however, it will be fully discussed in the Chapter on the Union and the State Executive in Vol. II of this book. It is enough to say that the tenure of the Governor's office at the pleasure of the President, which means, in effect, the Union Government, is most unsatisfactory and is liable to grave abuse. The Governor has certain powers under the Constitution. He is not the servant or agent of the President as the Governor's oath of office clearly shows. The exrcise of the power to remove or transfer a Governor must cause grave disquiet in the public mind. For example, during the hearing of the petition against Mr. Antulay, culminating in the judgment of Mr. Justice Lentin, Air Chief Marshal Mehra was the Governor of Maharashtra. Under the Constitution, a report by the Governor on the the working of the State Ministry is contemplated; Art. 356. Sometime after Mr. Antulay resigned, Mr. Mehra was transferred from the office of Governor of Maharashtra to the office of the Governor of Rajasthan, without any reason being assigned, and he was succeeded by Air Chief Marshal Latif, who, after the appeal Court judgment, gave sanction to prosecute Mr. Antulay, as stated earlier. Public confidence in the position and authority of the Governor would be gravely impared by happenings of this kind. It will be suggested in a full discussion on the Governor's position that his tenure of office must be fixed for a period of 5 years. However, as there is no provision in our Constitution for removing a Governor by a process of impeachment, such as there is for the removal of the President, such a provision should be introduced in the Constitution". (N. M. Tripathi P. Ltd. Vol. I; p. 1070).

In an earlier edition of this work Shri Seervai commented on Article 156(1) which says "the Governor shall held office during the pleasure of the President":

Shri Seervai wrote "it is submitted that a responsible Union Ministry would not advise, and would not be justified in advising, the removal of a Governor because in the honest discharge of his duty, the Governor takes action which does not fall in line with the policy of the Union Ministry. To hold otherwise would mean that the Union executive would effectively control the State executive which is opposed to the basic scheme of our federal Constitution. Art. 156(1) is designed to secure that if the Governor is pursuing courses which are detrimental to the State or to India, the President can remove the Governor from his office and appoint another Governor. This power takes the place of an impeachment which clearly is a power to be exercised in rare and exceptional circumstances". (Second Edition, Vol. II, p. 1074).

On October 26, 1980, the Governor of Tamil Nadu Shri Prabhudas Patwari was removed from office in a most humiliating manner without any reason being assigned.

In 1983, it is only too true to aver that "even the Governor has become a glorified servant of the Union." The office became highly politicised gradually. Norms came to be violated. The report of the Committee of Governors, appointed by the President on November 20, 1970, entitled *The Rule of Governors* did not concern itself with the aspect of the decline of the office at all or with devising safeguards to ensure their independence. The process was not checked, let alone halted. On vital issues affecting democratic government in the States, like the appointment of the Chief Minister and the dissolution of the State Legislative Assembly, the Governors made blatantly partisan decisions solely to promote the interests of the ruling party at the Centre. Article 356 has been consistently abused and the autonomy of the States as well as the principles of democracy flouted.

Judical review of such action is beset with difficulties. But in one case a High Court, while declining to issue a writ, felt constrained to criticise the Governor for violating parliamentary conventions and for refusing to give the opposition an opportunity to form the Government after a Congress Ministry had fallen.

In 1973 in Orissa 23 dissident Congress MLA returned to their parent parties, the Congress (O) and the Swatantra. The Chief Minister, Smt. Nandini Satpathy, resigned on March 1, 1973 while the Assembly was in Session since her party no longer commanded a majority. The Pragati Party led by Shri Biju Patnaik acquired a majority of 72 in a House of 140, a fact which was certified by the Speaker and notified by the Secretary of the Assembly to Governor B. D. Jatti. The majority was also proved by the fact that the Pragati Party's candidate for a seat in the Rajya Sabha, Shri Debananda Amat, was elected, on March 1 polling 77 votes against 60 secured by the Congress candidate.

Yet, in the face of these incontrovertible facts, Governor B. D. Jatti did not call upon the Pragati Party to form a Government but, instead, accepted Smt. Satpathy's recommendation to make a report to the President under Article 356. On March. 5, 1973 President's Rule was imposed on the State.

Shri Patnaik and his colleagues moved the High Court of Orissa. While declining to issue a writ the court criticised the Governor's action.

Bijayananda Patnaik and others versus President of India and others (A.I.R. 1974 Orissa 52) is a particularly noteworthy case. Filed by a majority of the House (74), it was one of the very rare to be taken to Court. Its strictures therefore have a much wider relevance. It said : "....The Governor examined the claim of the Pragati Party of having 72 members on withdrawal of 25 members from the ruling party. He noticed that the figure '72' had been reduced by two within a few hours. After taking into consideration various aspects....he came to the conclusion that there is no guarantee that the present majority claimed by shri Biju Patnaik and his supporters will be stable and if a Ministry is allowed to be formed under the leadership of Shri Patnaik, the said Ministry might not remain for a long time. Thus, the Governor did not call the leader of the Opposition to form the Ministry, not because they had no majority but because he expected that the majority might fall at any moment and there would be no stable Ministry. In arriving at this conclusion the Governor did not honour the convention prevalent in Great Britain in the matter of formation of the Ministry. The breach was in the following way. On the resignation of the Ministry of Nandini Satpathy having lost its majority support in the Assembly. the Governor should have called the leader of the Opposition to form the Ministry. It was for the latter to say whether he would be able to form a Ministry or not. The leader of the Opposition asserted that he had a majority support and that is confirmed by the Governor's own finding that he had support of 70 members. Even assuming that the Governor wanted to test the exact support he should have called upon the leader of the Opposition to test his strength in the House itself which was in Session. This was exactly what the Governer of West Bengal did when he dismissed the Ministry of Ajoy Mukherjee in November 1967....The Governor is not concerned whether the Ministry could be stable in future. If the Ministry which would have been formed by the leader of the Opposition would have fallen afterwards, the Governor would have been justified to recommend for the President's rule if at that time no other person was in a position to form an alternative Ministry by having majority support."

Dr. J. R. Siwach of the Kurukshetra University, a scholar who has made a detailed survey of such situations, makes the following comment in his work Politics of President's Rule in India, published by the Indian Institute of Advanced Study, Simla, in 1979 with a wealth of citation :

"On the other hand, whenever, the Government of Congress Party or a Government supported by it from outside of a Government in which it was a major partner, fell or was about to fall the Assemblies instead of being suspended were immediately dissolved either under Articles 174 (2)(b) as was done in Travancore—Cochin in 1954, in Kerala in 1970, in West Bengal and in Bihar in 1971, or under Article 356 as in Andhra in November 1954, in Pondicherry in August 1968, in West Bengal in 1968 and again in 1971, in Manipur in 1969 and in Orissa in 1973 unless this happened immediately after elections as in Haryana, U.P. and Madhya Pradesh in 1967 and in Bihar in 1969. In West Bengal in 1971 it is interesting to know that when the fall of the Ministry of Ajoy Mukherjee was imminent, since the Congress Party was a major partner in it, the Assembly was dissolved within four months of the elections. In all these cases the Opposition was ready to form the Government. In fact in Travancore Cochin in 1954, in Pondicherry in 1968 and in Manipur in 1969 when the Government was defeated on the floor of the House, the opposition had a legitimate right to get an opportunity to form the Government. Even in other cases where the Congress Ministry or a Ministry supported by it resigned in anticipation of its defeat particularly in West Bengal where the elections were recently held and where the largest party was not given a chance to form the Government, the claim of the Opposition should not have been ignored."

"It should also be noted in this connection that whenever a recommendation for dissolution under Article 174(2) (b) or under article 356 was made by a non-Congress outgoing Chief Minister or a non-Congress Chief Minister having doubtful majority it was rejected in all the cases where the Congress party was keen on forming the Government. For instance, the recommendations of Rao Birendra Singh in Haryana, of Gurnam Singh in Punjab (1967), of Charan Singh in U.P. (1968), of Bhola Paswan Shastri in Bihar (1968), of Raja Naresh Chandra Singh in Madhya Pradesh (1969) and that of Hitendra Desai in Gujarat and Karpoori Thakur in Bihar (1971) about the dissolution of the Assembly under Article 174(2) (b) or under Article 356 were rejected. The Chief Ministers of Haryana and Gujarat wanted dissolution under Article 174(2)(b) and the Chief Ministers of U.P., Madhya Pradesh and Punjab wanted dissolution under Article 356"

As with dissolution of the legislature so, also in the appointment of the Chief Ministers, Governors have, for the most part, acted in a partisan manner to promote the interests of the ruling party at the Centre. The latest in the series is the well-known instance of Haryana only last year while among the earliest and best remembered is that of Rajasthan because the method of physical verification of the opposition's claim was adopted. The Governor Dr. Sampurnanand invited the Congress Party leader, Mr. Mohanlal Sukhadia, to form the Government on March 4, 1967 on the ground that he was the leader of the largest single party with 88 members in a House of 183. On March 12 Shri Sukhadia expressed his inability to do so. The Assembly was to meet on March, 14. But, instead of giving the opposition a chance to form a Government, the Governor recommended and the Centre clamped President's rule on March, 13. The Assembly,

curiously, was suspended, not dissolved. The opposition paraded 93 of its members before the President in the presence of the Union Home Minister, Shri Y. B. Chavan.

On April 28, Shri Sukhadia was sworn in as Chief Minister and President's Rule lifted. He claimed the support of 94 MLAs. Comment is unnecessary. The episode left a sad impression. The president of denying the opposition a fair chance to form a Government hardened into practice.

Rules and concepts were invoked (the claims of the largest single party, stable government, etc.,) but were applied or ignored as expediency demanded. The only consistency in their application was that in almost all cases the interests of the ruling party at the Centre were fully served. In the process, Governors are known to have changed their own publicity expressed opinions as well.

Shri Nityanand Kanugo, then Governor of Bihar, in his report to the President on February 11, 1970, wrote : "In my opinion no Government with any reasonable prospect of stability can be formed now. Therefore, the President's Proclamation should be extended for another term of Six months"

But on February 14, just three days later, he changed his opinion and recommended to the President that there was no need for an extension and invited Daroga Prasad Rai, the leader of Congress (R) legislature party, to form the Government. It proved to be unstable. The Governor in his report on February 14, 1970 said that were 17 MLAs who could not be relied upon. But eleven out of these MLAs were in the list of 172 given by Daroga Prasad Rai.

In U. P., Shri B. Gopala Reddi, the Governor wrote to the President on October 2, 1970, that President's Rule should be imposed because there was no possibility of a stable Government in the State. He said: "I am not at all sanguine that any clear picture about the strength of the political parties or their combination would emerge in the near future. Prolonging the present state of uncertainty is not in public interest and the public interests of the State would be best served if the Legislature is placed under suspension." But after a mere 10 days, on October, 17, 1970, he wrote to Shri T .N. Singh : "I am satisfied that you are in a position to form a Ministry. I, therefore, invite you to form a ministry as early as possible."

In November 1967, Governor B. N. Chakravarti of Haryana recommended imposition of President's Rule although Chief Minister Rao Birendra Singh commanded a majority. The ground he adduced was instability brought about by defections.

In December 1968, however, Governor Chakravarti totally ignored the vice of defection when 16 Congress MLAs defected reducing the Party's strength of 32 in a House of 81. Rao Birendra Singh led 40 MLAs and pressed his claim to form a Ministry. Defections to the Congress followed swiftly. Eight of the defectors were appointed Ministers.

After these defections, the Assembly was summoned on January 28, 1969 only a day before the constitutionally permitted gap of six months. It was prorogued on February 12, 1969. The next Session was from August 20 to August 29, 1969. Thereafter the Assembly met on February 13, 1970 and was adjourned *sine die* on February 27, 1970.

The CPM won 40 seats out of 133 in the Kerala State Assembly election in March 1965. On March, 7, 1965 its leader Shri E. M. S. Namboodripad met the Governor and claimed the support of 23 others as well. But President's Rule was imposed on March 24 and the Assembly was dissolved without its even being summoned to test Mr. Namboodripad's claim —a test to which, by all accepted canons, he was fully entitled.

It is universally accepted that Article 356 has been abused. Implicit in this acceptance is recognition of the sad reality that the office of the Governor has also been abused. *For the Governor's participation is an integral part of the process.*

Governors have not only lent their sevices to keep opposition parties out of office but also to help the Congress party to resolve its internal feuds. A distinct category of cases of imposition of President's rule has come into being—president's rule to help a function-ridden Congress Party in a State to tide over a leadership crisis although the Party's majority was intact.

It was a palpable abuse of an emergency provision of the Constitution for purely party ends.

These cases are well known and are recognised as a distinct category in standard works by scholars :

Punjab	in 1951 and 1966
Uttar Pradesh . .	in 1973 and 1975
Andhra Pradesh . .	in 1973
Gujarat . . .	in 1974
Orissa	in 1976

To elaborate on two of these cases, Shri H. N. Bahuguna resigned as Chief Minister of Uttar Pradesh on November 29, 1975. On the Governor's recommendation, President's Rule was imposed on Nov. 30 and was lifted on Jan. 12, 1976 when Sh. N. D. Tiwari became Chief Minister. The Union Home Minister justified the action as being necessary "just to sort out some small problems, including the election of the leader" by the Congress Party. (Indian Express : December I, 1975).

Smt. Nandini Satpathy resigned Chief Minister of Orissa on December 16, 1976. President's Rule was imposed only to be lifted 13 days later when Sh. Binayak Acharya was appointed in her place. Few doubted that the DMK Minister of Tamil Nadu was over thrown in January 1976 only because of its opposition to the emergency. It had 184 members in an Assembly of 234 whose term was to expire in March 1976.

On January 29, 1976, the Governor Shri K. K. Shah submitted a Report to the President in which he accused the State Government of a "series of acts of mal-administration, corruption and misuse

of power for achieving, partisan ends" and recommended imposition of President's Rule. Two days later the President issued a Proclamation under Article 356. The Government was dismissed and the Assembly was dissolved.

On February 3, 1976 the Government of India appointed a Commission of Inquiry, consisting of Mr. Justice R. S. Sarkaria of the Supreme Court, to inquire into the charges against the Chief Minister Shri M. Karunanidhi and some of his colleagues.

However two memoranda levelling charges against them had been submitted as far back as November 4, 1972. On November 15, 1972 the Prime Minister Shrimati Indira Gandhi, had forwarded them to Shri Karunanidhi for his comments.

On September 30, 1979 Shrimati Indira Gandhi said in Madras, in order to remove "some confusion in the minds of some of our workers" about the Congress(I)'s electoral alliance with the D.M.K. that the D. M. K. Ministry was removed by her in January 1976 since its term of five years was over and "we did not think we had the authority to extend the term" (Indian Express, October 1, 1979). She also said that the C. P. I. and the A.I.A.D.M.K. had "pressurised us" to appoint the Sarkaria Commission. (The Times of India, October 1, 1979).

Be that as it may, these remarks clearly suggest that the Governor's Report was politically motivated.

Following the elections to the Haryana State Assembly in May 1982, the Governor, Shri G. D. Tapase, formally asked Shri Devi Lal, on May 22, to bring his supporters to the Raj Bhavan at 10 a.m. on Monday, May 24. In a House of 90 the Congress(I) had won 36 seats, the Lok Dal 31, the B. J. P. 6, the Congress (J) 3, the Janata 1 and Independents 12. The B. J. P. and the Congress (J) had pledged support to the Lok Dal and so had four Independents. Mr. Bhajan Lal, even with the support of Independents, could claim a total strength of 42.

On Sunday, May 23, without waiting for Shri Devi Lal to present his supporters the next day, as agreed earlier, Governor Tapase swore in the leader of the Congress (I) Party, Mr. Bhajan Lal, as Chief Minister (vide the Hindu May 24, 1982; the Statesman May 24).

On May 24, as many as 45, MLAs went to the Raj Bhavan to register their protest. Governor Tapase's action was widely criticised.

In Assam for the last nearly three years, the opposition has been repeatedly and deliberately denied the right to form a Government although it commanded a majority in the Legislative Assembly and despite the fact that the Congress (I)'s claim to a majority was repeatedly proved to be false. Successive Governors have acted in a partisan manner.

President's Rule was due to expire in Assam on December 12, 1980. Almost a month earlier, on November 17, 1980, the then Union Home Minister, Shri Zail Singh, claimed in the Lok Sabha that the Congress(I) had a majority in the Assembly and would form a Government. The Congress(I) had won only 8 seats in the elections to the State Assembly held in June 1978. Defections since January 1980 augmented its strength. But, let alone command a majority, the Congress(I) Legislature Party was in no condition even to elect a leader. It was so riven with dissension. On December 3, 1980, the Party authorised the Congress(I) President, Shrimati Indira Gandhi, to nominate a leader and pledged its "full and abject" support to the leader selected by her. (The Times of India December 4, 1980).

Three days later on December 6, the Governor, Shri L. P. Singh, swore in Shrimathi Anwara Taimur as Chief Minister. The Congress (I) claimed a membership of 52 in a House of 118 (the total membership was 126 but 8 seats were vacant). The Congress (I) had 45 members. Additional supports of some independents was also claimed. The opposition parties contested the claim, but their objection was rejected.

Shrimati Taimur's Ministry did not last long. She resigned on June 28, 1981 when the PTCA withdrew its support just a day before the Assembly was due to meet on June 29. But the opposition was not given a chance to form a Government. Instead, President's Rule was imposed on June 30, 1981 and was extended for another term on December 30, 1981. It was revoked only on January 13, 1982, when Mr. Keshava Chandra Gogoi, a Member of the Congress (I) Party was sworn in as Chief Minister by the Governor, Shri Prakash Mehrotra. He had been elected the Party's leader on January 11, two days after Smt. Taimur resigned as party leader. Once again, the Opposition's claim to majority support in the Legislature was brushed aside. The opposition leader Shri Sharat Chandra Sinha claimed the support of 65 members. But the Governor promised that Mr. Gogoi would soon be asked to face the Assembly. He was granted, instead, two months to consolidate himself. Even so, he failed.

On March 17, 1982, the Budget Session of the Assembly began. The opposition Left and Democratic Alliance immediately tabled a motion of no-confidence which was admitted that day and secured precedence over other business of the Session. The Alliance claimed a strength of 65 members drawn from 10 parties in a House of 118. Minutes before the legislature was due to meet the next day, on March 18, Shri Gogoi resigned as Chief Minister and did not face the Assembly. The Governor Shri Prakash Mehrotra once again did not invite the leader of the Left and Democratic Alliance, Shri Sharat Chandra Sinha, to form a Ministry, as he ought to have done especially in view of the denial of such an opportunity three times earlier. Instead, he recommended imposition of President's Rule and the dissolution of the Assembly. On March 19, 1982, President's Rule was imposed on the State and its Legislative Assembly was dissolved. The Gogoi Ministry had lasted for just 65 days.

Governors changed. One leader of the Congress (I) Legislature Party another proved unable to command a majority in the Assembly. *The Hindus* New Delhi correspondent remarked : "The Congress, for its part, has not been able till now (Jan. 1982) to demonstrate its majority." (*The Hindu* Jan. 11, 1982).

But on each of the four occasions when the rival claims were tested, the Opposition was denied the opportunity to form a Government and have its claim

to majority support tested on the floor of the Legislature. Finally, when the Congress (I)'s failure to run a Government could no longer be concealed, the State was brought under direct Central Administration, rather then be allowed to be governed by the Opposition Left and Democratic Alliance.

More recently, a Chief Minister has openly accused the Governor of his State of trying to create tensions in order to over-throw his Government. On August 29, 1983 the Chief Minister of Sikkim, Shri Nar Bahadur Bhandari, said of the Governor Shri Homi, J. H. Talyarkhan that he "appears to be ambitious to rule the State under President's Rule". He alleged that the Governor was even meeting the Congress(I) General Secretary and other party leaders, in Delhi to compaign against him. (*Vide* the PTI's Report in *The Times of India*, August 31, 1983).

Earlier, on August 27, 1983, 6 Opposition Members of the Parliament had in a joint letter to President Zail Singh criticised the reported presence of Shri Talyarkhan, at public meeting organised by the Sikkim Pradesh Congress (I) Committee during the Prime Minister Smt. Indira Gandhi's visit to the State. The letter said that while there was nothing unsual in Smt. Gandhi addressing the meeting in her capacity as the President of that Party, "It was a gross act of impropriety on the part of the Governor. He has done great disservice to the august office he is incharge of." The Members appealed to the President to admonish him. They enclosed a copy of a photograph showing the Governor on the dais at the meeting.

The members were Sarvashri Era Sezhiyan, Harkishan Singh Surjeet, Surendra Bhattacharjee, Abdul Rehman, J. P. Mathur and S. W. Dhabe.

Conclusion

The record proves beyond a shadow of doubt that, in most cases, the Governors have used their office to serve the interests of the ruling party at the Centre. It is unlikely that they would have acted thus except at the instance of the leaders of the ruling party. The clear intent of the framers of the Constitution and, indeed, the letter and spirit of the Constitution have been violated in all significant respects. These are : the appointment of the Governor in consultation and with the consent of the State's Chief Minister; the calibre and stature of the Governors; the security of tenure to which a Governor is entitled; the imposition of President's Rule and the Governor's right and duty freely to discharge his functions and duties as head of State without being instructed or dictated by the Centre, especially in regard to the appointment of the Chief Minister and the dissolution of the Legislature. Dr. B. R. Ambedkar stated in express terms in the Constituent Assembly on December 30, 1948 that in regard to these two matters as constitutional head of the State "the position of the Governor is exactly the same as the position of the President. This clear constitutional position has been subverted by destroying the Governor's Independence and suborning his impartiality. Governor's are not allowed to follow and do not follow the established conventions of the parliamentary system in regard to the appointment of the Chief Minister and the dissolution of the Legislature, but abide by the directions of the leaders of the Government of India. This is wholly unconstitutional in itself and quite independently of the fact that those directions are given in order to promote the interests of the ruling party.

In the process, the federal principle as well as the norms of democracy have suffered grievously. The State's autonomy is violated. Its people are denied the right to be governed by its elected representatives in accordance with the established conventions of the parliamentary system as was clearly envisaged by the Founding Fathers of the Constitution.

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 The Indian Constitution is a Federal Constitution in as much as it establishes what may be called the "dual polity". This dual polity consists of the Union at the Centre and the States at the periphery each endowed with sovereign powers to be exercised in the fields assigned to them respectively by the constitution. However, a major distinguishing feature of the Indian Federal System from other systems elsewhere is that the Indian Constitution can be both unitary as well as federal according to the requirements of time and circumstances. It works as a federal system in normal times, but in times of grave emergency it may convert itself into a unitary system.

1.2 The basic scheme of the constitution does not require to be changed. Yet thirty-four years is a long enough period to undertake a comprehensive review of the working of our constitutional frame work. Such a review should take note of the vastly increased needs of the States arising out of the responsibility to implement development programmes and social welfare measures, and should recommend suitable amendments to the constitution restoring to the States necessary powers to enable unimpeded growth.

It is considered that a review is necessary in respect of some of the provisions, referred to in the question, which give the Union a supervisory role over the States.

It is also considered necessary that the States should be given an increased share of the overall national resources.

Detailed views are given in the answers to the specific questions in the questionnaire.

1.3 Major Constitutional changes do not appear to be necessary. However, it is felt that there should be sufficient institutional arrangements for constant consultation between the Union and the States and adequate administrative decentralisation to remove irritants and impediments in the sphere of Union-State relations and development administration.

1.4 No, the system as mentioned does not exist.

1.5 Yes to a large degree. The following are some of the measures considered necessary :

(i) An Inter-State Council which may also function as National Development Council may be constituted under Art. 263 of the Constitution, the Article itself being amended to provide that there shall be an Inter State Council which will also be the National Development Council. The Inter-State Council would be a Standing Body to which all issues of national importance can be referred and which can advise on them authoritatively after taking all aspects of the problems into account.

(ii) There should be administrative decentralisation by delegating powers to lower levels within the Central Government, constituting Regional Bodies in place of various monolithic central agencies, constituting local committees with the representatives of the States concerned and the Union Government Central Agency to discuss and finalise matters of regional importance.

(iii) There is need for ensuring prior consultation with the states whenever any proposal for amendment of the constitution under Art. 368 is taken up for discussion in the Parliament.

(iv) The power to reserve a Bill for President's consideration under Art. 200 should invariably be exercised by the Governor on the advice of the Council of Ministers and Art. 200 needs amendment to make this position unambiguous.

PART II

LEGISLATIVE RELATIONS

2.1 The legislative field of the Union was extended by several devices in the formulation of entries in the Lists, some of which were not to be found in the Government of India Act, 1935. Firstly, a number of entries in the State List have been made subject to entries in the Union List (List-II—Entries 13, 17, 22, 23, 24, 32 and 54) or Concurrent List (e.g. List Entries 13, 26, 27 and 57) or any Law made by Parliament (e.g. List II—Entries 12, 37 and 50). Secondly, some entries in the Concurrent List have been made, subject either to the Union List (e.g. List III—Entries 19 and 32) or to any Law made by Parliament (e.g. List III—Entries 31, 33(a), and 40). Thirdly, through several Entries in the Union List itself the State List can be encroached upon by the Union either in public interest or for reasons of national importance (e.g. List I—Entries 52, 53, 54 and 56) (Public interest) and Entries 62, 63, 64 and 67 (National Importance).

In reply to Qn. 7.2, it is pointed out how by progressive enlargement of the Schedule to the Industries (Development and Regulation Act of 1951, by virtue of the exercise of the powers of the Union under Entry 52 in List II, the States' power in relation to industries has been almost completely eroded. Similarly by exercises of the powers under Entry 54 of List I, the development of minerals and mines has been so completely regulated, that State Governments find it impossible to deal with decentralised mining of small deposits.

The State Government would suggest that the Entries in List I in the cases should be so worded as to make it clear that the power will be exercised only in exceptional circumstances. Central Legislation in such cases should be undertaken in consultation with the Inter-State council and the working of each Central enactment, which is undertaken on declaration of 'national interest' or 'public interest' and which would otherwise have fallen within the States' sphere, should be reviewed once in five years by appointing a National Commission including representatives of States also. Necessary provision should be made in the Central statute itself for this purpose.

2.2 The State Government does not suggest any change in the details of the subjects listed under the three Lists in the Seventh Schedule except in regard to 'residuary powers'. In the spirit of co-operative federalism and on the analogy of the Government of India Act, 1935, the residuary powers may be listed in the Concurrent List. Consequently, Article 248 of the Constitution may be deleted.

As regards other provisions of the Constitution, detailed suggestions have bben made while giving replies to the different questions.

2.3 Yes. It is necessary that any legislation affecting the interest of the States should be discussed in a forum like the Inter-State Council, constituted under Article 263.

The State Government is also of the view that whenever any amendment to the Seventh Schedule is contemplated under Article 368, there should be prior consultation with the State Legislatures before the Amendment Bill is introduced in Parliament.

2.4 Legislation made by Parliament on certain subjects within the exclusive competence of the State by virtue of a declaration in 'National interest' or 'public interest' should be only for particular duration subject to periodical review. Please see also Answer to Q.2.1.

2.5 The power to reserve a Bill for the President's consideration under Art. 200 should invariably be exercised by the Governor on the advice of the Council of Ministers. Necessary amendment to Art. 200 may be made so as to place this position beyond, doubt. Some definite time limit may be laid down, say three months, within which the President should communicate to the State Government his decision that he assents to the Bill or that he withholds assent therefrom or that the Bill may be reconsidered by the Legislature as may be recommended in the message contemplated in Art. 200 and 201. Where the President withholds assent, the reason therefor should invariably be stated.

PART III

ROLE OF THE GOVERNOR

3.1 (a) The Constitution visualises the Governor as the head of the State, in whose name the Government of the State is carried on. In the running of the Government, the Governor is to act on the advice of the Council of Ministers. The most important occ sions when the Governor is to act without consulting the Council of Ministers are those relating to the choice of the Chief Minister and when reporting to the President under Article 356 on the breakdown in the working of the Constitution in the State.

(b) Governors have functioned generally as Constitutional Heads of State and have fulfilled the role envisaged in the Constitution. When discretion had to be exercised, for example, in calling or not calling a leader to form a Government when the majority support for him was not clear or then recommending or not recommending action under Art. 356, Governors have adopted different standards.

3.2 The primary role of the Governor is as the Constitutional Head of the State, but he is also the Constitutional link between the State and the Centre. In case of differences, he should objectively counsel both the State and the Central Governments in the larger interests of the State and the country.

3.3 As stated in the reply to Q. 3.1 in cases in which the course of action was not clear and judgement and discretion had to be exercised, the Governors have adopted different standards. Please also see Answers to Q. 4.4.

3.4 Articles 200 and 201 : The Legislature of the State consists of the Governor and the Legislative Assembly, as per Article 168 of the Constitution. Therefore, Governor is part of the Legislature and has equal importance as the Legislative Assembly. The power to make law is conferred by Article 246, on the Legislature. Therefore, a law has to be enacted jointly by the Legislative Assembly and the Governor. That is why provision has been made in Article 200 that a Bill can become law only after assent of the Governor or if recommended by the Governor to the President, then of the President.

Under the Constitution, the Legislative power is distributed between the State Legislature and the Parliament. It may sometimes happen that the law passed by a Legislative Assembly may contain provisions which are beyond the Legislative competance of the State Legislature. In other cases, a law passed by the States Legislative Assembly may embody provisions which may be repugnant to the policy of the Union or injurious to the national interest. In such circumstances it would be necessary that such provisions may require substantial modifications. Under Article 200, if a Bill returned to the House by the Governor is again presented to the Governor for his assent, the Governor cannot withhold assent. Under Article 201, the President is not bound to give assent even if it is presented to him again with or without amendment. If a Bill must be compulsorily so modified by the Legislative Assembly, it can be done only by returning the Bill to the House for effecting such changes as provided in Article 201. Therefore, in view of the distribution of legislative powers between the Centre and the States it is necessary to retain Articles 200 and 201.

There is no instance in this State where the Governnor has withhold his assent or reserved for the consideration of the President any Bill without an advice from the Council of Ministers.

3.5 Yes. In a number of cases, there has been considerable delay. Some examples in this State in recent years are :—

(i) The Kerala Casual, Temporary and Badli Workers' (Wages) Bill, 1977;

(ii) The Public Property (Prevention of Destruction and Loss) Bill, 1978;

(iii) The Kerala Cashew Workers' Relief and Welfare Fund Bill, 1979;

(iv) The Kerala Land Reforms (Amedments) Bill, 1980.

3.6 Answer to Question 3.1 covers the point.

3.7 No.

3.8 No. The responsibility should be left to the Chief Minister who has been appointed by the Governor.

3.9 Such a provision, parallel to Article 67 of the Basic Law of Federal Republic of Germany has serious defect. It may easily allow even minority Governments to continue long. Further it is likely that a successor aspirant will resort to undesirable means to get support from others encouraging horse trading and defection. The better alternative seems to dissolve the Assembly allowing the existing Governments to continue as caretaker and order fresh elections.

3.10 The issue whether an Instrument of Instructions should be issued to Governors was discussed in the Constituent Assembly, but the idea was given up. The Governors' Committee, appointed by the President in 1970, also felt that it was not practicable to prepare a set of guidelines, which could cover all possible eventualities. It does appear, however, that based on the experience of the last 34 years, when Governors have adopted different standards in meeting similar situations, guidelines could be laid down for the exercise of the discretionary powers of Governors.

PART IV

ADMINISTRATIVE RELATIONS

4.1 No instance of any direction under Articles 256 and 257 has come to the notice of this State.

4.2 Article 365 prescribes the consequence of non-compliance by a State of any direction given to it by the Union. The power to give directions by the Union should be there, as a reserve power, in order to maintain harmony in the exercise of executive power by the Centre and the States. However, the provisions of Art. 365 are worded on the lines of provisions in enactments creating statutory authorities. It is true that the powers under Arts. 256 and 257 and consequently the powers under Art. 365 have not been used so far. It will be in the spirit of co-operative federalism to delete Art. 365 from the Constitution. The provisions under Art. 356 should be more than adequate to deal with any situation in which the President feels that the Government of the State cannot be carried on in accordance with the provisions of the Constitution.

4.3 Since no direction has been issued under Art. 256, the question is hypothetical. We agree with the recommendations of the ARC, and one of the forums in which such discussions could be held, in cases bilateral discussions do not succeed, will be the Inter-State Council (National Development Council).

4.4 Between 1951 and 1976, there were more than 30 cases of imposition of President's rule in the States. A survey of all these cases would show that in addition to the use of the powers under this Article when an elected Government could not continue in power due to loss of majority in the legislature, the powers were used in one or other of the following circumstances:—

(i) Dismissal of a Government enjoying majority support but the State having large scale internal agitation.

(ii) Imposition of President's rule but without dissolution of the Assembly and keeping the Assembly under suspension.

In 1977, when a new party came to power for the first time at the Centre, the State Legislatures and State Governments led by the Congress Party, were dissolved *en masse*. This was an unprecedented measure. The overwhelming victory of a particular party at the Centre should not have been, and is not, a ground for the President's satisfaction under Art. 356. The Constitution does not say anywhere that the Parliamentary Election should be treated as reflecting the will of the people regarding composition of the State Legislature. The dismissal of nine popular State Governments created a bad precedent. A similar dissolution of a few State Legislatures was done in 1980 also.

The dismissal of a large number of State Governments and the dissolution of State Legislatures on the basis of the election results relating to the Centre and Parliament is contrary to the intent and purpose of Art. 356. Necessary safeguards should be built into Art. 356 to prevent the recurrence of such instances.

4.5 Prolonged President's rule is not a satisfactory solution to such difficulties. Therefore, it is felt that the provisions under clauses (4) and (5) require no change.

4.6 It is felt that the existing arrangements for implementation of functions like Census and Election are working satisfactorily.

4.7 All these agencies have been created in pursuance of certain policies. The question may therefore, be discussed at two levels—whether the policies are necessary and whether within the overall policy, these agencies should be doing what they have been doing.

2. The Agricultural Prices Commission and Food Corporation of India, have been created because of the basic requirement to have a stock of foodgrains under Government control, either by procuring from surplus areas or by importing and to make foodgrains available through the public distribution system of deficit areas. Arbitration between the producer, the processor, the trader and the

consumer is an extremely delicate matter. One way is to leave it entirely to the market. If it is done so in the case of foodgrains, in a country like India in which food production is susceptible to vagaries of the monsoon and large parts of the country are prone to periodic drought and therefore shortage of foodgrains, both the producer and the consumer will suffer. The arrangements to fix minimum prices for procurement from surplus areas through studies by the Agricultural Prices Commission, to stock the grains with the Government of India through the FCI and make them available to the deficit areas, reduce the amplitude of fluctuations in prices that producers will otherwise be getting and in the prices that consumers would other side have to pay. In so far as procurement in India is largely voluntary and is made from surpluses, there can be no real objection to the arrangements that are in force. Surplus areas may feel from time to time that they would have got more if they were free to sell their produce in the market. This may be so. But in years of good monsoon, the prices would also be very much lower. The only beneficiary in such an arrangement would be the intermediate trader.

3. The agencies like the Monoplies and Restrictive Trade Practices Commission and the Directorate General of Technical Development have been created in pursuance of the policies to restrict the growth of monopolies, to deal with restrictive trade practices and to give protection to Indian industry using indigenous technology. The overall policies themselves are unexceptionable. However, because of the manner in which industrial licensing and regulation have been implemented, organisations like the DGTD have got involved in too much of detail. The solution seems to lie in a different line of approach towards the regulation of monopolies, multinationals and protection to small scale industry and indigenous technology (Please see replies to questions in Part VII below.).

4. The Central Water and Power Commission (later the Central Water Commission and Central Electricity Authority) was created in pursuance of Central Acts relating to these subjects. Being basic infrastructural facilities, it is necessary to have a framework of central legislation for purposes of ensuring quality and for dealing with inter-State matters. However, over the years, these bodies have been dealing with too many matters of minor detail in as much as even very small projects had to be submitted to them for clearance. The technical bureaucracies in these authorities go into very great details, while some of the Engineers and professionals in the States which have sent these proposals, project reports and designs are much more competent especially in actual field work when compared to many of the junior functionaries in the central bodies. The answer lies in these central bodies concerning themselves only with projects above a certain size and projects which have inter-State implications.

5. In the case of the Employees State Insurance Corporation and the Employees Provident Fund Organisation it should be enough for the Central Government to provide the legal framework and leave it to the States to implement them and have only small technical agency for periodic inspection and report to the Parliament. It was wholly unnecessary to have created, vast central bureaucracy in these institutions. Similarly, in the case of National Saving Organisation also, the Central Government could lay down the various schemes and facilities and leave it to the States to organise the promotional and other activities. To the extent that post offices mobilise savings, Central Government would be directly involved in it.

6. The Bureau of Industrial Costs and Prices was created in order to advise Government on fixing of reasonable prices for the industrial products which are considered vital to the growth of the economy. With the fall in the functions and role of the tariff commission, the Bureau has also taken over the remnants of that body. In a country of vast dimensions like India, in which industrial products are produced only in certain parts and are also produced by units which vary from old ones to new ones, and which is susceptible to frequent shortages, it is necessary to fix reasonable prices for important industrial products from time to time. Once the logic is accepted, the need for a professional bureau to study industrial costs and suggest prices cannot be questioned.

7. Generally, the question, in these cases, is not basically between the Centre and the States as between Government and the market. If it is accepted that Government intervention in the market is necessary in larger interests as in the case of basic foodgrains and in the fixation of prices of important intermediate goods then the creation and functioning of bodies like APC, FCI and BICP is inevitable.

8. However, since almost all these central organisations deal with subjects which are the concern of States and impinge on the powers of States, institutional arrangements are necessary to ensure that the States are consulted and that their views and reactions are available to the GOI from time to time. It will be worthwhile to have an All-States Advisory Council at the level of Ministers for each of these organisations (or atleast one council for the agencies attached to a Central Ministry), which should meet atleast once a year and discuss the policies, role and working of the organisation/s.

4.8 The All-India Services as they are constituted today have provided a reasonably efficient band of top civil servants to aid and advise the State Government at the policy level as well as in co-ordinating the work at the District level. The good spread of officers from different parts of the country has no doubt given the service its true All-India character. Existing provision for 33.1/3% of promotion quota has protected the interest of the State Civil Service to enter the higher level of Civil Service hierarchy.

Under the present arrangement the top Civil Service in Central Government is largely composed of officers drawn from various State cadres. This helps the Central Government machinery to keep in touch with field conditions obtaining in the State and district level. For this reason also the present arrangements appear sound and desirable.

On the question of disciplinary control and service condition of All India Service Officers, the existing provisions have evoked from time to time a mixed response from the political executive at the State level, depending largely on the political complexion

of the Government vis-a-vis the Union Government. But by the large there is a general appreciation of the usefulness of the present arrangement, which has helped in building a fairly high level of integrity and reasonable efficiency in the cadre.

4.9 In actual practice the Central Government generally deploys the Central Reserve Police and other armed forces in aid of civil power only on the request of the State Government concerned. In fact the Central Government has not been in a position to supply enough contingents of the above armed forces as requested by various States.

We agree with the views expressed by the Administrative Reforms Commission and we are of the opinion that the arrangements contemplated under Article 355 are necessary in the larger interests of national integrity.

4.10 States should also have a voice in the administration of organisations like All India Radio. Doordarashan and other news media as they have a vital role in disseminating accurate information relating to the functioning of the State Governments. Joint Advisory Councils could be formed at the State level for the purpose.

4.11 While in the early years after the coming into force of the States Re-organisation Act 1956, these Zonal Councils did meet at regular intervals, their meetings have now become fewer and far between. Whether and to what extent they fulfil the objectives for which they were sought to be created seems some what obscure now.

4.12 It is considered necessary that steps should be taken to establish an inter-State Council under Art. 263 for the better co-ordination of policy and programmes among the States *inter se* and between the Union and the States. Art. 263 itself should be amended to provide that an inter-State Council, which will also be the National Development Council, shall be constituted. All matters which are of common concern to the States should be brought within the purview of this council for study and deliberation. Any proposal for constitutional amendment affecting Union-State relations should also be brought before the Inter-State Council so that the States' views thereon may be ascertained before the proposal goes to the Parliament.

The composition of the Council may be on the lines suggested by the Study Team of the ARC, that is to say the Council shall have the Prime Minister as its Chairman, the Union Ministers of Home, Finance, and Food and Ministers in charge of other subjects which are of common concern to the Centre and the States and Chief Ministers of all the States as members. Other Ministers from the States may be co-opted according to the needs.

The Law in respect of the constitution and functions of the Council should be a simple one so as to make room for improvements in respect of its functioning in the course of time.

The Planning Commission should be made the Secretariat to the restructured NDC and it should be ensured that the Council meets at least once in six months. The annual reports of the Council should be presented to the Parliament and to the State Legislatures.

PART V

FINANCIAL RELATIONS

5.1 The scheme of devolution envisaged by the Constitution-makers was one under which most of the transfer of resources from the Union to the States was to be made through the recommendations of the Finance Commissions. The need for transfer of resources under centralised planning was not visualised at that time. Transfer of resources for planned development meant transfer of capital resources also. With the centralisation of savings in the country, the quantum of capital resources to be transferred for Stae Plans had to be progressively increased. The pertcentage of resources transferred to the States through the Finance Commissions comes to only 40.4. Nearly 60 per cent of the transfer was made outside the Finance Commissions (vide answer to Qn.5.5). The original scheme of devolution envisaged by the Constitution-makers has not therefore been followed in practice. The question that arises, therefore, is whether any changes are necessary in the constitution based on our experience with the requirements of planned development.

The State Government's detailed views on the overall transfer of resources to the States are given in the reply to Qn. 5.5. We do not think, however, that the various suggestions made to have a single body to allocate Central resources to States or to create a number of agencies are practicable. We feel that the present institutional arrangements—the Finance Commission and the Planning Commission—are perhaps the most practicable mechanism for central assistance. However, the working of the present system should be improved upon and there should be effective co-ordination between the two Commissions as well as objective criteria for determing the quantum of Central assistance to States and its inter-State distribution.

5.2 The overall position stated by the ARC Study Team still holds good, as can be seen from the following table:—

*Central transfers as % of States disbursements**

1951—56	37·8
1956—61	39·8
1961—66	45·7
1966—69	45·2
1969—74	47·4
1974—79	42·1
1979—84	41·6

*Revenue and Capital account taken together.

A complete separation of fiscal relations of the Union and the States is neither desirable nor practicable. Similarly, concentration of all the tax powers with the Union is also not desirable. In the context of planned development, it is necessary to take an overall view of the financial needs of States. All income taxes (including Corporation tax and surcharges) and all excise duties, by whatever name called, should be shareable with the States and the States should get most of the resources transferred through assured devolution but the principles of inter-State distribution should be such that advanced States are not left with

large surpluses. There should also be institutional arrangements for more equitable distribution of resources other than tax revenues between the Union and the States.

5.3 Giving more financial powers to the States may benefit the richer States more and could increase inter-State disparities. We therefore agree with the need for a strong centre having adequate resources to allocate to States in the interests of balanced regional development.

The States feel, on the basis of experience, that the Union Government has been keen only (i) to increase receipts from those sources which are exclusive to it (ii) not to increase revenue from those sources or items which are shareable with the States and (iii) to grant concessions on those sources and items which are shareable with the States so that the quantum of the shareable pool goes down. As a result, as stated in the detailed reply to Qn. 5.5, the discretionary transfers become larger and have not been made in such a way as to reduce inter-State disparities.

We are of the view that what is necessary is to establish institutional arrangements and criteria that will evoke the confidence of States. Most of the transfer fof resources to State may be through assured devolution but the principles of devolution, again, should be such as to reduce the disparity and not increase them. Standards should be adopted and weightage given to such matters of national importance like progress in achieving universal primary education, so that the States which have spent resources to achieve such standards are enabled to meet their commitments.

5.4 It is not correct to say that the deficits in the central revenue account are in any way due to the devolutions to the State Governments. As has been stated elsewhere, the transfers to the States through the recommendations of the Finance Commission and the Planning Commission cannot be considered to be generous or even adequate.

The following table gives the proportion of total central resources transferred to the States over the last 34 years. It shows that there is no increase in the proportion over the years :—

Period	Proportion of Central* resources transferred to States
First Plan (1951—56)	36·4
Second Plan (1956—61) . . .	31·3
Third Plan (1961—66) . . .	31·3
Annual Plans (1966—69) . . .	31·4
Fourth Plan (1969—74) . . .	36·4
Fifth Plan (1974—79)	30·7
Sixth Plan (1979—84)	32·6

*Revenue and capital and including deficit financing.

The answer to the problem of central revenue deficits, which is a recent phenomenon of the last 4 to 5 years, lies in raising more resources through better income tax, excise and customs administration and better control over expenditure.

Revenue deficits should be avoided but over-all deficit financing cannot be totally avoided; it should be kept within reasonable limits so that annual rate of inflation does not in any case go beyond the single digit figure.

Therefore, the answer to the problem of Central deficits lies in a combination of factors viz. raising more resources, better control over expenditure and deficit financing to a certain extent. Subventions from richer States to the Central pool are not practicable in our context.

5.5 There are three channels of transfer of resouces from the Union to the States, viz. statutory transfers made on the basis of the recommendations of the Finance Commission, Central assistance to States given by the Planning Commission for the State Plans and discretionary transfers made by Central Ministries for different purposes. The broad picture of these three categories of transfers during the last 32 years has been as follows :

(Rs. Crores)

Period	Finance Commission	Planning Commission	Central Ministries	Total
(1)	(2)	(3)	(4)	(5)
I Plan	447	880	104	1431
(1951—56)	(31.2)	(61.5)	(7.3)	(100.0)
II Plan	918	1058	892	2868
(1956—61)	(32.0)	(36.9)	(31.1)	(100.0)
III Plan	1590	2738	1272	5600
(1961—66)	(28.4)	(48.9)	(22.7)	(100.0)
Annual Plans	1782	1917	1648	5347
(1966—69)	(33.3)	(35.9)	(30.8)	(100.0)
IV Plan	5421	4731	4949	15101
(1969—74)	(35.9)	(31.3)	(32.8)	(100.0)
V Plan	11168	10353	3761	25282
(1974—79)	(44.2)	(41.0)	(14.8)	(100.0)
1979—1983	17372	15773	6928	40073
	(43.4)	(39.3)	(17.3)	(100.0)
	38698	37450	19554	95702
	(40.4)	(39.1)	(20.5)	(100.0)

2. The statutory transfers on the recommendations of the Finance Commissions have generally shown a tendency for progressive increase. This cannot however be stated about the Central assistance to State Plans, which has fluctuated over the different plan periods. The discretionary transfers from the Central Ministries increased sharply from 7.3 per cent in the first plan period to 32.8 per cent in the IV plan period, but have since shown a shortfall. For the period of 32 years, as a whole 40 per cent of the transfers were through the recommendations of the Finance Commission, an equal percentage through Central assistance for State Plans and about 20 per ent was in the form of discretionary transfers.

3. The composition of budgetary transfers in terms of taxes grants and loans was as follows :

Figures in percentage

Plan	Tax	Grants	Tax & Grants	Loans
(1)	(2)	(3)	(4)	(5)
I Plan	24·0	20·1	44·1	55·9
II Plan	23·3	27·5	50·6	49·2
III Plan	21·4	23·3	44·7	55·3
Annual Plans	24·0	26·0	50·0	50·0
IV Plan	30·2	25·4	56·6	44·4
V Plan	33·0	22·2	65·2	34·8
VI Plan	40·3	27·0	67·3	32·7
All Plans	32·0	28·0	60·0	40·0

4. The tax and grant elements in the total transfers have shown progressive increases over the three decades and correspondingly, the loan content has come down. This is a progressive trend.

5. It is against the background of the above forms and amounts of transfer that the impact of the transfers on different States has to be studied. Ultimately, the objective of all federal transfers should be to bring out about an even development in the country through a reduction of regional disparities. Owing to the centralisation of revenues in our system the opportunity to bring about resource transfers in the direction of inter-State equity is higher than in many other countries. The following tables give a summary extract of per capita transfers to different States under different categories.

Per capita transfer in Rs. (1956--81)

Groups of States	Finance Commn. transfers	Index Nos.	Plan transfers	Index nos.	Discretionary transfers	Index Nos.	Total transfers	Index Nos,
A. High Income States—								
(Punjab, Haryana, Maharashtra, Gujarat, West Bengal)	471	91	338	77	549	118	1,258	94
B. Middle Income States (Tamil Nadu, Kerala, Orissa, Assam, Karnataka, Andhra Pradesh)	542	105	436	99	386	102	1,364	102
C. Low Income States								
(Uttar Pradesh, Rajasthan, Madhya Pradesh Bihar)	459	89	398	90	332	87	1,189	80
All States *	516	100	440	100	380	100	1,336	100

*Including Special category States.

6. While the requirement of special category States which are in the hill area and have small populations are attended to fairly statisfactorily, generally speaking the resource transfers from the Centre to the States have been regressive, with the poorer States not receiving their fair share. If will be, therefore, quite true to say that the present devolutions made through different channels have not bridged the gap in resources for in development between the poorer and richer States. Any improvement in this regard would call for cha ges both as regards (i) the overall quantum of resource transfer from the Centre to the States and (ii) the inter-States distribution.

7. Taking the totality of the Centre's resources (taxes, non-tax and capital) the States' share thereof came down from over 36 percent to less than 31 percent between the first and the fifth plan-periods, clearly revealing a downward trend in the share of States.

8. It has been noted above that there has been a progressive increase in statutory transfers. It is therefore, in the realm of the overall Central assistance to States' plans that a solution has to be found. The quantum of Central assistance to the State plan, as a whole, is now fixed on an *ad hoc* basis at the instance of the Finance Ministry. While the resources for the Centre's plan are increased progressively during a plan period in response to the demands due to inflation and increased costs of investment, there is no corresponding increase in the Central assistance to State Plans. As a result of inflation and rise in costs, there is a deep erosion in the State's resources also. The following table shows the outlay by the Centre, State and Union territories during the VI Plan (1980-85) as now estimated.

	Original size	Now anticipated (Rs. in Crores)
Central Plan	47,250	60,000
All States	48,600	48,000
Union Territories	1,650	2,000
Total	97,500	1,10,000

SOURCE : Sixth Five Year Plan, Planning Commission, 1981 and 1984-85 Annual Plan documents.

9. It will be seen that while the Central plan has gone up by 25 percent, there has been a shortfall, even in nominal money terms in the case of the State Plans. An important requirement in bringing about better distribution of resources between the Centre and the States and ultimately amongst the States themselves, is to increase the overall quantum of Central assistance to the States for their development plans.

10. As regards inter-State distribution, the approach of the VI and VII Finance Commissions, that most of the transfers to the State should be through sharing of taxes is a step in the right direction. However, basic changes were not made in the principles of inter-State distribution. The following table gives per capita revenue surplus of States under the Award of the VII Finance Commission :—

State		Per capita revenue surplus
(1)	(2)	(3)
The Poor Group		
1.	Orissa	15
2.	Bihar	205
3.	West Bengal	157
4.	Kerala	112
5.	Tamil Nadu	159
6.	Madhya Pradesh	282
7.	Uttar Pradesh	233
The Less Poor Group		
8.	Karnataka	343
9.	Andhra Pradesh	217
10.	Gujarat	423
11.	Maharashtra	596
12.	Rajasthan	85
13.	Assam	74
14.	Haryana	676
15.	Punjab	597
The Hill Group		
16.	Himachal Pradesh	22
17.	Jammu & Kashmir	40
18.	Manipur	93
19.	Meghalaya	48
20.	Nagaland	84
21.	Sikkim	31
22.	Tripura	23
	Average	258

11. It will be seen that the minimum surplus per capita was Rs. 15 for Orissa and the maximum was Rs. 676 for Haryana. The ratio between the lowest and the highest per capita surplus is 1 to 45. The recommendations of the previous Finance Commissions also resulted in varying amounts of surplus, all in favour of the advanced States. It would be saying the obvious that States which enjoy large non-plan revenue surpluses under the Finance Commission Award get the advantage of a strong resource-base for their development plans. When revenue transfer is largely through devolution of taxes. Such States also derive the additional advantage of larger revenue buoyance. Under the procedures that are followed by the Planning Commission, the available Central assistance is distributed according to a formula and the size of the States Plan is fixed by adding the State's own resources including the revenue surplus arising out of the Finance Commission Award and the Central assistance. Therefore, States which have the benefit of larger surpluses from the Finance Commission Award also have larger State Plans.

The following table sets out the position :

Sl. No.	States	Average per capita income (1973—76	Per capita cumulative Plan outlay 1951—78)	Per capita non-plan revenue
(1)	(2)	(3)	(4)	(5)
1.	Haryana	1,399	922	676
2.	Punjab	1,586	1,353	597
3.	Maharashtra	1,349	802	596
4.	Gujarat	1,134	840	423
5.	Karnataka	1,045	618	343
6.	Madhya Pradesh	776	525	282
7.	Uttar Pradesh	715	529	233
8.	Andhra Pradesh	928	531	217
9.	Bihar	646	387	205
10.	Tamil Nadu	942	546	159
11.	West Bengal	1,033	455	157
12.	Kerala	948	585	112
13.	Manipur	870	1,147	93
14.	Rajasthan	853	557	85
15.	Nagaland	820	2,650	84
16.	Assam	791	541	74
17.	Meghalaya	850	1,073	48
18.	Jammu & Kashmir	811	1,291	40
19.	Sikkim	820	1,190	31
20.	Tripura	830	783	223
21.	Himachal Pradesh	1,068	1,075	22
22.	Orissa	793	558	15
	Average of All States	930	603	258

12. Greater balance in inter-State distribution of resources can be obtained only if the principles of inter-State distribution are changed and if in the allocation of Central assistance for plans, the position emerging out of the award of the Finance Commission is first taken into account. In other words, it should first be ensured that all States have the same amount of per capita revenue surplus and this should be the first charge on central assistance. This is what is meant by saying that there should be better co-ordination between the Planning Commission and the Finance Commission.

13. As regards the distribution of Central assistance, the time has come to review the existing system based originally on the Gadgil formula. In the initial years, when the formula was devised in 1969 on the eve of the IV Five Year Plan, it brought about a considerable degree of discipline in the distribution of Central assistance to States. During the last 15 years, the formula has got considerably diluted and has also become out of alignment with the emerging needs.

14. It is interesting to recall that the States overdraft problems started assuming sizeable dimensions from the early 70s with the implementation of the IV Plan, when the new Central assistance formula started operating. While many factors such as cost escalations, slackeness in mobilising

additional resources and excess expenditure might have contributed to the increasing budgetary deficits of many States, the fact remains that the Planning Commission's annual review and adjustment of plan outlays and Central assistance for each year, have become mechanical, artithmetic exercise in recent years.

15. Though the Central assistance is said to be distributed on the basis of Gadgil formula the amount that comes within the purview of the Gadgil formula is only 50 per cent, the balance being earmarked for various purposes. A breakdown of the Central assistance in the VI Five Year Plan would bring out this point.

	Rs. Crores	Percentage
(1)	(2)	(3)
1. Allocation for Hill areas, Tribal areas and North Eastern Council . .	1355	8.8
2. Allocation for externally aided projects	1450	9.5
3. Allocations to 8 special category States (Assam, Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalaya, Nagaland, Sikkim & Tripura)	3245	21.1
4. Amount distributed under the IATP formula	1600	10.4
5. Total 1 to 4	7650	49.8
6. Amount distributed under the Gadgil formula	7700	50.2
7. Total Central assistance (5+6) .	15350	100.0

16. It will be seen that as much as half the central assistance is allocated outside the Gadgil formula the basis of many of these specific allocations has not been clearly spelt out by the Planning Commission. As far as the Gadgil formula is concerned, the elements consist of population 60 per cent, per capita income 20 per cent, tax effort 10 per cent and special problems 10 per cent. It is necessary to re-examine this formula. Not more than a third should be distributed on population basis. The remaining two thirds should be distributed on the basis of per capita income, percentage of unemployment and percentage of population below the proverty line the criteria for all these three and the method of calculation to be determined and applied in a uniform manner in all States. Out of the assistance so arrived at, 50 per cent could be in the form of block grants and loans and the remaining 50 percent could be earmarked for schemes of national priority and the schemes which are considered to be essential in the case of a particular State. It is felt that a formula of this nature would be able to deal with twin problems of inter-State disparities as well as adherence to certain national priorities.

17. As regards non-plan assistance, some of it is given through statutory transfers as recommended by the Finance Commission. They should continue.

5.6 Special consideration in the matter of devolution of resources through the Finance Commission and grant of Central assistance through the Planning Commission is already shown to special category States. It does not appear that the creation of a separate special Federal fund is an appropriate solution to the problem of regional imbalances. It will become one more limited source of funds used for making some amounts available to certain States without making a sufficient dent on the problem of backwardness or regional imbalances. Such a fund might have a justification in a federal arrangement in which the State's resources and functions are by and large matched and the role of the Central agency or federal Government is to specially look after the requirements of economically underdeveloped areas only. Such is not the case in India where the ratio of Centre vs. all States is 75:25 in the case of receipts, the ratio in the case of expenditure is roughly 50:50. Large transfers from the Centre to the States is inevitable in our context.

5.7 The imperative of Part XIII of the Constitution ensuring "freedom of trade, commerce and inter-course within the country" is one of the important positive aspects of the present situation. At a time when in different parts of the world, smaller countries of a region are making every effort to come together and have common markets of different types and are having infinite problems in organising such markets. It is indeed a major positive factor that after independence and with the adoption of our Constitution, India is a common market of over 700 million people. This aspect of our economy has to be fully protected.

2. As regards taxation functions between the Union and the States, the principle that the tax should be imposed and collected by the authority which can best collect it and administer it is a valid one. As regards the various taxes that are now assigned to the Centre and the States in India, there is really no need for many changes except to make all income tax (including Corporation Tax) and all excise duties including special auxiliary etc. by whatever name called, constitute the divisible pool. This single arrangement will introduce in the States a sense of confidence that the Central Government does not adopt measures calculated to reduce the States' resources and increase those of the Centre.

5.8 It is no doubt true that a fragmentary approach to the taxes should be avoided and that taxation should not be so undertaken as to damage the economy or cause harassment to trade and industry. The taxation should be simple and the collection should be efficient. From this point of view, there is no justification for devolving the taxation powers of income tax, corporation tax, wealth tax, estate duty, customs duty, excise duties etc. However, as regards sales tax in relation to excise duties, a practical approach is necessary. Sales taxes are the most important source of revenue to State Governments. In fact, it is the only source within the State Governments which is of any significance to the State revenues. What is needed in this case is not the transfer of more and more items from sales tax to excise duty or additional excise duty but a well-understood and mutually agreed system of cumulative taxation. The following principles could be followed in this regard :—

2. Further inroads into the States' limited sphere of taxation should not be made. The States should be enabled to exploit such resources. In our view instead of the proposals now made by the Government of India to impose excise duties in place of sales tax on some of the commodities, the Central

Government should voluntarily withdraw from excise duties on certain commodities and give up Additional Excise Duties now imposed on certain commodities in lieu of sales tax. (Detailed suggestions in this regard have been made by the National Institute of Public Finance and Policy—Dr. Raja J. Chellaiah).

3. A Council of Central and State Finance Ministers cannot itself control the levy, but frequent exchange of information and periodical discussions on matters of taxation between Centre and State Government, if need be through the establishment of a committee of the National Development Council, will certainly go a long way towards an understanding of the difficulties of each other and also lead to practical steps for taking measures of taxation which do not conflict with each other and which do not damage the economy and production. The discussions between States in a region as regards sales tax matters has helped to bring about some order in sales taxation in the States of the same region.

5.9 We feel that the suggestion that there should be a single body to allocate Central resources is not practicable. These sources available for development from the revenues could be ascertained only after knowing the recources allocated by the Finance Commission for other purposes. A considerable part of the plan finance and of Central transfer for the State plans are capital resources, dependent on the internal and external borrowings (assistance). This has to be continually assessed from year to year.

However, the working of the present system could be improved upon by achieving effective coordination between the Planning Commission and the Finance Commission. For this purpose we suggest that the Finance Commission should have a permanent Secretariat which would form an integral part of the Planning Commission. The Planning Commission in turn should be made the fulfledged Secretariat of the National Development Council.

5.10 The transfer of resources, both statutory and discretionary to the States on the advice of the successive Finance Commissions or otherwise have not promoted efficiency and economy in expenditure nor have they narrowed down the disparities in public expenditure among the States. This is because the transfer of resources on the recommendations of the Finance Commission has been done largely on the basis of a gap-filling approach and the transfer of resources to the States through Central assistance for the plan has been done largely on the basis of distribution on the basis of a general formula of a certain sum of money made available by the Union Finance Ministry to the Planning Commission. In neither case has the devolution been based on a study of the specific needs of committed expenditure or of development.

5.11 It is true that the present mechanism of transfer of resources has some inbuilt propensities towards financial indiscipline and improvidence. This is because the Finance Commissions were largely following the procedure of filling revenue gaps Increasingly, Finance Commissions have been adopting standards to be attained—for example the minimum returns to be earned over a period of 5 years by Road Transport Corporation and Electricity Boards etc. Similar standards have to be adopted in a variety of other cases also through continuous studies. While States which have indulged in improvident expenditure are not to be encouraged, States which have implemented programmes in accordance with the directive principles of States Policy of the nationally accepted programmes should be assured of adequate resources. The only solution is for the Finance Commissions to progressively increase the areas in which certain standards are prescribed and the devolution of resources is done based on such standards.

5.12 and 5.13 We are in agreement with the above proposition, but the Principles of devolution should be radically altered as stated in reply to Q. 5.3 and 5.11. To the extent possible the requirements of the States coming within the consitutional purview of the Finance Commission should be met through devolution of taxes. The instrument grant-in-aid may be used for specific requirements of different States. The special problems of each State should be taken into account and fullest possible discretion should be given to the States to order their programmes according to their own felt priorities. The whole objective of the grants-in-aid scheme should be guided by some kind of an equalisation approach.

5.14 The question mixes up different items. As regards "revenues" from the Special bearer bond scheme etc., these are in lieu of taxes which should have been collected and shared with the States. Therefore, as already stated, the entire proceeds have to be shared with the States. In fact, the proceeds of all schemes, contributions under which are eligible for income tax concession, for example, the newly-announced National Deposit Scheme, should be shareable on the lines of the National Small Savings. The receipts from raising the administered prices of items like petroleum, coal etc. are not "revenue" of the Central Government. The point made by some States, is that the Centre is raising only the prices and not the excise duty on these items and that by this process the Centre has gathered Rs. 6,500 crores through the Central public undertakings, during the lest three years. If the amount had been raised as excise duties, the States would have got Rs. 2,600 crores, under the devolution formula of the VII Finance Commission.

Despite the increase in prices, the Central undertakings except those connected with oil are running at a loss. The point is valid in the case of patroleum.

5.15 One of the major factors compounding the administrative and financial centralisation is the concentration of savings through nationalised banks and the Central financing institutions such as L.I.C., G.I.C., U.T.I., I.D.B.I., I.F.C.I., NABARD, etc. At present there are no institutional arrangements through which the States can express themselves regarding the policies and working of these institutions, on whom depend wholly the investment in agriculture, industry, housing, water supply and urban infrastructure all of which are so vital to the development of each State. The

links between local savings and local investment have been snapped with consequent deleterious effect on both.

2. As stated in the reply to Q. 5.4, there has been declined in the State's share of the tota public sector resources. It can be seen from the following table that the decline is due to the sharp decrease in the transfer of capital recources from the Centre to States.

States' share of Centres' Resources

	Of tax revenue	Of total revenues	Of capital resources	Of total Central resources
I Plan	17.0	23.0	61.5	36.4
II Plan	19.6	27.4	35.2	31.3
III Plan	25.2	24.3	40.3	31.3
Annual Plan	17.6	28.4	34.9	31.4
IV Plan	23.3	33.9	40.2	36.4
V Plan	19.8	31.0	30.1	30.7
VI Plan	26.9	35.9	27.1	32.6

It is necessary to correct this trend in the interest of the finances of the State and the needs of development. For this purpose the methods of distribution have to be altered as stated in the reply to Q. 5.5.

5.16 and 5.17 It is a fact that most of the States suffer on account of growing indebtedness and over draft problems in view of the fact that they do not possess many elastic sources of finance. Repayment of loans also becomes a major burden on the States.

The State Government is of the view that while sharing the capital resources of the nation between the Centre and the States a spirit of partnership should prevail. Just as the Central Government does not expect all its investments to yield returns sufficient enough to recoup the capital invested, it should also not insist that all capital resources transferred to the States should invariably be repaid by them. We would like to submit that a system of loans from the Centre to the States is, perhaps, not prevalent in many other federations. In most of the federations the Central transfers are in the form of grants. In India, the system of loans has developed mainly as a result of planning and the centralisation of savings and the assistance that the Centre has to provide towards investment in State Plans. While we appreciate the unavoidability on the part of the Centre to treat a part of its resource transfer as repayable loans, we would like the terms and conditions of such Central loans to be fixed in such a manner that the repayment liabilities should be restricted only to loans that are used for productive schemes which give direct financial returns. In recent years as a result of he mounting repayment liabilities, there has been a dimunition in the net transfers of Central resources to the States.

We would, therefore, suggest that the loan and grant component of Central assistance should be re-examined so as to bring about a reduction in the loan component on the basis of rational classification of Central loans based on their broad utilisation by the States. It would be much better to bring about such rationalisation and avoid a situation whereby States accumulate large definits on non-plan account and, the Finance Commission subsequently being asked to re-schedule or write-off a part of such loans.

5.18 and 5.20 At present, the Centre's permission has to be taken even for obtaining a loan from Central financing institutions like NABARD and L.I.C. for approved plan schemes. This adds to work unnecessarily and also delays matters. The restrictions regarding borrowing by States may be confined to market borrowing.

We do not favour any major change in the policy relating to market borrowings. For, if States are left free to raise loans from the market, only the richer States would benefit.

What is necessary is to evolve guidelines for the distribution of total market borrowings between the Centre and the States and for the inter-State allocations of borrowings between different States.

The overall quantum of market borrowing is to be decided upon macro economic considerations and this task is best left to be done by the country's central bank. The distribution between the Centre and the States and the inter-State distribution is now done by the G.O.I. and not by the R.B.I. out of the total market borrowing visualised during the current plan period the States were allocated only 20 per cent. The overall market borrowing envisaged for the plan period has been increased from Rs. 19,500 crores to Rs. 22,700 crores. But the States share was not increased.

Better institutional arrangements are necessary for ensuring equitable distribution of market borrowing between the Central and the States and between the States themselves. A Loan council has been suggested because the R.B.I. is now not performing the function. In any case when a Loans Council is set up it will have to be linked suitably with the R.B.I.

5.19 The foreign borrowings of the Centre have different rates of interest from those which are 100 per cent grant of these which have a rate of interest of even 12½ per cent. The entire foreign borrowing and assistance is treated as a pool and funds are made available from it to Central and State projects. The rate of interest fixed for such lending is the same rate of interest as for all other loans for State projects from the Centre. The logic of this from the Central Government's point of view is as follows : while the Central Government may require concessional foreign funds (which do not cast on it a heavy repayment liability in foreign exchange), the terms on which the funds are made available for projects should be the same as for identical projects financed by indigenous resources. The rate of interest charged by the Centre for the loans given by it is itself concessional when compared to the market rates and therefore there should be no criticism of the arrangements.

2. As regards project aided by foreign bodies, a major question arose about adequate project funding in each year's plan budget by the concerned

State Government, if all the resources are treated as a pool, there is a tendency to loose sight of the needs of individual projects. In view of this, starting from 25% in 1971, during the last few years, 70 per cent of the aid given for a project is made available as additional Central assistance to the State Government and is tied to the expenditure of certain sum of money on the concerned project. This has alleviated the problem to some extent.

3. The second set of problems relates to the type of projects for which the funds are actually applied in the States. It is not all projects which can yield adequate financial return. It is necessary to divide projects into those categories which do not yield direct financial returns and those which should and to adjust the grant and loan element and the rate of interest differentially as regards these two types of projects. This should be done not merely in the case of externally-aided projects, but for all plan schemes.

5.21 The question of large over drafts generally arises from the III year of a plan period in the case of those States which do not have a sufficient revenue surplus as a result of the recommendation of the Finance Commission (Please see answer to Q. 5.5). While the requirement of funds increases with the progress of schemes and the rising costs during a plan period, the States find that there is a substantial erosion in their resources due to grant of instalments of additional Dearness Allowance and other items of expenditure related to rise in costs. Since there is no corresponding increase in Central assistance to the State Plans, the State's resources are squeezed between the increasing demands both on the non-plan and plan sides leading to over drafts. On the part of the States, the development is also due to failure to improve the returns from Road Transport. Electricity or other public undertakings and the implementation of new, originally non-planned schemes, during the course of a plan period. During the course of a year, the over drafts are also due to the fact that a considerable part of the central assistance to the centrally sponsored schemes, externally assisted schemes etc., are released towards the latter part of the financial year. Though considerable improvement in payment through instalments has been made in recent years, since these schemes form a large part of overall plan outlay in a State, the effect of payment, based on claims filed after expenditure is incurred on the State's Ways and Means position is quite adverse.

2. As regards remedies, it has already been suggested (Q. 5.5) that the fixation and distribution of Central assistance to plans should be completely revised. It has also been suggested (Q. 6.10) that the number of centrally sponsored schemes should be considerably reduced.

3. On the part of the States, there should be greater faithfulness to the plan as agreed upon.

4. One of the major elements dislocating the State's resources is the grant of additional dearness allowance to compensate party for the rise in cost of living. The real answer this lies in ensuring price stability. In any case, since the Central Government is in charge of price situation, the commitment on this account should be taken into account and the Central assistance for the States' Plan increased correspondingly. The argument th t the expenditure can be met from buoyancy caused by the inflation is not wholly correct. The item which really suffers badly is maintenance of services and assets, as adequate resources for this is not available after meeting the inevitable increase in D.A.

5.22 A generalisation applicable to all States cannot be made. It would, however, be true to say that the tax effort of different States vary considerably. That is why this was treated as one of the items in the Gadgill formula.

As suggested elsewhere (Q. 5.29 and 5.31) the tax effort both of the Union and of the States differ and should be continously studied in a permanent unit in the Planning Commission and the result should be made available to the States and to the National Development Council. When authentic information about resources raised by different States are available to all, the discussions in the National Development Council, in the Planning Commission and the deliberations and findings of the Finance Commissions would become more meaningful.

5.23 The fact that the existence of a parallel economy is acknowledged and that there have been periodic schemes for voluntary disclosure and for Bearer Bonds shows that there is considerable scope for improvement in the collection of income tax. The improvements needed in the two major sources of revenue of the Union Viz., Income Tax and Union excise duties has been studied from time to time by different Committees and several recommendations have been made. The most recent set of recommendations has been made by the Economic Adiministration Commission led by Shri L. K. Jha. However, there has been no basic improvement in the system of income tax and changes have been made in a piece meal fashion from time to time, almost from budget to budget. It is necessary to bring about basic changes in Income Tax Law and administration as recommended by the various Commissions.

In order to have a continuous study of this, it has also been suggested elsewhere (Q. 5.31) that the collection of revenue by the Centre and the expenditure pattern should also be studied constantly by a parmanent unit in the Planning Commission.

5.24 We are of opinion that any move which may affect the financial interest, existing of prospective, of the States should be introduced in the Parliament only after necessary consultation with the States as envisaged under Article 274. We are of the view that it should be made obligatory that the National Development Council be consulted by the President when he acts under the provisions of Article 274.

5.25 State Government is of the view that while considering taxes of the kind mentioned in Article 269, it is necessary that account has to be taken of important factors such as their productivity economic implications as also of their impact on

the commodities or services concerned. Administrative convenience is also an important factor to be taken into account. The State Government would suggest the constitution of an expert committee consisting of the representatives of Central and State Governments and one or two tax specialists to go into the whole question in detail and formulate appropriate recommendations on the taxes to be levied under Articles 268 and 269.

5.26 In its memorandum to the Eigth Finance Commission, the State Government has pointed out that had the tax on railway passenger fares continued to operate, the revenue on the basis of the current passenger earnings of railways, would have amounted to Rs. 100 crores in the place of which the States are being given a paltry sum. Various Finance Commissions had felt that this grant amount was rather too low when judged in the light of what the repealed tax would have yielded, had it continued. We would suggest that the amount of grant should be fixed in such a way that the States would get approximately the same amount as they would have received had the tax continued to remain in force and that the basis of distribution among the States should be in the proportion of non-sub-urban passenger earnings in each State to the total passenger earnings in all the States.

5.27 We have not studied this question and are therefore unable to offer any suggestions. *Prima facia*, it appears that in the case of Union Territories also, the finance Commission could be required to give territory-wise devaluation.

5.28 Past experience has shown that some times the havoc caused by cyclones, floods and drought have been so immense in terms of loss of crops and also human lives that the resulting financial burden on the concerned States has been of a very large order. It is felt that the arrangements that have been tried out so far have proved to be totally inadequate,. The State Government would like to offer two suggestions in this regard. Firstly, we would suggest that the Central Government should set apart a separate corpus for meeting the expenditure connected with the relief measures whenever natural calamities occur in any part of the country. We are recommending this measure since we feel that natural calamities in any part of the country has to be viewed as a national problem and as such, the necessary financial assistance for dealing with such problems should be primarily the responsibility of the Centre. Secondly, the State Government would suggest that in the team which has to assess the extent of damages caused by natural calamities, representatives of the concerned State Government should also be included. The quantum of aid required should be assessed on a systematic basis and not on ad hoc considerations.

5.29 Considering the importance gained by the method of financing though open market borrowings and the relative deprivation faced by the States, the State Government had suggested that a system of loan council as in Australia for the purpose of formulating market borrowing policy and for determining the pattern of distribution of the proceeds between the Centre and the States could be tried out in India also.

The State Government agrees with the view that a lot of co-ordination is necessary in the matters affecting the interests of the States. We feel that there is no need to create a number of independent bodies for the purpose. Instead we are of the opinion that the National Development Council should be made a statutory body under Art. 263 of the Constitution with wider powers to decide on matters relating to co-ordination between the Centre and the States. The law in this regard should be a simple one laying down the composition and functions of the council, of its Secretariat, the Planning Commission, and enabling provisions for committees of members as well as of Officers. The N.D.C. may have different working committees and committees of officers apart from the central working group to go into different issues like the distribution of market borrowings and institutional finance, scrutiny of the expenditure of the Union and the State Governments and economic issues affecting the interests of the States with the assistance of its complete Secretariat consisting of the Planning Commission and the Permanent Secretariat to the Finance Commission.

5.30 The proposition has been stated in the question in too generally a term to be of any significance. It is undoubtedly true that what is important is that the funds are spent prudently and that they benefit the people. Who collects the funds is important from the point that the level at which the funds are collected would be in a position to apply it to the purposes that are considered necessary and urgent. Ideally, each level of Government should be able to raise the resources needed to fulfil its functions so that those who benefit from particular services would also be those who pay for them. However, in a modern economy and in a large country, both for purposes of efficiency and preserving the common market and for purposes of bringing about regional equalisation, the power to levy large resources has necessarily to be retained with the national Government. The real challenge before the country is to find a balance between the needs of decentralisation of power and resources and the reservation of national integrity. maintenance of the common market, and reasonably balance development of all parts of the country, keeping certain national priorities in view.

5.31, 5.38 and 5.39 We agree with the view that the expenditure of not only the States but also the Union should be subjected to closer and objective scrutiny. We do not find any need for establishing a body like National Extenditure Commission. Instead we suggest that the Finance Commission should be provided with a permanent Secretariat, one of the functions of which would be to undertake continuous studies on relevant problems on Union State finances including the review of the revenue and expenditure of the States and the Union Government. As mentioned in the answer for question No. 5.29, the National Development Council should have different working committees one of which will undertake scrutiny of expenditure of the Union as the Finance Commission looks into the expenditure of the States.

5.32 The present form of national accounts makes it possible to have comparable set of accounts for all States and therefore should continue. Some improvements in the accounts were made in the 1970s. In view of the fast changing needs of development and of Government, it is necessary to have a close look at the form of accounts at least once in 10 years.

2. The methods of preparation of the accounts should also be studied and modernised. This requires improvement at the level of Government Treasuries, the Banks, the office of the Accountant General (as at present) and the Reserve Bank of India. The R.B.I. and the Comptroller and Auditor General have to study this question and bring about basic improvements and modernisation in order to speed up the accounts. At present, it is not possible for the State Governments to have any effective system of financial control, as the figures are available after three or four months. Though the prescribed time is 1½ months, which is itself long, it is seldom, if ever, that it is followed in practice. Even the figures of cash balance reported by the R.B.I. for any particular day do not reflect the actual position. The reflect the partial position of receipts and expenditure over a period of 20 to 25 days preceding.

3. The C. & A. G. may be relieved of the responsibility of maintenance of accounts of States as has already been done in the case of Central Ministries. This separation may be part of the study mentioned above, so that the revised arrangements can be brought about in the Seventh Plan itself. As a part of this, either the entire Indian Audit and Accounts Service could be converted into an All-India Services or at least for the purposes of Civil accounts, there could be All-India Service, so that common standards could be maintained.

4. The transfer of responsibility for maintaining accounts to the State Governments and the modernisation of the system should enable the State Governments to have timely information and to improve financial control.

5.33 The main purpose of the audit of Government Accounts is to report to the Legislature on :

(i) Whether the amounts voted by it have been used for the purposes for which they were voted and whether there are any features to be noted either in the form of major departures—large increases or shortfalls.

(ii) Whether in the process of expenditures, the funds has been spent economically.

(iii) Whether the stated purposes have been achieved as a result of the expenditure.

2. The main criticism of 'audit' in India has been that it concentrated only on (ii) above and that also through isolated cases of non-placement of orders on the lowest tender, alleged irregularities and essentially in the nature of faultfinding on minutes.

3. There has been some change in recent years. The C. & A.G. has started auditing the efficiency-*cum*-performance on a whole scheme or programme. In its nature, this can be done only after the scheme/programme is completed and this takes considerable time. Efficiency or evaluation audit can be done only in the case of a few selected programmes from time to time.

4. "Voucher audit" cannot be dispensed with. In view of the large number of transaction in Government these days, the opportunities for fraud through manipulation of records are many. Until we modernise our system and introduce computers, which will themselves detect contradictions, the manual voucher check will have to continue.

5. As regards coverage by audit reports, a judicious mixture of large cases under (i) and (ii) and comprehensive study of selected schemes/programmes under (iii) above would seem to be practicable and desirable course. Even for this purposes, the C. & A.G.'s offices have to be modernised and the auditors at all levels would also require to be trained properly.

6. It is unfortunately true that what little has been done to change procedures and simplify rules has been done at the instance of Government and almost always in the face of routine opposition from the C. & A. G.'s offices.

5.34 The Law is a simple enabling one and because of this, there is considerable scope for flexibility. What is done by the C. & A.G. is dependent upon the areas and points on which he choose to concentrate and the professional competence of this organisation. As stated in the answer to the previous question, the audit reports seldom, if at all, critically examined the trends in expenditure and commented on unusual or noteworthy features, like large increases over the years, conflicting and overlapping expenditures on the same type of activity by different agencies and such matters. The law does not prevent the C. & A. G. from doing all this.

5.35 As regards appropriation accounts, there is considerable scope for improvement in reconciling the accounts as well as in the procedures for the booking of expenditure under works and purchases through the operation of Suspense Accounts. At present, the Accounts are not sufficiently accurate in these matters as they do not reflect the correct position at a given time. The improvement in these directions would involve modernisation through computerisation.

2. As regards audit reports, while the wood may be missed for the trees, meticulous collection of facts and accuracy have been a strong point.

3. Because of the over-growing size and number of Government operations, it is not possible to achieve comprehensiveness. This is one of the strong arguments for decentralisation. If higher levels—both the State and the Central Governments—confine themselves to larger issues, the audit of the reduced size of operations can be more comprehensive.

5.36 In a democratic set up, the Legislature and its Committees are the ultimate authorities to sanction and control expenditure. Historically, the Committees have been examining only the points raised by the C. & A.G. In his reports C. & A.G. has not been raising basic issues regarding unusual growth of expenditure on particular items etc. But nothing prevents the Committees themselves from looking into these questions on the Accounts presented to them by the C. & A.G. This has been done in a few cases by the Public Accounts Committee at the Centre and in the States.

The point to be noted is that the nature of the scrutiny by the Committees depends on what is intended to be checked. For a number of years, what was checked was only isolated cases of alleged irregularities as pointed out by the C. & A.G. There is a gradual change in this and it can be given greater momentum.

5.37 The estimates Committee can act a watch-dog to give useful suggestions on policies and programmes including, *inter alia*, suggestions on legislative and administrative matters. Many reports of Estimates Committees have in fact done this. In order to connect this with the question of scrutiny of expenditure, it will be useful if the Estimates Committees take up for detailed examination such of those areas as are brought out by the C. & A.G. under his audit of schemes and programmes [(iii) in the reply to Q. 5.33 above.]

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1, 6.2, 6.3, 6.5, 6.7 and 6.12 The emergency of Planning Commission and the subsequent experiments in the sphere of planning have significantly influenced the Union-State relations in the country. One important consequence of the system of national planning adopted is that the Central Government advised by the Planning Commission has assumed responsibility for planning the States' development even in spheres such as Agriculture, Public Health, Social Welfare, Education, etc., which have either been constitutionally allotted to the States or are in the concurrent list. The Planning Commission not only indicates broad national priorities has guidelines for development programmes in matters like Agriculture and Social Service but has along with the Central Ministries laid down schemes in those spheres. The result is that instead of planning being responsive to local situations, there is virtually a stereotyped system of schemes for the whole country with its immense diversity. The Planning Commission has not studied, until now, the developmental potential and the differences in emphasis that has to be placed in different States. A major portion of Central assistance flows in the form of matching grants or loans for centrally sponsored schemes.

Since planned development is the most basic task of a large and populous country like India, it is felt that the States should be given an effective say in the preparation of the national plan for development. This could be achieved by re-structuring the national development council and simultaneously vesting wider powers with the council. The N.D.C. should be made a statutory body under Art. 263 of the Constitution which visualises the formation of an Inter-State Council for achieving effective co-ordination between the States and the Union read with the Entry "economic and social planning". The law in this regard should be a simple one leaving the composition (composition suggested in answer to Q. No. 4.12) and function of the Council and its secretariat, with enabling provisions for committees of members as well as of Officers.

We have also suggested that the Finance Commission should be provided with a permanent Secretariat which should form an integral part of the Planning Commission to achieve effective co-ordination between the Planning Commission and the Finance Commission.

The N.D.C. if the above suggestions are implemented, will deal not only with the Plan proposals prepared by the Planning Commission, but also with the review of the Union-State Finances prepared by the Finance Commission's Secretariat as well as the policies and general working of the financial institutions, overall economic issues, etc. The annual reports of the N.D.C. should be presented to the Parliament and to the State Legislatures.

The Planning Commission and the National Development Council could thus be transformed into strong instruments of change and of development, not only of the Central Government but also equally of the State Governments, paving the way for better national integration. This will democratise the planning system infusing greater confidence among the States in the Planning process, while at the same time giving the Central Government necessary co-ordinate authority. The process of resource allocation will be made to subserve new economic priorities which are implicit in a dynamic and growing economy.

The purpose of annual plan preparation at the national level should only be to indicate the broad objective and framework for development keeping in view the national priorities. The detailed sectoral planning may be left to the States. In order to implement the national priorities the Central assistance in the form of 'tied' assistance may be resorted to in respect of schemes of basic national importance.

As far as the role of Union Government on the subjects in the State List is concerned we are in agreement with the Administrative Reforms Commission which visualised the following role for the Central Government in subjects in the State List :

(1) Providing initiative and the leadership to the States and in particular serving as a clearing house of information intimating details and data about good programmes and methods adopted in one part of the country to the rest of the country.

(2) Undertaking the responsibility for drawing up the national plan for the development sector in question in close collaboration with

the States and developing for this purpose well-manned planning and statistical units.

(3) Undertaking research at a national level, conferring attention to the matters which are beyond the research resources of States.

(4) Undertaking training programmes of a foundational nature, example training of planners and administrators and training of trainers.

(5) Taking the initiative in evaluation of programmes with the object of checking progress, locating bottlenecks, taking remedial measures, making adjustments.

(6) Providing of forum and a meeting ground for State representatives for the exchange of ideas on different subjects and for the evolution of guidelines.

(7) Attending to functions of the nature of coordination which can only be handled at the Centre.

(8) Maintaining relations with foreign and international organisations.

6.4 It has already been suggested elsewhere that the Planning Commission should function as the Secretariat of the National Development Council. The Commission as such would then be a Committee of the NDC, but it is not practicable to include in it the representatives of all the States nor will it be correct to make it a purely advisory body of economists and experts. The Commission could continue to consist as how, of the Prime Minister, Union Finance Minister and Deputy Chairman and one or two eminent public men with experience in development as well as a few experts of national standing. Increase in the number of Ministers is also not advisable, as it will make the body unwieldy.

6.6 It is necessary to consider and incorporate national priorities in the State Plans. As stated elsewhere (Q. 5.5), the present methods of scrutiny of the States' plans and finances do not ensure this. While a detailed scrutiny of the minutes is made, the finalisation of the plan is made on routine considerations of availability of State resources and share of central assistance and the State plan so finalised does not have any priorities even as regards the national ones.

2. It is necessary that the State plans are scrutinised from a different point of view, that is to say, from the point of view of—

(i) Whether they follow the priorities and programmes that have been agreed upon at the time of finalisation of the five year plan;

(ii) Whether the schemes of national priority that have been agreed upon are being adequately provided for and are being implemented satisfactorily; and

(iii) Whether the special programmes that have been considered important from the point of view of the particular State are receiving due attention.

It is unnecessary for the Planning Commission to go through and suggest scheme-wise allocations for all the schemes in all the sectors, which are in any case, not followed finally as the size of the Plan is not fixed on this basis.

6.8 As has been pointed out in the detailed reply to question 5.5, while the requirements of very backward States, coming under the special category States appear to be looked after reasonably, the distribution of Central assistance under the present formulae operate against the weaker groups in the rest of the States. The changes that are necessary in determining the quantum of Central Plan assistance and in deciding on inter-State distribution have been referred to in detail in the reply to question 5.5.

6.9 Please see the detailed answer to Q. 5.5.

6.10 The purpose of Centrally Sponsored Scheme originally was to ensure that some schemes of national importance were taken up by the States and certain measures of direction and co-ordination in respect of these schemes could be exercised by the Centre. But gradually the number of such schemes became very large. Most of the programmes envisaged in these schemes could be more appropriately carried out by the States through their own plan. We are in agreement with the view that the provision for Centrally Sponsored Schemes pertaining to subjects coming within the jurisdiction of the States should be considerably pruned. We recommend that the restructured NDC should scrutinise the existing Centrally Sponsored Schemes so as to prune the list to the desirable limit. No new schemes should be taken up as Centrally Sponsored without the prior concurrence of the NDC. Even when such new schemes are taken up, it should only be on the basis of 100% Central assistance and not on the basis of matching contribution. This would ensure that the State Plan priorities are not upset.

6.11 The Monitoring and Evaluation Machinery in the Planning Commission is a well-established one and it has done good work. The Monitoring and Evaluation Machinery in most of the States is in an infant stage and is yet to grow into full-fledged professional organisations. Both at the Centre and in the States, monitoring and evaluation have to the further strengthened. Monitoring has to be strengthened both in the implementing agencies and Ministries as well as in the Central Planning Organisation.

2. While feed-back during implementation is essential for improving implementation and bringing about changes in the programme itself, generally it is found that feed-back which is not favourable to the programme is not liked by those who have initiated the programme. In view of this, reports of monitoring tend to be luke-warm. A number of centres of studies have come into being in the country during the last 10 years. Many of them are manned by competent professional staff. It will be worthwhile to utilise their services in the monitoring and evaluation of selected plan programmes both at the Centre and in the States. Increasing use of independent outside agencies would bring in more unbiased reports on the performance.

6.13 The constitution of Planning Boards/Commissions in the States varies widely from State to State. It is only in very few States that there are organisations similar to the Planning Commission at the Centre, Kerala is one of such State. Whatever be the form and constitution of the planning body, a great deal depends upon the status that is given to it by the State Government. The planning bodies are contributing a great deal in making studies, in collecting data and in helping plan formulation. As far as plan formulation in the States is concerned, the first stage is the preparation of Plan proposals. Upto this stage, the Planning Boards play an important role. In the subsequent stages of finalisation of the plan through discussions in the State Government and with the Planning Commission, Ministries of the Government of India and in adjusting the proposals to the available resources, Planning Boards play much less role generally.

2. Similarly, in implementation also, Planning Boards play very little part. In fact, if a study is made of the State Plans as originally approved at the beginning of a five year plan and the five year plan as it was finally implemented through the annual plans, it will be seen that considerable changes have been made. This is because a large number of new schemes and programmes are sanctioned during the five year period on different occasions. In all these additions to the plan which are made simultaneously as there is a serious erosion in resources, the Planning Boards do not play any role.

3. In reviewing the performance of tne plans, therefore the Planning Boards are reviewing what has actually been undertaken by the Government and not what was planned for.

4. Once the importance of planning is accepted in effect, the State Planning Boards would be strenthened and once this is done, it would not be necesarry for the Planning Commission to go into details of the State Plans to the extent that it does now.

5. Whether the national plan should become progressively more indicative and less imperative is a broader question which is not dependent on the improvement in the working of State Planning Boards. The real positionin a mixed economy like ours is that the national plan would have both imperative and indicative features depending on which sector of the economy and which major products we are dealing with.

PART VII

MISCELLANEOUS

Industries

7.1 Yes. With the passing of the Industries (Development and Regulation) Act of 1951 the States' power in relation to industries has been considerably eroded. There has been increasing Central control in issuing licences for a vast category of industries. There is need for review of industries now controlled by the Central Government.

7.2 At present the Government of India has powers of control and licensing over a large number of industries that have been included in the Schedule to the Industries (Development and Regulation) Act of 1951 by virtue of the exercise of the powers under entry 52 in list 1. The Centre also controls clearance for capital issues, for the import of capital goods and raw materials and for foreign collaborations. The Central Financing Institutions and Advisory and Promotional Institutions play a supporting role in the Centre's control and regulation of industries.

1. The entire system of control and regulation by the Centre has been brought about on the basis of the need for :

(i) protection of infant industry in a developing country;

(ii) import substitution;

(iii) control of foreign investment;

(iv) control over scarce foreign exchange;

(v) control over the growth of monopolies and large houses; and

(vi) protection to indigenous technology.

Since foreign multi-nationals operating in India manufacture even soaps, "soaps" were brought under the Industries Regulation Act. That is how, the list of Industries has been progressively enlarged over the years.

2. An entirely different route was available for the attainment of the objectives mentioned in the previous paragraph. Just as certain industries as reserved for the public sector under the Industrial Policy Resolution, legislation could have been undertaken for laying down the particular industries which would not be open to foreign companies and multi national and/or to Indian monopolies and large houses. Similarly legislation could have been undertaken for reservation of products for small scale industries—such a legislation is now said to be under contemplation as a result of judicial decisions striking down the reservation of a few products for the small scale industries. Please also see answer to Q. 2.1.

3. The Industries (Development and Regulation) Act could be much simpler Act dealing with the control of only a few basic industries and those reserved for the public sector.

7.3 Some improvements have been brought about in the procedure for industrial licensing and for clearance of capital issues, import of capital goods and raw materials and foreign collaboration during the last 10 years. However, the improvements are neutralised by the large number of cases in which these clearances have to be obtained.

2. As a first step, the threshold for such clearance should be substantially increased. For example, the requirements of industrial licensing could be considerably reduced if the enactments as stated in the reply to the previous question are undertaken. The monetary limit in cases in which no import for foreign collaboration is involved could also be increased to Rs. 10 crores and periodically adjusted to inflation once in 5 years.

3. The organisation of the Chief Controller of Import and Exports, the Director General of Technical Development as well as central financing institutions like IDBI and IFCI have set up regional offices during the last few years. Their powers should be considerably increased so that that many of the clearances could be given, under well-understood guidelines, at the regional levels.

7.4 A number of institutions have been set up in States over the years for assistance in financing, in the supply of raw materials and in a few cases in marketing also. But the gaps pointed out by the Committee still persist. This is mainly due to the complexity of the requirements of different industries, the inadequacy of the efforts in relation to such complexity, the *ad hoc* changes in policies and programmes, the uncertainties of the availabilities for materials (materials surplus in one year becomes scarce in another year) and the difficulties in co-ordinating the activities of different agencies. The last one is a very major problem. The establishment of LICs has helped to some extent. But a great deal more remains to be done.

It appears that a time bound programme can and should be adopted in the VII Plan based on a realistic assessment of the extent to which the State Government and its agencies can take up responsibility and discharge them satisfactorily.

In the case of modern small scale industries, from the time of project proposal, appraisal and clearance through implementation and later production and marketing there are problems in the form of too many agencies to be approached for various clearances, inadequate working capital provided by Banks, difficulties in procuring raw materials and difficulties in marketing. The State Governments have to make institutional arrangements for giving all the clearances in one place. This should be one of the important elements of the time bound programme of the VII Plan. The financing institutions have also to participate in this and for this purpose the GOI and the Reserve Bank have to give clear instructions to them. The availability of many raw materials depends a great deal on the policies of the GOI and its agencies. As suggested by the Economic Administration Commission there should also be an immediate review of the taxation policies relating to this sector. It does not appear that marketing of all products can be undertaken by State agencies. The State agencies could deal with a few selected items and in the case of the rest, assist in marketing through counselling and supply of information. The agencies have to be staffed by properly trained people for this purpose.

In the case of traditional industries, the problems of each major industries relevant to a State have to be studied and an agreed set of policies regarding institutional structures (includi g co-operatives), procurement and supply of raw materials, taxation measures and subsidies and marketing arrangements have to be adopted for a reasonably long period of time. The States cannot decide on these by themselves because of the clearances necessary from the GOI for all matters relating to procurement, credit etc. Therefore, arrangements are necessary for joint study by the Central and State Governments and for quick decisions.

7.5 The resources tansfers sanctioned by nine All India Financial Institutions (LIC, IDBI, IFCI, ICICI, ARDC, REC, HUDCO, IRCI and NCDC) upto 1980-81 were of the order of Rs. 19,869 crores. A major part of these resources transfers has gone to the relatively developed States. Seven States, viz. Gujarat, Haryana, Karnataka, Maharashtra, Punjab, Rajasthan and Tamil Nadu with 36 per cent of the All India Population have been able to draw more than 62 per cent of the resources. Two States. Maharashtra and Gujarat with a little more than 14 per cent of the All India population have secured assistance to the extent of 27 per cent of the total amounts sanctioned. The rank correlation co-efficient between the per capita income of States and the per capita financial assistance by All India Financial Institutions gives a correlation co-efficient of +0·72, suggesting that States with high per capita income received more than proportionate share of the resources. To the extent such concentration of institutional assistance has taken place, the concerned State Governments have been enabled to finance a good part of their development from outside budgetary resources. Such States have also been the major beneficiaries of funds transferred from the Central Government under the award of the Finance Commission, as also in the sharing of open market borrowings.

2. One reason for the above situtation could be said to be the higher absorptive capacity of the advanced States/regions resulting from their already well-established industrial and institutional infrastructure. The urban bias of many of these States, which also generally have the benefit of concentration of technical expertise and talents, may also be an important factor. But these aspects only indicate that the process of economic development in the country tends to be more cumulative than equilibrating in character. The avowed objective of reduction of regional imbalances can be achieved only through proper correctives to these tendencies.

3. Certain features of credit dispensation by central financing institution have also contributed to the concentration of assistance to certain areas. These are—

(i) Both the IDBI and IFCI have been concentrating their assistance to selected industries like sugar, cement, textiles and paper and to some extent basic chemicals. Since these industries are largely concentrated in the already industrially advanced States, such States have been the main beneficiaries.

(ii) The financing institutions have been channelising a high proportion of their resources (about 3/4ths) to private sector industrial units. This has adversely affected those industrial backward areas where private entrepreneures or investment are lacking and the few available major industries are operated in the public sector. In the case of LIC, the picture is somewhat better since it has a diversified investment portfolio.

(iii) In the case of ARDC's funding of agricultural projects, it is disappointing that the project and programme chosen for financing turned out to be such as to deny many States of a reasonable share of assistance. Until

the end of 1980-81, as much as 63 per cent of the assistance had gone to finance minor irrigation schemes. An evaluation of the utilisation of these funds amounting to nearly Rs. 1500 crores will be extremely instructive. NABARD, the successor of ARDC, has a much more broad-based programme of assistance. It is hoped that with dynamic policies, NABARD will be able to assist all the States well.

7.6 It is not practicable to take States collectively into confidence on such issues. The criticism, is, however, valid to the extent that no objective criteria seem to be followed in deciding on locations of Central investments in the public sector, especially in these cases in which the location is not pre-determined by natural resources endowment. Choice of location is possible in those cases of industries which are "foot loose", that is, those which are not determined by the availability of particular natural resources. When the III Five Year Plan was being formulated, a Committee was appointed to suggest locations for the various major industries that were proposed in the public sector under that Plan. The Ramananda Rao Committee went into this question and suggested the establishment of units of BHEL, HMT, HAL etc., in different parts of the country. Thus, before the III Five Year Plan began, locations for many of the major industries had already been suggested and decided upon. But for this single isolated case of objective study of location, there has been no rational approach to decisions on locations of Central investment. Such decisions have become increasingly *ad hoc* and arbitrary. The Central Ministries and agencies also ask for various concessions in the form of free land, concessional electricity and water and even housing facilities from State Governments. A firm decision should be taken that in the matter of central public investment, the States will not be required to extend any concessions as the demand for such concessions acts against the backward States. As regards the VII Five Year Plan, a study on the location of industries that may be proposed in the plan should be undertaken as soon as an outline of the Plan is available and in the very first year the location should be decided and a suitable opportunity used for keeping the National Development Council informed.

7.7 Please see the Answers to Q. No. 7.6.

7.8 To the extent that incentives have been given for promotion of industries in backward areas, there has been some establishment of industries in such areas. The Sivaraman Committee had made a number of recommendations on the criteria of backwardness and on the incentives that are to be given for promotion of industries in backward areas. However, the criteria have been considerably watered down. This is not so much due to paucity of information. One of the important decisions to be taken in the context of promotion of industries in backward areas is to decide on those areas in which, for a period of time, starting of new industries (above a certain size) will not be allowed. Unless such a decision is taken or criterion is followed, the tendency for industries to concentrate around certain areas could continue unabated.

2. Indicators for assessing industrial backwardness should be different from those for assessing general backwardness. In a situation of scarcity of capital resources and the need for their efficient application, we should be wary of establishing "Cathedrals in the desert". Setting up isolated industrial units in backward areas without any linkages will not solve the problem of backwardness in any way. The availability of a reasonable level of infrastructure should be one of the important criteria for assessing industrial backwardness. The States have to play their own role in setting up the infrastructure first.

3. The point can be highlighted by citing the example of Kerala. The State has spent over the years substantial sums of money to develop the infrastructure for social and economic development. As a result of this, the State has achieved the highest rate of literacy in the country, lowest death rate, a very low birth rate and reasonably well-developed physical infrastructure. On the other hand, industrial growth has been slow and unemployment in the State is the highest in the country. The infrastructure that has been created at a huge cost is not fully utilised. It should be the specific objective of policy and planning to direct massive industrial investment to such States. Central investment plays an important role in this regard.

TRADE AND COMMERCE

8.1 Art. 307 confers power on Parliament to appoint an authority for carrying out the purposes of Art. 302 to 304 : that is to say, if there are disputes in regard to inter-State trade and commerce this authority may deal with such disputes and decide them. Past experience of the working of the regulations relating to Inter-State trade and commerce would suggest that the time has come to establish such an authority.

Agriculture

9.1, 9.2 and 9.3 The Planning Commission not only indicates broad national priorities and the guidelines for development programmes in matters like agriculture and social services but has along with Central Ministries laid down schemes in those spheres. The result is that instead of planning being responsive to local situations there is a virtually stereo-typed system of schemes for the whole country, with its immense diversity. The Planning Commission has not studied, until now the development potential and the differences in emphasis that has to be placed in different States.

As stated elsewhere we feel that the number of Centrally sponsored schemes should be kept to the minimum and that the Central grant assistance should be in the form of 'tied' assistance only in respect of schemes of basic national importance."

The Union Government's role on the subjects, like agriculture in the State list could be on the lines suggested by the Administrative Reforms Commission as pointed out in our reply to questions in Part VI.

9.4 The question arising in the context of fixation of minimum or fair prices for agricultural items and the public distribution system have been covered in the answer to Q. 4.7. They are not therefore repeated here.

2. In the case of irrigation, as has been stated elsewhere, in respect of projects which do not have any inter-State implications or financial assistance from abroad, the sanctioning of schemes should be left entirely to the State Government. Monitoring and evaluation of schemes above a certain level of cost, can and should be done at the time of finalisation of the plans and also periodically by the Central technical agencies. The present system of detailed scrutiny of all projects costing above Rs. 5 crores is wasteful of time and effort and does not achieve the more important objective of proper evaluation of economic and social benefits.

3. As regards projects on inter-State waters, it is advantageous to retain the need for approval by the Central agencies in the matter of allocation of inter-State waters, the procedures for arbitration and appointment of a tribunal are well laid down. However, on the ground that the tribunals take a long time, an even longer time has been taken by the GOI in trying to work out mutually acceptable solution. Several years have been lost by not referring many inter-State waters to a tribunal or by suspending the continuance of the cases before the tribunal—typical examples are those of the Cauveri water dispute and the Narmada Waters dispute respectively. Since water is a sensitive issue, popularly elected Governments are unable to come to decisions. The only method is to have the disputes arbitrated by tribunals as provided for under the appropriate law. The Central Government should not delay references to the tribunal.

4. As regards inputs, including credit, almost all the aspects from the supply of fertilisers and improved seeds to the supply of credit are matters ultimately determined by the GOI. The provisions of the distribution of inputs and the supply of credit have been progressively improved.

5. As regards forestry policy and administration, until a few years ago, the subject was entirely with the State Government. The forests were viewed from the legacy of the colonial period as a natural resource for exploitation by felling virgin forests and raising plantation. With the growth in population in many parts of the country cosiderable encroachments on forests also took place and State Government had to regularise the encroachments from time to time. The result was that the area under forests in the country and in the different States came down to dangerously low levels. Whether this was due to the fact that the subject was entirely with the State Governments or due to the prevailing notions regarding utilisation of forests and realisation of revenue from them and the pressure of growing population is a most question. With the transfer of the subject to the concurrent list and enactment of the Forest Conservation Law, there has been a 180 degree switch. Even for very small matters, clearance has to be obtained from a Committee in Delhi. In the matter of dealing with our forests, therefore, we seem to be swinging from one extreme to the other. There is need for enunciating a clear cut policy, getting it accepted by the Parliament and the National Development Council and for having in each State an Autority independent of the forest department to be in overall charge of implementing various aspects of the policy and eporting from time to time to the State legislature.

9.5 There are no problems in the sphere of Centre-State relations with respect to the role of agricultural research through ICAR. Establishment of major research institutions is one of the important functions of the Central Government and such research institutions should be further strengthened. They should also considerably enlarge the coordinated projects in States, involving fully the State Agricultural Universities and research institutions. As regards NABARD, comments have been made in reply to some of the questions in Part VII.

Food and Civil Supplies

10.1 There is scope and need for improving consultation. The difficulties faced by a deficit State like Kerala in the matter of food supplies are :

(i) inadequate supply of food grains, especially rice by the GOI for the public distribution system;

(ii) drying up of private trade channels due to restrictions (mostly informal) on movement of food-grains imposed by surplus States; and

(iii) the GOI's stipulation that State Governments or State Government Agencies (like Civil Supplies Corporations) should not make inter-State purchases without the GOI's prior concurrence. Such concurrence is very slow in coming and is given for small quantities only and is compounded by further difficulties in getting the authorisation for credit etc.

As a result, especially in years of drought in the country, the food supply position and the food prices situation become critical in deficit States like Kerala.

The advantage of a national common market is that dfferent parts of the country can produce different commodities efficiently and economically depending upon their natural endowments and agro-climatic condtions States which produce cash crops and earn foreign exchange for the country should not be made to suffer in the matter of food supplies. Supply of an agreed quantum of foodgrains to such States should be accepted a s a national responsibility.

In bringing about inter-State understanding and in working out an agreed policy, more systematic consultations between the GOI and the States would be useful. We feel that taking into account the nature of the monsoon, the National Development Council should discuss in the month of August/September every year, the national food situation and arrive at an understanding on the policies to be followed by the Centre and the different States in the next 12 months.

10.2 A periodic review would indeed be useful. In about once in 5 years, a National Committee with representatives from the Centre, States and concerned interests could be appointed to review the situation and make appropriate recommendations to the Centre and the States.

Education

11.1 It is felt that any criticism that there is unnecessary centralisation and standardisation in the field of education and too much of Central interference in the initiative and authority of the State is not at all justified. At present there is not much centralisation. In fact we require certain degree of standardisation in the matter of pre-degree and university education considering the need for mobility of students from one region to another, the need for unified or standard examination system which will have relevance and parity in the matter of degrees and diplomas issued by various authorities, a broadly unified national time calendar for admission and withdrawals of students, the general need to have parity in syllabi and curriculum with other countries in the field of scientific and technological education.

11.2 It is felt that University Grants Commission, may generally confine its attention in extending financial assistance to the Universities and affiliated colleges. To the extent necessary, the University Grants Commission may act as a co-ordinating body for shaping University and college education with specific reference to the physical facilities, the financial facilities and other allied matters. It would be however useful for a wider body with alround representation viz., from academic circles, educational planners, elected representatives, and administrators to lay down general policy norms for Higher Education. It should however be made mandatory that the UGC should be consulted by any such body before decisions are taken on policy issues.

11.3 There should be a national policy on education so that there will be some uniformity in the educational pattern throughout the nation and there will be scope for mobility for students from one State to another. The policy in its broad lines may be evolved by the Government of India and its execution and the details may be left to the respective States. There may be frequent discussions and consultations between the Centre and the States.

11.4 No difficulty has been experienced in our State in the operation of the constitutional provisions under articles 29 and 30 which guarantee the rights of the minorities for establishing and managing denominational educational institutions. As a matter of fact in Kerala Educational Institutions successfully run by minorities from an integral part of our educational system.

11.5 As far as Kerala is concerned there has not been any specific instance of conflicts of issues between the Centre and the State in regard to any programme of Educational development.

Inter-Governmental Co-ordination

12.1 The inter-State council suggested by us should be able to deal with such matters. A separate commission or council is not necessary.

Kerala

MEMORANDUM

The working of the Indian Constitution with particular reference to the relations between the Union and the States has been the subject of analysis and discussion by a number of scholars, Committees and the Administrative Reforms Commission. The present Commission is, however, the first one to be constituted by the Government of India specifically to examine and review the working of the existing arrangements between the Union and the States in regard to powers, functions and responsibilities in all spheres and recommend appropriate changes and other measures. The task assigned to the Commission is of immense national importance. The Government of Kerala welcomes the Commission which consists of eminent persons with long and wide experience of public affairs.

2. The general principles of allocation of responsibilities among different levels of Government in a country should, ideally, be—

(i) Clear demarcation of functions—Functions must be clearly defined and each particular function should be assigned to a particular level of Government to be performed exclusively by that level;

(ii) Efficiency—Each function should be performed at the level of Government, which can perform it most efficiently;

(iii) Priority to lower levels——Levels of Government which are close to the people should perform as many of the functions as they effectively can, and the higher levels undertaking only those that cannot be so performed.

It is recognised that, in practice, responsibilities can rarely be divided in this rational way. Firstly, the division is not done on a clean slate—there are different institutions with different powers already established and at a perticular point of time, when the division of responsibilities among levels of Government is considered, the historical context plays a very important role. Thus, at the time of finalisation of our Constitution, the fact that India was emerging as single unified country, with a common political system, for the first time in history and after long years of subjugation was a very important consideration. Secondly, the division of responsibilities is a political exercise and is subject to compromise based on what is considered to be most desirable and feasible at a given time. Thirdly, a clear division by subject area has become increasingly diffiicult with the growht of modern technology and the complexities of modern Government and society, with the result that different functions relating to each subject area may have to be carried out at appropriate diverse levels of Government. This is, to some extent, achieved in centrally planned socialist countries, as the lower levels of Government in such countries represent lower tiers of the Central Government. In systems in which the powers and functions have to be designated by statutes, it is not always feasible to list the functions in a detailed and differentiated way. Therefore, the functions are listed in general terms leaving the actual role to be determined in the Government system from time to time.

3. In the discussions in the Constituent Assembly and its Committees regarding the principles of our Constitution, the different alternatives — a unitary state, a federation with a strong Centre and with residuary powers vesting in the Centre or a federation with larger powers for the States — were all considered. One of the early Committees set up by the Constituent Assembly was the Union powers Committee with Shri Jawaharlal Nehru as its Chairman. This Committee came to the conclusion that a unitary State would be a retrograde step both politically and administratively and recommended that "the soundest framework of our Constitution was a Federation with a strong Centre", with residuary powers vesting in the Centre. When the Report of this Committee was discussed in the Constituent Assembly, strong views were expressed against it and in favour of larger powers for States. The general scheme suggested by the Committee was Finally adopted.

4. Introducing the Draft Constitution in the Constitutent Assembly, Dr. B. R. Ambedkar (the Chairman of the Drafting Committee) explained the form of the Comstitution and its essential characteristics. The Indian Constitution, he said, is a Federal Constitution in as much as it establishes what may be called a 'dual polity'. This dual polity consisted of the Union at the Centre and the States at the periphery, each endowed with sovereign powers to be exercised in the fields assigned to them respectively by the Constitution. However, one distinguishing feature of the Indian system from other systems elsewhere is that the Indian Constitution can be both unitary as well as federal according to the requirements of time and circumstances to work as federal system in normal times, but in times of grave emergency consequent on external aggression of war, it may convert itself virtually into a unitary system. There are also powers under the Constitution for the President to proclaim a financial emergency or to take over the administration of a State, when he is satisfied that there is a failure of the constitutional machinery in the State or when a State fails to comply with or give effect to direction given by the Union.

5. Replying to the criticism in the Constituent Assembly "that there was too much centralisation and that the States have been reduced to municipalities", Dr. B. R. Ambedkar observed as follows:—

"As to the relation between the Centre and the States, it is necessary to bear in mind the fundamental principle on which it rests. The basic principle of federalism is that the legislative and executive authority is partitioned between the Centre and the States not by any law to be made by the Centre but by the Constitution itself. This is what the Constitution does. The States under our Constitution are in no way dependent upon the Centre for their legislative or executive authority. The Centre and the States are co-equal in this matter. It is difficult to see how such a Constitution can be called centralism. It may be that the Constitution assigns to the Centre a larger field for the operation of its legislative and executive authority than is to be found in any other federal Constitution. It may be that the residuary powers are given to the Centre and not to the States. But these features do not form the essence of federalism. The chief mark of federalism, as I said, lies in the partition of the legislative and executive authority between the Centre and the Units by the Constitution. This is the principle embodied in our Constitution. There can be no mistake about it. It is, therefore, wrong to say that the States have been placed under the Centre. The Centre cannot by its own will alter the boundary of that partition. Nor can the judiciary."

6. After the Constitution was adopted, the country has undertaken national planning for development. With the advent of planning, the Union Government's area of influence and operation got extended to all subjects coming under development. The separation of powers and subjects between the Union and the States got increasingly blurred. The preparation of the national plan covering all development subjects, the clearance required for the State plans from the Planning Commission and the Government of India, the detailed examination by Working Groups of the Central Ministries of the State's resources and the development schemes in each sector from year to year, the determination of the quantum of Central assistance and the size of the State plan from year to year, the introduction of centrally-sponsored schemes (not only at the beginning of a Five Year Plan but almost throughltut the plan period) and the procedures for externally assisted schemes have all lead to a high degree of administrative and financial centralisation. This has been further compounded by the concentration of savings through the nationalised banks and the Central Financing institutions like the LIC, GIC, UTI, IDBI, IFCI, NABARD etc. There are no institutional arrangemnts through which the States can express themselves regarding the policies and working of these institutions on whom depend the substantial investments in agriculture (in its widest sense), industry, housing, water supply and infrastructural schemes, all of which are so vital to the development of each state.

7. The issues relating to finance and development have therefore become the most important ones to be discussed in the context of relationships between the Centre and the States.

8. The challenge facing the polity of the country is how to balance the requirements of planning for ational development and those of local initiative local savings and investment. One of the prominent Members of the Constituent Assembly, Shri G. L. Mehta impressed upon the Assembly that whatever the constitutional set up may be, the relationship between the Centre and the States would be determined by economic forces and tendencies. He said——

"Commerce, trade and industry today as well as the economic relationships which they involve are national in scope and cannot be easily divided into Provincial and Federal aspects for purposes of regulation......Unfortunately, the country was prone to fall a victim to fissiparous and disintigrating tendencies and it was essential to guard against them......Paradoxical though it may seem. It is only a strong Centre which can build up adequate provincial autonomy and achieve decentralisation".

9. Thirty-four years is a long enough period to undertake a comprehensive review of the working of the Constitution in the field of Union-State relations. It is a measure of the prescience of our national leaders and Constitution-makers and the national spirit of our people, that the basic scheme adopted by the Constituent Assembly is still relevant. The State Government is of the view that there is need for a strong Centre for preserving and fostering the unity and integrity of the country and the national common market and for national planning for development. The State Government is equally firm in its view that the States should also be strong, as the strength of the Centre lies in the strength of the States and, therefore, nothing should be done in the name of planning or other considerations that would bring about excessive financial, planning and administrative centralisation. The process of planning and financial sharing as at present seems to have become counter-productive in that the peculiarities and special requirements of each region or State are not studied in depth and appropriate solutions and paths of development worked out. There is a strong tendency, backed by the retention of larger resources with the Union, to lay down iniform patterns of development throughout the country, through schemes which are essentially worked out by a distant bureaucracy. The needs of national planning for development and of balanced regional development do not require the involvement of Central agencies in such minutes of development and administration as at present. There is considerable scope for improvement in the institutional arrangements for national planning, for dealing with Centre-State issues, for devolution of larger resources to the States commensurate with their vastly increased responsibilities and for dealing with inter-State distribution. There is great need for evolving new procedures for Centre-State consultations and for establishing healthy conventions.

10. We have presented the views of the State Government on the various issues in the legislative, Administrative, financial and developmental spheres, in the form of detailed answers to the questionnaire received from the Commission. We wish to indicate here briefly the salient points made in the detailed answers to the question.

Legislative Relations

11. The State Government does not suggest any change in the subjects listed under the three Lists in the Seventh Schedule of the Constitution of India except in regard to "Residuary Powers". In the spirit of cooperative federalism and on the analogy of the provisions in the Government of India Act, 1935, the residuary powers may be listed in the Concurrent List.

The State Govement is also of the view that in the case of those entries in List I, under which Parliament can legislate on declaration of 'public interest' or 'national importance', on subjects which are included in the State List, the entries should be so worded as to make it clear that the power will be exercised only in exceptional circumstances. Legislation under the entries should also be undertaken in consultation with the Inter-State Council and should be subject to periodical review, once in five years, by appointing National Commissions including represen tives of States; necessary provision should be made in the concerned Central statutes itself for this purpose.

Whenever any amendment to the Seventh Schedule is contemplated under Article 368, there should invariably be prior consultation with the State Legislatures before the Amendment Bill is introduced in Parliament. The State Government also urges that any legislation affecting the interests of the States should be undertaken only after a discussion in the Inter-State Council (Para 13 below) and on the basis of its recommendations.

The power to reserve a Bill for the President's consideration under Article 200 should be invariably exercised by the Governor on the advice of the Council of Ministers and Article 200 may be appropriately amended for this purpose. A definite time limit may be laid down, say three months, within which the State Government should be informed of the President's decision regarding assent to the Bill or withholding of assent or of the message to the legislature for reconsideration of the Bill. Where the President withholds assent, it may be laid down that the reasons therefor should be stated in writing.

Role of Governor

12. The primary role of the Governor is as constitutional head of the State but he is also the constitutional link between the State and the Central and should objectively counsel both the State and the Central Governments in the larger interests of the State and the country.

Governors have functioned generally as constitutional heads of State and have fulfilled the role envissaged in the Constitution. When discretion had to be exercised, for example, in calling or not calling a leader to form a Government when the majority support for him was not clear or when recommending or not recommending action under Article 356, Governors have adopted different standards. It is felt that it should be possible to lay down guidelines for the exercise of the discretionary powers of Governors, on the basis of the experience of the last 34 years.

Generally speaking, whenever a Chief Minister loses confidence and another leader with clear majority is not available, it is better to dissolve the Assembly and order fresh elections.

In matters relating to confidence of the legislature and proving of majority, the responsibility should be that of the Chief Minister and should not be taken on by the Governor.

Administrative Relations

13. The State Government feels that there is need for constant consultation between the Centre and the States and between the States themselves in the interests of coordination of policy and action. For this purpose and for the purposes mentioned in Article 263, it is necessary to constitute an Inter-State Council. The Inter-State Council may also be the National Development Council to deal with matters connected with National Planning and Development and economic policies. We suggest that Article 263 be amended to provide that there shall be an Inter-State

Council which will also be the National Development Council and which will have such composition, functiuncand powers as may be laid down in the law. The statute should provide for the Council to meet at least once in six months, for committees of Ministers and officers and for presentation of the annual report to the Parliament and the State legislatures. We would request the present commission to make detailed recommendations in this regard.

Differences between a State and the Centre should be discussed bilaterally for resolution and one of the forums in which such discussions could be held in case bilareral discussions do not succeed will be the Inter-State Council.

Article 356 of the constitution is necessary. However, necessary safeguards should be built into the Article to prevent the recurrence of mass dismissal of State Governments and dissolution of State Assemblies based on the results of Parliamentary elections.

The power to give directions by the Union should be there as reserve power, but it is felt that Article 365 which is worded on the lines of provisions in enactments creating statutory authorities is an unnecessary irritant and may be deleted from the Constitution.

A number of Central agencies have been created to handle activities relating to subjects in the State and Concurrent List as a result of national policies regarding procurement and distribution of foodgrains and essential commodities, fixation of prices of importment materials, restriction of monopolies and other matters. Bodies like the Central Water and Power Commission (later Central Water Commission and Central Electricity Authority) were created in pursuance of Central Acts. Being basic infrastructural facilities, it is necessary to have a framework of Central legislation for purposes of ensuring quality and for dealing with inter-State matters. However, the statutes have not been changed with time and, over the years these bodies have been dealing with too many matters of minor detail. For example, the monetary limit of Rs. one crore fixed for power projects in 1948 still remains unchanged, with the result that schemes which the States could undertake on their own 35 years ago have now to be posed for Central clearance. The examination by Central agencies even in respect of small schemes is so detailed that about two to three years are taken before a small scheme is sanctioned. These Central bodies could concern themselves only with projects above a certain size and projects which have inter-State implications. In the case of Employees State Insurance and Employees Provident Fund, it should be enough for the Central Government to provide the legal framework.' Similar is the case of National Savings Organisation regarding which the Central Government could lay down the schemes and facilities and leave it to the States to organise the promotional and other activities.

It will be desirable to have an All States Advisory Council at the level of Ministers for each of the Central organisations which deal with subjects in the State and Concurrent List—— are at least one council for the agencies attached to a Central ministry—— which should meet at least once a year and discuss the policies, role and working of the organisations. States should also have a voice in the administration of organisations like All India Radio and Doordarshan. Joint advisory Councils could be formed at the State level for this purpose.

The State Government is of the view that it is the primary responsibility of the State Government to protect the life and property and reights of its citizens, particularly that of the minorities. At the same time when circumstances so require, the Central Government should not hasitate to take corrective measures and ensure the protection of life and property and rights of persons affected, if any, during disturbances and also should help to rehabilitate the victims.

The arrangements contemplated under Article 355 for the location and use of Central Reserve Police and other Armed Forces in aid for Civil power in a State are necessary in the larger interests of national integrity.

Financial Relations and Economic and Social Planning

14. Taking the total revenues and expenditures, without making adjustments for resource transfers from the Centre to the States, as much as three-fourths the total budgetary resources (tax, non-tax and borrowings) come within the command of the Centre, while on the expenditure side the share of the Centre and the States is about equal. This imbalance between the resources and the expenditure of the States should be reduced substantially.

Further in roads into the States' limited sphere of taxation should not be made. On the other hand, the States should be enabled to exploit such resources fully. In our view, instead of the proposals now made by the GOI to impose excise duties in the place of sales-tax on some of the commodities, the Central Government should voluntarily withdraw from excise duties on certain commodities and from additional excise duties.

In the light of the experience of the changs in the rates of personal income tax, surcharges and corporation tax and in the rates of basic, specific, special, auxiliary and additional excise duties it is necessary to lay down that all income taxes, including corporation tax and surcharges and all excise duties, by whatever name called, should be made sharable with the States by necessary Constitutional amendments.

Before undertaking lagislation to levy or vary the rate structure or abolish any of the duties and taxes under Articles 268 and 269, it should be made obligatory to consult the States under Art. 274. The statutory National Development Council could be the appropriate body for such consultations.

The present institutional arrangemets—— the Finance Commission and the Planning Commission— are perhaps the most practicable mechanism for transfer of resources to the States. However, the working of the present system should be improved upon and there should be effective coordination between the two Commissions as well as objective criteria for determining the quantum of Central assistance to

States and its inter-State distribution. The Planning Commission should be the Secretariat of the statutory National Development Council. The Finance Commission should have a permanent Secretariat and it should also form an integral part of the Planning Commission.

Since the transfer of resources on the recommendations of the Finance Commissions has been done largely on the basis of a gap-filling approach and the transfer of resources through Central assistance for the plan has been done largely on the basis of distribution under a general formula of a certain sum of money made available by the Union Finance Ministry to the Planning Commission, the transfer of resources has not promoted either efficiency or economy in expenditure nor have they narrowed down the disparities between the States. Basic changes are therefore necessary as regards the principles governing the transfer of resources through the Finance Commission and the Planning Commission.

The states should be enabled to get most of the resources through assured devolution, but the principles of inter-State distribution should be such that they do not leave advanced States with large surpluses. Standards should be adopted and weightage given to such matters of basic national importance like progress in achieving universal primary education, so that States which have striven hard and committed resources to achieve such standards are enabled to meet their commitments.

An important requirement in bringing about better distribution of resources between the Centre and the States and ultimately amongst the States themselves is to increase the overall quantum of Central assistance to the States for their development plans.

It is necessary to re-examine the formulae and basis on which Central assistance is made available to the States' Plans. In the allocation of Central assistance for State plans, the position arising out of the award of Finance Commission should first be taken into account. It should be ensured that all States have the same amount of per capita revenue surplus. This is one of the important elements of coordination between the Planning Commission and the Finance Commission.

In recent years, as a result of the mounting repayment liabilities of States, there has been a diminution in the net transfer of resources to the States. The loan and grant component of Central assistance should be re-examined so as to bring about a reduction in the loan component on the basis of a rational classification of the purpose for which capital resources are utilised in the States. It is much better to bring about such rationalisation and avoid the situation in which States accumulate large deficits on non-plan account.

There has been a decline in the States' share of the total public sector resources and this is mainly due to the sharp decline in the transfer of capital resources from the Central to the States. It is necessary to correct this trend in the interests of the finances of the States and the needs of development.

No major change in the procedure relating to market borrowings is necessary but it is essential to have instituitional arrangements and evolve guidelines for the distribution of the total market borrowings between the Centre and the States and for the inter-State allocation. The present ad hoc allocations are largely in favour of the Central Government. The State Government would suggest the Constitution of a Loans Council for this purpose. States which earn large amounts of foreign exchange through export and remittance of non-residents should be given special consideration, as they are not allowed to set up institutions to mop up any part of the savings.

One of the major elements dislocating the States' resources is the grant of additional Dearness Allowance to compensate for the rise in cost of living. Since the Central Government is in charge of the price situation, the commitment on this account should be taken into account in the transfer of resources from the Centre to the States.

Since co-ordination is essential in all the matters connected with the transfer of resources to the States, it will be disadvantageous to create a number of independent bodies like the National Credit Council, the National Economic Council and the National Expenditure Commission. The State Government feels that a reorganised National Development Council with its Committees should be able to deal with most of the matters. Because of the importance and need for co-ordination with the Reserve Bank of India, a Loans Council is suggested separately.

The introduction of large number of Centrally sponsored Schemes during a plan period tends to dislocate the State plan financially weaker States are unable also to fully utilise the Centrally Sponsored Schemes for want of matching resources. The number of Centrally Sponsored Schemes should be reduced, they should be fully financed by the Centre and should be introduced only with the concurrence of the National Development Council.

One of the objectives of national planning and of intermediation by the Centre is to reduce regional imbalances. The preparation of State plans and the finalisation of their size and content should be based not only on the study of the source-potential of the State concerned but also the gaps in development and the special requirements and not in a routine manner.

The criteria for assessing industrial backwardness should be different from those for general backwardness. The point can be highlighted by citing the example of Kerala. The State has spent over the years substantial sums of money to develop the infrastructure for social and economic development. As a result of this, the State has achieved the highest rate of literacy in the country, lowest death rate, a low birth rate and a resonably well-developed physical infrastructure. On the other hand, industrial growth has been slow and unemployment in the State is the highest in the country. The infrastructure that has been created at huge cost is not fully utilised. It should be the specific objective of policy and planning to direct massive industrial investment to such States.

Central investment plays an important role in this regard. A firm decision should be taken that in the matter of Central public investment, the States will not be required to extend concessions like free land etc. as the demand for such concessions acts against financially weaker States.

15. The State Government is confident that the Commission will give due consideration to its views and make recommendations which will help to put the Centre-State relations in our country on healthy and progressive lines, consistent with the need to preserve the unity, integrity and the national common market and to foster rapid and balanced development of all parts of the country.

NOTE PRESENTED BY THE KERALA STATE PLANNING BOARD TO THE SARKARIYA COMMISSION ON CENTRE-STATE RELATIONS

The Planning Board is generally in agreement with the views expressed in the State Government's Memorandum on the respective roles of the Centre and State Governments, the difficulties that have been encountered and their recommendations regarding corrective measures. This Note is therefore limited in its scope and is confined mainly to Centre-State relations which pertain to economic and social planning. It deals with three broad areas : (a) Centre-State relations in ecomnomic and social Planning, (b) Measures to strengthen the planning process at the State level and (c) The decentralisation of Planning.

I

Centre-State relationship in Economic and Social Planning

2. The need for national planning and the role of the Planning Commission as the machinery for planning have now gained general acceptance. But the existing mechanisms and institutional arrangements for plan formulation and implementation leave much to be desired. The preparation of the National Plan has to be the joint responsibility of the Centre and the States. But at present there is a virtual absence of any substantive or meaningful discussions between the Planning Commission and the State Governments in determing the basic parameters of the five year plans. It is true that the final outcome of the exercise is placed before the National Development Council, but this is no more than a formality. The suggestion to accord a statutory status to the National Development Council and make the Planning Commission a Secretariat of the National Development Council has much to be commended.

3. Another matter which is proving to be a major source of irritation is the manner in which the plan programmes are finalised. The present procedures involving detailed scrutiny of individual schemes, big and small, by the Central Working group are frustrating.

4. The institution of a plethora of centrally sponsored schemes has also unsettled the State Plans. While Centrally Sponsored schemes are necessary in the case of a few areas of basic national importance, the introduction of a large number of schemes—from very small ones to large schemes—and the need to find matching funds for them diverts resources from ongoing and other priority State schemes. Correctives need to be applied in two directions. Firstly, the number of centrally sponsored schemes should be minimal, confined only to programmes which are admittedly of national priority. These should as far as possible form part of the Five Year Plan itself. Secondly, a measure of flexibility should be provided to fashion the centrally sponsored schemes to suit local requirements.

II

State Planning Board

5. While the claims of the State Government for their rightful place in the planning process are well taken, it is imperative that the State Governments should equip themselves to assume the responsibility for detailed plan formulation, monitoring and evaluation. To the extent capabilities in these direction are created and strengthened, the justification for a higher degree of decentralisation in decision making from the Centre to the States will be fortified.

6. As early as in the Third Plan, the Planning Commission had advised the State Governments to set up State Planning Boards to provide the technical and professional support to the preparation and monitoring of development plans at the State level. Following the guidelines from the Planning Commission, State Governments have constituted Planning Boards though their functions and status vary from one State to another. But most of them are merely appendages of the Planning Departments which jealously guard their right to plan. It is a most question whether there should be greater devolution of plan decisions at the State level, unless the States accept the discipline of planning and create the necessary infrastructure. Greater decentralisation of resources and powers to the States, is a necessary but not a sufficient condition for real progress. A Planning Board with the required technical competence and adequate powers is a sine-quo-non for the successful formulation and implementation of State Plans. But there is a general reluctance to conform to the discipline of plans.

7. The strengthening of the Planning Board will require that —

(a) The Planning Board should be responsible for the formulation of the perspective, five year and annual plans.

(b) Projects and programmes included in the plan should invariably be on the advice of the Planning Board.

(c) All important issues on economic policies and procedures should be considered by the Planning Board before being placed before the Cabinet for approval.

(d) Any significant changes in the plan programmes during the course of implementation should be with the concurrence of the Planning Board.

(e) Planning Board should be closely associated in all inter-departmental and Central/State discussions on major projects, programmes and policies.

(f) The programmes of Plan implementation should be reported on a regular basis to the Planning Board in order to enable it to undertake suitable monitoring and evaluation and to appraise the Cabinet from time to time on the implementation of Plan and any modification that might be required.

(g) Instead of a separate Planning Department in the Secretariat and a Planning Board, the State Planning Board should be the only planning agency at State level as in the case of the Centre.

(h) The Planning Board should have a statutory status and provision for this could be part of the proposed enactment for making the National Development Council statutory and the Planning Commission its Secretariat.

All of these will call for not only the enlargements of the responsibilities and functions of the Planning Board but also close co-ordination and consultation between the Departments and the Planning Board. Further, the Planning Board should be adequately strengthened with professional and technical personal to undertake macro-economic studies, sectoral planning and concurrent evaluation of projects. Above all, the advice rendered by the Planning Board should be given due consideration by Government.

8. Once reforms on these lines are brought about, it will help to generate a greater degree of confidence at the Centre on the competence and ability of the State Governments to undertake the planning functions more effectively than hitherto. This in turn will smoothen the process of a higher degree of devolution of decision making powers to the States on economic and social planning. It will also open up a direct channel between the Planning Boards at the States and the Planning Commission at the Centre. National Planning will then be a total integrated process with Planning Boards providing effective support from the States to the Planning Commission. This close liaison between the Planning Boards and Planning Commission and the introduction of the programmes for exchanging personnel will be mutually beneficial.

9. Finally it must be said to the credit of the present Kerala Ministry that they have made commondable strides in enlarging the functions of the Planning Board. In reconstituting the Planning Board recently, it has been ordered that all important matters of economic policy as well as the initiation of new projects and programmes should be referred to the Planning Board for its advice. The preparation of the Annual Plan is now a function of the Board and had been discharged by it during the current year. These do represent an advance over the pre-existing position, but there is still considerable improvement to be brought about to achieve a greater degree of involvement of the Planning Board in planning at the State level.

III

Decentralisation of planning

10. In a vast country like ours planning should be a multi-level process. The process of decentralisation of development planning and implementation will have to be taken down below the State level in order to be fully effective. Just as excessive centralisation of planning functions at the Centre can generate serious problems at the State level. equally, concentration of decision making powers on planning and implementation at the State capitals can be inimical to proper planning and implementation of schemes and projects which should appropriately be carried out at the district, block and panchayat level. Decentralisation of planning and implementation of economic development programmes from the Central Government to the State Governments should be accompanied by a similar delegation of powers to the various levels down below within the State level.

11. Decentralisation of planning has a chequered history in Kerala. Several attempts at devolution of functions to the district level have borne no fruit. The Planning Board has now recommended a phased programme of decentralisation which is under the Government's consideration. The crux of the problem in the Centre as well as in the States is the unwillingness of the powers that be to part with power.

12. Decentralisation of the planning process from the Centre to the States will definitely go a long way in establishing a spirit of 'Co-operative Federalism' in our planning system. The Planning Commission has the necessary technical expertise at its disposal for carrying out the responsibilities of plan formulation, and it undertakes macro-level planning exercises. But the States are not actively associated in these exercises. Nor has the Commission any rapport with the State Planning Boards. A beginning may be made in this regard by an arrangement under which all relevent technical papers prepared in the Planning Commission, and circulars issued from time to time in respect of plan formulation and implementation are sent directly to the State Planning Boards.

13. The present practice of States preparing inflated plans and bargaining with the Planning Commission for a large size plan should be discouraged. Once the Plan size and sectoral outlays are decided, the States should be left free to formulate the schemes. Given greater autonomy and initiative, the State Plans will be more purposeful and their implementation can be more effective.

14. The existing arrangements for monitoring and evaluation of plan programmes made in the Planning Commission and in the State are inadequate. In this State the monitoring of plan schemes is carried out by the Central Planning and Monitoring (CPM) Unit in the Secretariat which is functioning under the Planning Department. At the same time the evaluation function is entrusted with the State Planning Board. All the Departments inplementing plan schemes are to report the progress of execution of schemes to the CPM Unit in prescribed formats. Usually there is a time lag of more than a month in the reply of information. Most of the Departments furnish the financial expenditure under different heads and they do not pay much attention to the compiling of physical achievements. It is these skeleton reports which are being transmitted to the Planning Commission, so that the review of the progress

of implementation of plan schemes in the Planning Commission is bound to be tardy.

15. It is necessary to streamline the present arrangements for monitoring. In each of the major Departments there should be a monitoring cell which should continuously update the relevent implementation details and help to maintain a regular flow of information from the departments to the CPM Unit. The Budget contains about 1500 schemes implemented by various Departments. The details collected on each scheme should be computerised. In respect of Major irrigation projects, power projects etc., it is necessary to introduce Network technique (PERT/CPM) for planning, scheduling etc. which will help to establish an efficient monitoring system. At present these Departments are not adequately equipped to monitor the physical achievements and progress of each scheme and consequently mid course corrections cannot be effected. This is the main reason for projects like Kallada, on which work was started during the second Five Year Plan, to spill over from Plan to Plan and it is going to be a continuing scheme in the Seventh Plan also. As the Plan funds available with the State are quite inadequate for setting up the computerised monitoring unit, the cost of computerisation and the expenditure on staff of the monitoring units in the different departments will have to be met by the Central Government. This will improve the functioning of the monitoring cell in the Planning Commission also.

GOVERNMENT OF MADHYA PRADESH

(a) Replies to the Questionnaire

(b) Memorandum

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 Our Constitution cannot be described as 'federal' in the strict sense of the term. In fact the word 'federal' has not been used in the Constitution at all. Article 1(1) *ibid* says that India shall be a "Union" of States. According to Dr. B. R. Ambedkar, "although the Constitution may be 'federal' in character, the term "Union" has been used because of certain advantages". The advantages, he explained in the Constituent Assembly, were to indicate two things, *viz.* (a) that the Indian Federation is not the result of an agreement by the units; and (b) that the component units have no freedom to secede from it. Therefore, the word "Union" here does not carry the same meaning as the word 'Union' does in the Preamble to the Constitution of the United States of America, the model federation. The characteristics of a federal State had been deliberately assigned by the Constituent Assembly as a conscious measure of distribution of authority between the Centre and the States. But the authority of the Parliament continues to be wide and overriding in as much as it can even create new States, change the boundaries of the existing States, or abolish any one or more States. The situation could best be described in the words of M. C. Setalvad "as an arrangement arrived at by the representatives of the people for the governance of their country by the grouping of its territories into various regions, by distribution of Legislative and Executive powers between the Government of these regions and the general Government at the Centre, by the creation of institutions and agencies needed for efficient governance of the country."

1.2 The Indian Constitution does not envisage a classic federation nor is it unitary in the sense the Constitution of U. K. is. India is a composite State of a novel type. It enshrines the principle that in spite of federalism the national interest ought to be predominant. As such, any move to water down the authority of the Central Government would not be deemed to be in the spirit of the Constitution. The Rajamannar Committee constituted by the Tamilnadu Government worked on the thesis that India was a classic Federation and consequently federating units should have most of the authority and the Central Government should be left only with the residuary powers. To this extent the approach of the Committee was basically faulty. The distribution of power between the Centre and the States should be continuously reviewed and debated in the Parliament. In fact, this has been the practice all these years.

1.3 Our view is that the existing provisions in the Constitution of India regarding the matters in question whether in normal times or in emergency are adequate. In fact it has been established that they are flexible enough to cope with the situations arising from time to time.

1.4 The federation of the type mentioned in the question does not seem to exist any where in the world. The American federation has been described as an indestructible union composed of States. It is not possible for the Federal Government to redraw the map of the United States by forming new States or adjusting their boundaries without the consent of the States. The same characteristics are found in the Australian Constitution. But even in the United States there is considerable presence of the Federal Government in the States. There is even a federal civil service with representatives in the States. There is a provision for imposition of martial law throughout the country in the United States.

1.5 We are of the view that there is no substantial lacuna, either conceptual or structural in the Constitution. It has great resilience to meet all kinds of situations as they develop from time to time in a comparatively young democracy like ours. In fact, the Constitution has been amended several times in response to new developments and challenges. The responsibility of keeping the spirit of the Constitution intact and alive largely depends on practices and conventions that are developed both by the Centre and the States. The democratic institutions, in India being in a state of evolution, it can be said that even in this respect the evolution has been, by and large, healthy.

1.6 We agree with the view that the protection of independence and integrity of the country is of paramount importance. The Preamble of the Constitution, Articles 5, 9, 256, 257, 258, 260, 352 to 360, 365 and the VIIth Schedule embody some of the provisions in this regard.

1.7 We are of the opinion that through Articles 256, 257, 354 to 357 the Constitution of India has provided a broad and sound framework regarding the obligations of the Centre and the States in respect of the country as a whole and to one another. These provisions are reasonable and rooted firmly in the spirit of mutual trust.

1.8 In our opinion the provisions in Article 3 are necessary and functional. No reconsideration is called for.

PART II

LEGISLATIVE RELATIONS

2.1 We agree that there is nothing basically wroug in the scheme of distribution of Leigslative powers between the Union and the States. The States do enjoy a vast and substantial measures of Legislative

autonomy. There are instances in which the Union Government have legislated upon subjects which materially affect the States. Viewed narrowly, this could be termed as encroachment. However, taking a long term view and keeping in mind the national interest, we feel that this is unavoidable and, in many cases, indeed desirable. For instance, in case of the Union Legislation about forests, it can be seen that it is a measure to prevent serious erosion, if not eventual extinction of a very crucial natural resource, namely forests, done with the additional objective of ensuring ecological balance.

2.2 In spite of temporary tensions and controversies in this behalf, taking a long term view our opinion is that there does not appear to be sufficient ground for making any basic or substantial changes in the distribution of powers under the legislative lists of the VIIth Schedule and/or the contents thereof, or in other relevant provisions of the Constitution.

2.3 Mutual consultation between the Centre and the States is always desirable. However, it need not be formalised by a specific provision in the Constitution. Informal consultations on major Legislative measures in the concurrent list take place even now and could be further developed into a healthy convention. Formal provisions in this regard are likely to cause delay and possible embarrassment on issues which may need urgent legislative action.

2.4 The existing provisions in Article 249 of the Constitution of India in this regard are reasonable and do not call for any change.

2.5 The experience of the States has been that several enactments referred to the Centre either for assent or for clearance tend to take a long time. The procedures in this regard should be so streamlined that only those aspects of the enactments are scrutinized in the Centre which are to be examined from the point of view of their constitutionality and not the whole enactments *per se* as seems to be the practice now.

PART III

ROLE OF THE GOVERNOR

3.1 (a) The executive power in a State is vested in the Governor. He is, however, appointed by the President of India and holds office during the pleasure of the President. He is, therefore, liable to removal at the discretion of the President. The nexus between the Central Government and the State Government regarding the office of the Governor is, therefore obvious.

In so far as his role *vis-a-vis* the State is concerned, in Rai Sahib Ram Jawaya Kapoor *vs.* State of Punjab (1955), the Supreme Court has held that the Governor is only a constitutional head of the executive and that the real executive power is vested in the Council of Ministers. The Governor acts on the advice of his Council of Ministers, generally, but he has also certain discretionary powers. Under the Constitution where the expression "in his discretion" is used in relation to the powers and functions of the Governor the reference is to special responsibilities of the Governor such as Article 371-A and paragraphs 9(2) and 18(3) in the Sixth Schedule. Similarly the powers under Articles 200 and 356 are also to be used in his discretionary capacity.

Under Article 167 it is a duty of the Chief Minister to communicate to the Governor all decisions of the Council of Ministers for legislation.

The constitutional provisions relating to the role of the Governor in the context of the Centre-State Relations, are, therefore, adequate in as much as the Governor is fully informed of the important affairs of the State and he has a organic link with the Central Government so as to enable him to take up any issue of public importance with the Central Government. The powers relating to withholding the assent on the Bills and reserving them for the assent of the President also equips him with the authority to prevent any law being made contrary to national policies. The provisions under Article 356 of the Constitution also give him a pivotal role in respect of Centre-State Relationship.

3.1(b) In our opinion the Governors have, by and large, lived up to the expectation of the Constitution and their performance has generally fostered the spirit of national integration and solidarity.

3.2 In a federal set-up like our polity there is always a possibility of difference of views between the Centre and the States on a wide range of subjects irrespective of the fact whether the subject finds a place in List I, List II and List III of the VIIth Schedule of the Constitution. The role of the Governor should be to anticipate and identify the areas of differences and to endeavour to remove or diminish them by working as the subtle two way communication channel between the Centre and the State. Thus the institution of Governor should create cohesion and feeling of unity in Centre-State relations, natural divergence of views on various topics notwithstanding.

3.3(a) The role of the Governor assumes special importance in abnormal times when the constitutional machinery of a State is under stress due to instability of the elected Government or some other potent cause. In such circumstances the Governor has to act in an objective manner. In doing so he must keep in mind the solemnity of his oath of office.

3.3(b) The decision to appoint the Chief Minister should be in accordance with the provisions of the Constitution and be guided by the need of providing a stable Government in the State.

3.3(c) No comments.

3.4 The provisions of this Article of the Constitution are such and as provide for the Governor to bring to bear upon the problems of legislation administrative maturity and experience. It provides a safeguard against hasty legislation or legislative measures which are in the long term against the interest of the State. Fortunately, there has been no instance in our State of the Governor having reserved a State Bill for the President's consideration without advice from the Council of Ministers.

3.5 This has been covered in replay to question No. 2.5.

3.6 The view that the Governor is neither an agent of the Centre nor a more ornamental head of the State but a close link between the Centre and the State represents the correct position. Our considered view is that the Governors have acted impartially and fairly in accordance with the Constitution and healthy conventions in discharging their dual responsibility.

3.7 In our view the constitutional provisions regarding tenure of the office of Governor in Article 156(1) are adequate. The deletion of Art. 156(1) will undermine the present delicate role of the Governor as an agent of the Centre. We are, therefore, of the view that no change in this behalf is warranted.

3.8 In our view the present system has worked quite satisfactorily.

3.9 In our view the criticism in this behalf is not well founded. There does not appear to be good and sufficient ground for introducing in our Constitution any provision similar to Art. 67 of the Basic Law of Federal Republic of Germany.

3.10 In case of a high constitutional functionary like the Governor it should be assumed that he will use his discretion under the Constitution in accordance with his oath in furtherance of the good of the people. To give him discretion and then to circumscribe it by issuing guidelines is to repose faith in him and then to doubt his ability to live upto such faith.

PART IV

ADMINISTRATIVE RELATIONS

4.1 Article 256 of the Constitution provides that the executive power of a State shall secure compliance with Union laws. As the Union has Legislative authority over the whole of the territory of India any law enacted by Parliament shall have the force of law in every State. The Article provides that it shall be the Constitutional duty of every State to enforce Union laws as they are applicable to the State. The Executive of the Union shall have the power to give directions to the State to ensure due compliance with enforcement of Union laws.

Article 257 lays down that the executive power of the State even within its proper sphere, must be so exercised as not to impede or prejudice the exercise of the executive power of the Union and, subject to directions issued by the Union Executive in this behalf. The object is to prevent any conflict between the executive policy of the State and that the Union. So, even within the sphere covered by List II read with Article 162, the Union Executive shall have the power to give directions to the State Executive so that the exercise of the State power may not prejudicially effect the exercise of the executive power of the Union to give directions to the States on particular matters.

Article 365 provides that where-in any case the direction given in exercise of power of the Union under any provision of the Constitution to comply with by any State but the State has failed to comply with, or to give effect to, any directions, the President may hold that the situation has arisen in which the Government of such State cannot be carried on in accordance with the provisions of the Constitution.

The Article provides the sanction behind such directions. If any State fails to comply with any such direction, the President shall be entitled to exercise his power under Article 365.

The result of such a decision by the President would be that he can issue a Proclamation under Article 365 taking over the Government of the State. On the President's taking such a decision, the provisions of Article 356 may come into operation.

The provisions of these Articles are in larger interest of the Nation. However, these Articles should be used only where it is felt that their use has become inevitable.

There has been no case so far wherein this State Government was compelled to carry out the directions given under Article 256 and 257 under the threat of invoking Article 365.

4.2 We agree with the latter view. Since Article 365 is purely a consequential enabling clause, it may remain as a reserve provision.

If the directions are given by the Union Government under Article 256 and the State Government does not comply with such directions, the Union Government cannot take any step against such State Government in the absence of the aforesaid constitutional provision.

4.3 The State Government agrees with the Commission.

4.4 Such instances have not come to the notice of the State Government.

4.5 The period fixed by the Constitution (Forty-fourth Amendment) Act, 1978 appears to be sufficient for restoring the normally within the time specified in clauses (4) and (5) of Article 356.

4.6 The present arrangements are working satisfactorily.

4.7 The Central agencies enumerated in this question are handling activities relating to subjects in the State and Concurrent Lists of the VII Schedule to the Constitution, but considering their nature and impact on national life it is advisable not to disturb this arrangement in the name of State autonomy. However, these agencies can deliver goods more effectively if they are more responsive to the needs and problems of the States in this behalf. The role of these agencies need to be reviewed from time to time in association with the State Governments.

4.8 The All India Services have played a valuable role in fostering national integration and combating regional feelings. It is, therefore, a fair assessment of their overall performance that they have lived up to the expectations of the Constitution makers. In the present system the control exercised by the

States over the personnel of these services does not appear to be inadequate for purposes of effective administration.

4.9. As matter of rule deploying of Central Forces in the States should be done with the consent of the State Governments. However, in exceptional circumstances where national security or integrity is threatened and the State adopts intransigent attitude, the Central Government should be free, in larger interest to deploy Central Forces *suo moto* in aid of civil power.

4.10. The television and radio are very powerful media and an instrument of fostering national integration. As such they should continue to be in the Central List. However, there should be a more rational basis for the expansion of these facilities. Madhya Pradesh, because of its large size, has special problems of communication. Therefore, it is all the more necessary that the State gets wide network of radio transmission and television relay stations. The Commission could devise a formula according to which the plan resources going into the expansion of these facilities are equitably distributed between different States.

4.11 The functions of Zonal Councils have been enumerated in Section 21 of the States Reorganisation Act, 1956. Matters of common interest of the States are discussed in the Council meetings. The view of the State Government is that the purpose of collectively pursuing States' interests is properly served by the Council and that it is a useful organisation.

4.12. Under Article 263 of the Constitution there is a provision to establish inter-State Council. The functions to be discharged by such Council are given under the Article stated above. The Supreme Court of India has the jurisdiction to hear disputes between the States involving theex istence or extent of a legal right but certain disputes of non-legal character also arise between the States. Such type of disputes are not fully covered by the Zonal Councils which are in existence now.

The State Government, therefore, feel that inter-State Council should be established to iron out inter-State and Union-State differences and issues and thereby to secure better cooperation between the States.

It is suggested that it should be constituted on the pattern recommended by the Central Administrative Reforms Commission, as below:—

(1) Prime Minister	Chairman
(2) Finance Minister	Member
(3) Home Minister	Member
(4) The Leader of the opposition party in Parliament	
(5) Five representatives on the basis of one each from five Zonal Councils.	
(6) Any Association, Cbinet Minister or Chief Minister connected with any particular subject can be invited for discussions while considering the relevant subject.	

The Council should be set up on a permanent basis. The Inter-State Council should also have its permanent Secretariat like Zonal Council.

PART V

FINANCIAL RELATIONS

5.1 The fiscal provision relating to the sharing of tax revenues as well as power to levy taxes contained in the Constitution were incorporated at a time when the level of technology was low and the expectations regarding the scope for development in the country as well as achievements in certain sectors were limited. With the remarkable progress and advancement in technology it has been possible for mankind to reach a very high standard of living in several parts of the world. Within the country on account of historical and locational advantages certain States have been able to progress much faster than the others. Given the scheme of fiscal transfers and powers in the Contitution on account of the inherent capacity of certain States to grow faster, their resources have also grown faster, with the result that the gap between the other disadvantageously placed States and these States have continued to grow. A time has now come when the country has to take stock of the situation to find out whether the scheme of fiscal powers as existed in the Constitution is sufficient to muster enough resources by the States to discharge their growing responsibilities.

A time has now come when the State Governments are looking for more resources not only to meet their current consumption needs but also to provide for all the multifarious developmental activities they have undertaken. Looking at the provisions of the Constitution in this light we do consider that it is now deficient. We have time and again represented before the Finance Commissions that the Government of India should consider sharing of the proceeds of the Corporation Tax with the States. A time has now come when perhaps the entire scheme of devolution and the entire scheme of sharing of tax revenues as well as the fiscal powers entrusted to the States should be looked into with a view to bringing about such changes as are required to provide substantial resources in the hands of the State Government.

5.2 The constitutional division of sovereignty between the two layers of government—Centre and States—makes the States dependent on the Centre for their fiscal needs. This in itself should normally not be a great cause for concern as in almost all federal governments the constituent States are dependent on the Central Government. The Indian system has a built-in mechanism whereby under the Constitution there is a system of tax sharing with the States by the Union and grant-in-aid to the needy States by the Central Government. The greatest defect in implementation of the system is that the three cardinal principles of better Centre-State financial relations, viz. (a) that every State should get reasonable opportunity to rise to its full stature by harnessing its potentialities in the shortest possible time; (b) that the States which have remained backward despite their natural wealth and resources should be provided adequate assistance to assist them to harness these

resources fully; and (c) that inter and intra regional imbalances be removed, have not been given the primacy which they deserve.

Out of the five alternatives suggested in the questionnaire, we do not advocate (a), (b) and (c) due to the fact that as we have averred in our Memorandum to the Commission we dó not feel that there is any need to make any fundamental changes in the provisions of the Constitution, as these alternatives would require. As for item (d) relating to bringing in more Central taxes such as Corporation Tax, Customs Duty, Surcharge on Income Tax, etc. we have already mentioned in our memorandom that Corporaiton tax should become in shareable as it is indisputable that the State Governments play a major role in the industrialisation of the country by providing land, capital, water, power, and many other inputs at concessional rates. These concessions given by the State Governments render it possible for the companies to generate profits and pay Corporation Tax. Besides, the Surcharge on Income Tax is not different from Income Tax itself. There is no need to keep it separate and levy it solely for the purposes of the Union.

For item (e), i. e. financial resources, other than tax revenues of the Union, we suggest that as during the past so many years inequality between States has widened making the poor regions poorer, special dispensation should be made for these States and regions from the other financial resources of the Union Government so that the initially disadvantaged may eventually wind up equal in resources or rights. The concept of giving grants for upgradation of standards of administration evolved by the Sixth Finance Commission and improved upon by the Seventh Finance Commission was a step in right direction. Though, as is common in all pioneering efforts it could not be fully developed or improved. It should be given a rightful place, meaning thereby that the need for upgradation should be assessed for all services and sectors independently of the current budgetary expenditure, which is distorted due to a multiplicity of factors and does not give the correct assessment of the need of a particular State. Budgetary factors are merely surface manifestations, therefore, what is needed is to go and examine the real factors and then to provide for these real fiscal needs.

5.3 A strong Centre presupposes strong States. India is after all a Union of States; and unless the States are strong the Union cannot be strong. Fiscal autonomy to States may or may not produce the desired result due to the fact that in a vast country like India a combination of factors—historical, demographic, economic and socio-cultural—have been exerting their influence. There are States having vast and varied mineral resources but these are generally exploited by Central agencies and the States get nominal royalties only. These States also do not have the means to fully exploit renewable resources like water. There are on the other hand relatively advanced States, having comparatively modern agriculture or industrial base. In a nascent democracy, which is dedicated to social and economic justice for all, full fiscal autonomy to the States may perhaps not be appropriate at this stage. But within the framework of the Constitution it is not necessary for the Centre to concentrate all financial powers in its own hands. A selective approach is, therefore, necessary where the Centre may have a decisive say in matters of national importance, the States may also be given necessary funds commensurate with the needs and aspirations of the people and to use these funds to the best advantage of the people. Overall national policy may be laid down by the Central Government, but the minute details, method of implementation and within the overall priorities, the best course of action may be delegated to the States.

5.4 We dispute the point that the Central revenue account shows fairly large deficits during the past several years after making the necessary devolutions to the State Governments, as recommended by the Finance Commissions and the Planning Commission. The revenue deficits of the Centre are on account of the phenomenal growth in its non-Plan expenditure. We have the following suggestions to make :

(a) **Raising more revenue resources** :—(i) Through taxation : Almost all the elastic sources of taxation are with the Central Government. Even without raising the tax rate or widening the base most of these taxes have shown considerable elasticity. Corporation Tax has increased at a compound rate of 15 per cent in the last ten years. Union Excise Duties have also registered a similar growth rate; whereas the Customs Duties have of late shown a greater buoyancy. Most of these taxes have high potential of growth in future also. So taxation, as a measure of increasing revenue, is much easier for the Central Government than the States, and should therefore, be resorted to.

(ii) Through subventions from richer States to Central pool under some principles : Though some States may be comparatively richer than other States, but they are in the ultimate analysis, all poor. Some of them may even have revenue surplus, but that surplus is purely artificial in the sense that it has been brought about by curtailing the expenditure very drastically on services and maintenance of assets—Madhya Pradesh is a typical case in point. All States have to depend on the Centre for funding a part of their development Plans. In such circumstances, no State is at present in a position to give any subvention to the Central pool. Of course, there are invisible subventions from States, which may by no stretch of imagination be called rich. For example, poor States like Madhya Pradesh, Bihar and Orissa are getting only nominal royalty on non-renewable resources like coal, iron ore, etc. from the Central Government and its undertakings, thereby giving indirect advantage to the Central Government.

(b) **Better Control over Expenditure.**—Be it the Finance Commission or the Planning Commission, the State Governments are always exhorted to have better control over their expenditure. The States strive to achieve that. This could equally be applicable to the Central Government. It is true that the Seventh Finance Commission took a look at the Centre's finances. However, no Finance Commission goes into the full details of the Centre's expenditure as it does with the minutiae of States' expenditure. While it is true that outlays like those on defence cannot be open much to scrutiny, but a constitutional body like the Finance Commission should be fully authorised to initiate cost effectiveness studies of

the Central Government's expenditure as there is a general feeling that there are a number of areas in which spending of the Central Government can be substantially pruned and the cost reduced.

(c) **Deficit financing.**—In a developing economy some deficit financing would always be there. It is, however, very difficult to quantify the safe-level of such deficit financing. It depends on the circumstances, the need, the cost and benefit and a host of other considerations. While for purposes of development it may be necessary to have deficit financing to some extent, it cannot be treated as a permanent source of resources.

5.5 (a) **The share of taxes.**—At present the two important Central taxes which are distributed to the States are : (i) Income Tax and (ii) Union Excise Duties. Two points are involved here : (a) Enlarging the divisible pool with a view to increasing the share of States in the existing distributable taxes, removing the restrictions through which some parts of the taxes are not shared and restraining the Central Government from taking action which harms the interest of the States, like giving concessions in Income Tax, increasing the administered prices of commodities instead of increasing the Union Excise Duties and, (b) Bringing in some more Central taxes like the Corporation Tax, in the divisible pool.

Under the award of the Seventh Finance Commission, 85 percent of the net proceeds of Income Tax and 40 percent of Union Excise Duties are distributed to the States. Under Article 270 of the Constitution there is an explicit provision to distribute Income Tax between the Union and the States. In the initial years, Income Tax was a major source of revenue. The situation has changed now. The Centre is getting increasingly more revenues from Union Excise Duties, Customs Duties and Corporation tax. If receipts from Corporation tax and Customs Duties are brought into the shareable pool, a different concept of sharing from the present one will have to be worked out. What share of the total pool of the revenues from all these taxes should go to the States will itself be a major concern for the Finance Commission. As regards sharing of the distributable pool *inter se* the States, a uniform formula should govern the distribution.

For *inter se* distribution among States, the State Government is of the view that with slight modification, the formula evolved by the Seventh Finance Commission may be used for this purpose :

Population	10 percent
Area	15 percent
Inverse of per Capita Income	25 percent
Revenue Equalisation	25 percent
Poverty criterion	25 percent

(b) **Plan Assistance.**—There is no reason why the plan assistance to States should not follow the same criteria as evolved for allocation of the divisible pool of tax revenue.

There is another fall out of Plan assistance and that is the growing non-Plan capital gap of the States, which is because of heavy debt burden on the States, with particular reference to Central Loans. The repayment liability of the States increased every year on account of the loans received from the Centre, particularly the block loans for financing the Plan Schemes. It may be pointed out that a substantial part of the capital outlay of States on account of which loans are taken from the Centre are on power, irrigation, roads, buildings and share capital participation in public sector undertakings. Investments on social infrastructure yield very little matching return. Out of the total Central assistance, 70 per cent is paid in the form of block loans. In order to reduce the accrual of future dept burden on the States and the mounting servicing charges, which erode the current revenue of the States considerably, it is suggested that the grant proportion in the Central assistance may be increased.

(c) **Non-Plan assistance.**—Non Plan assistance is usually given in the form of grants-in-aid. As a first step it is suggested that a determined effort should be made to bring all States at par in so far as minimum standards of services and facilities to the citizens are concerned. The resources should be devolved in such a way that the level of backward States in various spheres is raised to at least the All-India level, if not to that of the highest amongst them. For this, criteria other than financial are required.

Unless the financial content of the need is methodically derived from desired physical standards of service levels, the fiscal needs hardly get projected and the relative economic backwardness of a State cannot be accorded the importance which it deserves. The Centre may have adequate safeguards to ensure that the amounts are utilised only for the specific purpose for which they are allotted.

5.6 Considering the existing institutional mechanism within the country to provide additional resources to develop economically under developed areas, what is required is to lay down proper ground rules and guidelines for the functioning of the existing mechanism rather than to create a new fund which will again bristle with complications regarding allocations *inter se* the States.

5.7 We view the Indian Constitution as an organic whole and as we do not advocate altering its basic structure, we are not suggesting the transfer of any of the existing Central taxation powers to the States.

5.8 We agree with the above view. It will be an ideal situation to have a Council of Central and State Finance Ministers looking into the overall fiscal policy for the country, including levy of or alteration in the rates of taxes, both Central and States. This should be preceded by a reform in our existing budgetary procedure of keeping everything secret before the budget is presented to the Parliament or the Legislature.

5.9 The State Government feel that in view of the growing volume of resources to be transferred from the Centre to the States, both on the Plan and non-Plan accounts, it may be worthwhile to set up a Finance Commission on a permanent basis and entrust to it the responsibilities of devolving all resources from the Centre to the States. It

should be a statutory body under the Constitution and would thus command greater respect. Besides, instead of one organisation over-seeing the non-Plan performance and needs and another that of development planning, the same organisation could look after both and thus take an intergrated view of the situation. The State Governments should be given adequate representation in the Finance Commission by rotation. This will also reduce the burden of the Finance Ministry and the Planning Commission and enable them to more effectively formulate and monitor the development programmes.

5.10 By insisting on a realistic forecast of both revenue and expenditure based on past trends and then again reassessing the same according to standardised norms, the Finance Commission's transfers are designed to promote efficiency and economy in expenditure by the State Governments. Similarly, for discretionary transfers also the Government of India lays down vigorous norms. The performance in the case of development Plans is judged by the Planning Commission, while in the case of other transfers the various Union Ministers monitor and assess every item of expenditure by the State Governments.

Disparities in public expenditure among the States have definitely narrowed, but not to the desired extent. The Finance Commissions, excepting the Seventh, had devoted themselves only to covering of fiscal gaps worked out on the basis of forecasts furnished by the State Governments and reassessed by the Commissions. If a State has done its best in raising the maximum resources possible consistent with its capacity and has exercised maximum prudence and caution in so far as expenditure is concerned, it is penalised by this approach. The question of determining the levels of existing services in the manner considered desirable by the Commission and built in their forecast, therefore, need further examination. Fiscal gaps, which ought to be reduced through the process of fiscal needs can be computed only when there is a readiness to move out of the budgetary data whether actual or in the form of reassessed forecasts. Unless the financial content of the need is methodically derived from desired physical standards of service levels and requirements of maintenance of assets, the fiscal needs hardly get projected and the relative economic backwardness of a State cannot be accorded the importance which it deserves.

Similarly in the case of Central assistance for Plan, the Planning Commission have had recourse to the Gadgil formula, in which also 60 per cent of the devolution is based on population. This is the reason why backward States, particularly sparesely populated but large in area, do not get adequate funds for their Plans.

5.11 It cannot be said that the present mechanism of transfer has inbuilt propensities for extravagance. Extravagance in expenditure and populist measures leading to revenue loss are definitely there. Some States get away with it also. So long as transfer of resources is based on so-called "fiscal gaps", computation of which takes into account such extravagance and populist measures, the transfer mechanism itself could be insulated. In fact, it could have a distinctive clause to discourage such extravagance.

5.12 The State Government view with favour the point that fiscal transfers should be effected mainly, if not wholly through devolution of taxes. There is also scope for granst- in-aid. The assumption implied in the approach adopted so far that the States which have no deficit on non-Plan revenue account have all their non-Plan needs fairly adequately taken care of, is far from correct. Besides uniformity in estimating the requirements within the constitutional frame-work of Centre-State financial relations does not mean applying uniform growth rates on the existing base, in order to forecast the revenue gap. When the States are in varying stages of development, the poor amongst them cannot be equated with the advanced States. The measure of equalisation effected so far by seven Finance Commissions has got submerged under the impact of many disequalising tendencies, operating from many sources and the net contribution of the Finance Commissions in terms of equalisation had been negligible or at best meagre. The Finance Commission should thus take care of this ultimate result in their exercises. The only manner in which the purpose can be accomplished is by way of making additional grants-in-aid to backward States, irrespective of their revenue gap, in order to enable them to come up to at least the all-India average in the first instance.

5.13 Broadly, the three principles enunciated by the Seventh Finance Commission for giving grants-in-aid to States under Article 275 are un-exceptionable. In their implementation there are, however, certain constraints and misgivings which should be removed.

(i) For reasons given in reply to question No. 5.12 the Finance Commission should be asked to give up the existing methodology of arriving at the non-Plan revenue gap as a criterion for determining the grants-in-aid under Article 275. It may be noted in this connection that the need for grants-in-aid of the States cannot, and should not, be estimated from the forecasts furnished by the States, or reassessed by the existing methodology by the Finance Commission. Unless the financial content of the needs is methodically derived from desired standards of service levels, it cannot be taken that budgetary needs have been transformed into real needs.

(ii) The Sixth Finance Commission introduced the concept of upgradation of standards of administration, though it gave no separate grants-in-aid for the purpose. It visualised a time-frame of ten years during which the purpose of upgradation would be achieved. Unfortunately, the Commission did not provide any specific grants for this purpose. The Seventh Finance Commission partially remedied this defect in approach. It is heartening to note that the Government of India had realised its importance and kept it as a term of reference of the Eighth Finance Commission also. The Seventh Finance Commission was constrained by the terms of reference under which they were required to restrict their recommendations to six non-development sectors services only. The plea of the States seeking provisions to upgrade the administration in certain other fields like education, etc. was turned down by the

Seventh Finance Commission as not belonging to the category of non-development sectors. A similar restriction has been placed on the Eighth Finance Commission also. Such restrictions should not be placed in the terms of reference of the Finance Commissions.

(iii) Though the Seventh Finance Commission enunciated this third principle also, it has not deemed it desirable to invoke it in its award. It is time to invoke more thoroughly this principle to enable States to meet special burdens on their finances because of their peculiar circumstances or matters of national concern. For example, States having large area like Madhya Pradesh. where the per unit cost of each service is higher than in other States, which is further aggravated by the high percentage of scheduled castes and scheduled tribes population, scattered in tiny hamlets throughout the length and breadth of the State, should come under this category and qualify for special grants-in-aid.

Grants-in-aid, being by their very nature a fixed amount, get severely eroded due to ravages of inflation. It is therefore, necessary that whenever a grant is sanctioned, a suitable built in price neutralisation formula should be evolved and included as a package for working out the quantum to be actually given, so that the real worth of the grant-in-aid, during a particular period, may be evolved and applied.

5.14. We will confine our reply to the two items specifically given in the question. Both the yield from the Special Bearer Bonds and the revenue from raising prices of administered commodities are not Central non-tax revenues as the wordings of the question imply. They are, or ought to be a part of the Central tax revenue, which would have been distributed to the States.

(i) **Special Bearer Bonds.**—The sale proceeds of these Bearer Bonds are the amounts of Income Tax that have been left uncollected during the past years for a variety of reasons. Had they been collected as normal Income Tax, the State Governments would have automatically got a share in the revenue.

(ii) **Revenue accruing from raising administered prices of items like petroleum, coal etc.**—The States are losers here on two counts. Firstly, being termed as national resources, the States get very meagre royalty on the mining of these minerals, and, secondly, instead of raising the Union Excise Duty on these items the Centre raises their prices and hence deprives the States of their due share in the Union Excise Duties. Neither the Finance Commission nor the States have any means of judging the efficiency of the Central agencies in producing these commodities or whether there cannot be any reduction in cost of production. If the price increase is, however, too frequent, substantial and without any cost studies, the States may feel rightly that there is something wrong somewhere. The aura of suspicion should, therefore, be dispelled.

5.15 We don't know how the distribution is affected at present hence, could not offer any comments. However, setting up of a National Credit Council and a National Economic Council may help in determining the share to be distributed between the Centre and the States in a more realistic manner.

5.16 Article 246 of the Constitution demarcates the sphere of responsibilities of the Centre and the States in terms of their legislative jurisdictions as laid down in the Seventh Schedule while the Centre has been entrusted with a few major responsibilities like defence, external affairs, etc., the States have to shoulder major responsibilities for most of the development and welfare functions like irrigation, power, agriculture, education, health, social welfare, etc.

From the period of the second Plan there has been growing centralisation of revenues. On the other hand, compared with the revenues at its command, the Centre assumed relatively less responsibility in the total public expenditure of the country. This resulted in increasing federal fiscal imbalance during the past few years. Thus, the States' own revenues (both capital and revenue) could now finance less than 60 per cent of their total expenditure. It may be observed that there has been a continuous decline in the States' own revenue to finance States' total expenditure upto the end of the fourth Plan. There has, however, been some improvement in the situation during the fifth Plan period. This, in the context of the increasing additional resources mobilisation by the States in recent years, imply that while their capacity to raise their own revenues has reached a plateau, their expenditure needs are increasing faster owing to the increasing demand for development and welfare expenditures from the people.

Fiscal transfers from the Centre to the States are made through three channels, *viz*: on the recommendations of the Finance Commission, Planning Commission and through various Central Ministries. Financial transfers made on the recommendations of the Finance Commission are statutory and in the form of share in Central taxes and grants-in-aid, both of which are non-returnable. Until the end of the fourth Plan such transfers constituted only one-third of the total federal fiscal transfers. However, during the fifth Plan period the share of Finance Commission transfers increased to 44 per cent. Transfers on the recommendations of the Planning Commission are on the other hand discretionary and usually have a mix of 30:70 between grants and loans. When 30 to 40 per cent of the Central transfers are through this medium, the rising debt burden of the States may well be visualised.

5.17 It is necessary that each Finance Commission should look into the problem of growing indebtedness of the States and suggest remedies. The Sixth Finance Commission was asked to suggest changes in the terms of repayment of the Central loans; whereas the Seventh Finance Commission was asked to suggest appropriate measures to deal with the non-Plan capital gap of the States. A similar term of reference has been made to the Eighth Finance Commission also.

A table showing net accretions to resources of the States out of Central loans, after adjusting repayment of principal and interest, is depicted below :

(Rs. in crores)

Year	Gross Loans from the Centre to the States	Repayment of Loans to the Centre by the States	Interest paid by the States on Loans from the Centre	Net transfers on Loan Account from the Centre to the States (col. 2+3–4)
1	2	3	4	5
1971–72	1,192·5	801·4	324·3	66·8
1972–73	1,950·2*	689·6	331·1	929·5*
1973–74	1,552·9	933·9	401·0	218·0
1974–75	1,075·2	505·4	349·8	220·0
1975–76	1,294·3	761·7*	445·7	86·9
1976–77	1,446·2	719·3	485·5	241·4
1977–78	1,910·9	790·1	510·1	610·7
1978–79	3,229·7	868·3	590·1	1,771·3
1979–80	2,668·5	802·7	578·8	1,287·0
1980–81	3,021·9	1,458·2	786·9	776·8

* Including Rs. 421·1 Crores of net ways and means assistance received by the States from the Centre to clear their outstanding overdrafts with the Reserve Bank of India at the end of April, 1972.

In the context of the mounting indebtedness of the States, it may be observed that the problem of Central loans to the State Governments has become an important issue in the debate on Centre-State Relations. Hence any suggestion to reduce the overall indebtedness of the States should take into account the mounting burden of Central loans on the States. The Second Finance Commission to which the matter was referred recommended consolidation of the various Central loans into a few categories with reduced interest rates. The recommendation was not accepted by the Central Government in toto, though certain modifications in the terms of repayment and interest rates were made. The Fourth Finance Commission considered that the States' share of Estate Duty was not sufficient for the purpose of repayment of the States' debt to the Central Government and hence recommended that an expert body may be appointed to study the whole problem of inter-governmental borrowing and to recommend suitable remedies. The Central Government is yet to act on this recommendation. In the meanwhile, the States' debt has gone on increasing in magnitude. The Fifth Finance Commission was asked to examine only States' unauthorised overdrafts and to suggest remedies to reduce them. The Commission did some justice to this.

Central loans have been made to the States under the Plan assistance scheme. Under this scheme, most of the States get 70 per cent of the Central assistance in the form of loans and the remaining 30 per cent in the form of outright grant. In this way the States have been dragged in to a vicious circle of Central loans, which create interest and repayment liability on these loans, and then the need for more loans from the Centre to meet these needs.

The Sixth Finance Commission was asked for the first time to estimate the non-plan capital gap in the States' budgets and to suggest measures to reduce such gaps. The Commission recommended (a) consolidation of some loans into uniform types, (b) extension of the period of repayment of some loans, (c) moratorium on the repayment of some loans and (d) writing-off of some loans. The Commission, however, did not recommend substantial debt cancellation on the ground that it would reduce the pool of resources available with the Central Government for providing further assistance to the States.

The Seventh Finance Commission also supported the Sixth Finance Commission approach, though with a note of caution regarding the plea of the States to write-off the outstanding Means. The Commission divided the loans in to three categories, *viz,* (a) loans applied for unproductive purposes, to be written-off (b) loans for semi-productive purposes to be repaid in 30 years, and (c) loans for productive purposes to be repaid in 15 years. Small savings loans were recommended to be consolidated and to be converted to loans in perpetuity. The Central Government did not accept conversion of small savings loans into loans in perpetuity, though the other recommendations of the Commission were accepted.

Suggestions

Any attempt to suggest solutions to the problem of burden of Central loans on the States should have both short-term and long-term perspectives. This is essential because any realistic solution should go to minimise the immediate financial burden of Central loans on States.

An important short-term policy measure should be debt adjustment in the form of writing-off of certain loans, and interest therein made for socially as well as financially unproductive purposes, such as drought or flood relief and rehabilitation. Another short term solution is the rescheduling of the existing loans, apart from those mentioned above, by extending the period of repayment. For this, all outstanding loans may be consolidated with a repayment period of fifty years, the same as for soft loans obtained from the International Development Agency, with the rate of interest equivalent to the Treasury Bills rate. Finally, the rate of interest charged by the Reserve Bank of India for ways and means Advances should also not exceed the Treasury Bills rate.

As for long-term measures, the first and foremost is that in future the grant proportion in the Central assistance for Plan schemes may be increased to 50 per cent from 30 per cent at present. The Centre could consider evolving a formula on the basis of backwardness of States.

The following table shows net accretion to the resources of the Government of Madhya Pradesh

through Central loans after adjustments for repayment of such loans and Interest paid thereon :

(Rs. in crores)

Year	Gross Central Loans to the State Government	Repayment of Loans to the Centre	Interest paid on Central Loans	Net accretion to State Resources through Central Loans (Col. 2+3—4)
1	2	3	4	5
1971—72	47·51	44·55	19·56	(—)16·60
1972—73	62·12	48·11	19·69	(—) 5·68
1973—74	58·05	54·78	20·36	(—)17·09
1974—75	57·83	22·79	16·26	18·78

1982—83	385·33	74·42	59·45	251·16

5.18 The State Governments' market loans are periodically floated and subscribed usually by the financial institutions. But very little is known about various aspects of this financial operations, particularly the criteria on the basis of which the exact amount of market loans is allocated to each State.

The public debt of the State Governments in India comprises of market borrowings, borrowings of the State Governments' autonomous commercial undertakings from the financial institutions, General Provident Fund of its employees, ways and means advances from the Reserve Bank of India and loans from the Central Government. Here we are concerned only with the State Government market borrowings.

In most of the federations their constitutions have made provisions for the State Governments to borrow both from within the country and from abroad. In India the State Governments have the power to borrow only within the entry and the external borrowings are reserved exclusively for the Central Government.

In India the former British Indian provinces obtained the power to borrow from any source only in 1921. As the country was having a unitary form of administration prior to 1919, the question of borrowing powers of then administrative provinces did not arise. However, the former princely States enjoyed the power to borrow within their respective territories.

The Government of India Act, 1935 continued under section 163 the right of the former provinces to borrow on the security of their revenues. They were empowered to borrow inside as well as outside the country and the Act also conferred the right to borrow short-term loans from the Imperial Bank of India (which was then the Central Bank of the country). However, just as in the case of Local Government Borrowing Rules under the Government of India Act, 1919, clause (3), of Section 163 of the Government of India Act, 1935 imposed certain restrictions on the powers of the former provinces to borrow.

After independence, the Constitution of India has empowered the States under Article 293(1) to borrow within India on the security of the Consolidated Fund of the respective States and also to give guarantee to loans raised by their subordinate authorities or authorities created by the State legislature. According to these provisions, the State Governments can only borrow within the country. The right to borrow from abroad has been reserved exclusively for the Central Government. Even if the State Governments require foreign loans for development purposes, they have got to obtain through the instrumentality of the Central Government.

It is necessary to note here that even the internal borrowing powers of the State Govenments in India are subject to limitations: (a) as may be imposed by the State Legislatures; and (b) if the Central Government has guaranteed outstanding loan of the State or if the State owes a debt to the Central Government, no fresh loan can be raised by that State without the consent of the Central Government. Since most of the State Governments are in fact indebted to the Central Government, they have to obtain the permission of the Central Government to borrow from the public.

There is also a practical problem which forces the State Governments to seek the assistance of the Central Government to borrow in the open market. The Indian capital market is not developed for various reasons and most of the financial Institutions which mobilise public savings for investment are owned and/or controlled by the Central Government. Therefore, any State Government which wants to borrow from these institutions (as they constitute the capital market in the country) has to comply with the policy of the Central Government. Thus, the Central Government, because of its dominant financial position and being the owner of the Reserve Bank of India and various other financial institutions, controls the public borrowing policy of the State Governments. The Reserve Bank of India which is also responsible for the monetary policy and public debt policy of the Government of India has been coordinating the market borrowing policies of the State Government by undertaking to float all the State Government loans periodically according to the economic conditions prevailing in the country. The market borrowings are being allocated between different States by the Reserve Bank of India on advice of the Planning Commission and the Union Ministry of Finance. The criteria on the basis of which the share of each State is determined in the total available market funds, are not made known.

It was, however, observed that there has been a wide disparity in the share of different States. Besides, the Central Government has been taking the loan's share in the total market borrowings; whereas the State Governments appear to borrow more for repayment or old loans than for actual utilisation. Although the

total market borrowings of the State Governments have increased consistently during the past ten years, such consistency is not present in the case of individual State Governments. In case of State Governments like Uttar Pradesh and West Bengal the share has been consistently increasing, but in the case of other States, they have been fluctuating, but what is interesting is that in the case of Andhra Pradesh, Assam, Haryana, Madhya Pradesh and Orissa, the shares have remained more or less constant. These fluctuations suggest that the market borrowings of the State Governments have not been distributed or allocated consistently on any objective principles.

There have been various suggestions to rationalise the allocation of market borrowings among the States. The most important among these is that there must be some objective criteria for the distribution of market borrowings among different States, rather than the present rule of thumb method of allocating the funds.

5. 19 We do not think that this allegation against the Centre is fair. We understand that the Centre while fixing the rate of interest on its loans to the States takes into account the borrowings at liberal rates from the U.N. Agencies. If not, our plea is that the rate of interest should be fixed on a weighted average basis, so that the advantage is shared between the Centre and the States.

5.20 Instead of setting up another Agency, such as the loan Council, the National Development Council (NDC) itself could lay down criteria for sharing of market borrowings as between the Centre and the States and *inter-se* the States also. This could be periodically reviewed, say every year by a Standing Committee of all Finance Ministers.

5.21 Overdrafts by the States is a symptom of a deeper malaise in the finances of the State Governments. Doubling of the Ways and Means Advance was a short-term measure, which was only a palliative and not a remedy for the disease. Unless the root cause is eradicated, the disease of overdrafts will not be steammed.

We cannot blame any single Government for this malaise, While it is true that the sources of Revenue available to the States are limited, the fact can not be overlooked that there is a great deal of laxity in fiscal administration in the States also. Too many Public Utilities are neither run competently nor their services priced at a cost-plus basis, leading to heavy losses requiring budgetary support. Secondly, there is over-capitalisation. States are under various pressures to take up too many projects, needing heavy investment, which results in wastages of resources and consequently, high capital-output ratio and very low rate of returns. There is a general lack of will to collect Government dues in time. These collectively lead to a weak resource base for the States and their ways and Means problems. This is further compounded by the relatively inelastic sources of revenue to the States. The deficiencies in fiscal management by the States are largely found in the Centre's fiscal management also. Though the States' problem of Ways and Means is not a simple one, only an overall National Financial Strategy, which strives for efficiency shown of other considerations alone can solve this deeprooted malaise.

5.22 Article 246 of the Constitution demarcates the sphere of responsibilities of the Centre and the States in terms of their legislative jurisdiction as laid down in the Seventh Schedule. As far as the division of sources of revenue is concerned, the Central Government enjoys a comfortable position with many elastic sources of revenue like Union Excise Duties, Custom Duties, Corporation Tax, etc. which have a national tax base. In contrast, the States are given inadequate and less elastic sources of revenue. A possible exception. is Sales Tax. But its scope has been gradually reduced by the Central Government, by making many inroads into its coverage, like centralisation of Sales Tax on inter-State trade, taking over the power of fixing the rates of Sales Tax on declared goods and services and gradual extension of Additional Union Excise Duties in lieu of Sales Tax to more commodities. What is more, some of the sources of revenue like land taxation and State Excise Duties are entangled in various types of constrains, making it difficult for the State Governments to raise more revenue from these sources. In spite of these constraints, a backward State like Madhya Pradesh, has been able to sustain a compound growth rate of more than 16 per cent per annum in receipts of all State taxes and duties during the past 12 years. Individual taxes, like General Sales Tax, Taxes on Vehicles, Electricity Duty, Entertainment Tax, Taxes on Goods, Stamp Duty and State Excise Duties registered a compound growth rate of 17.5, 21.5, 19.3, 15.7, 13.6, 15.3 and 14.2 per cent respectively per annum during the same period. The per capita revenue from State Taxes and Duties rose from Rs. 20.79 in 1970-71 to Rs. 87.94 in 1982-83 and the average tax propensity (Tax revenue as percentage of Net State Domestic Product) from 4.35 in 1970-71 to 7.15 in 1982-83 which is quite high for a State being almost at the bottom rung of the ladder of economic development. Non-tax revenue has also registered commensurate buoyancy during the periods. Other States have also registered similar trends. Thus, in so far as revenue from State Sources and Additional resources Mobilisation measures are concerned, the State Governments have done, and are doing whatever is possible within the given framework of the Constitution and the prevailing economic situation.

5.23 The State Governments are not competent to make any comment on the performance of the public sector undertakings of the Central Government. We do not have adequate data to pass any valid judgement on how they have performed since their inception. As regards the leakage in Central taxation one can only make a general comment that as in the case of the taxes administered by the States it is likely that there is a substantial degree of leakage in the Central taxation also.

It has long been felt that in this country there has been a tremendous cascading effect of taxes on manufactured items. This is one of the areas in which a study is urgently required. While some time back there was serious thinking about the introduction of a value added tax in the country. in recent discussions such a topic has not emerged. The very fact that of late the Union Finance Ministry has been reducing

taxes on many items indicates that there is a growing realisation that the effect of multifarious taxes on manufactured items is not yielding either fiscal returns of a high rate of growth that we require in this country. At this stage all that the State Government can suggest is that a very thorough study is required in this area in order to find solutions.

5.24 It will be a healthy convention conducive to the stability of State finances if the Union Government ascertain the views of the State Governments and give them due consideration before moving any Bill to levy or vary the rate structure or abolish any of the duties and taxes enumerated in Article 268 and 269.

5.25 Article 269 of the Constitution provides that the following taxes and duties shall be levied and collected by the Government of India but shall be assigned to the States in the manner provided in clause (2) of Article 269 :—

(a) duties in respect of succession to property other than agricultural land;

(b) estate duty in respect of property other than agricultural land;

(c) terminal taxes on goods or passengers carried by railway, sea or air;

(d) taxes on railway fares and freights;

(e) taxes, other than stamp duties, on transactions in stock exchanges and future markets ;

(f) taxes on sale or purchases of newspapers and on advertisements published therein ;

(g) taxes on sale or purchases of goods other than newspapers when such sale or purchase takes place in the course of inter state trade or commerce.

Article 269 provides for a special kind of tax rental arrangements between the Union and the States and the arrangement has been provided in the Constitution itself. It does not provide the Centre with any economic interest in this arrangement. Though the Fifth Finance Commission was of the opinion that taxes listed under Article 269 had a greater use in ensuring uniformity of rates of taxes than being a source of revenue to the States, this Article had not been used even for that purpose fully. Further, some of the taxes enumerated in this Article could be fruitfully exploited to yield revenue for the States.

The Central Government has imposed only the taxes and duties mentioned in Article 269(1) (b) and (g). The tax on railway fares, which was levied earlier was repealed in 1961. It is necessary that the potential for raising resources from these taxes and duties should be assessed and the Central Government should be strongly urged to levy at least some of these.

5.26 The tax on railway passenger fares is one of the levies under Article 269 of the Constitution, the net proceeds of which are to be wholly assigned to the States. The tax was levied for the first time under the Railway Passenger Fares Tax Act, 1957. It was, however, repealed by the Government of India in 1961 and the tax was merged in the basic fares from April, 1962 without consultations with the States. Though the levy was given up, the Government of India decided to make an *ad-hoc* grant of Rs. 12.50 crores per year for distribution among the States in lieu of the tax. After persistent demands by the States, the quantum of this grant was raised to Rs. 16.25 crores from 1966-67. It has thereafter continued at the same level till now. An additional grant of Rs. 6.87 crores is also given for Railway Safety Works.

The State Government would like to point out that in providing for an impost on railway passenger fares as one of the taxes to be levied by the Centre and assigned to the States under Article 269 of the Constitution, the architects of the Constitution has presumably intended to give the States access to a modest share in growing revenues of the railways. This objective has been thwarted by the substitution of the railway passenger fares tax by a fixed lump-sum grant. Besides, the fixation of the quantum of grant has been given to the Railway Convention Committee, which is very conservative in estimating the amount to be distributed to the States. Apart from erosion in value due to price rise, the quantum of grant recommended by the Railways Convention Commitee of 1965 is inadequate in this sense also and does not reflect the inherent elasticity of the tax receipts. Both the Sixth and Seventh Finance Commissions were convinced that the pleas of the State Governments for reimposition of the tax or for corresponding enhancement of the quantum of grant were valid and their grievance in this respect needs to be redressed early.

It is indisputable that both passenger traffic and passenger earnings have continued to grow. If due weightage would have been given to this consideration, it would be legitimate to expect that the grant would have been increased at intervals. This was, however, not the case. Assuming the average rate of 10.7 per cent of non-suburban passenger earnings as the tax element, the Seventh Finance Commission calculated that the collection of tax if continued would have been Rs. 56.21 crores in 1976-77 and Rs. 61.17 crores in 1977-78. This represents four times the grant being given to the States now. There has been a tremendous growth in railway earnings since then. It is, therefore, the submission of the State Government that as the determination of the quantum of the grant to be paid to the States in lieu of a tax is an aspect of Centre-State financial relations, which should come under the purview of the Finance Commission, the quantum of grant should be left to be decided by that Commission. Besides, a positive recommendation may be made that either the power to levy to a tax on railway passenger fares be restored or the amount of grant be increased to the level of what the States would have earned had the tax been levied. In the latter case, there should be a provision for annual growth in the grant in proportion to the growth in passenger fare earnings of the railways.

5.27 We have no comments.

5.28 At present, for drought relief expenditure in excess of the margin money the State Governments are required to make a contribution from their Plan

for providing relief employment. The extent to which the State Governments should contribute from their Plan in this manner is assessed by a Central Team, after consultation with the State Governments and approved by the Central Government. This contribution is not to exceed about five per cent of the annual Plan outlay. This Plan contribution of the State Government is treated as an addition to the Plan outlay in that year and is covered by advance Plan assistance. The adjustment of the advance Plan assistance, against the ceiling of the Central assistance for the Plan of the State is effected within five years following the end of the drought. If the expenditure requirements as assessed by the Central Team and high level committee cannot be adequately met in a particular case after the State Plan contribution is taken into account, the extra expenditure is to be met by the Central Government half as grant and half as loan.

This arrangement has not proved favourable to the State Governments and has been found to be unsatisfactory in its implementation. The large-scale expenditure on relief works affects the total economy of the State. The major portion of the States' Plan outlay is exclusively for capital investment in irrigation, power and other programmes and could not be diverted for normal relief works for providing employment in areas or pockets where scarcity conditions occur. It in effect requires diversion of current Plan outlays from areas not affected by scarcity which is always resented. According to the existing practice, the adjustment of the advance Plan Central assistance for relief works is effected within five years following the end of the drought against the ceiling of the Central assistance of Plan, and the repayment of the loan portion of the assistance starts from the next year of the receipt of the loan. This procedure affects the State Governments in two ways. First, the State Government are not able to adjust it without cutting the resources for the Plan. Secondly, by doing so they are not able to achieve the targeted growth. Besides, it is inequitable to burden the State Governments with the repayment liability so soon after the natural calamity.

In the light of our experience we suggest the following :

(i) For computing the margin money the actual additional expenditure incurred by the State Governments both under Plan and non-Plan for relief should be taken into account.

(ii) The ceiling of five per cent on drought expenditure with reference to the State Plan outlay should be removed. The Central assistance in respect of drought relief measures should be by way of additional assistance, *i.e.*, in the form of 75 per cent grant and 25 per cent loan and not an advance which is recoverable.

(iii) The Central assistance, at present, is to be spent before 31st March and the releases are made only with reference to the expenditure upto this period. It may be mentioned that 31st March, even though it is the end of the financial year, is a very artificial date as far as nature's pattern is concerned. Accordingly, if employment is to be given in the event of drought, and other natural calamities, it is necessary that the amount is granted till 30th September, of the next year. This will enable the schemes to be implemented, without rush and wasteful expenditure, generating durable assets while giving continuous employment to the unemployed and under-employed labour, till they get employment after the normal agricultural operations begin.

(iv) The inevitable complementary expenditure in the case of labour-oriented works, which is necessary to make the works durable, should be made eligible for Central assistance.

(v) The expenditure on certain items like emergency water supply by tankers, etc. should be made eligible for Central assistance.

(vi) The loan component of the relief expenditure should be recovered with a five-year moratorium by the Central Government.

5.29 The State Government is unable to understand the idea behind setting up a National Loan Corporation as even today the nationalised banks are by themselves competent to raise loans in the national as well as international markets for economically viable projects. The State Government welcomes the idea of setting up a National Credit Council. We would, however, suggest that all the State Governments should have equal representation in the National Credit Council. This Council should be entrusted with the task of assessing the available credit resources within the country, its growth possibilities and the extent to which it can be tapped for purposes of meeting developmental expenditure. This Council should determine the share of the States as well as the Centre and also the distribution of the share of the States *inter se* amongst them. The State Government also welcomes the idea of setting up a National Economic Council. Here again it is our suggestion that all the States should be given representation in Council. The Council could set up Standing Committees or Expert Bodies for analysing different economic problems of national and local importance within the country. We also agree that the annual reports of the two bodies should be placed before the Parliament for discussion and suggestion as well as before the State Legislature for their information.

5.30 While collection of funds and their distribution in a constitutional set up such as India's is significantly relevant, what is more important is how effieciently the funds are utilised. There can be no two opinions that there is a large scope for improvement in this sphere both at the Centre and in the States.

5.31 (a) *A priori* judgement that the expenditure of the Union is not being organised in the best interest of the nation's growth and instead there are trends for incurrence of infructuous, unnecessary and uneconomic expenditure, may not be fully correct. The need for periodical assessment of Central Government expenditure could, however, not be minimised.

(b) The above reply is equally true for the States also.

(c) In reply to an earlier question we have advocated the setting up of a permanent Finance Commission, having adequate representation of State Governments by rotation. It will not only be the responsibility of this Commission to devolve all resources from the Centre to the States, but in this process also to go into the finances of both the Central and State Governments. The Standing Finance Commission should be an expert body with wide ranging powers having representatives from States.

5.32 We have not experienced any serious problem on this front.

5.33 'Evaluation Audit' can only be possible when there is Performance Budgeting. At present it is very difficult to have evaluation audit of all Government expenditure, though it can be introduced selectively in case of works and similar other Departments where the performance could be evaluated. In addition, the present audit machinery is neither designed nor suited for this function. In order to introduce evaluation audit not only the system of budget and accounting would have to be changed, but a specialised machinery to undertake evaluation-audit will also have to be created. In the prevailing circumstances this is a very tall order indeed.

5.34 In our view the Comptroller and Auditor General as a Constitutional functionary has been discharging his responsibilities satisfactorily in regard to the maintenance of Accounts of the State Governments as well as in conducting audit of expenditure.

5.35 We are entirely satisfied with the reports of the Comptroller and Auditor General presented to the State Legislature. They are comprehensive enough and reasonably accurate for the legislature to take a view on as to how the appropriations given by them to the different departments of the Government have been utilised.

5.36 While the institutions, such as the Public Accounts Committee and the Public Undertakings Committee with the assistance of the Accountant General have been examining the propriety of expenditure incurred by various departments of the State Government they have generally been helpless in preventing expenditure in excess of the appropriation granted by the State Legislature. The Government of Madhya Pradesh has been taking several measures to prevent excess expenditure. Nevertheless due to the lack of any punitive provisions, either in the Constitution or in any other law, it has been impossible to ensure that expenditure incurred exactly tallies with the Appropriations given by the Legislature, either in the main budget or through Supplementary Estimates. The Commission could examine whether any other safeguard can be provided in the Constitution to prevent any form of excess over the appropriation granted by the Legislature.

5.37 The recommendations of the Estimates Committee on wider aspects of the policy as well as certain details of administrative importance have been of use to the State Government.

5.38 We do not advocate the setting up of a separate Expenditure Commission in India. The Comptroller and Auditor General of India has been provided with sufficient constitutional authority to assess the propriety of the expenditure authorised by the Legislature. In order to improve the direction and nature of expenditure we have already suggested a permanent Finance Commission, which while scrutinising the Central and State Budgets would also suggest filling up of lacunae and need for efficiency and better management. Not only that, it would also see that what it suggests is implemented. For Schemes included in the development Plan, the Planning Commission will of course prepare and monitor the development programmes.

5.39 The State Governments have a very bitter experience while implementing the upgradation schemes recommended by the Seventh Finance Commission, in which for the first time the Government of India was required to provide cent per cent grant-in-aid. As it was perhaps for the first time that a Finance Commission formulated such a scheme they were naturally anxious to make it a success. Dilating on the subject of monitoring they, therefore, said : "The main objective of monitoring is to ensure that the funds provided for specific purposes are actually utilised for these purposes, and not diverted. Another objective would be to see that the desired results in physical terms are achieved by incurring expenditure". Nobody can dispute these statements. The Finance Commission, however, rejected the States' request to have the monitoring through the normal audit by the Comptroller and Auditor General of India, for which it was suggested that the upgradation provisions could be shown in separate sub-heads. Instead they recommended that the states may prepare plans of action and get them finalised in consultation with the administrative Ministry concerned at the Centre. The grants were to be released by the Ministry of Finance on the recommendation of the administrative Ministry. This clearance of the plan of action by the concerned administrative Ministry at the Centre proved to be the worst stumbling block in implementation of the scheme. First the plans of action have to be prepared in the minutest detail, without knowing whether they would be approved or not, this took time. Secondly, the concerned administrative Ministry has to be convinced of the viability of these plans of action and that they fit into the upgradation scheme, this took some more time. Thirdly, if due to escalation the cost goes up, the administrative Ministry required that the State Government give commitment that it would shoulder the extra burden, which meant going back to the State Finance Department for preliminary approval. This took some more time. Fourthly, due to the five-year span of the scheme, after which its burden was going to fall on the State Governments, they felt rightly that they should have a say in changing the priorities, which was not allowed. Thus, in the ultimate analysis, the State Governments felt that while the overall need for upgradation should be decided by the Finance Commission, the State Governments, which are the beneficiaries under the Scheme, should be authorised to decide the validity of the expenditure under the approved scheme without the intervention of an external agency. Normal audit will ensure that funds are utilised for the purpose they were intended.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 It has been accepted at all levels that planning should be decentralised and the Government of India have accordingly prepared detailed guidelines for the formulation of district plans in various states. Taking this to its logical conclusion, states will have to be given greater freedom in the formulation of their plans. The Planning Commission may continue to lay down national priorities and targets for various sectors of development planning, but before putting the "Approach to the National Plan" before the National Development Council for their consideration and approval, states should be consulted at length to enable them to express their views on the schemes, proposed therein and to propose their own schemes. Besides, the Planning Commission should lay down national targets only in vital sectors like Power, Major Irrigation, Family Welfare etc. The formulation of other programmes within national guidelines should devolve on the states. The present policy of taking up national issues and priorities by the National Development Council may continue.

6.2 We agree with this view.

6.3 It is true that the present composition and procedure of the Planning Commission do not allow close understanding and consultation with State Governments. It is suggested that there should be a continuous dialogue between Planning Commission and State Government in formulation of sectoral and area planning of the States, periodical review of progress and a better understanding of the impediments faced by the States. The Planning Commission should also have at least fair representations of the State Governments who should be rotated every year. At least once a year all State C.Ms. should meet together with the Planning Commission to discuss national economic problems or at least the National Development Council should meet every year.

6.4 The National Development Council already has representatives of the States. The first alternative is, therefore, not necessary. The 3rd alternative is not possible because planning cannot be made autonomous and independent of the Union Government. The alternative suggested in R. 6.3 may be considered.

6.5 As stated above, Planning Commission can never become autonomous because it must formulate policies on National development programmes according to the directives of the Union Government. The Planning Commission should, however, be empowered to give its own independent view before the National Development Council. It will of course be the NDC which may finally take a decision which should be carried out by the Planning Commission.

6.6 The national priorities will have to be incorporated in the State Plans. However, the Planning Commission while examining the finances and plans of the states should keep in view the needs of the states, their local conditions, local aspirations. Such States, which implement national programmes successfully, should be given incentives.

6.7 No comments. This question has been elaborately dealt with in our answers to questions on Centre-State Financial relations.

6.8 Yes. We agree that the present system of arriving at the State Plan size is faulty. It should be need-based and based on the local problems like tribal population, sparseness of population, lack of infrastructure etc. and the capacity of the state to raise additional resources. In the modified Gadgil Formula 60 per cent of the assistance has been distributed on the basis of population. This is the reason why economically weaker or backward states, particularly sparsely populated states like Madhya Pradesh (which has largest area in the country) do not get adequate funds for their plans. The stress should, therefore, be on the removal of regional backwardness amongst the states and within the states.

6.9 As mentioned in R. 6.8 above, the present system of allocation of Central assistance has not contributed to the attainment of the planning objectives of balanced regional development and removal of poverty, as backward states are not getting the adequate funds to achieve the above objectives.

The present system of determining special Central assistance for Tribal and Hill area sub-plan is adequate, but the mechanism of earmarking of state plan outlays in aggregate and for certain priority sectors is a sort of inducement and distorts the plan priorities of the states as such. This is particularly so, as Planning Commission does not consult the states in earmarking outlays and is generally implicit on this matter.

6.10 It is true that central programmes and centrally sponsored schemes tend to distort priorities in the States. One suggestion is that the present system of financing a new programme for five years only by the centre should be extended to a period of atleast 10 years. Thereafter, a review may be undertaken to determine the impact of the programme before it is absorbed in the non-plan expenditure of the State Government. No new Centrally Sponsored Programmes should be introduced in the middle of a year as State Governments find it difficult to provide matching resources. This very system leads to even financial difficulties. Hence Government of India should determine at the beginning of the plan period their centrally sponsored programmes. If any new scheme has to be introduced, then it should always be at the beginning of a new plan year and introduced only after discussions.

6.11 Monitoring and evaluation programme, to say the least, has been ineffective both at the Centre as well as in the States. Had they been effective, projects would have been completed in time without unreasonable cost escalation. Every project scheme has to be evaluated every year in the States and major project/scheme in the Planning Commission also. There should be some statutory compulsion that major projects are provided adequate funds for their timely completion and new projects are taken up only if there are any balances left in resources. If a scheme does not achieve its objective within

a specified period, it should be terminated forthwith. A suitable powerful machinery should be evolved for the purpose.

6.12 It is hoped that with the decentralised planning, people's participation at different levels will be brought about and a sense of "partners in progress" will be aroused at all levels to ensure that the plan of the Government becomes a people's plan. For this purpose, it is very necessary to take into account views of representatives of the people before a plan is prepared. The present system of preparing plan from the top will have to be discontinued. After giving the guidelines, lower planning bodies will have to be given a certain amount of freedom to prepare a plan which can then be called as their own plan. At the State level and the national level, targets of State and National policies may be spelt out and left to the local or regional planning authorities to adapt the plan to suit local needs. This is indeed a tall order. But if planning has to become more useful, welfare oriented, then involvement of larger number of people will have to be brought out.

6.13 The State Planning Boards in some States have hardly contributed anything in the preparation of the State Plans. The Board only edits the programmes prepared by different departments. If State Planning Board has to become effective, it will have to be given functions as carried out by the Planning Commission. The State Planning Board should take up preparation of a perspective plan, give guidelines on preparation of five year and annual plans, should have close liaison and discussions with the development departments on programmes and policies, should scrutinise and approve every important development programme before it is taken up for implementation and as a watchdog, monitor and evaluate the Plan programmes. The Planning Board should have adequate strength and, if need be, can further be strengthened to take up detailed scrutiny in short time. However, it should be made clear that Finance Department should not entertain any proposal on a plan programme unless it has been approved in principle by the Planning Board.

Industries

7.1 It is true that that the Constitution envisaged Central regulation of only those industries which were of vital public interest and of national importance, but over a period of time, Central control has grown to include within it all types of industries and the only sector left to the States is the small scale sector which is also to a large extent looked after by the Centre.

There has been no instance where the Central Government has used a policy deliberately to the detriment of States' interest. However, Central regulation has, with the best of intentions, led to a situation in many States, particularly like ours, where vast natural resources, particularly mineral resources have remained unexploited. By way of example, the cement industry can be cited. A policy followed by the Central Government in the early 70s of discouraging additional capacity in surplus States slowed down the growth of cement industries in the State and thereby the exploitation of its vast resources of limestone. Similarly, Central licencing has resulted in the States in concentration of industries in a few pockets. Had these powers been with the States, the dispersal of industries within the States and removal of regional imbalance could have been better regulated.

7.2 In our opinion, the Central Government should only regulate those industries which are connected with the security of the country. The licencing powers for the remaining industries could be given to the State Government and the national interest will not be in any way jeopardised because so long as the Central Government controls foreign exchange and the Central Financial Institutions, they can regulate the growth within their guidelines.

7.3 Even though the Central Government have streamlined the procedure for capital goods clearance, foreign collaboration etc. and pace of clearance has improved, yet experience has shown that these do still take a substantial time. It is, therefore, suggested that the Central Government should continue to make guidelines for such clearance but institutions should be set up in the States in which the representatives of State Governments are involved to give clearance so that the work can be expedited.

7.4 It is true that supply of raw material at fair rates to the small scale sector and marketing of their products are crucial factors for the growth of small industries. Most of the States have fairly effective small scale industries development corporations. These corporations have, by and large, so far functioned to provide such of the raw materials as are made available to them from other institutions. There are other institutions like MMTC, STC, etc. which import raw materials for the small sector. The responsibility of providing all the raw materials in adequate quantity has, therefore, never been cast on the Small Scale Industries Development Corporations. In case it is so decided, it would be possible for the Small Scale Industries Development Corporation in our State to organise themselves without much difficulty to undertake this work.

7.5 Statistics will show that substantial portion of the loans from the Central Financial Institutions has gone and continues to go to industrially advanced States. It is our belief that much more than licencing, the Central Financial Institutions can regulate the growth of industries in backward States like ours. It is, therefore, suggested that there should be a State-wise allocation of funds from the Central institutions to ensure removal of regional imbalance.

7.6 We agree that the States should be taken into confidence in deciding Central investment in Public Sector.

7.7 The State Government has no reason to believe that the Centre has either favoured or neglected the State in the matter of its direct investment in heavy industries. However, the State Government would like that the State should be taken into confidence in deciding Central investment in Public Sector.

7.8 We are fully satisfied with the policy announced by the Government of India regarding assistance for development of backward areas.

Replies to the supplementary Questionnaire on Industry

1. The list of industries narrated in Schedule-I of the Industrial Development and Regulation Act are essentially "Key Industries". The Union Government is exercising effective control and regulation keeping in view the need to correct regional imbalances. The decision to set up industries to achieve the aim of removing imbalances totally rests with Government of India. It would be desirable that the Act should provide categorically norms for locating these units in a manner, which can remove imbalances.

2. There should be a uniform legislation throughout the country, in order to have uniform growth of the Small Scale Industries Sector in the country as a whole.

3. The State Government provides infrastructure facilities to promote Industries. The existing arrangement is satisfactory. However, conditions of licence should provide for compulsory development of ancillary industries. States like Madhya Pradesh lack in financial resources and assistance from Government of India is required for the development of infrastructure in backward areas.

4. Yes. There does not appear to be any need for removal of any of the items from the list of items reserved for the Small Scale Sector.

5. We feel that the existing arrangements are satisfactory.

6. Yes, we agree.

7. There should be more frequent consultations.

8. The provisions of the Monopolies and Restrictive Trade Practices Act should be further liberalised and the procedure thereunder streamlined.

Trade and Commerce

8.1 We agree to the setting up of the authority envisaged in Article 307 of the Constitution for the purposes enumerated in the question.

Agriculture

9.1 Even though agriculture is a State subject, it cannot be the concern of only the State, because it has to have relevance to the national requirements of commerce and trade also. The assistance of the Government of India specially in the field of research is of utmost importance to the State.

It is, however, also a fact that the Government of India sometimes places the interests of the Central Government over and above the local interests of the States. This is evident at the time of state plan approval when the Central Government priorities do not match with the State Government priorities. Similarly, in the case of centrally sponsored schemes, the terms and conditions for the whole of the country are kept uniform even though the Agro-climatic conditions differ from State to State. Similarly, in the case of allocation of Research Schemes by ICAR the priorities of the State are ignored.

Therefore, while it will not be proper to treat Agriculture as a purely state subject, the Government of India should also give priority to the interests of the States.

9.2 It is a normal policy of the Government of India to make the State Governments take up certain programmes in the form of Central and Centrally sponsored schemes and then to pass on the entire burden to the State subsequently. Because of Central assistance, the States take up these schemes but later on find it difficult to continue them as such because of financial constrains. Therefore, it is suggested that wherever the interest of the Government of India dictate implementation of a particular scheme in a State, the Government of India should continue to bear the entire expenditure of the scheme as long as the Government of India considers the running of the scheme necessary in the interest of the country.

9.3 The recommendations of the National Commission are very valid and the Government of India should not only confer with the State Government in the formulation of the Central and Centrally Sponsored Schemes, but should also formulate location-specific schemes keeping in view different conditions in different States.

9.4 (a) The Government of India fixes uniform minimum/support prices as well as fair prices for different commodities for the whole country which is not proper. They should be fixed according to local conditions, like productivity, market price etc. which differ from State to State.

(b) In this case the initiative of the Central Government is of utmost importance to the States because strategic inputs like fertilizers, pesticides etc. have to come from other States also. Similarly, in case of credit, only the Government of India can direct the various financial institutions to provide necessary credit.

9.5 The States have neither the resources nor the expertise to tackle the various research problems facing the States. The National Agricultural Research Institutions should, therefore, supplement the efforts of the State Research Organisations in tackling problems of local importance. This aspect is sometimes neglected by the Central Research Institutions which are mostly engaged in National Research problems.

The NABARD like any other national financial institution should not have uniform regulations for all the States. They should formulate credit schemes keeping in view different socio-economic status of each State. They should also try to meet the full financial requirements of the States, keeping in view their particular stage of development.

Food and Civil Supplies

10.1 Present arrangements for Centre-State consultation are adequate and consistent with the actual responsibilities of the State Government.

10.2 Quarterly review will be definitely useful. But the condition of prior concurrence of the Central Government can be eliminated in many enforcements and regulatory orders, where the responsibility of implementation rests with the State Government.

Education

11.1 We do not agree with the view that there is unnecessary centralisation and standardisation in the field of education. If at all, the tendency is just opposite, despite the Centre's constitutional responsibility of coordination and maintenance of standards. If we glance through the list of centrally sponsored programmes during the first three five year plans and now, the facts would become immediately clear. Plan after plan, such programmes are getting reduced mainly because of States' insistence on providing more funds in the State Sector. The less advanced States have suffered due to this policy. At the State level, other sectors of economic development get priority over education in the allocation of resources and vital programmes like universalisation of elementary education, introduction of the national pattern of 10+2 or providing basic minimum physical facilities in the schools have to suffer. In the wake of acute shortage of resources, innovative and qualitative important programmes are not able to get any place in the educational plans. In the earlier plans, most of such programmes were taken care of under the central and centrally sponsored sectors. There is no Central interference and the States are free to devise their plans and strategies. They have full authority and initiative in the matter.

11.2 (a) U.G.C. has made wide ranging efforts in the last several years to improve standards of Higher Education and bring about a coordinated action in the field. Several new concepts and methodologies have been tried and assimilated in the system throughout the country thanks to the efforts and initiatives taken by the U.G.C. However, certain factors such as inadequate job opportunities after the secondary stage of schooling and popular demand for making higher education available in remote areas, the States have been under great pressure to expand the higher education sector without having the necessary resources. Whereas the U.G.C. has done substantial work in terms of consolidation and standardization, it has been severely constrained in promoting and assisting expansion.

It is suggested that U.G.C. must have more effective and live coordination with the State U.G.Cs. wherever such bodies exist, like in Madhya Pradesh. Secondly, U.G.C. must provide financial assistance on a long term basis to centres of advanced and special studies.

Educationally backward States like Madhya Pradesh cannot commit adequate resources towards their matching share for the U.G.C. grants to the universities and colleges of the State. A system of weightages needs to be evolved, so that U.G.C. assistance is made available on liberal terms to such States.

U.G.C. should also take urgent and concrete steps to ensure that regional imbalances in the field of higher education are corrected through a phased programme and its policy is so redesigned that they do not lead to further imbalances.

11.3 The process of discussion, consultation and persuasion is already being followed in evolving consensus on matters of importance to the Centre and the States. The Central Ministry of Education has evolved a system of frequent meetings of Education Ministers, Education Secretaries, Directors of Education/Public Instruction and other officers. There is also a Central Advisory Board of Education (CABE) in which all important issues/programmes relating to education are discussed and a consensus is evolved on them. The Education Ministers of all States/Union Territories are the members of this Board, and its meetings are attended invariably by the Education Secretaries and D.B.Is. For monitoring the programmes of national importance like the universalisation of elementary education for children in the age group 6-14, the Ministry of Education maintains a continuous dialogue with the States through occasional meetings and consultations. However, the Ministry has not yet been able to exercise effectively its influence in getting more resources allocated to poorer states even for nationally important programmes, the result of which is a widening gulf between the developed and less developed states. Education is now a concurrent subject, yet in practice the Centre has not started operating on this provision so far. It is still considered to be basically a State subject.

11.4 The rights granted to religious and linguistic minorities under Article 29 and 30 of the Constitution of India do sometimes come in the way of prevention of victimisation of teachers and employees of such institutions. Suitable administrative and legislative measures should be suggested by the Commission to cope with these impediments.

11.5 Implementation of the University Grants Commission scale to the University and College teachers in the State can be mentioned as an example. The State Government first of all wanted to implement these scales looking to the local needs, administrative convenience, availability of financial resources and the cadre structure prevailing in the Education Department of the State, whereas the U.G.C. was insisting on implementation of these scales, as designed by them without any modifications. The design, however, was based on the scene prevailing Delhi and some other States ignoring the realities prevailing in the State, like Madhya Pradesh. This has resulted in delay in the implementation of the U.G.C. scales. The U.G.C. scales were implemented from 1-4-76 and not from 1-1-73 as was desired by the U.G.C. In order to avoid such situations in future, the better course would be that due consultation should take place between the Central Government or its agencies on the one hand and the State Governments on the other, before schemes are announced which vitally affect resources and administrative structure of the State Govts.

Inter Governmental Co-ordination

12.1 No serious irritants in the Centre-State relations have been experienced in this State. As such it is not considered necessary to set up a permanent institution as existing in U.S.A.

Madhya Pradesh

MEMORANDUM

The State Government are happy to note that the Government of India have appointed a Commission on Centre-State relations with Justice Sarkaria as its Chairman. The State Government are pleased to note that the Commission has been entrusted with the responsibility of reviewing the existing arrangements between the Union and the States in regard to powers and functions and make recommendations for changes and on such other matters as it may appreciate.

2. In the first instance, the State Government want to acknowledge the fact that Constitution of India framed by its founding Fathers, who had been great statesmen and scholars, has stood the test of time. Our Constitution was framed by people like Dr. Rajendra Prasad, Dr. Ambedkar, Pandit Jawaharlal Nehru, Sardar Vallabh Bhai Patel, Shri Sriniwas Shastri, Shri C. Rajgopalacharya and Shri Gopalaswami Iyengar who had been acknowledged as great statesmen and men of wisdom in their times. Whenever constraint has been noticed in the functioning of the Constitution particularly with reference to matters concerning the fundamental rights and the directive principles of State policy the Government of India had been prompt in carrying out necessary amendments to the Constitution. These amendments along with the original Constitution have created a base for the development of the Indian polity into a major technically advanced and developed egalitarian nation.

3. The Government of M.P. feel that in the operation of the Constitution particularly in regard to the provisions relating to Centre-State relations, there has not been any area in which it has felt undue strain, warranting any fundamental change in its structure. We, therefore, in the first instance would like to submit that there is no need to make any fundamental changes in the provisions of the Constitution relating to Centre-State relations.

4. However, over the years on account of the growing responsibilities of the States, their need for resources have grown manifold but unfortunately the Constitutional provisions relating to the sharing of resources have remained unchanged. In the past 36 years since Independence tremendous changes have taken place in the country in regard to the responsibilities of the State *vis-a-vis* the people. We have recognised the need of the State Government to intervene in public activities with a view to eradicating poverty, diseases and un-employment. Public recognition of these economic responsibilities of the State Governments have in turn raised the expectations of the people. To carry out development programmes to achieve these welfare objectives, the State Government has to mobilise resources of a high order. The resources raising powers of the State Government, however, are limited. They continue to remain what they were when the Constitution was drafted and adopted. Despite efforts by the State Governments there are limiting factors which do not permit the raising of resources beyond a particular level. For example, it is not possible to raise Sales Tax beyond a particular level.

5. The State Government is feeling its helplessness in a situation where it is not able to fulfil its commitment to cater to the rising expectations of the people on account of paucity of resources.

It is in this context that the State Government would like to give a few suggestions for the consideration of the Sarkaria Commission which may or may not involve amendments to the existing Constitution.

6. The State Government feel that in view of the growing volume of resources to be transferred from the Centre to the States both on the Plan and non-Plan accounts, it may be worthwhile to set up . Finance Commission on a permanent basis and entrust to it the responsibilities of developing all resources from the Centre to the States. The State Governments should be given adequate representation in the Finance Commission by rotation. This will also reduce the burden of the Finance Ministry and the Planning Commission and enable them to more effectively monitor the development programmes.

7. The State Governments have repeatedly pleaded before the Finance Commissions that the Corporation tax should become shareable. It is indisputable that the State Governments play a major role in the industrialisation of the country by providing land, capital water, power and many other inputs at concessional rates. All new industries are permanently exempted from sales tax for a number of years. These concessions given by the State Governments render it possible for the companies to generate profits and pay corporation tax. The revenue from corporation tax has been increasing at a compound rate of 15 per cent in the last ten years. The VI & VII Finance Commissions recommended that the Government of India should pay attention to the demands of the States for a share in the corporation tax. They could not recommend any further as the Constitution did not permit the sharing of the Corporation tax between the Centre and the States. Our only submission is that the Commission should consider the need for making the Corporation tax shareable with the State Governments.

8. The State Government feel that the surcharge on Income Tax is not different from the Income Tax itself. There is no reason why this portion of revenue should not be shared with the State Governments. The State Government feel that there is no need to keep it separate and levy it solely for the purposes of the Union. It should also be made shareable with the State Governments.

9. The Finance Commissions have continued to increase the divisible share of Income Tax and now it stands at 85 per cent for the States. The Central Government makes changes in the rates of Income Tax which adversely affect the interests of the State Governments. The States are neither consulted nor any warning given to them of such changes. As the Income Tax is a major source of revenue to the States any change adversely affecting them should be affected only after consultation with the State Governments.

10. The State Government acknowledge the fact that for orderly development of the national economy, fiscal discipline has to be observed. Despite the Central Government's directives in regard to the observance of fiscal discipline, there are wide variations in

this regard as amongst the State Governments. More often than not fiscal indiscipline leads to overdrafts. After a lapse of time the Central Government willy-nilly covers such overdrafts by Central loans. In addition to this advantage of Central loans accruing to States with overdrafts, dispensation of the Finance Commission as regards capital gaps confers additional advantages by way of either write off of these loans, or their conversion into long term loans.

11. In the past the State Governments enjoyed the right to levy a tax on a railway passenger fares. This power was taken away in April, 1961. Since then the Finance Commission has been recommending the allocation of a grant in lieu of a tax on railway passenger fare that had been fixed by the Railway Convention Committee. This grant had remained static at Rs. 16.25 crores over the last two decades. The State Government have been pleading before the Finance Commission for the enhancement of this grant. The VII Finance Commission had observed on this matter as follows :—

"We are in agreement with the view held by the earlier Commissions that, though the tax on railway passenger fares has been repealed and what the States now receive are not shares in the proceeds of tax under Artilce 269 but shares in the grant in lieu of the tax, these shares should be determined in the same manner as if the levy and collection of the tax had continued. The general principle for the distribution of proceeds on taxes and duties under Article 269 as enunciated by the Commission in the past is that each State should receive from such taxes, as nearly as may be, the amounts which it would have raised if it had the power to levy and collect them." (Page 68 of the Seventh Finance Commission Report).

"The Finance Commission may not be the competent body to advise whether it would be appropriate to re-impose the railway passenger fare-tax as has been urged by at least one State Government. Nevertheless, we do appreciate the force of the argument put forward by almost all State Governments that a fixed grant is not an adequate replacement of a tax on railway fares, since it does not take into account the considerable buoyance in the earnings of the Indian Railways caused by the rapid increase in passenger traffic." (Page 71 of the Seventh Finance Commission Report).

12. The Commission should recommend the restoration of the power to levy tax on passenger fares and freights to the State Governments or recommend enhancement of this compensation to the extent to which the State Governments would have realised it had the power to levy the tax continued with them.

13. It had also been observed by the State Government and the Central Heads of Departments ask for major concessions from the State Governments for location of industries or other local head offices of the departments. The reality of the situation is that these organisations create an unhealthy competition amongst the States, which the States cannot resist, to provide concessions beyond normal requirements. We feel that the location of Central Government undertakings and offices of Central Government Departments should be based on regional balance and economic considerations rather than on the basis of concessions to be wrested out of the State Governments.

Licensing of Industries

14. A fresh look is needed at the list of industries under the Industries (Development and Regulation) Act. At present any industrial unit falling within the list needs to be licensed by the Government of India. There are, of course, exemptions with regard to the size of the unit. The economy today has become so diversified and needs to move at a faster pace. The present procedures for obtaining industrial licences are quite cumbersome. Quite often, considerations other than economic or removal of regional imbalances have come to play a part in granting licences. Therefore, at least in cases of certain selected industries the State Governments should be authorised to issue licences, subject to any overall guidelines that may be given by the Centre.

Development of Power Sector

15. The Rajadhyaksha Committee recommended that by 2000 A.D. 45% of thermal generation capacity in the country must be with the National Thermal Power Corporation. Almost all the States had opposed this recommendation. While constraint of resources will certainly be the governing factor in investment in power sector, yet greater flow of funds from the Government of India to the States is needed. In the long run decentralised power generation at the State level will certainly be more conducive to efficiency and growth of the country's economy than the generation being done by a Central authority.

Clearance of Projects

16. The present system of clearance of projects (power, irrigation or for that matter any project) by the agencies of the Central Government before they are included in the Plan needs examination. At present, power projects with an investment of more than Rs. one crore and irrigation projects with a command area of more than 10,000 hectares need to get technical and other clearances from the Central Electricity Authority or Central Water Commission, the concerned department of the Government of India and finally the Planning Commission. This is a very time-consuming procedure lasting 3-4 years. Perhaps, the tenure of an elected Government will be over before any project of this size could be cleared at the Central level. The need for such clearance existed in those days where not much expertise and experience were available at the State level. Perhaps we can even say that in certain States, like Punjab, Uttar Pradesh and in the Southern States, the Irrigation Departments have a very long history and tradition. Therefore, the need for clearance, etc. by the Centre should be severely curtailed, extending only to major irrigation projects. So far as thermal power projects are concerned, everything is so standardised today that it does not take much time to prepare the detailed project report. Similarly, any changes in the parameters of a major irrigation or power project cannot also be made without Central concurrence. This should also be avoided. So far

as inter-State projects are concerned, even here, there are Inter-State Control Boards which go into the details of the project.

Legal Matters

17. As per clause 5(4) of Part B of the Vth Schedule to the Constitution of India, President's assent to all regulations made for tribal areas is necessary. It is proposed that so far as the matters which are covered by List II of the Seventh Schedule it should not be necessary to have President's assent because that matter specifically falls within the exclusive jurisdiction of the States. Similarly with respect to the matters enumerated in List III, if the field remains unoccupied, the regulation may, with respect to subject relating to that field, not be required to be sent for the assent of the President. This rule makes the matters consistent with the provisions of Article 254(2) and the policy will then become uniform in respect of the distribution of the legislative powers.

18. At present wherever in a city there are cantonment areas the civil population of the cantonment area is governed by the cantonment board in which the concept of local self Government has been applied with a lot of restraint. In the same city across the road, the rest of the town is governed by either the Municipal Corporation Act or Municipalities Act, where the concept of local self Government is much more democratically applied. Where it can be well understood that the areas of defence establishment where defence personnel actually reside may be placed under the disciplinary control of the military authorities but it is difficult to conceive as to why the civil population of that area should be subjected to that rigour which is non-existent, with the other part of the town. It is proposed that the area of civil population at present governed by the cantonment board should be transferred to the respective municipalities or municipal corporations.

19. As per Article 252 it is necessary for the State Government to pass a resolution authorising the Central Government to make law in respect of particular subject. The law made by the Central Government under the powers so delegated assume the shape of Central law falling in List I so that by such delegation the State Government becomes deprived of all powers to suitably amend it according to the local conditions. The difficulties which are being felt by the Urban Land Ceiling Act are not unknown. Since we have delegated the powers and the Central Government has framed the law on that point it has now become impossible to get it amended. It is proposed that Article 252 of the Constitution be suitably amended so as to place such a law in the category III legislation. In that case the State Government will have power to amend the law if and when the necessity to do so arised according to the local conditions.

20. The existence of working mines in the States increases traffic intensity on its roads resulting in the excessive wear and tear and increase in maintenance expenditure. It also calls for additional development expenditure in the area and the people in the neighbouring areas suffer all the hardships of population and price rise. It, therefore, becomes necessary for the State to invest large amounts in developing that area and in keeping the roads in good condition. This necessity directly arises out of the fact of existence of a mine, the operation of which is a Central subject. Tax on the mineral rights can be imposed only by the Central Government. Vide entry 54 of List I partly the power of regulation of mines and minerals development also vests in the State vide entry 23 of List IX. However, this requires to be clarified that the State Government should have specific powers for the levy of cess on the mineral for the purposes of the development of the mine area and the roads emanating from the mine areas.

Food

21. As the public distribution system has come to stay in the country, there should be effective coordination between the Food Corporation of India and the State Government organisations dealing with procurement and distribution of foodgrains in order to make available foodgrains at the lowest price to the consumer.

22. At present licensing of roller flour mills is being done by the Government of India. This creates an anomalous situation where by there is an unutilised capacity and new licenses are being issued by the Government of India. The powers could be delegated to the States for better coordination and control of this industry.

Forest

23. The operation of the Forests Protection Act, 1980 has created considerable amount of difficulties for various development departments in the State including the exploitation of mineral areas. While it is sincerely appreciated that this Act is meant to conserve the depleting of forest wealth in this country, the Government of India should vest some powers in the States to remove hardships they are facing now.

Centrally sponsored and Central Sector Schemes

24. While most of the Centrally sponsored schemes and central sector schemes are formulated with a view to giving incentives to the State Governments, in their practical application the States have to face problems on account of several conditions imposed by the Administrative Ministries of the Central Government regarding staff, salaries, status etc. While the Central Government may impose conditions regarding implementation of the project, the details of the staff, etc. should be left to the State Governments. The Central Government should also indicate the State sufficiently in advance all the financial liability which the State Government will have to bear on emergence of such schemes during the Plan year as it causes difficulty to the State Governments to reappropriate funds for implementing the programme in the middle of a year. An overall view of the Centrally Sponsored Schemes and the Central Sector Schemes in this context would be welcome.

Salary Structure of Government employees

25. The Central Government takes periodical decisions regarding revision of emoluments; dearness allowance and other financial benefits to their employees. These announcements of the Central Government have necessarily to be followed by the States and in most cases they cause financial hardships to the State Governments. Over the years the pattern has emerged that the State Governments follow the Centre in regard to the dearness allowance even though the pay scales may be different. A time has now come when there has to be serious thought on whether there should be a close consultation between the Centre and all the States together periodically to bring about a national policy in this.

26. The State Government feel that the points mentioned above require careful consideration by the Sarkaria Commission. While they cannot be called irritants in the Centre-State relations, they offer scope for improvement which would make administration smoother and better. Many of the items mentioned above may not require any fundamental charge in the existing Constitution. Perhaps minor modifications would meet the requirements.

27. The State Government takes this opportunity of expressing its gratitude to the Sarkaria Commission for having afforded us an opportunity to submit its point of view for its consideration.

Maharashtra

REPLIES TO THE QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 If Federal principle means absolute division of Sovereignty and political power between Centre and States, each acting independently of the other in the sphere carved out for it by a Constitution document, the answer to the question is negative. Our Constitution has drawn heavily on the Government of India Act, 1935, which was evolved to give a try to a loose federation comprising of provinces and Princely States littered over the whole sub-continent. But the decision to accept partition of the country per force required the founding fathers to incorporate certain unique features which provide for a strong centre and an inbuilt mechanism to convert the federation into unitary State during emergencies arising out of war, external aggression or armed rebellion, failure of Constitutional machinery and financial crisis. Therefore, if a broad approach is adopted, namely, whether all the basic features of a Federation such as distribution of power between Centre and States flowing from a written Constitution, judicial review of both legislative and executive action etc. are present, then it is amply borne out by our Constitution that the Federal principle is predominant. A strong Centre is a lesson taught by the long history of this nation and the current events reinforce it. On a broad perspective, it can be said that the unique features tending to make the polity unitary are ordinarily dormant giving full scope for the Federal principle to play its role; but when national interest is at stake, it is placed above everything till the occasion lasts. Jurists may choose to call it by any name, either Federal, Quasi-Federal or Co-operative Federation, the fact remains that the Federal principle is predominant in our Constitution.

1.2 Broadly, save some small matter, this Government does not subscribe to the abovementioned view of the Rajmannar Committee. A careful study of the three Legislative Lists shows that by and large subjects of national importance are included in the Central List (List I), subjects of local or regional importance are included in the State List (List II) and subjects with which States are primarily concerned but which are likely to assume national importance or which require uniform policy throughout the country are included in the Concurrent List (List III). An important feature of these lists is that the subjects relating to taxation are exhaustively enumerated both in Central List as well as State List taking care to see that no conflict on that account arises. In fact, there is not a single instance of conflict so far as taxation power is concerned. It is possible to argue that the States should have some more elastic tax resources but this aspect is dealt with in details in part V.

As regards deletion of Articles 251, 256, 257, 348, 349, 355, 356, 357, 365 etc. suggested by Rajmannar Committee, this Government is of the firm view that for national interest, to protect the integrity of the nation and avoid failure of Constitutional machinery these provisions are necessary. Any power to give Directions not adequately backed by a sanction is meaningless. These powers, specially power to assume the functions of the Government of a State in a situation in which the Government of a State cannot be carried on in accordance with the provisions of Constitution or to protect a State from external aggression and internal disturbance are essential to protect the integrity of the nation, otherwise there will be a vacuum resulting in chaos. It is indeed an irony that the hypothesis of the Rajmannar Committee while suggesting these changes that the fear of external aggression and internal disturbance that weighed heavily on the minds of the founding fathers in making such provisions, had ceased to exist, has proved to be a myth and if regard be had to the recent events, the need for such provisions is felt actually even today. In fact, recent events emphasise a need to do some hard thinking in the direction of devising ways and means for further strengthening the hands of the centre to protect integrity of the nation.

As regards appeals to the Supreme Court, the Supreme Court in our Constitution performs a multiple role; and its jurisdiction is much wider than that of any other apex court in any country. It is not only a federal court, but it is the highest court in the land deciding all types of legal question. It is the protector of Fundamental rights as Court of original jurisdiction and it is the final court on matters involving important questions of civil or criminal law. It is nobody's case that the Supreme Court has not discharged its responsibilities adequately. The only complaint is about arrears. It does not appear necessary that the Supreme Court should take up only constitutional matters. This Government does not favour any such proposition. However, this Government is of the view that there is much to be desired in the working of the Supreme Court. Experience of the last 35 years shows that the institutions are outpacing disposal resulting in treme[illegible]us arrears. Reform, both in the nature of [illegible] approach to Supreme Court to cases [illegible] important questions of Law and procedural innovations like shorter hearings, shorter arguments and shorter judgments is called for.

1.3 A federal constitution involves a distribution of legislative powers between the Union and the States, each being supreme and sovereign in its own sphere. This distribution is made on the principle of granting powers to the Union in matters

of national concern, or in matters where informity of laws throughout the Union is considered desirable, and of granting powers to the States in matters which concern the States or can be described as principally of local interest. The distribution generally takes one or two forms; enumerated powers are given to the Union, residuary powers being retained by the States, as in the United States and Australia, or enumerated powers are given to the States, residuary powers being given to the Union as in Canada. India has followed the latter model.

The Constitution has made an exhaustive enumeration of heads of legislative subjects and distributed them in three legislative lists : List I being the Union, List II being the State, and List III being the Concurrent Legislative List. The State has been given exclusive power to legislate in respect of matters in List II. The subjects included in List I can be described as of national importance, the subjects included in List III can be described as having an important national aspect in which local variations or experiments might be desirable and were not necessarily injurious to the national interest; the subjects included in List II can be described as matters which were considered to be principally of local and State interest.

The Administrative Reforms Commission in its report in Chapter VIII has dealt with general scheme regarding the distribution of powers between the Centre and the States. The crux of the recommendation is that power should be delegated to the maximum extent to the States with regard to their work on Projects in which the Centre is directly interested or which are carried out by them as agents of the Centre. This State generally agrees with the views expressed and the recommendations made by Administrative Reforms Commission and would admit that if these recommendations are implemented it would bring about a substantial amount of decentralisation and at the same time remove a cause of friction if any, that may arise in the relations between the Centre and the States. It will be noticed that the suggestion made by the A.R.C. and endorsed by the State may not call for any amendment of the Constitution as such but it would involve certain changes in the administrative arrangements to be brought about by the Centre in relation to the working of various schemes on subjects in both the State List as well as concurrent list over which the Centre has control on account of the financial implication involved therein.

Of course, it goes without saying that whenever a subject of national importance arises or any emergency requires the execution of a certain policy, Central Government should be in a position to use the State Government machinery for the implementation but barring such exceptions, the State Government should be left to operate on their own as recommended by the A.R.C. This Government agrees with the view of the A.R.C. that in the State field a Centre's role should be confined to that of a pioneer, guide, disseminator of information, overall planner and evaluator and so far as the Projects in which the Centre is directly interested or which are carried out by the States as the Agents of the Centre, it is necessary in the interest of speedy completion of work that the Centre's role should be reduced to the minimum and power should be delegated to the State Officers to the maximum extent.

1.4 We are not aware of the country where the Federation of traditional type exists as a functional entity.

However, in the U.S.A. the Centre, designed to be weak because of its limited powers, has turned out to be strong to meet the serious challenges of wars, depression and economic growth in the country. The Centre has become strong not so much through the formal amendments of the Constitution but through the process of judicial interpretation. The judiciary has helped the Centre, thereby giving an expansive interpretation to its enumerated powers, that is commerce power, defence and war power, taxing power etc. in response to the demands of time.

Even in Australia, the Federal Principle has given way during war.

Strictly speaking as per the Constitutional theory. in a federal Government the Central and Regional Governments are in their own spheres independent of each other, but constitutional reality is today far removed from the abstract principle. This principle of federalism i.e. two Governments functioning at their respective levels separately and independently, can be adhered to only when the functions of Government are extremely limited.

Further, there is a general tendency in the older federations that there should be a strong Government at Centre. It has been said that "nationalism of sentiment" and a will to work together in solving the problems posed by independence is responsible for the changing structure of federalism. The distribution of power between the units and the Centre is sometimes called "Co-perative federalism". Co-operative federalism is the search for a middle ground between the either or attitude typified by discussion of National Government versus the States or the advantages of Centralisation versus Decentralisation. Joint action of Federal and State Governments, it is hoped, will gradually produce the advantages of a unitary state without destroying the essential values of federalism. It appears that this spirit might have animated the U.S.A. to adopt in a highly non-theoretical fashion her relationship between the Centre and States built around the operating principles of *de-jure* national supremacy and *de-facto* local autonomy. Thus, the above history of federation will show that there is no truly Federal State.

1.5 Fortunately for this State, there never were any problems with the Centre in any sphere, either legislative, executive or judicial and therefore it is difficult for this Government to make any concrete suggesctions on problems which it was never required to face.

This Government is of the view that the provisions of the Constitution governing the Centre-State relations are adequate for the purpose of meet-

ing any situation or resolving any problem that may arise in this field and no constitutional amendments appear necessary for ensuring proper relations between the Centre and the State. It may however by mentioned that there is scope for improvement in the process of according assent of the president to legislative proposals. in the Concurrent List made by the States by expediting the consideration within certain time limit imposed administratively. Suitable administrative machinery should be devised to resolve the difficulties and problems that may arise in Union-State relations.

1.6 The Constitution that was so framed was neither purely 'unitary' nor purely 'federal'. The word 'federation' is nowhere found in the Constitution. To meet the requirements of the situation, the Constituent Assembly described India as a Union of States. This was deliberately done in order to discountenance fissiparous tendencies and centrifugal forces. Residuary power was conferred on the Union and not on the States, and the right to secede from the Union was not recognised.

Single citizenship, Governor's power to reserve a bill for the consideration of the president (Art. 200), exercise of executive power by States so as to ensure compliance with Laws made by the Parliament and existing Laws with power to Union to give directions to ensure such compliance (Art. 256), exercise of executive power by State in such a way that it does not impede or prejudice the exercise of executive power of the Union and power to Union to give such direction to States as are necessary (Art. 257), entrustment of executive functions by Union to States and by States to Union (Articles 258 and 258-A), provision for All India Services (Art. 312), a single judiciary with Supreme Court at its apex, uniformity in Fundamental Laws, Civil and Criminal, emergency powers (Articles 352, 356, 360), these are some of the important provisions in the Constitution which the founding fathers designed to achieve the objective of the protection of independence and ensurance of the unity and integrity of the country.

It is our firm view that the basic Constitutional fabric of ours is quite sound and must remain intact.

1.7 The design of our Constitution is such that the Central Government has been given vast powers and enumerated powers are given to the States. However, the relationship of the Union with the States is not that of domination but of co-ordination for common subjects. In normal times both the Government, the Union and the State Governments, are to function as co-ordinates; but in certain circumstances the Union reserves the right to give directions if it is found necessary in the national interest. Under Article 256 of the Constitution of India it is the duty of the State to make such laws which should be in conformity with the laws made by the Union Government. Under Article 257 of the Constitution the Union Government has got right to give directions to the States in certain circumstances. The sanction behind this power to give directions is provided by Article 365, which empowers the president to hold that a situation has arisen in which the Government of a State cannot be carried on in accordance with the provisions of the Constitution, when it fails to comply with or give effect to any such directions. So far as entrustment of executive functions is concerned Articles 258 and 258A provide for entrustment of functions by Union and State with consent of the other.

Article 355 takes care of a situation where there is external aggression or internal disturbance in a State by casting a duty on the Union to protect such a State in such a contingency. Articles 356 and 357 of the Constitution provide for the case of failure of Constitutional machinery in the State. These emergency powers are special powers and are reserved with the Union. The Union can under the emergency situation take over the administration of a State, make legislation for it and spend from its consolidated fund.

Our Constitutional has recognised the principle of responsibility of the Union to grant financial assistance to needy States and particularly for promoting welfare of the Scheduled Tribes or raising the level of administration in Scheduled Areas to that of the administration of the rest of the areas of that State. Subject to this, by and large the Constitutional provisions regarding the obligations of the Centre and the States in respect of the country as a whole and to one another appear to be reasonable and do not call for any drastic changes.

1.8 Article 3 is important from the point of view of the federal nature of the Constitution. For parliament exercising its legislative powers under this article may even wipe out a State from the map of India even against the wishes of the people of the State concerned. Theoretically, this is a serious flaw in the federal structure of the Constitution. However, experience shows that parliament has always respected and never flouted the wishes of the people of any particular State.

In the Australian Constitution, the parliament of the Commonwealth has to take the consent of parliament of a State and the approval of the majority of electors of the State voting upon the question of diminishing, increasing or altering the limits of a State. In the United States of America, the consent of the legislature of the States affected by alteration of boundaries is essential. Article IV, Section 3(i) lays down: "New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the jurisdiction of any other State; nor any State be formed by the junction of two or more States, or parts of States without the consent of the legislatures of the States concerned as well as of the Congress." Under Indian Constitution, no consent of the concerned State is necessary, although an opportunity to express the views is given. However, one has to look to the history and culture of a country before adopting a particular principle incorporated in the Constitution of another country having different historical and cultural background. So far as India is concerned, it is inhabited by people professing different religions and speaking diverse languages. Looking to the historical and cultural background of our country, this power to alter, change or even wipe out a State appears

to have been given to Parliament as an arbiter not interested in any particular State or Community, constituted as it is of representatives of the whole people of India, with an expectation that it will discharge this duty without fear or favour and by keeping in view only the ultimate welfare of the country which was implicit in the welfare of the citizens of a reorganised State. By and large, this expectation has proved to be true.

Therefore, Article 3 though it may appear to be against the Federal principle and undemocratic, the background on which it came to be incorporated and the manner in which it has been put to operation so far, demand that it be better left alone as it is without tinkering with it, which will probably create problems rather than provide solution.

PART II

LEGISLATIVE RELATIONS

2.1 There does not appear to be any concrete instance where it can be contended that the Union has under the cover of a declaration of 'national interest' or 'public interest', encroached on the State legislative field. Article 249 of the Constitution of India empowers Parliament to legislate with respect to a matter in the State List in the national interest. It may be seen that even this power of Parliament is limited and any law passed in exercise of these powers can remain in force for a maximum period of two years. Therefore, there does not appear to be any ground to make a grievance as regards the power of Parliament to pass any law covering the field of State legislation, in the national interest. Moreover, even if such laws are passed by the Parliament they are administered through the State Governments in their respective States.

If the State Government is of the opinion that the law passed by Parliament is not sufficient for their requirements looking to the local conditions in the State, it is always open to the State Legislature to pass any law which will meet its requirements. Although the Parliament has passed the National Security Act, 1980 (LXIII of 1980), this State Government has passed the Maharashtra Prevention of Dangerous Activities of Slumlords, Bootleggers and Drug-Offenders Act, 1981 (Mah. LV of 1981), to provide for preventive detention of the anti-social elements for prevention of their dangerous activities prejudicial to the maintenance of public order.

The State is unable to subscribe to the view that the Centre has been encroaching on the State Legislature field under the cover of national or public interest.

2.2 Overall national interest and particularly the unity and integrity of the country demand that no change is called for in the basic scheme of distribution of subjects in the three lists of the Seventh Schedule. But in practice, while examining legislative proposals on subjects like labour, rural and urban area development programmes, technical and medical education, it is necessary to have a more liberal approach in giving assent to State proposals which are progressive in nature and ultimately are going to prove beneficial to the national interest.

2.3 The suggestion made in this paragraph should be welcome and it would be desirable in the interest of better relations between the Union and the States that the Central Government consults beforehand while undertaking legislation of a Concurrent subject. Although there is no provision in the Constitution of India, the Government of India many a time consults the State Governments by inviting its views on any particular subject relating to which it proposed to undertake legislation. Moreover, whenever a bill is referred to Joint Committee or a Select Committee of the Parliament, such Committee visits several State Governments with a view to assess the views of the State Governments and the people on the proposed provisions of the Bill. A recent instance is the Dowry Prohibition Bill. It would, therefore, be desirable in the interest of better relations between the Union and the State to have a specific provision in the Constitution of India requiring the Centre to consult the State Governments beforehand whenever any legislation is proposed to be undertaken on a Concurrent legislative subject, except where on account of urgency it is considered expedient to dispense with prior consultation.

2.4 It would not be desirable to empower the Parliament to legislate on any subjects within the exclusive competence of the States in "national interest" or "public interest" on a permanent basis. The present power of the Parliament, as referred to in question 2.1 of Part II under Article 249 to legislate for a limited period appears to be proper.

2.5 Subject to the observations made in replies to questions 2.1 to 2.4 of Part II, there are no further suggestions to be made relating to any change or reform with regard to Union-State relations to the legislative sphere.

PART III

ROLE OF THE GOVERNOR

3.1 A Governor of a State is appointed by the President. The Governor so appointed, in the context of Centre-State relations, has to perform three important functions among others. Under Article 167, Governor is entitled to seek information from the Chief Ministers and also ask certain matter to be considered by the Council of Ministers which has not been considered by the Council. A Governor is expected to send periodical reports to the President with copy to the Chief Minister. This is useful in that it keeps the President duly informed about the state of affairs in the State and at the same time enables the Chief Minister and his colleagues to know the views of the Governor on such matters. Such reports are bound to keep the Chief Minister on occasions informed about the wrong policies persued to enable him to take corrective action to avoid any action on the part of the President under Article 356.

The second such function is reservation of a Bill for the consideration of the President under Article 200. Such occasion may arise when Governor feels that a particular bill is of such importance that he should reserve it for the consideration of the President instead of taking the responsibility on himself by giving his assent. This he may do on his own or sometimes on the advice of the Chief Minister. This is an important function assigned to Governor which enables him to maintain a proper understanding between the Centre and the State to keep harmonious relations between them in the larger interests of the Country.

The last and important role assigned to the Governor is under Article 356 to report to the President on the point whether the Government of particular State is carried on in accordance with the provisions of the Constitution. This is also interlinked with the question whether the State Government exercises its executive power in accordance with the Central Laws and consistent with the executive power of the Centre as contemplated by Articles 256 and 257 which attracts Article 356 read with Article 365.

A great deal has been discussed, a lot of literature has been produced on this aspect but it must be admitted that the practice followed by various Governors during the last 34 years has not been uniform. Much depends upon the personality of the Governor. There have been allegations that the Governors have abused their power to favour the party in power in the Central Government to whom he owes his appointment. Of course, there have been cases where the Governors have acted with utmost impartiality. There are other cases where the Governors have acted according to their own Rights. So far as the experience of this State goes, the role of the Governor in the context of its relations with the Centre has been by and large congenial and useful.

3.2 In our opinion, the Governor should play the role assigned to him under the Constitution in the context of Centre-State relations, namely, to be a powerful link between the Centre and the State helpful in maintaining harmonious relations between the two by constantly keeping in touch with the Centre as well as the Chief Minister of the State and as a Counsellor and elderly statesman who would after giving his counsel, act on the aid and advice of the Council of Ministers as postulated by the Constitution. Whenever occasion demands, he must exercise his discretionary functions in an upright manner, true to his position as the Constitutional Head of the State. He may, if he so needs, seek guidance from the Centre but the ultimate decision in discretionery matter must be his own in accordance with the provisions of the Constitution.

3.3 (a) While making report under Article 356(1) of the Constitution our expectation is that the Governor will be objective in making such a report and act according to his own independent judgment. This is a matter of vital importance to the State and therefore, ordinarily it is expected of the Governor that he would warn the Chief Minister and give opportunity for correction before he submits his report to the President under Article 356.

(b) The principal consideration governing the choice of the Chief Minister should be that he shall be a person most likely to command a majority in that Legislative Assembly.

Where at an election a party gets a clear majority, the Governor constitutionally, is bound to call the leader of that party to form the Government. It is for the leader who is asked to form the Government to advise the Governor on the appointment of other ministers, in other words, it is the Chief Minister appointed by the Governor who has to suggest the names of other Ministers, and the Governor is bound to accept the advice of Chief Minister in the matter of appointment of Council of Ministers. However, where there is no clear majority at the elections in favour of a particular party, and intimations are sent to the Governor singly by a party or a group of parties that they are in a position to command the majority in the Legislature and able to form a Government, in such a case, it becomes his duty to form a judgment as to which of the various parties or groups who have sent their intimations, are able to form a Government which would really command a majority. In such situations complete impartiality of Governor becomes important. His sole purpose ought to be to give the State as stable a Government as he can under the circumstances and all his moves have to be directed to that purpose.

(c) Prorogation of House.—According to Article 164(1) of the Constitution, the Ministry remains in the office during the pleasure of the Governor. In normal circumstances pleasure of the Governor means that the ministry remains in the office as long as it retains the confidence of the Legislative Assembly. But the problem arises when the Chief Minister becomes aware of the fact that he is no longer in a majority and advices the Governor to prorogue the Session of the Legislative Assembly. In such circumstances, the Governor is justified in compelling the Chief Minister to face the Legislature to demonstrate his majority. However, there cannot be any hard and fast rules in this behalf and the Governor must be left to exercise his best judgment to the best of his ability and conscience. Stability of Government being the ultimate goal.

Dissolution of the Assembly.—In India, the power to dissolve the Assembly has been given by Article 174(2)(b). The Constitution of India, as it stands in the present shape, gives this power to the Governor. There are two articles pertaining to this power. Under Article 172, the Assembly stands dissolved after the expiry of five years though the dissolution is formally announced by the Governor. According to Article 174, the Assembly may be dissolved at an earlier date.

Normally, the Governor should accept the advice of the Chief Minister for the simple reason that this is not a discretionary power. But in certain cases it is not desirable and constitutionally sound. For instance, if a Chief Minister, who happens to be in the office without majority support in the house, advises the Governor to dissolve the

Assembly, it seems that the same is not in consonance with the principles of Parliamentary democracy.

Above all, since the Governor is supposed to go by the advice of the Council of Ministers and not the "Chief Ministers" in view of the phraseology used in Article 163 of the Constitution, he should, before he concedes the demand, direct the Cheif Minister to place any such sweeping step before the colleagues in the Ministry. Though it is not important legally, politically it would be in consonance with the principles of collective responsibility.

3.4 After a careful reading of Article 200 of the Constitution it appears that the Governor has four options before him. He shall either declare his assent to the Bill or he shall withhold his assent or he may return the Bill for reconsideration if it is not a money Bill or he may reserve it for the consideration of the President.

The powers vested in the Governor under Article 200 are discretionary powers. It is for him to decide whether as a part of legislature he would assent to the Bill. If he feels some doubt about the validity or the advisability of the course of action outlined in the Bill, he can ask the legislature to reconsider it. Whenever the matter is of such importance that he feels that he should not take responsibility of assenting the Bill, he can reserve the same for the consideration of President. All these indicate that the powers vested in the Governor require him to exercise his own judgment. The obvious purpose in making this provision was to provide an outlet to take out the steam behind a measure brought before the State Legislature due to popular pressure but without considering its consequences. In order to study the impact of such a measure in a dispassionate manner, the reservation of the Bill for President's consideration acts as a safety valve.

3.5 Experience of this Government in getting President's assent is quite encouraging. During the last 8 years (1976—83) 110 Bills were reserved for President's assent: but in only 4 cases the assent was withheld. By and large, it is the experience of this Government that when any objection is raised, the matter can be explained to the Government of India and the assent can be expedited. This Government would however, suggest that except in urgent or time bound Bills which are required to be dealt with speedily, there should be a time limit of any three months within which the process of consideration and assent ought to be completed.

3.6 This Government agrees with this view. The experience of this State has been that in practice the Governors appointed to this State, have generally acted impartially and fairly in accordance with the Constitution and healthy conventions in discharging their dual responsibility.

3.7 This Government does not agree with the suggestion. The present position should continue.

3.8 It is difficult to agree with this suggestion. Power to summon the Legislative Assembly of a State by virtue of the provision of Article 174(1) has been accepted as one to be exercised on the advice of the Council of Ministers. In a given case, if the Governor happens to have formed a view that the ruling party has lost its majority in the legislature, the proper course for him would be to informally ask the Chief Minister to satisfy him whether the Chief Minister still has a majority in the legislature. If the Chief Minister is not able to satisfy the Governor by this method, it would be open to the Governor to ask the Chief Minister to give advice to summon the legislature as early as possible and if the Chief Minister fails to give such advice, the Governor would be perfectly justified in withdrawing his pleasure from the Ministry and dismiss the same by virtue of Article 164(1). This course on practical grounds is preferable than giving the Governor a power to summon the Legislature on his own and get involved in the politics of number.

3.9 The necessary implication of Article 67 of the Constitution of the Federal Republic of Germany, is that so long as the Bundestag (Federal Legislature) is not in a position to elect the successor, the Federal Chancellor who has lost confidence of the Bundestag, would continue to be the Chancellor. This would be against the basic principle of democratic Government that the Chancellor must have the confidence of the legislature. It may not be desirable also from practical point of view. It is true that the Governor of a State may be required to face this problem occasionally and in order to avoid any criticism, charge of unfairness and allegation of acting in a manner calculated to advance the interest of a particularly party, the Governor must act independently on his own judgement. This will be possible only when the Governor is an independent, respected capable and impartial man. If this is observed while selecting a Governor by the President scrupulously, there may not arise any occasions for making any imputations against the Governor. Ultimately, the success of our democracy will largely depend how enlightened our popular representatives are and how they behave with full responsibility. Any change in the Constitution laying down convention are norms of behaviour for a Governor, are not going to solve the problem unless the representatives of the people choose to behave in a responsible way and elect the new leader of the house quickly. This will surely avoid any possible friction between the Governor and the elected representatives provided the Governor himself maintains the standard of independence and impartiality required for his office. The chances of situations giving rise to such frictions have been practically reduced to nil on account of the Constitution (52nd Amendment) Act, 1985 introducing provisions as to disqualification on ground of defection in the Constitution.

3.10 It is doubtful whether the manner in which discretionary powers should be exercised by the Governors under the Constitution could be a subject of enquiry by an Inter-State Council for the purpose of formulating certain guidelines which could be issued in the name of the President after acceptance by Union. Under Article 163(2), it is the Governor's decision whether any matter in respect of which he is required to act in his discretion has

been made final and therefore, constitutionally any guidelines which encroach upon the power of the Governor, would violate the said provision. Apart from that looking to the different situations arising in different States, such guidelines which may not prove adequate to meet every situation, may be of little pragmatic utility. Political propriety also demands that the Governor of a State should be left to himself while discharging his discretionary function. This will be appreciated if one has a look at the discretionary function of the Governor under the Constitution, namely :—

(1) Appointment of the Chief Ministers ;

(2) Dismissal of the Ministry ;

(3) Dissolution of the Assembly ;

(4) Right to advise, warn and suggest :

(5) Withholding assent to a Bill ;

(6) Statutory Functions ; and

(7) Discretionary powers of the Governor of Assam.

Each one of these discretionary functions is highly political except at Sr. No. 6, involving different situations at different times on different background, which may call for different solutions in different circumstances. It may not be fair to the Governor to put his discretionary functions in a straight jacket of guidelines and ask him to deal with each and every situation on the basis of these guidelines. To put it bluntly the very idea of the Governor's discretionary functions becoming the subject of a formula is contradiction in terms for the simple reason that a discretion will cease to be a discretion if it is substituted by a formula.

The last and most important aspect that has to be taken into consideration is that by providing guidelines for exercise of the discretionary function of the Governor we will be adding to the already wide field of judicial review because every action of the Governor will be liable to be tested whether it is in accordance with the guidelines or not, thereby subjecting it to judicial review, which as per present state of the Constitution is not open to judicial review. It is common knowledge how statutory actions of the Governor as Chancellor under various university Acts are frequently challenged in a Court of Law.

PART IV

ADMINISTRATIVE RELATIONS

4.1 The Constitution envisages a federal polity with some strong unitary characteristics. The Constitutional sanction for the role of the Union Government in such a set up has been provided by Articles 256, 257 and 365. The provisions of these Articles are clearly in the largest interest of the unity and integrity of the nation. Having said this, it needs to be emphasised that resort to these provisions should be taken very sparingly and after exhausting other means, such as consultations, discussions and persuation, for achieving the object. There appears to be little scope for having any built-in safeguards against any misuse of these powers by the Union Government and the best safeguard against any possible misuse would appear to be public opinion and, to some extent, conventions to be built up over a period of time.

We cannot recall any case in which directions were issued under Article 256 or 257 to this State or any case where the State was compelled to carry out any such directions under threat of invoking Article 365.

4.2 Article 365 provides a sanction behind the powers of the Union Government to issue directions, for failure to obey them would entail President's rule. Without such sanction, orders of the Central Government would be flouted with impunity. Therefore, the existing of Article 365 is absolutely necessary though it has never actually been operated so far.

4.3 The Government of Maharashtra agrees with the A. R. C. The Union Government should evolve a practice or convention to explore the possibilities of settling points of conflict by all other available means before issue of directions to a State under Article 256.

4.4 Sufficient material for examining the above question is not available with this Government. However, in Dr. Chandra Pal's Book on "Centre-State Relations and Co-operative Federalism" on pages 107 to 110, a table describing the immediate causes of President's Rule in various States has been given.

From the said table, it appears that barring about 8 to 10 cases, where reasons for use of the power are not available, it appears that the Governor was justified in using his discretion to recommend to the President the imposition of President's Rule.

This Government is of the opinion that the Governors ordinarily should not recommend the imposition of the President's rule so long as the Chief Minister has a majority in the Assembly and is prepared to demonstrate it by facing the Assembly at a very short notice, unless the Governor is otherwise convinced that the Government of the State is not being carried on in accordance with the provisions of the Constitution.

4.5 It is true that sub-clauses (a) and (b) of clause (5) of Article 356 prescribe the conditions, namely, a proclamation of emergency under Article 352 and Certificate of the Election Commission regarding difficulties in holding elections, on the satisfaction of which alone the period of proclamation could be extended beyond one year and upto three years. These conditions are stringent. Recently, in relation to the State of Punjab, a proviso was required to be added to clause (5) of Article 356 by the Constitution (Forty-eighth Amendment) Act when it was found that although the situation demanded continuance of the proclamation under Article 356 beyond the period of one year, it could not be done for want of satis-/

faction of the conditions mentioned in clause (5) thereof. In order to avoid such situations in future, it is desirable that Article 356 is restored to the pre-44th Amendment position.

4.6 The present arrangements are working stable economy and a uniform economic and functions performed directly by the Union Administration in view of the very large number of personnel required to be deployed throughout the length and breadth of the country at one and the same time.

4.7 The various Central agencies were created in pursuance of a national policy to ensure a suitable economy and a uniform economic and social balance in the country. There is no doubt that in various matters it is necessary to have an All-India perspective and there is therefore need for these Central agencies to continue. While we would not say that through these agencies the Union Government has made undue inroads into the autonomy of the State, we feel that several times the views of the State Government are not given adequate consideration by these Agencies. By way of an example we may cite cases concerning the Agricultural Costs and Prices Commission (formerly called the Agricultural Prices Commission). In Maharashtra, the per unit cost of production of foodgrains is much higher than in some other more fortunate States in view of its agro-climatic conditions, nature of the soil, extremely limited facilities for irrigation and almost total dependence on rains etc. It cannot be disputed that the purpose of fixing support prices is to adequately safeguard the interests of the farmers and the State has always taken the view that agriculture has to be treated as an industry and the actual cost of production, expenditure on transport, managerial expenses, as well as an assured reasonable return on investment must be taken into account while recommending support prices. It is, however, our experience that the Commission recommends the support prices mainly on the basis of facts obtaining in more fortunate States like Punjab where the irrigation facilities are excellent, the yield much higher and the cost of production much lower. This approach adversely affects the interest of the farmers in our State. Our plea that different prices should be fixed for different regions in the country has also not received due consideration by the Commission.

The same approach is adversely affecting the cotton growers in the State. The practice of the Agricultural Cost and Prices Commission is to recommend the support price of raw cotton primarily on the basis of the cost of cultivation for Punjab Variety 320-F, which works out very unfavourable for the farmers in Maharashtra who cultivate different varieties, mostly under unirrigated conditions. Of late, the Commission has been recommending support price for the variety H-4 also. But even now such prices are not being fixed in respect of major varieties grown in our State. The State Government feels that separate calculation of cost of cultivation should be undertaken for different varieties of cotton which can be broadly categorised as Long, Medium and Short Staple varieties. Our pleas in this regard have not been given adequate consideration by the Commission.

While growers of cotton and foodgrains in Maharashtra are being adversely affected as mentioned above, on account of the policy to fix a uniform support price for the country as a whole, a departure from this policy has been made in respect of sugarcane which has also adversely affected sugarcane growers in Maharashtra. Maharashtra is one of the major producers of sugarcane in the country and has different agro-climatic tracts having different sugarcane yields as well as sugar recovery. The yields as well as sugar recovery in areas like Marathwada, Vidarbha and Khandesh are much lower than south Maharashtra. But even so, the entire State is being treated as a single zone for the purposes of fixing levy price of sugar. The sugarcane factories in these areas are, therefore, unable to run profitably thereby creating an imbalance in the development of the State. Some States like UP and Bihar have been divided into more than one zone for fixation of levy prices. But Maharashtra has been receiving differential treatment on this account. Difference in sugar recovery in Southern Maharashtra and Marathwada/Vidarbha/Khandesh is much more than the corresponding difference in different zones in either U.P. or Bihar. Despite these facts, our request to divide Maharashtra into three different zones based on agro-climatic considerations has not received sympathetic consideration with the result that interests of sugarcane growers have been adversely affected.

We also feel that in respect of certain agencies there is an over centralisation of powers which results in impeding the pace of development in the State. Under the present dispensation, the State Government is required to submit all power projects costing more than Rs. 5 crores to the Central Electricity Authority for their clearance. We feel that the clearance of the CEA should be dispensed with in respect of projects costing upto Rs. 10 crores. It is also our experience that the need for clearance by the Central Water Commission in respect of Irrigation and Hydro-Power Projects also delays the execution of projects in ordinately and it would be advisable if the CWC restricts its scrutiny mainly to the overall planning aspects, giving importance to the core concept of the project and its inter-State aspects only.

In short, there is a great need for a more realistic appreciation of the situation obtaining in the States on the part of the Central Agencies. Similarly, there is need for vesting more authority, which presently vests with some of the Agencies, in the State Government.

4.8 By and large, the All India Services have fulfilled the expectations of the Constitution makers. The present arrangements for the control of the All India Services are calculated to preserve the All India character of such services without detracting from the amenability to the control of the States when the officers work in connection with the affairs of the State, and thus appear to provide a reasonable and practical balance between the Union and the States.

4.9 As a matter of general policy, deployment of a Central Force in a State should be done with the consent of the State Government concerned. But keeping in view that Article 355 imposes a duty on the Union Government to protect every State against external aggression and internal disturbance and to ensure that the Government of every State is carried on in accordance with the provisions of the Constitution, the view taken by the Administrative Reforms Commission appears to be correct. In the matter of external aggression, in particular, the Union Government is in the best position to make a proper assessment.

4.10 The State Government does not agree with the suggestion to transfer the subject from the Union List to the Coucurrent List. While the subject should continue in the Union List, there is clearly a need for effective consultations between the Union and the States to ensure that adequate time is devoted to programmes in the local Language as also to programmes concerning local culture and problems.

4.11 The Zonal Councils have not been meeting either frequently or regularly so far. The State Government is of the view that the Zonal Councils should meet regularly and more often, and that items on which there is broad agreement in the meetings of the Zonal Councils should be actively followed up by all concerned, and in particular by the Union Government, to ensure expeditious implementation.

4.12 It is true that the Central Council of Health and the Central Council of Local Self Government are functioning satisfactorily and have proved to be successful in achieving co-ordination and co-operation between the Union and the States. However, it is doubtful whether establishing such Councils in respect of every subject of common interest would prove useful. This Government is of the view that any problem between Centre and State or State and State, should be resolved by mutual discussion and if necessary, with the mediation of the Centre in respect of a dispute between two States and it is only as a last resort and dire necessity that such a Council be established in respect of a particular issue. There is no need for a permanent Council as such.

PART V

FINANCIAL RELATIONS

5.1 The state Government is of the view that the Constitution-makers could not visualise the socio-economic changes that would occur, the growth in population and consequent strain on the finance of the State Governments, inflation, and the insufficiency of finance of the State Governments to fulfil the responsibilities cast on them under the directive principles. On the other hand, they must have thought that the sources of finance of the States would be sufficient. That is why only Income Tax was made compulsorily shareable whereas in the case of Union Excise Duties sharing of the proceeds is merely permissible. The Constitution makers evidently provided adequate sources of revenue for the Centre so that there should be a strong Centre and also to enable the Centre to give grants-in-aid to States needing assistance. At the time of framing the Constitution there was no idea of plan schemes. Thus, what the Constitution-makers aimed at was making available resources to the States primarily through distribution of income-tax and union excise duties, and secondarily through grants-in-aid to the States needing assistance. This implied that even the advanced States were eligible for grants-in-aid for particular schemes or problems.

Increasingly, the successive Finance Commissions have tended to give greater weightage to different factors of backwardness in their horizontal distribution of resources among the States, to the progressive detriment of the so-called richer or well-off States. While this is unexceptionable in principle, larger assistance to the relatively weaker States should not be at the cost of the so-called well-off States and through gradual diminution in their shares. For, these States also have their own peculiar problems which too require considerable expenditures and outlays. For instance, Bombay is the premier agglomeration in the country and attracts people from all over the country in search of employment. This places a heavy strain on the civic, transport and other services of the City which are already stretched beyond their capacities. The order of investment required in the City of Bombay is beyond the scope of the State Government and hence the problems of Bombay should be viewed as national issues. Besides, even the supposedly advanced States have large parts of the State which are comparable in backwardness to those of financially weaker States.

Secondly, the Finance Commissions have as a matter of course denied grants-in-aid to States which, in their assessment, have revenues surpluses even before devolution of funds recommended by them. A normative approach in the estimation of resources by the Finance Commissions reveal misleadingly large surpluses for State like Maharashtra which do not really exist. To deny them any grants-in-aid, therefore, is doubly unfair.

There is, therefore need for change in the attitude of the Finance Commissions and the Centre towards the so-called richer States. A deceleration in the pace of development of these States is not in the national interest, for even a modicum of investment in these States will generate substantially larger resources for the nation, which would ultimately enlarge the share of the weaker States.

5.2 There is no denying that the dependence of the States on the Centre is on the increase. The remedy does not merely be, is bringing more Central taxes under the scheme of devolution. What is more important is financial discipline both on the part of the Central Government and the State Governments. The State Governments should also adopt national policies like population control and strive for optimal utilization of resources and adequate returns on investments. Factors like natural calamities including drought, inflation, and

the large burden on account of servicing of central loans cast a great strain on the State Governments resources. Upward revisions in administered prices by the Centre and persistent inflationary trends in the economy also place considerable strain on States' resources. While the resources of the Centre are sufficiently elastic to absorb these effects, the impact of these on States' resources is very adverse. It is thus necessary to take all steps to contain inflation as otherwise it creates a vicious circle, and the State Governments have to bear the burden of additional dearness allowance instalments in addition to increase in expenditure on the items required by it. The State Government therefore feels that it is necessary to bring into the divisible pool the Corporation tax as it is not different from Income-tax but which has shown greater elasticity. Customs duty which is the second largest source of revenue for the Centre also needs to be shared with the States. Combined with sharing these elastic sources of revenue with the States, there is pressing need for greater fiscal discipline both by the Centre and the States.

5.3 While the need for a strong Centre cannot be overemphasized, regional imbalances cannot be reduced through Central intervention alone. The States should also make effective contributions in this direction through better administrative procedures, greater financial discipline and optimising the use of resources. Larger transfer of resources from the Centre to the relatively underdeveloped States without a proper monitoring mechanism to ensure that the funds have indeed been used for the intended purposes will not meet the objective of reducing desparities. Reserving more resources for the Centre to enable larger discretionary grants or transfers to the poorer States at the cost of reduced allocations to the supposedly well-off States will only dampen the growth of States with well developed infrastructures capable of making significant and substantial contribution to national income. Reduction of disparities should not be achieved by a levelling down. Assistance to weaker States should aim at better exploitation and optimal utilisation of their resources without reducing the legitimate flow of funds to the comparatively developed States, which will only put a brake on their growth. National interest does not merely imply giving support to the poorer States; it is necessary that all States endeavour to make progress and the funds should be really used for developmental purposes and there should be strict financial discipline. The Centre should even consider giving bonuses or incentives to States whose finances are well-managed. The State Government is not in favour of giving more discretionary powers to the Centre to use the funds available with it for the development of the poor States. It will have an adverse impact on the richer States in their developmental activities which will not be conducive to generating more revenues for the Centre.

In this connection, it is also worth recalling that regional disparities exist not only between different States, but also within different regions of a State. Central intervention alone will not, therefore, result in reduction of regional disparities, without a conscious effort by the States themselves towards this end.

5.4 We are not in favour of subventions from the richer States to the Central pool under some principles. Already the shares of the so-called richer States in the devolution of funds recommended by the Finance Commission have been progressively coming down. To make subventions from the richer States into a central pool for distribution among the poorer States would, therefore, place the so-called richer States double at a disadvantage.

There can be no two opinions about the desirability for better control over expenditure, both by the Centre and the States. It may not however be correct to attribute the large budgetary deficits of the Centre in recent years to the devolutions of the Finance Commission or transfer of resources by the Planning Commission. Both the Finance and Planning Commission assess the resources of the Centre and take care to see that the transfers recommended by them do not leave the Centre with a deficit.

Deficit financing on a large scale in order to transfer resources to the poorer States for reducing inequalities may not be desirable. Deficit financing for obvious reasons, has to be kept within acceptable limits; otherwise it will only accentuate the already persistent inflationary trends in the economy.

5.5 First, our State is of the opinion that it is neither the function nor the objective of either the Finance Commission or the Planning Commission to bridge the gap in resources between the poorer and the richer States. No doubt it is the function of the Finance Commission to assess the resources and requirements of funds on the non-plan side and to recommend adequate devolutions so as not to leave the requirement of funds uncovered. While doing so it may keep the national policies and objectives in view and the need for reducing regional imbalances. The Planning Commission is concerned with assessing the developmental needs of State and to provide adequately for these within the overall constraint of resources and the desirability of reducing regional disparities. But it is not the function of either of these bodies to reduce the gap in resources between the poorer and richer States.

The tax efforts made by the States as well as efficiency and economy in management is the basic need for all the States. Mere giving more grants-in-aid to the poor States, may not solve the problem. It is necessary that State should optimise returns by proper implementation of developmental and non-developmental schemes.

As regards share of taxes, the States which yield more revenue should also get a reasonable share. Even the so-called richer States have their own obligations and liabilities to fulfil. They generate more resources for the Central Government, particularly by way of Income Tax, Union Excise Duty and Corporation Tax.

It is difficult to formulate any objective criteria that should be used for determining the share of taxes, plan assistance and non-plan assistance for each State. Corporation Tax and the Custom Duty may be brought in the divisible pool. Further 50 per cent of Income Tax, Union Excise Duty, Corporation Tax and Custom Duty may be earmarked as the share of the States.

As regards the distribution of Income Tax among the States, a weightage of 45 per cent be given to the factor of contribution as measured by Income Tax collection while the balance of 55 per cent be distributed in proprtion of States population.

As regards Union Excise Duties, the distribution of the States share should be on the following basis :—

(i) 60 per cent should be given on the basis of the population fact or with weightage of 30 per cent for urban population and 70 per cent for rural population.

(ii) 20 per cent weightage should be given to the economic backwardness of the States as measured by the product of distance of per capita income of the State from that of the State with the highest per capita income and the population of the State as per formula of the Sixth Finance Commission.

(iii) A weightage of 10 per cent each should be given to the factors of performance in regard to the population control programme and the mobilisation of small savings.

As regards plan assistance, this may be determined by the Planning Commission. Giving of more funds by way of devolution will create larger surplus. Some States will, therefore, have need for lesser plan assistance. However, the debt burden on the States should be reduced by altering the existing proportions of the grant and loan components to include more of grant. This may be more liberal in the case of the special category States. The Small Savings loans should be treated as loans in perpetuity.

The revised Gadgil formula for Plan Assistance operates to the disadvantage of States like Maharashtra and we feel that there is justification for reverting to the original Gadgil formula. Our replies to question No. 6.8 and 6.9 may be referred to in this connection.

Our State is of the opinion that the Centrally sponsored schemes should be wholly assisted by the Centre and that whenever such a scheme is abolished or transferred to the State as non-plan, an amount of equal to the level of committed expenditure reached at that time, should be transferred to the States till the scheme is continued.

We are also of the view that non-plan assistance, particularly discretionary grants by the Centre should be the absolute minimum. If more of the elastic source of revenue of the Centre are brought within the divisible pool and these are equitably distributed among the States the need for non-plan assistance through grants-in-aid and discretionary assistance by the Centre would be minimal.

5.6 We do not see any special merits in the creation of a special federal fund. For, even if such a fund were created there should be a machinery for deciding the allocations from the fund. In devising the principles of distribution from the fund the agency administering the fund will be confronted with the same problems and compulsions that are today faced by the Finance Commission and Planning Commission. In our opinion the existing institutional framework should be adequate.

5.7 Our country has a federal structure with the federating States forming an organic whole. Much thought has gone into the allocation of taxing powers of the Centre and States while framing the Constitution having regard to the respective roles and responsibilities of the Centre and the States. We would not advocate any structural change in the taxing powers as it may undermine the effective functioning of the Centre and the States.

5.8 The State Government is of the view that the existing arrangements need not be changed. Any surrender of more taxes to the Central Government will adversely affect the federal system. It is also necessary that the States should have powers in respect of certain taxes. Otherwise, the position will be that the States will have no major source for mobilising additional resources. It will also mean that there will be complete dependence of the States on the Centre in respect of major sources of revenue. The experience of the States in respect of additional duties of the excise imposed by the Government of India on the surrendering of the power of the States in respect of Sales Tax on sugar, tobacco and textiles has not been very happy. The view that there should be a control of Council of Central and States' Ministers does not seem to be a practicable proposition. There could be differences of opinion and this will lead to dead-lock and indecisions. Besides, it may be difficult to maintain secrecy.

5.9 The State Government does not agree with the approach suggested in the question. The Finance Commission and Planning Commission will necessarily have to be two separate bodies. The Finance Commission has to play an important role in respect of devolution and grants-in-aid. The functions of the Finance Commission are of a statutory nature while those of the Planning Commission are of a non-statutory nature and there is no need for any change in the existing system. It is not clear what is meant by a permanent Finance Commission and whether there should be one body for an indefinite period. It is also not clear how the members of the Permanent Finance Commission will be constituted. As has been the experience, the various Finance Commissions have held different views over the same matters and from this point of view, it is not desirable that there should be a Permanent Finance Commission. In any case, the role of the Finance Commission will have to be limited as at present. The role of the Planning Commission is altogether of different nature. Whatever practicable difficulties are experienced the remedy is to try to find acceptable solutions. The Finance Commission and Planning Commissions have complementary roles to play which will have to take note of the changing

circumstances. Having a permanent Finance Commission will introduce unnecessary rigidity into the system.

5.10 It is difficult to make a definite statement as to how far transfers both statutory and discretionary from the Union to the States, on the advice of successive Finance Commissions or otherwise, have promoted efficiency and economy in expenditure. It, however, appears that there is still much scope for economy in expenditure and as regards efficiency there can be varied levels of achievement. There can be no doubt that there is scope for more efficiency. However, as regards narrowing down the disparities in public expenditure among the States, it can be said that the transfers have narrowed down the disparities. In particular Grants-in-aid and the discretionary grants have to a greater extent contributed to the narrowing down of the disparities in public expenditure among the States. In this connection, it may be recalled that the last two Finance Commissions have recommended grants-in-aid to States for upgradation of standards of administration.

5.11 The State Government agrees with the view expressed in the above question. Strict financial discipline is required both at the Centre as well as in the States. The Government of India should be very strict in the matter of financial discipline and incurring of expenditure unmatched by the available resources and in respect of adoption of populist measures resulting in revenue deficits. There is possibility of laxity by some States in not adhering to financial discipline and in implementing progressive polices on the assumption that they will get grants-in-aid from the Finance Commission to fill the revenue gap as well as for upgradation of standards. The Government of India should keep a watch on the financial discipline by the States. In fact, our State strongly favours the grant of some incentive or bonus to the States which manage their finance prudently. It is also necessary for States to take progressive measures including measures which ultimately bring in more revenue. Otherwise, it will mean that the States which take progressive measures and do their best for increasing the revenue are penalised in that they do not get any grants-in-aid and the poor States get money by way of grants-in-aid etc. even though they do not adopt financial discipline and progressive measures but take up populist schemes. Finance Commissions and the Planning Commission should keep this aspect in mind while deciding on transfers of resources to States.

5.12 We agree with this view. In fact, we would go a step further and say that the maximum possible transfer of resources should be through tax-sharing thus minimising the need for even a supplementary rule for grants-in-aid.

5.13 The Government agrees with the principles enunciated by the Seventh Finance Commission relating to Grants-in-aid under Article 275. This implies that any category of States is eligible for Grants-in-aid and this is what the present provision indicates on a plain reading. The Seventh Finance Commission has, however, observed that in regard to Grants-in-aid to cover fiscal gap, consideration should be given to the tax efforts made by the individual States in relation to the targets for the Plan, to economies in expenditure, consistent with efficiency and the prudent management of public sector enterprises. The State Government views that these observations of the Seventh Finance Commission should be adopted.

In this connection, we would reiterate our observations in replies given elsewhere in the questionnaire that even the so-called well-off States should be eligible for grants-in-aid. For, as pointed out elsewhere, State like Maharashtra have their own peculiar problems because of urbanisation and the choking congestion in the city of Bombay, whose civic services and amenities have already been stretched to the limit. Unless the Government of India views this as a national problem and grants special funds it would be beyond the means of the State Government to tackle this issue.

5.14 The State Government is satisfied about the logic of claiming that the yield from Special Bearer Bond Scheme and the revenue accruing from raising administered prices of items like petroleum, coal, etc., should properly come under the divisible pool of taxation.

As regards Special Bearer Bond Scheme, in order to map up part of black money circulating in the economy, the Government of India issued Special Bearer Bonds which were on sale from 2nd February 1981 to 30th April 1981 and again from 1st December 1981 to 9th January 1982. The total sale of the bonds amounted to Rs. 964 crores. normally these incomes would have been subject to income tax and the net proceeds shared with the States in the ratios prescribed by the Finance Commission. In view of this, the State Government is of the view that the yield from the Special Bearer Bond Schemes should come under the divisible pool.

The Centre is raising the administered prices of excisable goods instead of raising the excise duties on commodities like petroleum products, coal, cement, etc. This has been done to mobilise more resources for the Union. In the case of petroleum products the last major increase in excise duties was made in the Budget of 1979-80. Thereafter, the Union Government has only increased their prices in June, 1980, January 1981 and July 1981. The total annual yield due to those increases is estimated at over Rs. 4,000 the benefit of which has not accrued to the States. Had this revenue been mobilised by way of excise duties the States would have received a larger amount as their share in excise. Not only are the States losers on this account but they are also adversely affected as the burden on account of increase in the prices also falls on them. Therefore, any measures adopted by the Centre need to be considered carefully from the point of view of the States also and the Centre should not look after its interests alone to the detriment of the interests of the States.

5.15 The savings of the community are mopped up by the public sector mainly through small savings, provident funds, market borrowings (including bonds and debentures) and through

nationalised banks and financial institutions including nationalised insurance companies. But except in the matter of small savings and provident funds the share of the States in the savings so mobilised are not related to the performance of the States in mobilising the savings or the collections made from a State. We feel that there should be rational criteria in distributing among the States the market borrowings and also for distributing the savings mobilised through institutional agencies and nationalised banks and in deciding on their investments in developmental activities in the different States.

In our opinion there is scope for increasing the States' share in small savings collections from 2/3 of the net collections at present to say 3/4 of the net collections. Since the loan assistance to States is on net collections the repayment liability by the Centre is already taken care of.

Distribution of market borrowings among States could be related among other things to the repaying capacity of States. There is also a case for need-related distribution of funds invested in developmental activities by the nationalised insurance companies.

5.16 The Finance Commission also look to the requirements of the Centre before making their recommendations about devolution of funds from the Centre to the States. The responsibilities of the Centre are less though they are of an important nature. It is the States which have to shoulder major responsibilities for the development and welfare functions like irrigation, power, agriculture, education, health, social welfare, etc. The States responsibilities are ever on the increase. The States, resources are inelastic and the taxation measures by the Centre from time to time create conditions which make it difficult for the States to take recourse to additional resources mobilisation. All the developmental plan schemes of the States do not yield additional revenue and at the end of the plan period the State Government have to bear the committed expenditure also. Maharashtra State has mainly to depend on rains and several of the districts are drought prone. During drought the State has to incur large expenditure and further the irrigation and power position also are adversely affected. State revenues are also affected. All these put considerable strain on the resources of the State. Repayment of the Central loans also casts a great burden on the State. The debt relief given by the Finance Commission to this State is very meagre. On the other hand, the Centre is better placed than the States with its elastic revenue. It is extremely difficult for the the States to contain their expenditures within their resources under uncertain conditions on account of inflation, natural calamities, etc.

5.17 The State Government agrees that periodical review of the problem of growing indebtedness of the States is necessary. No doubt the Finance Commissions, recommend debt relief but these recommendations do not go far enough in the case of many States. Thus periodical recommendations regarding debt relief alone are not sufficient. A more fundamental approach is necessary. The loan component in the transfer of resources to States should be minimal. There is hence need for altering the proportions of loan and grant components in the plan assistance to States. Further the Centre should pass on a greater share of the external assistance received by it for the externally aided projects of the States. The additional plan assistance given to the States on this account should also reflect the highly concessional terms at which the Centre receives the external aid. Small savings loans should also be treated as loans in perpetuity as recommended by the Seventh Finance Commission. Unless the problem is tackled at the root, mere periodical reviews will not relieve the increasing burden of debt servicing cast on the States.

5.18 Yes, we agree with the view that the States' capacity and freedom to borrowing has been unduly restricted because in the allocation of open market borrowings the States' capacity or needs have not been taken into account. The following paragraphs explain the view more vividly.

The figures of open market borrowings and Plan Outlays since the Third Plan have been as follows:—

Plan period	Market borrowings (Plan Outlays in brackets); (Rs. in crores)		Percentage of OMB to Plan Outlay		Percentage share of Centre and State Governments in borrowings	
	Centre	States	Centre	States	Centre	States
Third Plan .	307 (4,412)	516 (4,165)	7	12	37	63
Fourth Plan .	1,567 (8,783)	773 (7,367)	18	14	60	40
Fifth Plan .	3,746 (20,586)	2,135 (18,717)	18	11	64	36
Sixth Plan .	15,000 (48,900)	4,500 (48,600)	31	9	77	23

It would be observed from the above table that the percentage share of States in the market borrowings which was 63 per cent in the Third Plan had come down to as low as 23 per cent in the Sixth Plan even though there had been no substantial difference in the Plan sizes of the Centre and States during these periods. Similarly, the percentage share of OMB to the Plan Outlays in respect of States had come down from 12 per cent in the Third Plan to 9 per cent in the Sixth Plan whereas in respect of the Centre, the same has gone up from 7 per cent in the Third Plan to 31 per cent in the Sixth Plan. It would thus be seen that *ad-hoc* methods had been adopted in allocation of the open market borrowings between the Centre and States. The Eighth Finance Commission also was satisfied that the States are being given smaller share in the total market borrowings and has, therefore, suggested in Chapter II, para 2.11 of its report that the existing pattern of distribution of total market borrowings needs correction and share of States ought to be raised.

As regards the distribution of open market borrowings amongst States, the capacity of each State has not been taken into account. Upto the

Fourth Plan, the allocation of market borrowing for each State was *ad-hoc*.. From the Fifth Plan onwards, the only change made was stepping up each State's quota by 10 per cent per annum over the borrowing quota of the previous plan.

It would thus be observed from the above account that there have been no rational principles adopted for allocation of open market borrowing between the Centre and States and also in the *inter se* distribution amongst States. We, therefore, suggest the following rational principles in this respect.

(i) The allocation of open market borrowings between the Centre and States should be made in the proportion of Plan sizes of the Centre and States.

(ii) The *inter se* distribution of open market borrowings amongst States should be in the proportion of mobilisation of savings made by different agencies in each State.

5.19 We are of the view that in respect of externally aided projects, the entire external aid which is project-tied should be passed on fully to the State Government instead of only 70 per cent as is being, done at present. The said assistance may also be passed on at the same rate of interest as is being charged by the external agencies plus a nominal service charge. The period of repayment may also be decided keeping in view that fixed by the external agency. For example, in the case of IDA assistance, the assistance carries no interest but only a service change varying between ½ per cent and 1½ per cent repayable in 50 years. Other external assistance is also received on generous terms (though not as liberal as IDA assistance) whereas the States are required to repay the plan assistance in 15 years. We feel that there is ample justification for Centre to liberalise the terms of assistance to the States.

5.20 The Constitution of the Australian Loan Council or details of its functioning are not available. In the book "World Constitutions" by Vishnoo Bhagwan and Vidya Bhushan, there is a passing reference to Australian Loans Councils. The information regarding Australian Loans Councils given in this book is as under:—

"Government borrowings became an important Source of revenue in Australia. In view of this, a federal agreement was concluded in 1927 between the States and the Federal Government and an Australian Loan Council was created. Though the States have voting majority on the Council, the federal authorities can, veto a loan Council decision and thereby influence public finances of the States."

Thus it is clear that because of veto power, the loan Council if set up on Australian pattern will not serve any useful purpose.

The purpose of the Council as mentioned in the question is, however, limited viz. fixing the borrowing limits of principles approved by the National Development Council. This means that the Council will have no say in deciding the principles of distribution. It is felt that such council with a limited purpose will not serve any useful purpose. It is necessary to lay down certain principles for distribution of total O. M. B. between States and the Centre and also in regard to *inter se* distribution among the States and thus to stop the present practice of *ad-hoc* distribution. This Government is of the view that instead of Loan Council, a Committee consisting of officers of the Centre and Finance Secretaries of all or some major States may be set up for formulating the principles for distribution of O. M .B. The recommendation of the committee may be placed before N. D. C. for approval.

As regards the suggestion about improving the working of R. B. I. in the context. of borrowing by States and the Centre, at present R. B. I. does not play any role in the matter of deciding allocation as the limit of *net* borrowings of each State is fixed in the meeting between Deputy Chairman, Planning Commission and State's Chief Minister for finalising the size of the plan. Normally 10 per cent or 20 per cent step up is allowed over the net borrowings of the previous year. Once the State's net borrowings and determined, the States intimate to Government of India its internal distribution between State Government and various autonomous bodies. The distribution of net borrowings made by each State is communicated by Government of India to R. B. I. which in turn works out the amounts of Gross borrowings after adding to net borrowings the amount of repayment due in the year and indicates the amount to be notified. The R. B. I. thus plays a limited role of co-ordination and this Government may not have any suggestion about improving of the working of R. B. I. in this context.

5.21 The ways and means limits of States with the R. B. I. are intended to provide a cushion against temporary imbalances between the flow of receipts into the State coffers. and the pace of expenditure. Persistent drawals on the ways and means limits and even continuing overdrafts arise when the imbalance between receipts and expenditure is not a temporary one but is more pronounced.

There could be several reasons for this. To give a few, first States could be taking on more ambitious outlays than the resources permit and in this process even treating the ways and means limits and overdrafts on the R. B. I. as a resource rather than a temporary accommodation. Secondly, a large number of unbudgeted expenditure may be allowed during the course of the year, including additional instalments of D.A. for which adequate provisions may not have been made but which become necessary as a result of persisting inflationary trends in the economy. Thirdly, there may be emergent expenditures required to be incurred because of severe drought or heavy floods or some other emergency. Even if Central assistance is received for this purpose it often falls considerably short of the expenditures incurred by States. Moreover, the expenditure has to be first incurred on an emergency basis, whereas the Central assistance comes later. Fourthly, there is sometimes a time-lag of few months between the flow of funds on

centrally sponsored schemes and the incurring of expenditure. Fifthly, there is no denying a certain laxity in financial discipline among the departments and State undertakings and enterprises which do not give the expected returns. Sixthly, quarterly payments by States to the Centre on payment of interest and repayment of Central loans puts a heavy pressure on the ways and means position during certain months as the receipts may not show a corresponding spurt during those months. This is more so in the month of April when the receipts are at a low ebb. The ways and means cushion may not therefore be adequate during those months.

No doubt the normal ways and means limits were doubled in July 1982. But this by itself will not eliminate the occurrence of overdrafts or persistent and continuing drawals on the ways and means limits as long as the fundamental reasons mentioned above continue to exist. Besides, the ways and means limits were determined with reference to the revenue expenditure of States in a particular year. But the revenue expenditures as also the total expenditures rise steadily from year to year, while the ways and means limits continues to be the same. For instance, the total expenditure of Maharashtra when the normal ways and means limits were doubled in 1982 was Rs. 8,799.40 crores whereas the estimated expenditure for 1985-86 is Rs. 10,178.64 crores. There is thus need for periodic revision of the ways and means limits.

5.22 It is difficult to pass any general remark that the States are not exploiting adequately their own sources of revenue. The sources of revenue of the State Governments are not elastic and it becomes difficult every year to take recourse to additional resources mobilisation. In fact, it is extremely difficult now to impose additional taxation. Whether or not the States are not fully exploiting their own resources of revenue may be left to the Finance Commissions to decide through the Finance Commission Division set up in the Finance Ministry of the Government of India.

Sales Tax is the only major source of the revenue of State Governments. The State Governments have surrendered their right to the Centre in respect of Sales Tax on textiles, tobacco and sugar. The Central Government has, however, not fulfilled its commitments in this respect. The sources of revenue of the States as provided under Articles 268 and 269 are at the hands of the Government of India. Taxation in respect of some of the items mentioned in Article 269 have not been levied by the Central Government. The State Governments with their inelastic resources are in a difficult position to raise more revenue by way of taxation.

5.23 It will be difficult for the State Government to make any observation on the view that the Centre is not assessing and collecting all revenues that it can and should do. We leave it to the Central Government to do its best in this direction.

It is necessary that the public sector undertakings should be run in a proper way and periodical reviews about their performance should be undertaken. Unless this is done the expected returns may not be achieved.

As regards leakage in Central taxation, the State Government has no comments to make in the absence of material to substantiate that there is leakage in Central taxation. It is for the Central Government to take adequate precautions to see that there is no leakage in Central taxation.

5.24 The State Government agrees that it will be a healthy convention if the Union Government ascertains the views of the State Governments and gives them due consideration, before moving a bill to levy or vary the rate-structure or abolish any of the duties and taxes enumerated in Articles 268 and 269. However, it will not be possible to state whether the said procedure will be conducive to the stability of the State Finances as such.

5.25 The State Government is of the view that Article 269 of the Constitution should be better exploited to augment the resources of the States. The State Government is of the view that the steps indicated below may be undertaken :—

(1) Tax on railway freight may be levied.

(2) Terminal Tax on passengers carried by air at the rate of 1 per cent of the air fare on internal and international flights and also a terminal tax on air-cargo at the same rate may be levied.

(3) If the grant at present being paid in lieu of tax on Railway Passenger Fares is not periodically raised adequately to compensate the loss of revenue to the States, then the tax on Railway Passenger Fares may be reimposed at an appropriate rate.

(4) The luggage and different varieties of parcels carried by railways may be suitably classified based on the principle of cost of service and value of service broadly on the lines suggested by the Railway Tariff Enquiry Committee (1980) and the tax be levied on freights at suitable rates.

(5) A tax on advertisements published in the newspapers and journals may be introduced. The Eighth Finance Commission has observed that there is scope for raising revenue through such a tax.

(6) The rate of Central Sales Tax which is at present 4 per cent may be raised to 5 per cent.

5.26 The State Government is of the view that a grant based on 10.7 p.c. of the total non-suburban passenger earnings, which would have been the tax component had the tax not been repealed should be given, and this should be worked out on the basis of prospective earnings. The State Government's estimate on this basis is that the States would be eligible for a grant of Rs. 125 crores per year. The 8th Finance Commission has accepted the principle that grant should be given at 10.7 p.c. of the non-suburban passenger earnings. This recommendation should be accepted by the future Finance Commissions. The Eighth Finance Commission has recommended a grant of Rs. 95 crores per year for each of the year 1984-85 to 1988-89 based on the figures of

the non-suburban passenger earnings which were available upto and for the year 1981-82. The Commission has not suggested an annual increase in the quantum of the grant in view of the difficult financial position of the Railways. The Government of India has accepted the recommendation of the 8th Finance Commission and has observed that the matter will need to be referred to the Railway Convention Committee. The recommendation of the 8th Finance Commission will be implemented if accepted by the Railway Convention Committee. The State Government is, however, of the view that the grant recommended by the 8th Finance Commission should be paid without the condition of the recommendation being accepted by the Railway Convention Committee.

5.27 No comments.

5.28 Natural calamities generally fall into two categories *viz.* (1) situation caused by damage to crops by excessive rains, damages caused by floods, hail-storm, earthquake and fire, and (2) situation caused by drought.

As regards the natural calamities referred to at (1) above, the State Government is of the view that the present system is adequate.

As regards drought, the matter needs to be viewed from a realistic point of view. Maharashtra has several districts which are drought-prone. So also, when there is failure of the monsoon several other districts are also affected. 70 p.c. of the gross cropped area in Maharashtra is under rain-fed farming. 98 talukas of this State accounting for 1/3 of the gross cropped area have been identified as chronically drought-prone. Therefore, as compared to other natural calamities Maharashtra is more severely affected by drought and this situation has become a special problem for Maharashtra particularly when there is drought during successive years.

The Seventh Finance Commission recognised the undesirable effects of dislocation of finance of a State on account of relief expenditure. It also noted that during periods of drought, the State Budgets lose some of their normal revenue and the State economy suffers a set back. A large part of the Maharashtra State Plan is pre-empted by the irrigation and power sectors because of basic compulsions, and a substantial part of the remaining plan is committed to the provision of social infrastructure of an on going nature which lead to creation of services un-related to the type of employment works required for mitigating drought situation. Even in normal, seasons, in the drought-prone districts, the Employment Guarantee Scheme expenditure is higher owing to a larger turn out of labour and hence a substantial part of the Plan is absorbed by the Employment Guarantee Scheme. This becomes more pronouned when these districts are affected by drought. The main constraint, so far as drought relief is concerned, is that the plan programme relating to water supply is limited in its implementation to "difficult villages" identified some years ago, and it does not take into account the fact that in a year of drought when precipitation may be very low, even the so-called non-difficult villages become difficult. The provision of drinking water being of the highest priority the State Government cannot shirk its responsibility in this regard.

Under the present formula only advance plan assistance is available upto the extent of 5 p.c. of the Annual Plan outlay and there is no additionality from the Centre. Additional Central assistance becomes available only if the total relief expenditure during the particular year is expected to go beyond the 5 p.c. limit. In the event of expenditure spilling over the 5 p.c. limit, the Central assistance is in the form of 50 p.c. grant and 50 p.c. loan, While this formula covers expenditure on employment generating works and such other works of a plan nature, as permanent measures for drinking water supply, and measures to recoup the loss of, or augmentation of agricultural production by intensifying some of the on-going schemes or starting new schemes, it does not cover non-plan schemes. The expenditure on non-plan items like emergency water supply by tankers and bullock-carts and supply of fodder, medical care, doles, etc. has to be borne by the State Government itself.

The State Government is of the view that the linkage between expenditure and advance plan assistance should be done away with and the additional expenditure occasioned by scarcity relief which cannot be met by the existing plan programmes and margin money, should be financed through Central assistance by way of grant to the extent of 75 p.c., the remaining 25 p.c. being borne by the State Government. Further, drought relief assistance should also cover non-plan expenditure like emergency drinking water supply, fodder, doles, medical care etc. So also, while providing assistance for relief, the entire expenditure on relief works including the expenditure on machinery, skilled labour, materials, transport, etc., should be taken into account along with wages of non-skilled labour. Unless substantial assistance is given by the Centre in respect of situation caused by drought, the State economy will suffer and this will be more so if the drought situation continues for successive years.

As regards second part of the question, it is necessary to ensure that relief assistance is put to optimum use. The Government of India, may call for returns from the State Governments and the Government of India officers may also visit the States for verification.

5.29 Regarding the setting up of National Loan Corporation (NLC) supported by a consortium of nationalised banks for the purpose of loan raising and loan utilisation for productive and economically viable projects, the creation of such an independent situation in the context of the general control on the nationalised banks directly by the Government of India or through the Reserve Bank of India does not seem to be called for. The Reserve Bank of India indirectly controls the loan raising and the loan utilisation by the nationalised banks. The banks should have the requisite freedom/autonomy to appraise the projects referred to them for assistance and should not be fettered with controls from Corporations like N.L.C.

In principle, there seems no objection to setting up a National Credit Council (N.C.C.) for assessing credit resources and growth possibilities. The Council should not however determine once for all the share of the States as a whole. This should be left to be determined with reference to the needs of development of each State particularly after taking into account the benefits or otherwise they have derived in the form of revenue gap grants from the Union. The repaying capacity of the States should also be considered as one of the factors for inter-state allocation.

In principle, the State Government has no objection to the setting up of National Economic Council with proper and adequate representation to each State thereon. Apparently, such an Economic Council will consider the resources of the State, infrastructural facilities and the existing natural facilities like international ports, Airport, etc.

5.30 The aspect who collects the fund and how the collected funds should be distributed are also very relevant even though all funds flow from the public. The State Government agrees that it is very important that the funds are spent prudently and the benefits should go back largely to the people.

5.31 (a) The State Government agrees that periodical assessment as regards the expenditure of the Union should be undertaken. This will satisfy the States and the public.

(b) The State Government is in general agreement that the States which complain of meagre developmental resources should not indulge in expenditure which is not strictly justifiable on economic grounds. This will make available some resources for developmental purposes. Strict financial discipline is called for so that there will not be any criticism against these States in the matter of grants-in-aid to them by the Finance Commissions.

(c) The State Government is of the view that it is not necessary to have a permanent National Expenditure Commission to assess the nature and quality of the expenditure and the need for revenue resources for both the Centre and the States. It will not be a practicable proposition to have such a Commission as it might lead to controversies and arguments about the decision on the expenditures involved. There should, however, be a national consensus on the need for optimal utilisation of resources consistent with the national policies and objectives and for maximising returns on investments.

5.32 The State Government is of the view that the present system should continue.

5.33 Voucher audit is absolutely necessary as it acts as a check on malpractices. Evaluation audit may also be introduced selectively and in respect of important schemes, as it will be conducive to proper and efficient implementation of the schemes. However, this will evidently necessitate creation of suitable additional staff. A beginning can be made in this respect and the results evaluated with reference to the expenditure on the additional staff.

5.34 The State Government is of the view that the Parliament has conferred sufficient powers and enjoined adequate duties on the Comptroller and Auditor General in the matter of maintenance of accounts and conducting audit of expenditure.

5.35 The State Government is satisfied that the reports of the Comptroller and Auditor General are comprehensive enough and reasonably accurate.

5.36 We are of the opinion that it is not the function of the Public Accounts Committee of the Parliament or of the State Legislatures to exercise control over expenditure. Their function is primarily to see that the monies sanctioned by the Parliament or by the State Legislatures as the case may be for different purposes have been properly utilised. Their control is therefore, more in regard to the proper utilisation of the funds sanctioned rather than over the expenditure of the Government.

5.37 It is to be stated that the Estimates Committee of this Government acts as a watch-dog to give useful legislative and administrative advice to the administration.

5.38 In reply to Question No. 5.31 the State Government has expressed the view that an Expenditure Commission is not needed.

5.39 It is necessary that there should be proper monitoring of utilisation of grants-in-aid given by the Government of India for implementation of specific schemes. A few States had represented before the 8th Finance Commission that the need for clearance of plan of action by the Central Government in respect of schemes for upgradation for which grants-in-aid is given by the Commission to certain States is a source of avoidable delay. The Commission considered the matter and viewed that simplicity in monitoring should be the guiding principle. The Commission suggested that at the Government of India level there should be an inter-ministerial Empowered Committee for monitoring the progress of utilisation of grants. The Committee should be empowered to alter the physical targets contained in the upgradation grants within the amounts specified by the Commisssion. The Committee would be competent to transfer the grants from one scheme to another. The Commission also suggested that members of the Committee should visit the States and make random inspection of the works under construction and the offices set up out of the upgradation grants. The Commission also proposed that at the State level a similar State Level Empowered Committee under the Chairmanship of the Chief Secretary or a very senior officer should be constituted. The Commission recommended release of the amount of grants-in-aid in phases.

The State Government is of the view that the approach recommended by the 8th Finance Commission may be adopted in respect of major amounts of grants-in-aid of financial assistance given by the Government of India to the States in respect of other schemes also.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 In the economic and social planning the Centre and the States will have to play roles which are complimentary to each other. The Centre may have to continue to lay down the national priorities and objectives for various sectors of development. However, it is felt the State Governments should be given full freedom and autonomy to formulate their own plans suited to the local conditions in the State within the overall national policy frame.

To overcome the present shortcomings in planning relationship, it is suggested that—

(a) the State Governments may be actively involved while finalising the approach for the Five Year Plan. They may invariably be consulted before any policy decision about the plan programmes are taken by the Central Government,

(b) A meeting of the National Development Council should be held at least once every year,

(c) The National Development Council meetings may be preceded and followed by the meetings at the official level. The meetings at official level may be held as frequently as necessary.

(d) A Group consisting of representatives of Central and State Governments may be set up to ensure follow up action on the decision of N.D.C.

(e) The Planning Commission should lay down national targets only in vital sectors like Power, Major Irrigation etc.

(f) While scrutinizing the State Plan proposals, the Working Groups of the Planning Commission need not go into details of various programmes falling mainly within the State jurisdiction and may restrict themselves only to the important sectors like Power and Major Irrigation etc.

6.2 The Constitution of National Development Council on statutory basis may run counter to the principle of decentralised planning. A non-statutory advisory body will do equally well if it involves the States more meaningfully in plan formulation in its broad perspectives and then leaves it to the States to formulate their plans within the broad framework. Such an approach is more likely to be accepted by the States than a 'straight jacket' treatment by a statutory apex body. In the ultimate analysis, acceptance is of the essence which can be ensured with the help of a non-statutory body also.

6.3 The present composition of the Commission does not ensure adequate representation of the State Government in the matter of formulation of goals and objectives. The procedure followed by the Planning Commission for finalising the State's Plan is also unsatisfactory since it involves unnecessary detailed scrutiny of each and every scheme under each sector/sub-sector of development. It is the State Government's view, that after the plan priorities and goals are finalised in consultation with the States, they should be left to formulate their own plans within the broad framework.

6.4 The Second alternative suggested above appears reasonable. However, Administrators, representatives of the Central and State Governments should also be included in the Planning Commission. A suitable methodology may be evolved by the Planning Commission to ensure representation of at least major States on the Commission so that the State Governments' point of view will always be available to the Planning Commission, on issues of policy, objectives, goals etc.

6.5 The Planning Commission need not be an autonomous body but it may continue to be an advisory body assisting the Central and the State Governments in the formulation, and monitoring of the State Plans finalised within the broad framework indicated by the National Development Council.

6.6 Yes, there is a need to consider and incorporate national priorities in the State Plans. However by doing that it does not mean that the State autonomy has been compromised. States can prepare their own plans, keeping the broad national objectives in view but suited to their own peculiar conditions and requirements. The scrutiny of the State Plan proposals by the Planning Commission should be more directed to objectives and results than to the specific schemes. Within the broad sectoral outlays, the State should be free to formulate the schemes and incorporate them in the State Plan.

6.7 The Government of India provides the block Central assistance and also the Central assistance on account of externally aided projects. The entire assistance is passed on to the State Government in the form of 70 per cent loan and 30 per cent grant. This places an unduly large burden on the States. It is, therefore, suggested that the terms of assistance may be revised and the entire assistance should be provided as grant.

As regards assistance in respect of externally aided projects, it is suggested that the entire external aid which is project-tied should be passed on fully to the State Government, instead of only 70 per cent which is being passed on to the State Government as at present. The said assistance may also be passed on at the interest charged by the external agencies plus a nominal service charge. The period of repayment may also be decided keeping in view that fixed by the external agency. For example, in the case of IDA assistance, the assistance carries no interest but only a service charge varying between ½ per cent and 1½ per cent and is repayable in 50 years. Other external assistance is also received on generous terms (though not as liberal as the IDA assistance) whereas the States are to repay the plan assistance in 15 years. We feel that there is ample justification for the Centre to liberalise the terms of assistance to the States.

6.8 & 6.9 1. Under the present formula adopted by the planning Commission the central assistance for the plan is distributed to the States on an

agreed formula approved by the NDB. Of the total plan assistance, central assistance is given in four components, the first three relate to the (1) special category states, (2) to the hill and tribal areas and NEC scheme and (3) for Externally Aided projects. The fourth relates to the central assistance distributed to the 14 major states under which Maharashtra gets its share of central plan assistance.

2. In the allocation of the central assistance to the 14 states (1) 60 per cent is given according to population of 1971 census, (2) 20 per cent is given according to the per capita income only to those states which have their per capita incomes below the average of the 14 states, (3) 10 per cent according to tax effort and (4) 10 per cent for special problems to cover gaps in resources for financing inescapable outlays.

3. The method of allocation of central assistance thus takes into account the four factors of (1) population, (2) backwardness of the State adjudged by per capita income, (3) the tax effort and (4) the special problems of the State. We do not recommend any change in these four factors nor in the percentage allocation that is presently made by the planning Commission. However, the method adopted by the planning Commission in respect of the component distributed according to the backwardness of the State and tax effort requires a revision.

4. Under the present formula which governs the distribution of 20 per cent of central assistance according to per capita income, only the states which have per capita income below the average of the 14 States qualify for assistance. This does not appear to be fair as a State which is even marginally above the average is denied assistance under this component treating it as if it were a developed State. While the formula has to be such that more assistance should be given under it to more backward states, it should not deny assistance to States which are considered developed only in relation to the average. Perhaps from this point of view under the original Gadgil formula the distance of the State was measured from twice the average and not the average as at present and the amount of assistance was made proportional to this distance and the population of the State. In our view the present formula requires a review and a detailed examination made in the accompanying note would show that measuring distance from twice the average has certain technical merits which the present formula does not possess. We therefore recommend reversion to the original Gadgil formula in this respect.

5. In respect of the component of 10 per cent which is distributed according to tax effort, the present formula adopted by the Planning Commission is not arithmetically correct as it does not take into account the size of the State. In a separate note attached, this point has been thoroughly examined and it has been shown that in order to rectify this error it is necessary to give a weightage to the tax effort by the population of the State. Since this is a technical flaw in the present formula adopted by the Planning Commission it requires immediate rectification.

6. After this correction is carried out it would be seen that three of the four components would involve the population of the States for the purposes of determination of the size of their allocation. Since the containment of the population growth is a national policy, the present practice of using the 1971 population figures both for the purposes of distribution of the 60 per cent component as well as for assignment of the weights under the second and the third component should continue. However, where the calculation of the indicators like per capita State income or per capita tax effort is to be made on the basis of uptodate figures (of tax calculation and State income), this should be done using the population figures for the specific years that are considered.

6.10 There is no doubt that Central Programmes and the Centrally Sponsored Schemes such as family welfare, control of communicable diseases, removal of adult illiteracy etc. are necessary to attain effectively the desired goals. However, the States should be actively associated in the formulation of Centrally Sponsored Schemes so that the varying conditions from State to State can be taken into account and the schemes designed accordingly so that they could be effectively implemented. Similarly, there should be more flexibility in implementation of the centrally sponsored scheme and latitude is given to the States to make variation in the different components of the scheme considering the conditions prevailing in the State. New schemes may be introduced preferably at the beginning of a new plan. Any Central programme or Centrally Sponsored Scheme should be run at least for a period of 10 years and wholly assisted by the Centre. A review of every centrally sponsored scheme may be undertaken to determine impact of the scheme before the decision regarding its continuance or otherwise is taken. Whenever a centrally sponsored scheme is abolished or transferred to the State Non-Plan, an amount equal to the level of committed expenditure reached at that time on implementation of the programme scheme should be transferred to the States as long as the scheme is continued.

6.11 It is true that the system of monitoring and evaluation has not been effective. It is necessary that a proper system of monitoring and evaluation including concurrent evaluation is built up by the State Government and the Planning Commission to ensure proper and effective implementation of the plan programmes so as to achieve the desired goals within the specified period. A suitable machinery may be evolved for this purpose. The Central Government may provide the necessary guidance and also the financial assistance to the State Governments for this purpose.

6.12 Yes, the concept of decentralised planning is laudable, as an effort to involve peoples' participation and reduce regional imbalance, but the process of decentralisation should start from the State level itself before we go to the sub-state level. If the State themselves are not given reasonable amount of freedom in formulating their own plan, it is difficult to expect a further effective decentralisation below the State level. The present time schedule for finalising the State resources for

925 ISCS/98—23A

the plan also precludes any effective decentralisation below State level because, there is hardly any time left for the Districts to prepare their plans before they are incorporated into the State Plan for submission to the Planning Commission.

6.13 The State Government is of the view that the State Planning Boards, consisting of experts, specialists etc. should have an advisory role in the matter of important issues of policy having a bearing on planning and development of the State. Its advice on such matters should be constantly available to the State Government on such matters for formulating the State Annual and Five Year Plans.

NOTE I

(Vide Answer 6.8 & 6.9; para 4)

Notation

1. Let x denote the per capita SDP of a State and $\bar{x}$ its all-State average and V(x) and S(x) the variance and standard deviation of x.

2. Let y denote the per capita allocation to a State and $\bar{y}$ its all-State average and V(y) and S(y) the variance and standard deviation of y.

The Measure of Variation

3. The reason for seeking to make the allocation progressive is the observed disparities or variation in the per capita SDPs. It is, however, necessary to note that the variation is understood as relative to the values of the x, *i.e.* the per capita SDPs, themselves. For example, if all x values increase by a constant amount, the variation as measured by V(x) or S(x) or range or any other measure will remain the same, but its importance will be a little less than before as the values have increased. To give an example if the x values are 100, 125, 150, 175 and 200 before, and they become 200, 225, 250, 275 and 300; the absolute measure of variation remains the same in both cases, but in relation to the values themselves — and that is important — variation is less in the letter series than before. Our appropriate measure of variation should be therefore the coefficient of variation *i.e.* CV(x) given by $CV(x) = S(x)\sqrt{\bar{x}}$.

The Requirements from the Formula

4. The objective of the use of the formula is to make the allocation 'progressive', the term progressive is to mean that y should be larger for smaller x and *vice versa*. This can be done in different ways and the degree of progressivity can also be varied.

5. The objective can be now translated into mathematical terms. Since y is to be related to x in the above manner

$$y = A - Bx \quad \ldots\ldots\ldots(1)$$

Where A and B, both positive are to be suitably determined and the correct extent of progressivity is given by

$$CV(y) = CV(x) \quad \ldots\ldots\ldots(2)$$

This ensures that for larger x, y will be smaller and *vice versa*. Secondly, the relative variation in y is made to depend upon that in x, so that the former remains always in step with the letter and any changes in the letter are automatically reflected in the former.

6. It is now easy to determine A and B. Squaring both sides of equation (2) and using simple statistical results we get

$$\therefore \left\{ CV(y) \right\}^2 = \left\{ CV(x) \right\}^2$$

$$\therefore \frac{V(A - Bx)}{(A - B\bar{x})^2} = \frac{V(x)}{\bar{x}^2}$$

$$\therefore \frac{B^2V(x)}{(A - B\bar{x})^2} = \frac{V(x)}{\bar{x}^2}$$

$$\therefore 2B\bar{x} = A \quad \ldots\ldots\ldots\ldots(3)$$

Equation (3) gives the relationship between A and B and substituting it in (1) we get

$$y = 2B\bar{x} - Bx$$

$$= B(2\bar{x} - x) \quad \ldots\ldots\ldots(4)$$

Thus, with any positive value of B, if y is determined by (4) it will meet out objective. We should note that y has to be positive for any State; therefore, the equation (4) will give us the values of per capita allocation so long as the *maximum* of the per capita SDPs is less than or equal to twice of their average.

7. Let us now denote by y_i and x_i the corresponding values for the i^{th} state and let P_i be its population. Let Y be the total amount of resource to be allocated, then from (4) we get

$Y = \Sigma Y_i = B\Sigma P_i\ (2\bar{x} - x_i)$, where Y_i = allocation to the i^{th} state giving

$B = Y/\Sigma P_i\ (2\bar{x} - x_i)$ and

$$Y_i = \frac{YoP_i\ (2\bar{x} - x_i)}{\Sigma P_i\ (2\bar{x} - x_i)} \quad \ldots\ldots\ldots\ldots(5)$$

The expression (5) gives us our desirable formula for allocation so long as the maximum of the x is less than $2\bar{x}$ The formula states that the allocation to a particular state is proportional to its population multiplied by its 'distance', where its distance is equal to the difference of its per capita SDP from twice the average per capita SDP of all States.

8. If in the formula (5) the distance of a state is measured from multiple of the average other than 2, there will be an unduly large progressivity in the per capita allocations if the multiple is less than 2. Conversly, if the multiple is greater than 2, the per capita allocations will be less progressive.

9. If the 'distance' is measured from the maximum of the per capita SDP, as the Finance Commission do, the progressivity in the per capita allocations has no relationship with the observed disparity in the per capita SDP of the States. The formula based on such a measurement of 'distance' therefore becomes inconsistent. Further the maximum is a relatively unstable statistic and it is not desirable to base decision on one single value like the maximum. If for some reasons the per capita SDP of the maximum valued state changes, it brings about a considerable variation in the allocations of all States especially of those States which are nearer to the maximum. It is, therefore, a sound statistical judgement to employ a more stable statistic such as the one based on the average which uses the per capita SDP values of all States, so that the result of the allocation exercise is not swayed by the circumstances in one particular State, and measure distances from it. Taking twice the average as the point from which distances are measured, has this advantage over the maximum value.

10. In the formula with distances taken from twice the average, the relative variation in the per capita allocations becomes exactly equal to the relative variation of the per capita SDPs. The smaller per capita SDP valued States get more and *vice versa*. Thus, the progressivity of allocations is kept in tact. Further if there is any change in the relative variations among the per capita SDPs, the relative variation in the per capita allocations follows suit and always maintains its equality with the former. While the formula based on distances measured from the maximum lacks this consistency, both progressivity and consistency are achieved by the formula based on twice the average. It is for this reason that the formula based on distances measured from twice the average is considered superior.

NOTE II

Note on the Formula for Allocation of Central Assistance to States for the Five-Year Plans

(Vide Answers 6.8 and 6.9; para 5)

Background

1. Under the present formula adopted by the Planning Commission, the central assistance for plan is distributed to the States on an agreed formula approved by the NDC. Of the total plan assistance, central assistance is given in four components; the first three relate to the (1) special category States, (2) to the hill and tribal areas and NEC scheme and (3) for IDA assisted projects. The fourth relates to the central assistance distributed to the 14 major States under which alone, Maharashtra gets its share of central plan assistance.

2. In the allocation of the central assistance to the 14 States (1) 60 per cent is given according to population of 1971 census, (2) 20 per cent is given according to the per capita income only to those states which have their per capita incomes below the average of the 14 States, (3) 10 per cent according to tax effort, (4) 10 per cent for special problems to cover gaps in resources for financing inescapable outlets. Maharashtra does not get share in the component based on per capita income. During the Sixth Five-Year Plan it got assistance only in the two components based on population and tax effort. The State Government has been promised assistance in the components of "special problems" in addition to the components of population and tax effort during the Seventh Five-Year Plan. It is the component based on tax effort which is the subject of study in the present note.

Allocation according to Tax Effort

3. The methodology followed by the Planning Commission in distributing the component is shown in Table No. 1. For the fourteen States, the receipts from state taxes are shown in Column (2), their population in column (3); the per capita tax receipts in column (4) after dividing the figures in column (2) by column (3). the per capita State income in column (5). The tax effort, is defined by the Planning Commission. as the ratio of per capita tax receipts divided by per capita state income and is expressed as a percentage and shown in column (6). The total of column 6 is 89.19. The amount of Rs. 430 crore, to be distributed among the 14 States on the basis of tax-effort, is distributed among them in proportion to the values in column (6), and the Statewise allocations are shown in column (7). To illustrate, the allocation against Maharashtra is equal to $\frac{(9\cdot01)\times(43)}{89\cdot19}$ i.e. Rs. 43·44 crore.

Defects of the formula

4. The first point to be noted is that though the ratio of per capita tax receipt to per capita State income is calculated, since both the numerator and the denominator are calculated on per capita basis, the population factor cancels out and what is obtained as an indicator of tax effort in column (6) is nothing other than the percentage of State's tax receipts to total State income. It is simple arithmetic that a percentage of a larger quantity and a percentage of a smaller quantity cannot be added. Since the figures in column (6) are percentages with different bases, it is an arithmetical error to add them to obtain their total (89.19) and calculate the relative share of every State using this total by the formula given above. This is what has made the methodology adopted by the Planning Commission incorrect.

5. It is not difficult to see the oddities which the procedure adopted by the Planning Commission logically leads to. In an extreme case if one imagines a one person state, the allocation under the present formula of the Planning Commission for such a state would be independent of the fact that it is a one person state. For if its tax effort ratio is 9 per cent, the allocation to this one person state will be about Rs. 43 crores; the same as that for Maharashtra. In other words, the allocation has no relationship with the 'size' of the State in terms of population.

6. To see that the oddity demonstrated by this example is actually at work in the allocation by the Planning Commission formula, as an illustration, the allocations to Haryana and Punjab may be seen. The population of Haryana is about 1/5th of Maharashtra (19.92%) and the tax effort is 6.97 per cent as compared with 9.01 per cent of Maharashtra; but the allocation to Haryana is Rs. 33.60 crore as against Rs. 43.44 crore for Maharashtra *i.e.* 77.35 per cent of that of Maharashtra. Similarly for Punjab whose population is about 1/4th of Maharashtra (26.70%) and the tax effort is 7.87 per cent, its allocation is Rs. 37.94 crore which is 87.34 per cent that to Maharashtra.

7. Another illogical conclusion the formula of the Planning Commission leads to is that, if a State splits into two, everything else—*i.e.* the per capita income and the per capita State tax collection—remaining the same, the aggregate allocation to the two constituents *increases* as compared with the original. For example, if U.P., splits into two states, the allocation, under the Planning Commission formula, to the two new States would be Rs. 20.87 crore each aggregating to Rs. 41.74 crore for the two taken together. In other words, the allocation to the original U.P. is nearly doubled at the cost of other States.

Suggestions for corrections

8. The present methodology adopted by the Planning Commission is thus obviously wrong, arithmetically and therefore, logically. To correct it, what is needed is to 'weight' the percentages, which reflect the tax effort by the 'size' of the State. The Planning Commission has done this in respect of its allocation of that component which it distributed to the States, with less than average per capita income, by weighting the distance of the State from twice the average, by the population of the State. It did not do so, in respect of the allocation of the component relating to tax effort. It is necessary that the Planning Commission rectified this error, which has already penalised 'larger' States.

9. Thus to set matters right, the allocation to two States has to be proportional to tax effort, only if their 'size' is the same. Conversely, the allocation should be proportional to the sizes of the States only if their tax effort is same. Elementary algebra requires that if x is proportional to y if z is constant, and proportional to z if y is constant, then x should be proportional to the product of y and z. Putting x as the allocation to a State, y its tax effort indicator and z its size, the formula to maintain logical consistency, should be that x *the allocation should be proportional to the product of the indicator of tax effort and the 'size' of the State.* The question that would remain to be settled is the choice of a measure to represent the 'size' of a State.

10. If total State income is taken as the 'size' of a State the percentages are in effect 'weighted' by the total income and the resultant arithmetics would mean that the distribution of the component based on tax effort will have to be proportional to the receipts from the State taxes. The allocation worked out on this basis are given in Table No. 2.

11. The other alternative is to take population as the 'size' of the State *i.e.* to 'eight' the tax effort percentages by the population of the States. The resulting calculations are shown in Table No. 3.

12. It would be seen from both these tables that because of the incorrect methodology followed by the Planning Commission, Maharashtra had been a leser in this component of central assistance to the tune of at least Rs. 18.22 crore in the Fifth Plan. The same defective methodology has been followed in the Sixth Plan. The correction in this defective methodology is now long overdue and should be immediately carried out.

TABLE No. 1.

Fifth five-year Plan—States

Allocation of Central Assistance

Tax effort— 10 per cent

(Rs. crore)

State	Receipts from State Taxes 1973-74 Actuals	Mid-year population 1973 (lakhs)	Per capita Tax Effort (Rs.)	Per capita State Income (Rs.)	Tax Effort as percentage of per capita income	Distribution of Rs. 430 crores

PART VII

MISCELLANEOUS

Industries

7.1 We agree that extension of the First Schedule to cover a very high proportion of industries in terms of value of their output has resulted in converting industries into virtually a Union Subject, "Industries" is on the concurrent list and the State Government is expected to operate so as to ensure balanced growth of industries, utilising the available resources gainfully in all areas of the State. With the addition to the first schedule the scope for operating by the State has been curtailed. For example, items like sewing machinery, cutlery, pressure cookers, footwear, household appliances and tools, typewriters, chinawares, pottery, oil stoves, etc. are basically consumer goods and production of these goods to meet the local demand should be left to the discretion of the State. The inclusion of these items in the first schedule read with the Government of India's latest policy decision regarding restricting the issue of licences to "No Industry District" or particularly to A, B, and C areas of the country in fact amount to denying to the State Government its privilege of promoting industries in certain areas to ensure balanced development. The experience of the past three years has indicated that the State of Maharashtra has been consistently losing its share of the total licences letters of intent issued by the Government of India. For example, in 1981 against total 916 letters of intent, the State of Maharashtra received 144 letters of intent while the figures in 1982 and 1983 are 148 out of 1043 and 155 out of 1055. Simi-

larly in respect of industrial licences in 1981 the State of Maharashtra had 114 industrial licences out of total 476 while in 1982 and 1983 the figures are 95 out of 432 and 171 out of 1075.

While in respect of core industries Government of India's authority to allocate capacities may be justifiable, in respect of non-core industries however (the industries mentioned in the Questionnaire are all non-core industries) there is no justification for retaining the authority with the Government of India. For example, the State was denied setting up of a project like match sticks, in one of the backward areas of Marathwada. We also feel that the provisions in the I (D. & R.) Act, 1951 for the take over a such units should be amended suitably to enable State Governments to take over sick units if they feel that sufficient grounds for doing so exist,

7.2 (i) We feel that some norms to define or describe what is "national public interest" in the context of national control over an industry, when Parliament alone can legislate, need to be defined. The following norms are suggested :—

(1) The Parliament may legislate in respect of core industry and defence industry.

(2) In respect of subsidiary and ancillary industries of core industry and defence industry, Parliament need not legislate.

(3) Except in case of core industry where the natural resources are available in a State it should be for the State to legislate. For example, Chinaware pottery or all silica based industries could be decided by the State Government itself.

(4) In industries like agricultural implements, after the national capacities and requirements are determined, the State Government should have a free play for creation of capacities in the State itself.

In transport industry (excepting the 4 wheelers and commercial vehicles) as the transport requirements would be to meet the needs of people at large from the rural areas the State Government should have the privilege to determine the capacities. Those items would be bicycles and two and three wheelers.

(ii) A list of items in the first schedule to the Industries (Development and Regulation) Act, 1951 which could be deleted on the ground that they are really not crucial to the national public interest to justify control by the Union Government is indicated hereinafter.

1. **Metallurgical Industries :**

A. Ferrous :

(i) Iron and Steel structurals.

(ii) Iron and steel pipes.

(iii) Other products of iron and steel.

B. Non ferrous :

(i) Semi-manufactures and manufactures.

2. **Electrical Equipment :**

(i) Electrical motors.

(ii) Electrical fans.

(iii) Electrical lamps.

(iv) X-ray equipment.

(v) Electronic equipment.

(vi) Household appliances such as electric irons, heaters and the like.

(vii) Storage batteries.

(viii) Dry cells.

3. **Telecommunications :**

(i) Radio receivers, including amplifying and public address equipment.

(ii) Television sets.

4. **Transportation :**

(i) motor cycles, scooters and the like.

(ii) Bicycles.

(iii) Others such as fork lift trucks and the like.

5. **Agricultural Machinery :**

(i) Agricultural implements.

6. **Miscellaneous Mechanical and Engineering Industries :**

(i) Plastic moulded goods.

(ii) Hand tools, small tools and the like.

(iii) Razor blades.

(iv) Pressure Cookers.

(v) Cutlery.

(vi) Steel furniture.

7. **Commercial, Office and Household Equipment :**

(i) Typewriters.

(ii) Calculating machines.

(iii) Vacuum cleaners.

(iv) Sewing and knitting machines.

(v) Hurricane lanterns.

8. **Medical and Surgical Appliances :**

(i) Surgical instruments—sterilisers, incubators and the like.

9. **Mathematical, Surveying and Drawing Instruments :**

(i) Mathematical, surveying and drawing instrument.

10. **Fertilisers :**

(i) Mixed fertilisers.

11. **Chemicals (other than Fertilisers) :**

(i) Paints, varnishes and enamels.

12. **Paper and pulp including paper products :**

(i) Paper for packaging (corrugated paper, craft paper, paper bags, paper containers and the like).

(ii) Pulp-wood pulp, mechanical, chemical, including dissolving pulp.

13. **Soaps, Cosmetics and Toilet Preparations :**

(i) Soaps.

(ii) Cosmetics.

(iii) Perfumery.

(iv) Toilet preparations.

14. **Rubber Goods :**

(i) Footwear.

(ii) Other rubber goods.

15. **Leather, Leather Goods and Pickers :**

(i) Leather, Leather goods and pickers.

16. **Glass :**

(i) Hollow ware.

(ii) Sheet and plate glass.

(iii) Optical glass.

(iv) Glass wool.

(v) Laboratory ware.

(vi) Miscellaneous ware.

17. **Timber Products :**

(i) Plywood.

(ii) Hardboard, including fibre-board, chip board and the like.

(iii) Matches.

(iv) Miscellaneous (furniture components, bobins, shuttles and the like).

7.3 (1) **Procedure for Industrial Licence.**—Clearance in principle, regarding the capacity and availability for a particular project may be given by the Government of India. Thereafter issues relating to capital issues, import of capital goods, allocation of raw materials, and foreign collaboration need not become part of the total licencing procedure but these should be available automatically once the basic clearance is given.

(2) **Capital Issues.**—In respect of projects approved by the Licensing Committee, clearance for capital issue should be automatic.

7.4 The States have got an organisational structure to service the Small Scale Sector, but there are still linkages with the macro or national level on critical issues such as allocation of raw materials and lack of statutory powers which vest with the Centre. Unless raw material supply is planned for appropriately, shortages would continue and the Centre is compelled to ration cut its cake to the States. We feel that there could be an improvement in the States treatment of their sector through—(i) better and more coordinated approach between institutions; (ii) ensuring adequate marketing support for the goods from this sector as well as raw material supply; and (iii) financial support through adequate supply of term and working loans.

7.5, 7.6 & 7.7 The decisions of the Central Government in regard to its direct investment in heavy industries on the basis of allocation of projects to 'No Industry District' and to State where no public sector projects have so far been allocated affect us. Maharashtra, however, faces a peculiar position with reference to number of public sector projects it has already received and areas in Maharashtra which have not received any benefit whatsoever from location of such public sector projects. Because of the development which has already taken place in and around Bombay, a few public sector projects were located in Maharashtra. This should not come in the way of Maharashtra getting legitimate quota of public sector projects for a balanced development of areas like Vidarbha, Marathwada and Konkan. We also feel that where a project has been cleared by the Government of India for a licence, the financial institutions should not again sit in judgement over the putting up of the project. We also feel that within the State the view of the State Government on the location of public sector projects should be taken into account.

7.8 In our opinion, the incentives for promotion of industries provided by the Government of India have succeeded in accelerating the pace of industrialisation in the backward areas. Implementation of these schemes for last 10 years has thrown up new growth centres for industrialisation in these industrially backward areas such as Aurangabad, Chandrapur, etc.

2. The present methodology for identification of backward areas adopts the district as a unit for identification. District is too large an entity for identification of a backward area. Existence of few industries concentrated in few pockets of a district does not make perceptible impact on the remaining part of the district where the industries have not been sufficiently developed. Further, indicators of industrial backwardness based on district level statistical data also distort intradistrict disparities in development. On account of diseconomies of locating unit in backward area, prospective entrepreneurs have come to rely heavily on fiscal and other incentives for establishing their projects in such areas. If a district is disqualified for such incentives because of such areas. If a district is disqualified or distortions, fears that the backward parts of districts may be permanently deprived of the benefits of industrialisations may become real. Therefore, instead of treating district as a unit for identification of backward areas, talukas would be an appropriate unit for identification as it is a more compact administrative unit than a district. Further in identifying industrially backward talukas following factors may have to be considered :—

(1) While considering the level of development, investments in public sector project in an area may not be taken into account.

(2) Resource based industries may also be excluded in assessing the stage of development, as they do not necessarily contribute to the development of the areas.

(3) The scale of incentives may be linked up with employment potential.

Trade and Commerce

8.1 We feel that no such authority needs to be appointed and there should not be any restrictions on inter-State trade or commerce.

Agriculture

9.1 The position mentioned in the Question has not substantially changed since 1967. It is felt that the Central Government should also have some responsibility for substantial activity in the field of agriculture. Though agriculture is a State subject, it cannot be the concern of only the States, because often an all-India view has to be taken in many matters and for this Central involvement in the area of agriculture development would be unavoidable. The Central Government through its policies relating to inter-State trade in commodities, control of production and supplies of vital agricultural inputs, like fertilisers, pesticides, etc., research activities in the field of agriculture, through institutions like ICAR, IARI and various Central research institutes, plays an important role and these have a great deal of relevance to the agricultural activities in the State. It is felt that the Central Government should continue to play its role at the national level and help the States in their activities.

9.2 We do not fully agree with the view that Central and centrally sponsored schemes being implemented through the State agencies should ultimately form part of the State sector and, further, that their number should be kept to a minimum. However, in the formulation of Central and centrally sponsored schemes, the Central Government should actively associate the State Governments and the role of the Central Government should be confined to giving broad guidelines to the State Government and assisting by way of supplementing Plan resources for implementation of different schemes to improve agricultural production. In recent years, the Government of India have also veered round to the view that, in the formulation of Central and centrally sponsored schemes, that Government should only indicate broad guidelines and expect the States to come up with detailed project formulations. That is, once the goals and broad methodologies are determined, each State should have the flexibility regarding the manner in which the Central and centrally sponsored schemes will be implemented. It is also felt that the Government of India should continue to bear the expenditure on the implementation of such schemes for a period of 10 years at least.

9.3 There has been effective co-operation between the Central and State Governments till now and we have not experienced any serious problems. Once the goals are specified in relation to undertaking of schemes for improving agricultural production, the States should have considerable voice in the manner in which the schemes will be implemented.

9.4 The Government of India have been fixing uniform minimum support prices for different commodities for the country as a whole. It is felt that taking into account the fact that the cost of production varies considerably from one area to another, there ought to be greater flexibility in fixing minimum support prices for different areas of the country, considering the local agro-climatic conditions, productivity levels, cost of production, market prices, etc. In this connection our reply to Q. 4.7 may be referred to.

We feel that the initiative of the Central Government in these matters is of importance to the State because strategic inputs, like fertilizers, pesticides, etc., show a great deal of inter-State movement. There is also a great deal of inter-State commerce of agricultural commodities. In so far as credit is concerned, where the Government of India can direct various financial institutions to provide credit for various agricultural programmes, the policies will have to be extremely flexible so that a State, within its own jurisdiction, is able to lay down definite policies for the flow of credit.

In case of Irrigation, we feel that the Central Government or their agencies should confine their scrutiny only to the overall planning aspects, giving importance to the core aspects of the project and its inter-State implications, if any, and that prior clearance in respect of projects costing upto Rs. 10 crores should be dispensed with. In this connection, our answer to Q. 4.7 may be referred to.

Forestry policy and administration was formerly a State subject but of late the Central Government has stepped in a big way with the transfer of the subject to the Concurrent List and enactment of the Forest Conservation Law. The State Governments are therefore, required to refer even small matters pertaining to forest clearance to the Central Government, which delays implementation of projects considerably. This needs to be reviewed and we feel that wide latitude should be given to the State Governments in administration of forests, subject to national goals in regard to conservations of forests being followed, guidelines for which could be clearly laid down.

9.5 There have been no serious problems between Centre and State in respect of agricultural research or education. However, in exercising certain amount of leverage, derived from supplementing funds available with the Agricultural Universities in the State, the Central Government should take note of the specific circumstances prevailing in the State and there ought to be much higher concern for the views of the State, and any attempt to universalise the problems can at best be avoided. As far as institutions, like NABARD, are concerned, except for very broad policy guidelines, the Centre should not attempt to frame too rigid a set of instructions in the working of financial institutions. The State's policies should have greater weightage in the working of financial institutions, such as, the Apex Co-operative Bank etc. We would like to make the following suggestions :—

(1) **Credit Authorisation.**—RBI, NABARD has placed condition on the Maharashtra State Co-operative Bank to seek prior approval of it before Medium Term Loans are sanctioned to Credit Authorisation Scheme Units. These restrictions need to be removed.

(2) **Pre-seasonal Loans.**—The Co-operative Sugar Factories are sanctioned Pre-seasonal

Loans every year under Credit Authorisation Scheme. In the past M.S.C. Bank was permitted to sanction such clean loans not exceeding Rs. 10 lakhs without prior credit authorisation. This facility has been withdrawn and needs to be restored.

(3) **Sanction of bridge loans to newly Licenced Co-operative Sugar Factories.**—NABARD should remove restriction imposed by it in respect of bridge loan to newly licenced Co-operative Sugar Factories in respect of bridge loan. Such loans should be cleared under Credit Authorisation Scheme as a matter of routine after assessing the overall surplus resource position of the M.S.C. Bank.

(4) **Financing of non-agro-industries.**—NABARD should permit the Maharashtra State Co-operative Bank to lend its surplus funds to Co-operative Units even outside the agro-industries sector.

(5) **Seasonality discipline.**—Seasonality discipline imposed by NABARD needs to be relaxed so as to enable D.C.C. Banks to get refinance from it for seasonal agricultural Operations.

(6) **Concessional rate of interest.**—The State Government's proposal to give short, medium and long term loans to small farmers at 6% has not been approved by R.B.I./NABARD and Government of India. Since the State Government proposes to bear full financial liability in this behalf, it should be allowed to implement the scheme.

(7) **Financing by M.S.C.L.D. Bank.**—At present Land Development Bank cannot lend beyond the lending limit fixed for the sub-branch. It is necessary that NABARD should at least in the case of Land Development Banks which are not banks under the Banking Regulation Act, take a more flexible attitude and evolve norms of lending which are flexible in character so that they do not come in the way of balanced orderly growth of agriculture and allied activities.

NABARD should adequately strengthen the technical wings in their regional offices so that there is a quicker clearance of schemes by the regional offices. NABARD should also delegate powers to release refinance under schemes sanctioned by the Regional Offices.

There may be two representatives each on behalf of State Land Development Banks, State Co-operative Banks on the Board of Directors of NABARD.

Food and Civil Supplies

10.1 It is felt that consultation with State Governments should precede formulation of policies regarding pricing, storage, movement and distribution of food-grains as well as other essential commodities. Unless absolutely necessary in the national interest, unilateral directives should be avoided.

10.2 Yes, Periodical review will be useful and is necessary. At present, prior concurrence of the Central Government under the Essential Commodities Act is necessary in respect of several enforcements and regulatory orders. Such prior approval needs to be dispensed with. The specific areas where this could be done may be decided by the Central Government in consultation with the State Governments.

Education

11.1 It would not be correct to say that there is unnecessary centralisation and standardisation in the field of education. The subject "Education" figures in the concurrent list and the State Government is at liberty to implement its own schemes on the basis of decisions taken at the State level. The State is required to abide by the instructions given by the Government of India from time to time only so far as Centrally sponsored programmes are concerned. Central interference in the initiative and authority of the State Government is not borne out by the experience of our State.

11.2 We have had no instances where U.G.C. has interfered with University Education in the State. The Commission has been extending financial assistance to the Universities in the State as well as non-Government Colleges within the framework of the U.G.C. Act.

11.3 We feel that there is considerable scope to evolve a consensus among the States as well as between Centre and States in the field of education through discussion and consultation. The process of discussion, consultation and persuation is already being followed in respect of matter of importance. In fact, the Government of India have presented a document entitled 'Challenge of Education : A Policy Perspective' to the Lok Sabha very recently on which views of the State Government have been sought for by the Central Government. The new Education Policy will be finalised in consultation with the State Governments.

11.4 No difficulty has been experienced by the Maharashtra State in the operation of the constitutional provisions under Articles 29 and 30 which guarantee the rights of the minorities in regard to the establishment and management of denominational educational institutions. We have a number of minority educational institutions in the State permitted by the State Government and they are being run without difficulty.

11.5 There are no specific instances of conflicts on issues between the Centre and State so far as education is concerned. Should such instances arise in future, it is felt that they can be resolved by discussion, consultation and persuation.

Inter-Governmental Coordination

12.1 We have no experience of any serious irritants in the Centre-State relations and therefore we do not consider it necessary to set up a permanent institution as existing in U.S.A.

Maharashtra

MEMORANDUM

Introductory

We extend a warm welcome to the Commission on Centre-State Relations on its visit to Maharashtra and we are grateful for the opportunity given to us to place before it our views on a subject of great national importance. While we have already submitted detailed replies to the questionnaire issued by the Commission, in this Memorandum we shall confine ourselves only to the more significant aspects of Centre-State Relations.

Terms of Reference

2. The terms of reference for the Commission on Centre-State Relations have specifically provided that the Commission, while examining and reviewing the working of the existing arrangements between the Union and the States and making recommendations as to the changes and measures needed, will keep in view the social and economic developments that have taken place over the years and have due regard to the scheme and frame work of the Constitution which the founding fathers have so sedulously designed to protect the independence and ensure the unity and integrity of the country, which is of paramount importance for promoting the welfare of the people. These are, therefore, the parameters within which examination and review as well as recommendations for change, if any, in the Centre-State Relations, will have to be conceived.

A Brief Historical Review

3. A brief review of the political conditions that prevailed before achieving independence will be necessary to appreciate the scheme and the framework of the Constitution. Till the enactment of the Government of India Act, 1919, the Indian subcontinent had for centuries been under a unitary form of Government. It was by the Act of 1919 that diarchy was introduced in the provinces, which was the beginning of some sort of a quasi-federal structure. The pre-Independence history between the 1919 and 1947 shows how the freedom movement for complete independence passed through different phases. On the failure of the Cabinet Mission Plan there remained no purpose in providing a Constitution for a loose federation. In fact, the acceptance of the partition and the merger of the Princely States left no choice before the founding fathers but to provide for a strong Centre with enumerated powers to the States, leaving residuary legislative powers with the Union. The history, thus, had taught a lesson that in order to maintain the unity and integrity of the remaining sub-continent after partition, a strong Centre with powers to convert federal Government into a unitary Government was a felt necessity of the time.

4. Theoretically, on a broad perspective it can be said that in our Constitution the unique features tending to make the polity unitary are ordinarily dorment giving full scope for the federal principle to play its role but when the national interest is at stake, it is placed above everything till the occasion lasts.

Rajamannar Committee

5. It is difficult to subscribe to the recommendation of the Rajamannar Committee appointed by the then Tamil Nadu Government, urging for greater autonomy for the States by a redistribution of legislative powers of the three lists in the Seventh Schedule, deletion, revision or substantial modification of the relevant provisions of the Constitution which give the Union supervisory role over the States and allotment of more tax resources in the List 2 to the States. A careful study of the three Lists of the Seventh Schedule shows that, by and large, subjects of national importance are included in the Union List, subjects of local or regional importance are included in the States List and subjects with which States are primarily concerned but which are likely to assume national importance or which require uniform policy throughout the country are included in the concurrent List. The provisions of Articles 251, 256, 257, 348, 349, 355, 356, 357 and 365 of our Constitution, which give the Union a supervisory role over the States are necessary in national interst to protect the integrity of the nation and to avoid failure of constitutional machinery in the States. It is perhaps the sanction provided by Article 355 that has prevented the States from going wayward against the spirit of the Constitution.

6. It is also difficult to agree with the Rajamannar Committee in its recommendation to abolish appeals to the Supreme Court except in constitutional matters. The Supreme Court performs multiple roles including that of the highest appeal court in the land. The Supreme Court has discharged its responsibilities satisfactorily. The only complaint is about arrears. The experience of the past 35 years shows that institutions are outpacing disposal resulting in tremendous arrears and reform, both in the nature of restricting approach to Supreme Court to cases involving important questions of law and procedural innovations like shorter hearings, shorter arguments and shorter judgments are called for.

7. As already stated, the general scheme regarding the distribution of powers between the Centre and the States as depicted in the Three Lists in the Seventh Schedule does not require any interference. However, it is necessary to see if there is scope for change in the administrative arrangements in relation to the working of various Centrally sponsored schemes on subjects in both the State List as well as the Concurrent List. It would be worthwhile to delegate to the States powers to the maximum extent with regard to the work on projects in which the Centre is directly interested or which are carried out by the States as agents of the Centre. This will help in speedy completion of work.

President's assent

8. The provisions of the Constitution governing the Centre-State relations are adequate for the purpose of meeting any situation or resolving

any problem that may arise in the State and no constitutional amendment appears necessary for ensuring proper relations between the Centre and the State. The only suggestion that could be made is for improvement of the process of according assent of the President to States' legislative proposals in the Concurrent List, by prescribing certain time limit.

Article 3 of the Constitution

9. One unique feature that has been enshrined in our Constitution and which is against the federal principle in its strict sense, pertains to the provision in Article 3 regarding formation of new States by increasing, diminishing, altering the boundaries as well as the name of any State. This article came to be incorporated in the Constitution in the context of the peculiar historical and cultural background of our country and the experience of the last 35 years shows that the confidence reposed in the Parliament by the founding fathers has been amply justified. The Parliament has never used this power except in deference to the wishes of the particular State. It can therefore safely be said that though Article 3 appears to be against federal principle, it does not call for any change. In sum, one can confidently say that the federal principle is predominant in our Constitution during normal times and it is only during emergency of any kind contemplated by the Constitution that the polity becomes unitary so long as the emergency lasts. The unitary character ceases as soon as the emergency is over and polity reverts back to its normal federal character.

Legislative Relations

10. Overall national interest and particularly the unity and integrity of the country demand that no change is called for in the basic scheme of distribution of subjects in the three Lists of the Seventh Schedule. There is no ground for making any complaint that the Union under the cover of a declaration of national interest or public interest has encroached upon the State Legislative field. The existing provision of Article 249 is sufficiently elastic for the State to pass any law which will meet its requirements, having regard to the local conditions prevailing in a State, even if there is a Parliamentary Legislation on a particular subject. From practical point of view it could be suggested that while examining legislative proposals on subjects like labour, rural and urban area development programmes, technical and medical education Centre should have a more liberal approach in giving assent to State proposals which are progressive in nature and beneficial to national interest. In this context, it would be desirable, in the interest of better relations between the Union and the State, to have a specific provisions in the Constitution of India requiring the Centre to consult the State Governments beforehand whenever any legislation is proposed to be undertaken on a concurrent legislative subject, except where on account of urgency it is considered expedient to disperse with prior consultation.

Role of the Governor

11. The office of the Governor has an important place in the context of Union-State relations. He is a powerful link between the Centre and the State, helpful in maintaining harmonious relations between the two. He should act as a Counseller and an elder Statesman who would, after giving his counsel, act on the aid and advice of the Council of Ministers as postulated by the Constitution. In the discharge of his discretionary functions the Governor is expected to act in an upright manner. He may, if an occasion demands, seek guidance from the Centre, but the ultimate decision in discretionary matters must be his own in accordance with the provisions of the Constitution.

12. In the context of Centre-State relations, the Governor has to perform three important functions, amongst others. Under Article 167 he is entitled to seek information from the Chief Minister and also ask certain matter to be considered by the Council of Ministers which has not been considered by the Council. He is expected to send periodical reports to the President. This is useful in keeping the President duly informed about the state of affairs in the State. Under Article 200, the Governor is entitled to reserve a Bill for the consideration of the President if he feels that a particular Bill is of sufficient importance which should be so reserved. Under Article 356 the Governor is expected to report to the President on the point whether the Government of a particular State is carried on in accordance with the provisions of the constitution. This is also inter-linked with the question whether the State Government exercises its executive power in accordance with the Central Laws and consistent with the executive power of the Centre as contemplated by Articles 256 and 257 which attract Article 356 read with Article 365 of the Constitution.

13. It is expected of a Governor that while making the report under Article 356(1) he will be objective and act according to his own independent judgement. Selecting a Chief Minister, when a party has a clear majority in a State Assembly, presents no problem, it is only when there is no clear majority in favour of a particular party that the Governor has to form a judgement as to which of the parties or group or groups of parties are able to form Government which would really command a majority. In such a situation, complete impartiality of the Governor becomes important. His sole purpose ought to be to give to the State as stable a Government as he can under the circumstances and all his moves have to be directed to that purpose.

14. So long as the Ministry in office retains the confidence of the Legislative Assembly, the pleasure of the Governor continues under Article 164(1) of the Constitution. Problem arises when the party in power does not command a majority and advises prorogation of the Assembly. In such circumstances the Governor is justified in compelling the Chief Minister to face the Legislature to demonstrate his majority. Same is the position regarding the power of the Governor to dissolve the Assembly under Article 172(2)(b). Normally,

the Governor has to accept the advice of the Chief Minister, but in certain cases he may advise the Chief Minister to place the matter before the Council of Ministers as contemplated by Article 163 of the Constitution, which would be in consonance with the principles of a collective responsibility.

15. Having regard to the role expected to be performed by the Governor, particularly in the context of Centre-State relations, the present position namely that he continues to hold the office during the pleasure of the President deserves to be continued and no change is called for.

16. A view has been expressed that in making choice of the Chief Minister when there is unstable party position after a Ministry in the State resigns on account of a non-confidence motion passed against it in the State Legislature, the Governor does not act fairly but in a manner calculated to advance the interest of a particular political party or group and therefore some provision should be made to guard against instability of the Ministries resulting in such situations. By and large, experience shows that if the Governor is an independent, respected and impartial person, there arises no occasion for making any such imputation. However, the success of democracy will depend on how they behave with full responsibility. The chances of situations giving rise to such frictions have been practically reduced to nil on account of the Constitution (Fifty-Second Amendment) Act, 1985 introducing provisions as to disqualification on ground of defection in the Constitution.

17. The suggestion that guidelines on the manner in which the discretionary powers should be exercised by the Governors should be formulated does not deserve any consideration. Different situations may arise in different States and no guidelines can prove adequate to meet every situation. That apart, legally the very idea of the Governor's discretionary functions becoming a subject of guidelines is contradiction in terms. Prescription of guidelines may subject the actions of the Governor to judicial review, which as at present is totally excluded. In view of this position, it would be better that the Governor is left to himself while discharging his discretionary functions.

Administrative Relations

18. So far as assumption of Government by the President under Article 356(1) is concerned, it is felt that the Governor ordinarily should not recommend the imposition of the President's rule so long as the Chief Minister has majority in the Assembly and is prepared to demonstrate it by facing the Assembly at a very short notice unless the Governor is otherwise convinced that the Government of the State is not being carried on in accordance with the provisions of the Constitution. In this behalf it is suggested that before taking the drastic step of recommending the assumption of Government by the President, the Governor should give sufficient warning to the Chief Minister concerned to give him an opportunity to take corrective measures if he is so inclined. Recent experience shows that Clause (5) of Article 356 deserves to be restored to the pre-forty-fourth amendment position since in a given situation it may be difficult to meet the stringent conditions mentioned in the said clause, though the circumstances warrant the continuance of the proclamation under Article 356(1) beyond the period of one year.

Central Agencies

19. The various Central agencies were created in pursuance of a national policy to ensure a stable economy and a uniform economic and social balance in the country. There is no doubt that in various matters it is necessary to have an All India perspective and there is therefore, need for these agencies to continue. While we would not say that through these agencies the Union Government has made undue inroads into the autonomy of the State, we feel that there is a great need for a more realistic appreciation of the situation obtaining in the State on part of the Central agencies. We could cite the Agricultural Costs and Prices Commission as an example. We also feel that in respect of certain agencies, like the Central Electricity Authority and the Central Water Commission, there is an over centralisation of powers which results in impeding the pace of development in the State. There is, therefore, need for vesting more authority, which presently vests with some of the agencies, in the State Government.

Zonal Councils

20. The Zonal Council set up under the States' Reorganisation Act, 1956, have generally not been meeting either frequently or regularly. It is necessary that Zonal Council should meet regularly and more often and items, on which broad agreement is arrived at in the meetings of the Zonal Council should be actively followed up by all concerned and in particular by the Union Government, to ensure expenditious implementation.

All India Services

21. The All India Services have, by and large, fulfilled the expectations of the Constitution makers. The present arrangements for the control of the All India Services are calculated to preserve the All India character of those services without detracting from their amenability to the control of the State, when the officers work in connection with the State and thus appear to provide a reasonable and practical balance between the Union and the State.

Deployment of Central Forces in a State

22. Under Article 355 of the Constitution a duty is imposed on the Centre to protect every State against external aggression and internal disturbance and to ensure that the Government of every State is carried on in accordance with the provisions of the Constitution. It is, therefore, necessary that the matter of assessment should be left to the Union Government. It is, however, felt that as a matter of general policy the deployment of the Central forces in a State should be done with the consent of the State Government concerned.

Broadcasting and Television

23. There is no need to transfer the subject of broadcasting and television to the concurrent list. The present position should be continued. There is, however, a need for effective consultation between the Union and States to ensure that adequate time is devoted to programmes in local languages as well as to programmes concerning the local culture and problems.

Inter-State Councils

24. It is difficult to agree with the recommendation of the Administrative Reforms Commission to establish Inter-State Councils under Article 263 of the Constitution. We feel that any problem between Centre and State or State and State should be resolved by mutual discussion and if necessary, with the mediation of the Centre in respect of a dispute between two States and that it is only as a last resort and dire necessity that such a Council be established in respect of a particular issue. We feel that there is no need for a permanent Council as such.

Financial Relations

25. The provisions of the Constitution provide for making available resources to the States primarily through the distribution of income-tax and Union excise duty and secondarily through the grants-in-aid to the States needing assistance. This implies that even the advanced States are eligible for grant-in-aid for particular schemes or problems. However, successive Finance Commissions have given greater weightage to different factors of backwardness in their distribution of resources among the States to the progressive detriment of the so-called richer or well-off States. While no exception can be taken to larger assistance to the relatively weaker States, it should not be at the cost of the so-called well-off States. It is also necessary to bear in mind that large parts of such well-off States are comparable in backwardness to those of financially weaker States. Besides, richer States also have their own peculiar problems which too require considerable expenditure and outlay. For instance, problems of Bombay, which should be viewed as national issues. We also find that while assessing the resources of a State like Maharashtra, large revenue surpluses have been assumed which do not really exist. There is, therefore, need for change in the attitude of the Finance Commissions and the Centre towards the so-called richer States.

Sharing of Corporation Tax and Customs Duty

26. While the resources of the Centre are sufficiently elastic to absorb the effects of inflation, the State Governments are not in a position to bear its adverse effects. It is, therefore, necessary that Corporation tax, which is in no way different from Income-Tax, should be brought into the divisible pool. Similarly, the Customs Duty also needs to be shared with the States. Alongwith this, there is a pressing need for greater fiscal discipline at all levels. It is necessary for the States to make effective contribution to reduce imbalances by adopting better administrative procedures, rigorous financial discipline and optimising the use of resources. The Centre should also consider giving incentives to States whose finances are well managed. Deficit financing on large scale in order to transfer the resources to the poorer States with a view to reducing inequality may not be desirable. It is necessary to keep deficit financing within acceptable limits: otherwise it will accentuate the already persistent inflationary trends in the economy.

Criteria for determining State's shares

27. It is the function of the Finance Commission to assess the resources and requirements of funds on the non-plan side and to recommend adequate devolutions so as not to leave the requirement of funds uncovered. It is, however, not their objective to bridge the gap in resources between the poorer and the richer States. The tax efforts made by the States as well as efficiency and economy in management is the basic need for all the States. Merely giving more grants-in-aids to the poorer States will not solve the problem. It is necessary that the States should optimise returns by proper implementation of developmental and non-developmental schemes.

As regards the share of taxes, we feel that the States which yield more revenue ought to get reasonable share. Even the so-called richer States have their own obligations and liabilities to fulfil and they generate more resources for the Central Government, particularly by way of Income Tax, Union Excise Duty and Corporation Tax.

While it is difficult to formulate any objective criteria that should be used for determining the share of taxes, Plan assistance and Non-Plan assistance for each State, we feel that 50 per cent of the Income Tax, Union Excise Duty, Corporation Tax and Custom Duty should be earmarked as the share of the States.

As regards the distribution of Income Tax amongst the States, a weightage of 45 per cent may be given to the factor of contribution as measured by Income Tax collection while the balance of 55 per cent may be distributed in proportion of the States population. As regards Union Excise Duties, the distribution of the States share should be on the following basis :—

(1) 60 per cent should be given on the basis of population factor with weightage of 30 per cent for urban population and 70 per cent on rural population.

(2) 20 per cent weightage should be given to economic backwardness of the States measured by the product of distance of per capita income of the State from that of the State with higher per capita income and the population of the States as per formula of the Sixth Finance Commission.

(3) A weightage of 10 per cent each should be given to the factors of performance in regard to the population control programme and mobilisation of small savings.

Plan Assistance

28. It is necessary to revert to the original Gadgil formula in relation to the plan assistance, since the present one operates to the disadvantage of States like Maharashtra. It is suggested that the debt burden of the States should be reduced by enhancing the proportion of grants. The Centre should pass on greater share of external assistance received by it for the externally aided projects of the States.

Small Savings

29. There is scope for increasing the States' share in Small Savings collection from two-third of the net collection as at present to three-fourth of net collection. Moreover, the Small Savings loans should be treated as loans in perpetuity.

Open Market borrowings

30. In the context of the open market borrowings it needs to be pointed out that the pattern of distribution of total market borrowings needs correction and share of States ought to be raised. It is suggested in this behalf that the allocation of open market borrowing between the Centre and the States should be made in the proportion of plan size of the Centre and the States and the *inter se* distribution, of open market borrowings amongst the States should be in the proportion of mobilisation of savings made by different agencies in each State. It should also be related to the repaying capacity of the State.

Centrally Sponsored Schemes

31. It is suggested that Centrally Sponsored Schemes should be wholly assisted by the Centre and that whenever such scheme is abolished or transferred to State as non-plan, the amount equal to the level of committed expenditure reached at that time should be transferred to the States till the scheme is continued. It is felt that if more elastic sources of revenue of the Centre are brought within the divisible pool and they are equitably distributed among the States, the need for non-plan assistance through grants-in-aid discretionary assistance by the Centre would be minimal.

Central Assistance for Relief of Natural Calamities

32. So far as the Central assistance to States for dealing with natural calamities is concerned it is pointed out that although in relation to damages caused due to excessive rains, floods, storms, etc., the present arrangement is satisfactory, the assistance rendered in drought situation requires to be reviewed. It is suggested that linkage between the expenditure and advance plan assistance should be done away with and additional expenditure occasioned by scarcity relief which cannot be met by the existing plan programmes and margin money should be financed through Central assistance by way of grants to the extent of 75 per cent, the remaining 25 per cent being borne by the State Government.

Special Problems

33. Even the so-called well-off State like Maharashtra has its own peculiar problems such as choking conditions in the City of Bombay and therefore, unless the Government of India views this as a national problem and grants special funds it will be beyond the means of the State Government to tackle this issue.

Ways and Means Limits

34. So far as ways and means limits of State Governments with Reserve Bank of India are concerned we feel that there is a need for periodical revision of such limits in view of the various factors that necessitate such a change.

Augmenting States' Resources

35. It is felt that resources from Special Bearer Bonds Scheme and revenue accrued from raising prices of items like petrol and coal etc., should come under the divisible pool. This is income which otherwise would have been subject to income-tax. It has, however, been invested in Special Bearer Bonds with the result that it has gone out of the tax sharing. Similarly, if petroleum products and coal were made subject to higher excise duties instead of raising their prices, States' share to that extent would have been augmented. It is suggested that the Union Government should undertake steps to exploit certain items mentioned in Articles 268 and 269 which have not so far been exploited by the Centre.

Comptroller and Auditor General

36. The present arrangements under the Constitution regarding the Comptroller and Auditor General are reasonable and satisfactory and no change as such is called for. Parliament has also conferred adequate powers on the Comptroller and Auditor General in the matter of maintenance of accounts and auditing of expenditure.

Monitoring Utilisation of Grants

37. It is necessary that there should be proper monitoring of utilization of grant-in-aid given by the Government of India for implementation of specific schemes. The suggestion of the Eighth Finance Commission to have Inter-Ministerial High Power Committee for monitoring programmes and use of grants deserves to be considered.

Economic and Social Planning

38. In the sphere of Economic and Social Planning, the Centre and the States will have to play roles which are complementary to each other. The Centre may have to continue to lay down national priorities and objectives of various sectors of development. However, the State Government should be given full freedom to formulate their own plan suited to the local conditions in the State, within the over-all national policy frame. To overcome the present short-comings it is suggested that (a) the State Governments may be actively involved while finalising the approach for the Five Year Plan. They may invariably be consulted before

any policy decisions about the plan programmes are taken by the Central Government; (b) a meeting of the National Development Council should be held at least once every year; (c) the National Development Council meetings may be preceded and followed by the meetings at the official level. The meetings at official level may be held as frequently as necessary; (d) a group consisting of representatives of Central and State Governments may be set up to ensure follow up action on the decisions of the N. D. C.; (e) the Planning Commission should lay down national targets only in vital sectors like power, major irrigation etc.; (f) while scrutinising the State Plan proposals the working groups of the Planning Commission need not go into the details of various programmes falling mainly within the State jurisdiction and may restrict themselves only to the important sectors like power and major irrigation etc.

National Development Council

39. Constitution of National Development Council on statutory basis may run counter to the principle of decentralised planning. Non-statutory advisory body will do equally well if it involves the States more meaningfully in the plan formulation in its broad perspective and then leaves it to the States to formulate their plans within the broad policy frame work.

Composition of Planning Commission — Representation of States

40. So far as the composition of Planning Commission is concerned, it requires a second look. Adequate representation of the State Governments in the formulation of goals and objectives is necessary. After the Plan priorities and goals are finalised in consultation with the States, they should be left to formulate their own plan within the broad frame work. So far as the composition of the Planning Commission is concerned, it should be a high grade advisory body of Economists, Technologists and management experts with a representation of administrators, representatives of the Central Government and State Governments, at least of the major States. This will ensure the State Government's point of view being available to the Planning Commission on issues of policy, objectives, goals etc. It is not necessary that the Planning Commission should be an autonomous body. It may continue to be an advisory body as at present.

It is true that there is a need to consider and incorporate the national priorities in the State Plan but the scrutiny of the State Plan proposal by the Planning Commission should be more directed to objectives and results than to specific schemes. Within broad sectoral outlays, the State should be free to formulate schemes and incorporate them in the State Plan.

Central Assistance

41. At present the entire assistance is passed on to the State Government in the form of 70 per cent loan and 30 per cent grant. This places unduly large burden on the States. It is suggested that the terms of assistance may be revised and the entire assistance should be provided as grant. As regards assistance in respect of externally aided projects, it is suggested that the entire external aid which is project-tied should be passed on fully to the State Government instead of only 70 per cent, which is being passed on to the State Government as at present. The said assistance should also be passed on at the same rate of interest charged by the external agencies plus a nominal service charge. The period of repayment should also be decided keeping in view that fixed by the external agency. We feel that there is ample justification for the Centre to liberalise the terms of assistance to the States.

Allocation of Central Assistance

42. The present method of allocation of Central assistance takes into account the four factors of (1) Population; (2) Backwardness of the State adjudged by per capita income; (3) the tax efforts and (4) the special problems of the State. We do not recommend any change in these four factors nor in the percentage allocation that is presently made by the Planning Commission. However, the method adopted by the Planning Commission in respect of the component distributed according to the backwardness of the State and tax effort requires a revision. Under the present formula which governs the distribution of 20 per cent Central assistance according to the per capita income, only the States which had per capita income below the average of the 14 States qualified for assistance. This does not appear to be fair as a State, which is even marginally above the average, is denied assistance under this component treating it as if it were a developed State. While the formula has to be such that more assistance should be given under this to the more Backward States, it should not deny the assistance to the States which are considered developed only in relation to the average. From this point of view the original Gadgil formula was more just and equitable and we therefore recommend reversion to it. In respect of the component of 10 per cent, which is distributed according to the tax effort, the present formula adopted by the Planning Commission is not arithmetically correct as it does not take into account the size of the State. In order to rectify this error it is necessary to give a weightage to the tax effort by the population of the State. We would like to mention that since containment of population growth is a national policy, the present practice of using the 1971 figures both for the purposes of distribution of the 60 per cent component as well as for assignment of the weights under the second and third components should continue. However, where the calculation of the indicators like per capita State income or per capita tax effort is to be made on the basis of up-to-date figures of tax calculation and State income, this should be done using the population figures for the specific years that are considered.

Centrally Sponsored Schemes

43. We feel that while formulating the Centrally sponsored schemes such as Family Welfare, Control of Communicable Diseases, etc., the State should be actively associated so that the varying

conditions from State to State can be taken into account and the schemes designed accordingly so that they could be effectively implemented. Similarly, enough latitude needs to be given to the States to make variation in the different components of the scheme considering the conditions prevailing in the State. It is suggested that any Centrally assisted programme or Centrally Sponsored Scheme should be run atleast for a period of 10 years and wholly assisted by the Centre. Whenever a Centrally Sponsored Scheme is abolished or transferred to the State non-plan, an amount equal to the level of committed expenditure reached at that time on implementation of the programme/scheme should be transferred to the States as long as the scheme is continued.

Monitoring and Evaluation

44. It is necessary that a proper system of Monitoring and Evaluation including a concurrent evaluation is built up by the State Government and the Planning Commission to ensure proper and effective implementation of the plan programmes so as to achieve the desired goals within the specified period. A suitable machinery may be evolved for this purpose.

Need for Effective Decentralisation

45. The present time schedule for finalising the State resources for the Plan precludes any effective decentralisation below the State level because there is hardly any time left for the districts to prepare their plans before they are incorporated into the State Plan for submission to the Planning Commission. It is, therefore, necessary that the States themselves are given reasonable amount of freedom in formulating their own plans with sufficient time schedule for effective decentralisation below the State level.

Miscellaneous

Industries

46. The extension of the First Schedule to the Industries (Development and Regulation) Act, 1951 has resulted in converting the subject 'Industries' into a virtually Union subject. There are a large number of items in this Schedule which deserve to be deleted. We have listed them in reply to Q. 7.2 of the Commission's Questionnaire. In this context, it is suggested that the phrase "national public interest" in the context of national control over an industry when Parliament alone can legislate, needs to be defined. The following norms are suggested :—

(1) The Parliament may legislate in respect of Core Industries and Defence Industries.

(2) In respect of subsidiary and ancillary industries of the Core Industry and Defence Industry, Parliament need not legislate.

(3) Except in case of Core Industry where the natural resources are available in a State it should be for the State to legislate.

(4) In industries like agricultural implements, after the national capacities and requirements are determined, the State Government should have a free play for creation of capacities in the State itself. In transport industry, excepting the four-wheelers and commercial vehicles, the State Government should have the privilege to determine the capacities. These items would be bicycles and two and three-wheelers.

Procedure for Industrial Licence

47. Clearance in principle regarding the capacity and availability for a particular project may be given by the Government of India. Thereafter, matters relating to capital issues, import of capital goods, location of raw materials and foreign collaboration need not become part of the total licencing procedure but these should be available automatically once the basic clearance is given.

48. The States have got an organisational structure to service the Small Scale Sector, but there are still linkages with the macro or national level on critical issues such as allocation of raw materials and lack of statutory powers which vest with the Centre. Unless raw material supply is planned for appropriately, shortages would continue and the Centre is compelled to ration out its cake to the States. We feel that there could be an improvement in the States treatment of their sector through (i) better and more co-ordinated approach between institutions; (ii) ensuring adequate marketing support for the goods from this sector as well as raw material supply; and (iii) financial support through adequate supply of term and working loans.

49. The decisions of the Central Government in regard to its direct investment in heavy industries on the basis of allocation of projects to "No Industry District" and to State where no public sector projects have so far been allocated, have affected us adversely. Because of the development which has already taken place in and around Bombay, a few public sector proejcts were located in Maharashtra and we feel that it should not come in the way of our State getting legitimate quota of such projects for a balanced development of areas like Vidarbha, Marathwada and Konkan. We also feel that views of the State Government on the location of Public Sector projects within the State should be taken into account. It may be pointed out that the present methodology for identification of backward areas for location of industries has adopted the district as a unit for identification. We feel that a district is too large an entity for such identification and that the appropriate unit for identification of backward areas would be the Taluka. We further feel that in identifying industrially backward Talukas, the following factors need to be considered :

(i) While considering the level of development, investments in public sector project in an area may not be taken into account.

(ii) Resource based industries may also be excluded in assessing the stage of development, as they do not necessarily contribute to the development of the area; and

(iii) The scale of incentives may be linked up with employment potential.

Trade and Commerce

50. There is no need to appoint any authority as contemplated by Articles 307 and there should be no restrictions on Inter-State Trade and Commerce.

Agriculture

51. Though agriculture is a State subject, it cannot be the concern of only the States, because often an all-India view has to be taken in many matters and for this Central involvement in the area of agricultural development would be unavoidable. We, however, feel that the State Governments should be more actively associated in the formulation of Central and Centrally Sponsored Schemes in the agricultural sectors. We also feel that while formulating such schemes the Central Government should confine itself only to indicating the broad guidelines and expect the States to come up with detailed project formulation. In other words, once the goals and broad methodologies are determined, each State should have the flexibility regarding the manner in which the Central and Centrally Sponsored Schemes will be implemented.

52. The Government of India have been fixing uniform minimum support prices for different commodities for the country as a whole. It is felt that taking into account the fact that the cost of production varies considerably from one area to another, there ought to be greater flexibility in fixing minimum support prices for different areas of the country, considering the local agro-climatic conditions, productivity levels, cost of production, market prices etc.

53. Forestry policy and its administration was formerly a State subject but now Central Government has stepped in a big way with the transfer of the subject to the Concurrent list and enactment of Forest Conservation Law. The State Governments are, therefore, required to refer even small matters pertaining to forest clearance to the Central Government, which delays implementation of projects considerably. This needs to be reviewed and we feel that wide latitude should be given to the State Governments in administration of forests, subject to national goals in regard to conservation of forests being followed, guidelines for which could be clearly laid down.

54. Regarding financial institutions, like NABARD we feel that except for very broad policy guidelines, the Centre should not attempt to frame too rigid a set of instructions in the working of such financial institutions. The State's policies should have greater weightage in the working of financial institutions such as the Apex Cooperative Bank etc.

Food and Civil Supplies

55. It is felt that consultation with State Governments should precede formulation of policies regarding pricing, storage, movement and distribution of foodgrains as well as other essential commodities. A periodical review of the arrangements for administering the Essential Commodities Act and other regulatory Central Acts would be useful. Prior approval of the Central Government which at present is necessary in respect of several enforcement and regulatory orders under the Essential Commodities Act, needs to be dispensed with. The specific areas where this could be done may be decided by the Central Government in consultation with the State Governments.

Education

56. There is considerable scope to evolve a consensus among the States as well as between the Centre and the States in the field of education through discussions and consultation.

Inter-Government Co-ordination

57. It is not necessary to set up a permanent Advisory Commission on Inter-Governmental relations as existing in U.S.A. as no serious irritants in the Centre-State relations have so far been experienced.

Government of Manipur

REPLIES TO QUESTIONNAIRE

PART I

INTRODUCTORY

1.1 Ours is a limited federalism unlike in the U.S.A.

1.2 We agree to limited federalism and not to the extent of the recommendation of the Rajamanner Committee. The States like Manipur which are backward in all respects in comparison with other States should be allowed some concession in the allotment of overall national resources by making a temporary statutory provision in that behalf.

1.3 Substantial decentralisation may lead to disintegration. Our efforts should be towards achieving a homogenous country or nation in all respects except for retaining distinct and different cultures. What is necessary in times of emergency shall also be a necessity in normal times with a difference in the degree of efforts. Otherwise, maximum efficiency in times of emergency will only be an exercise in futility.

1.4 American system of federalism is a reality in the present day world. However, the population in India is not yet prepared for that degree of federalism.

1.5 We agree with the views. The Constitution, as it is, is the answer for all our needs. We should at all times make maximum effort to resolve our difficulties, problems and issues within the framework of the Constitution and should avoid temptations to introduce amendments in the Constitution. The more the Constitution is amended the more it shall become defined and less in flexibility.

1.6 The distribution of legislative powers under the provisions of the Constitution and the separation of judiciary are the basic foundations for the protection of independence and ensurance of unity and integrity.

1.7 The Constitutional provisions under reference are not only reasonable but also necessary.

1.8 No comment.

PART II

LEGISLATIVE RELATIONS

2.1 We have not come across of any such instance.

2.2 No suggestion.

2.3 Yes.

2.4 Where there is necessity for the uniformity of law the enabling provision should be perpetual.

2.5 No.

PART III

ROLE OF THE GOVERNOR

3.1 The role of the Governor as envisaged in the Constitution and established by convention is ideal and suitable for the Indian conditions.

3.2 The role of the Governor should be that of a friend, philosopher and guide even in the discharge of the discretionary functions. The Governor should consult the concerned State Ministry though the opinion given by such State Ministry may not be binding either on the Governor or on the Union Government.

3.3 While making report to the President suggesting action under Article 356(I), the Governor is to make the report in his discretion. Since the provision is intended to be used only in emergency, the desirability thereof is beyond doubt; but there should be cerain additional safeguards. The exercise of such power for purposes other than constitutional should be prevented.

In regard to the appointment of Chief Minister, the role of the Governor should be akin to that of the President of India.

In regard to the prorogation or dissolution of the Legislative Assembly, the Governor should act in accordance with the advise tendered by the Council of Ministers.

3.4 Articles 200 and 201 give general power of reservation of the bills for consideration by the President. It will be adviseable to have an Instrument of Instructions to the Governor giving them certain guidelines in this matter, the power, though discretionary in nature, cannot be exercised in an arbitrary manner.

3.5 No comment.

3.6 The Governor is not an agent of the Centre and may not exactly be described as an ornamental head of the State. He is undoubtedly "a close link" between the Centre and the States. But the position of the Governor is not an independent one. Alike the President of India, he should also act in accordance with the advice tendered by the State Council of Ministers except in the sphere where he is required to function in a discretionary manner. There should be a clear demarcation between the functions where the Governor is expected to work in his discretion

and the functions where the Governor is expected to work in his discretion and the functions where he is expected to work in accordance with aid and advice of the Council of Ministers.

The more precise this demarcation is made, the less will be the chances of confusion and ambiguity. Sphere of discretionary powers should be kept limited to the cases covered by Articles 356 and 365, and in the matter of selection of the Chief Minister under Article 164. In regard to other functions, the Governor should be bound to act in accordance with the advice of the Council of Ministers, after his selection.

3.7 The functions of the Governor are different than that of the High Court Judges and as such, the tenure of his office and the manner of his appointment or removal cannot be the same as prescribed in the case of a Judge of Supreme Court or of High Court.

3.8 The position of the Governor is that of the Constitutional Head of the State. The framework of the Indian Constitution is such that question of empowering him in this manner cannot be recommended. The position of the Governor in this regard is not in any way different from that of the President of India except only in the cases where he is to discharge his duties in his discretion. Even though some amount of discretion is inevitable in the matter of appointments of the Chief Minister under Article 164, the same power for the purposes of checking and verifying the loss of majority in the legislature cannot be given to a Governor who might elect to act as an agent of the Union Government. Such power if given would be contrary to the principles of federalism.

3.9 The system introduced in the Republic of Germany by article 67 of the Basic Laws may not be suitable under the Indian Constitution where there is shifting of allegiance amongst the political leaders and Members of Legislative Assemblies and Parliament. Even though the solution offered by the Republic of Germany appears to be idealistic in nature, it cannot be treated as practical in the Indian context.

3.10 The guidance regarding the manner in which discretionary powers of the Governors are to be exercised should be formulated in consultation with the States by the Union and these guidelines could be contained in an Instrument of Instructions in a similar manner as they were adopted under the Government of India Act, 1935.

Part IV

ADMINISTRATIVE RELATIONS

4.1 The purpose of Article 256, 257 and 365 of the Constitution is to define the scope and areas of Centre and State relation and also the extent of control of the Centre over the State. In matters where the authority and power of the Centre and necessary to exercise in relation to a State the said provisions are invoked. Article 365 of the Constitution is only a definitive provision which can be relied on when the defined situation arises for the purpose of invoking emergency provisions. There was never any cause or decision for extending threat of exercising such a power.

4.2 The directions of the Centre to the States in exercise of its Constitutional powers is to be complied with when flouted it will amount to violation of Constitutional directives resulting to failure of constitutional machinery. To avoid controversy, such a situation is defined in Article 365. This is, therefore a necessary provision.

4.3 We agree with the recommendation. Because the Centre should always prefer willing obedience without the show of authority.

4.4 We have had no occasion to question the past actions in this behalf.

4.5 We cannot agree with the view expressed. The interference of the Centre is not for the purpose of bringing about total normalcy. If only the immediate dangers are removed by invoking the emergency provisions, the rest of the problems for restoring normalcy should be left at the hands of the State Governments, for that purpose limitation of time to a shorter period is more than justified.

4.5 Satisfactory except that the State Governments shall be involved and consulted wherever possible.

4.7 Where the subjects are in the concurrent list the central agencies should confine their activities to only advisory in areas where expert and special knowledge is necessary.

4.8 The members of the All India Services who are in State services mostly appear to have more resistance to political pressure at the State level as their careers were not always at the mercy of the State politicians. This restraint had been a major factor for preventing arbitrary an drash acts at the State level. Hence, to give greater control to the State Governments is not desirable.

4.9 Article 355 is to be invoked only at the time of and during emergency. Hence, there is no cause for apprehension.

4.10 We agree that the State should be given room to share access to the mass communication medias.

4.11 The zonal councils have become superfluous in view of the existence of the North Eastern Council in the North Eastern Region.

4.12 We agree that such an agency should have a permanent setup. with the functioning as proposed.

PART V

FINANCIAL RELATIONS

5.1 The Constitution allocated to the States subjects such as agriculture, medical, public health, law and order etc. that touch intimately the lives of the people. Such subjects can be efficiently

administered only by the states who are closer to the people and are more keenly alive to their problems and needs. With the advent of planning there has been a shift in strategy and national priorities. The fiscal burden of the newly devised development strategy and the reordering of plan priorities has fallen relatively heavily on the States compared to any time in the past. The gradual shift towards emphasis on social justice calls for a realignment of resources in favour of the States because services and programmes that favour more equitable social order come within the purview of the States. There can be no doubt that having regard to the growing responsibilities of the States, the distribution of taxes and revenues is very unfair to the States. This has resulted in a chronic and widening gap between the States' own resources and their expenditure necessitating dependence on the Centre for financial assistance to meet growing obligations. Of late, this has generated a persistent demand from the states for larger transfer of funds from the Centre.

The existing scheme of fiscal transfer from the Centre to States is marked by the prevalance of of a parallel assessment of needs of the States by the Finance Commission and the Planning Commission. This new element in fiscal transfer was not envisaged by the framers of the Constitution. To a certain extent there might be overlapping of efforts if two independent agencies are simultaneously responsible for recommending assistance to the States. The overlapping situation is sought to be corrected by a distinction between plan and Non-Plan expenditure on revenue account. While the Finance Commission confines itself to tax sharing and grants-in-aid covering non-plan revenue account of the States, Plan assistance is channelised through the Planning Commission in the shape of both loans and grants. The tax sharing is regarded as a matter of right and can leave the States with surpluses which they are free to spend. The grants under Art. 275 are generally unconditional and not on a matching basis. They have also never exceeded the Non-Plan deficits of the States though the terms of reference do not seem to prevent the Finance Commission from recommending grants to poorer States in excess of their non-plan deficits. On the other hand the scheme of tax sharing leaves some States with large non-plan surpluses. Since the States contribution for plan should generate from non-plan surpluses and additional resource mobilisation undertaken by the States, the poorer States find themselves in a weak bargaining position in the matter of plan finalisation. In this context the Finance Commission might accord a developmental orientation to the flow of funds recommended by them considering the existing disparities in the provision of State Services as between advanced States and others. There seems to be no need for a change in the present system or the establishment of a single body to recommend all financial assistance from the Centre. The Planning Commission may recommend assistance for plan projects. This will divest the Commission of the responsibility of finding resources and enable them to discharge planning functions in a better way.

5.2 The observations of the A.R.C. Study team are not only valid even now but by and large financial dependence on the Centre has been growing over the years. This process cannot be halted or reversed by a more redistribution of taxing powers in favour of the States. There can be no controversy on the need to enlarge the size of the national kitty in terms of tax resources. Nor can the advantage of a vast all India Market with free mobility of capital and skill be lost sight of. Having regard to all these aspects the present division of tax resources given in the Constitution appears to be by and large well conceived and needs no radical change.

Another matter which needs attention is the provision of Article 276 of the Constitution under which the total amount of tax payable in respect of any one person to the State or any one Municipality, District Board or other Local authority in the State by way of tax on professions, trades callings and employments shall not exceed Rs. 250 per annum. While this provision might have been reasonable at the time of framing the Constitution the ceiling imposed by this provision constitutes an unreasonable restraint on the powers of the States to levy and realise tax from this source. With the escalation in the general price level and the inflation that has taken place in the country since the early sixties a change in this limit has become necessary so as to enable the States to augment their resources. It is felt that the ceiling should be suitably raised from Rs. 250.

It is also necessary to bring about changes in the distribution of nationally collected taxes, inclusion of the proceeds of new items like Corporation tax, Surcharge on I.T. Custom Duty etc. In the divisible pool, full implementation of the tax powers given to the Union for exclusive distribution to the States. Apart from devolution of taxes, grant-in-aid on the basis of the principle of equalisation will serve to restore the financial imbalance of the States particularly of the backward areas. That apart. huge financial resources at the command of the Centre through its control over the nationalised banks, financial institutions, domestic loans foreign aid and deficit financing need to be shared with the State with a view to reducing growing dependence on the Centre.

5.3 While the need for a strong Centre is not denied, a strong Centre is in no way inconsistent with strong States. On the contrary, a strong Union can only be a Union of strong States. The Indian Constitution provides the Centre with much greater powers than the States in the legislative, administrative and financial spheres. The Constitution provides for the levy and administration of taxes with wider economic base such as Income tax, Corporation Tax, Union Excise Duties and Customs Duties by the Union Government, whereas the resources allocated to the States are comparatively meagre and have only limited growth potential. Apart from elastic sources of tax revenues the Centre has at its command all resources mobilised through nationalised banks, financial institutions domestic and foreign loans and deficit financing. While the present division of resources provided in the Constitution is not sought to be

disturbed, the pattern of transfer should be such that the resources are applied at points where they are most needed with a view to reducing regional disparities and attaining social and economic justice.

5.4 In order to attain the objectives, the Centre may take recourse to better administraion of existing taxes as well as implementing the tax powers given to the Union for exclusive distribution to the States which has had hitherto remained unexploited. Secondly, there need to be proper vigilance over the magnitude, propriety and efficiency of Union expenditure. Better administration of public undertaknigs is one of the many measures that can be taken for achievement of better control over expenditure. Deficit financing to a limited extent may be adopted as a last resort. So long as it boost up effective demand there may not be adverse effect on the economy. The Indian economy is marked by high rate of unemployment combined with inflation. In such a situation inflation tends to get aggravated if massive dose of deficit financing is pursued.

5.5 The objective criteria that should be used for determining the share of taxes may be as follows :—

(a) **Share of taxes**

Income Tax : The divisible pool of income tax should be stepped up from the existing 85 p.c. to 90 p.c. The distribution of the net proceeds of income tax may be on the basis of 90 p.c. population and 10 p.c. backwardness.

Surcharge on Income Tax : Surcharge on income tax has been levied year after year and raised from 10 p.c. to 15 p.c. but its proceeds have been retained exclusively by the Centre. The estimated yield from surcharge is Rs. 219 crores in the budget for 1984-85. A surcharge is levied for meeting the requirements of some unexpected events and it should remain for the limited period of such requirements. But a surcharge continued indefinitely could well be regarded as an additional income tax sharable with the rest of the proceeds of income tax. It should be merged with the basic rates and made sharable with the States.

Corporation Tax : The growth of Corporation tax over the years has been phenomenal. In 1952-53, the income tax realisation was Rs. 143 crores and that of Corporation tax about Rs. 44 crores. The position has considerably changed since then.

In the budget for 1984-85 the Income tax revenue is estimated at Rs. 1801 crores and the Corporation tax revenue at Rs. 2588 crores. Thus in the past 32 years while income tax has grown by 1159 p.c., Corporation tax has grown by 5702 p.c. The exclusion of Corporation tax from the divisional pool has deprived the States of a source of revenue that is more buoyant than income tax. It is suggested that 50 p.c. of the Corporation tax which is only a form of income tax, should be brought into the divisible pool by appropriate amendment of the Constitution and distributed among the States in the same manner as income tax.

Union Excise Duty : That States' share in the net proceeds of Union Excise Duties should be raised to 50 p.c. in place of the existing 40 p.c. *Inter se* distribution among the States may be on the existing basis.

Additional Duties of Excise : The incidence of additional excise duties as a percentage of the value of clearance should be raised to 10.8 p.c. and should not be allowed to fall below this level in future and a ratio of 2:1 should be maintained between the yield from the basis and the additional duties Distribution of net proceeds among the States may be on the basis of 70 p.c. weightage for population, 20 p.c. for State domestic product and 10 p.c. for production.

Estate Duty in respect of property other than agricultural land : Distribution of net proceeds should be on the basis of location of property in respect of immovable property and on the basis of population in respect of property other than immovable.

(b) **Plan Assistance**

Prior to Fourth Plan, Plan assistance was mainly schematic being tied to particular projects or schemes and thereby assumed a character of conditional grants. The Gadgil Formula made it more general through its recommendation of block loans and grants. To a large extent such assistance was freed from the string attached to it. The whole plan assistance, however depends on approval by the Planning Commission of the plan as a whole. Even now on some items the assistance is tied to some ear-marked sectors and a spending shortage in such sectors could invite a proportionate cut in assistance. The pattern of assistance under the present system is 70 p.c. loan and 30 p.c. grant. For the purpose of distribution of Central Assistance eight States are kept outside the purview of Gadgil formula and termed as special category States. These are Assam, Himachal Pradesh, Jammu and Kashmir, Manipur, Meghalaya, Nagaland, Sikkim and Tripura. Central assistance to special category states is determined in terms of their actual need and past performance. The pattern of assistance is 70 p.c. loan and 30 p.c. grants for general areas and 10 p.c. loan and 90 p.c. grants for hill areas. The present system and procedure of channelising Central assistance through the planning Commission may continue. Manipur may be allowed to retain its special status outside the Gadgil formula.

(c) **Non-Plan Assistance**

The States are receiving statutory assistance under the provision of Art. 275(I) as per recommendations of the successive Finance Commissions. Besides, Assam is receiving a small sum under clause (a) of the second proviso to Art. 275(I) for administration of the Trible Areas. Apart from the statutory assistance, the States are also receiving from the Centre non-plan assistance channelised

through respective Ministries for other purposes, the more important being (i) relief and rehabilitation of displaced persons, (ii) relief necessitated by hostilities, (iii) construction and maintenance of border roads, roads of strategic importance and national highway, (iv) modernisation of police force, (v) labour and employment, (vi) Education, (vii) Social Welfare and (viii) C.R.F.

So far assistance under the provisions of Art. 275(I) is concerned the non-plan revenue gap should be ascertained having regard to backwardness, special problems and matters of national concern. The non-plan grants should not only cover the gap so assessed but should leave the backward States with sufficient surplus on revenue account which can be ploughed back for fresh development.

Most other non-statutory assistance takes the form of reimbursement of expenditure on a limited number of specific items combined with advance assistance for which provision is made in the State budget. Though there is no complaint with regard to the procedure adopted for this purpose, it is increasingly being felt that some more items of expenditure should be fully reimbursable for instance of late, the State Government has received a substantial amount for relief necessitated by hostilities but the pattern of assistance adopted by the Centre is 70 p.c. loan and 30 p.c. grant. The nature of such assistance calls for a revision of the pattern of assistance by treating the entire amount as outright grant. So far, expendiure on outside SWS is concerned, the States do not receive any non-plan assistance. The MHA charges Rs. 24 lakhs per annum per Bn. of CRPF/BSF plus actual cost of transportation, movement, accommodation, water supply etc. Though maintenance of law and order is a State subject yet in abnormal situations large scale deployment of Central bns. becomes necessary in addition to full deployment of State forces. If the Centre insists on payment for such services this will have disastrous effects on State finances particularly considering the abnormal that calls for such deployment. In this context the observation of the Sixth Finance Commission is of special relevance. That Commission urged the Government of India to waive payment altogether for the services of CRPF made available to the State for maintenances of law and order. They further observed that the Government of India would continue to have a decisive voice in determining whether or not the law and order situation in a State warrants supplementary support in the form of CRPF and there is no reason to apprehend that the State Government may invoke assistance of the CRPF on a large scale if payment for the same is waived. After all the Government of India have an equal stake with the State Governments in the maintenance of law and order throughout the Country. This aspect needs consideration.

5.6 The existence of inter-regional and inter-State disparities in the rates of economic growth even after sustained efforts of over three decades by FC and PC clearly shows the inadequacy of measures taken in this regard. With a view, to reducing inter-State disparities and ensuring social justice a part of the share of taxes may be set apart and credited to a special fund exclusively for distribution among the backward States. The Fund so created may be financed out of any increase in States' share of taxes and suggested incorporation of Corporation Tax and surcharge in the divisible pool. This would narrow down inter-State disparities and the backward States will be left with adequate surplus for investment in development activities.

5.7 & 5.8 The framers of the Indian Constitution have adopted the principle of separation and clearly demarcated the spheres of taxation for both the Union and the States and two separate lists of taxation were drawn up for the purpose. While allocating the taxation functions to the Union and the States due regard was paid to the principles enumerated for a sound taxation system. As a result, the Union was vested with the powers to levy broad-based taxes both direct and indirect like IT, CT, Customs and Excise which satisfy the cannons of economy efficiency convenience, etc. The States were left with the powers to levy taxes on consumption and localised items of income and wealth. Judging from the stand-point of economy, freedom of trade and commerce and equity, it may at this stage, perhaps not be possible to transfer any item of taxation from Union List without adversely affecting internal trade and economy. There is no denying the fact that major taxes like IT, CT, Customs Duty, Excise, etc. have a profound bearing on the economy of the country as a whole and as such the present division of tax resources in the Constitution need not be changed. Nevertheless, any concession, exemption and incentive that the Centre is now giving or propose to give which have the effect of reducing the divisible pool and other relevant matters the fiscal effect of which fall on the States, should be reviewed in depth by a Committee on which Centre and State Finance Ministers are represented. Sales tax being the most elastic and buoyant source of revenue to the States, any further incursion in this field will take away the limited flexibility the States now enjoy in the matter of augmenting their revenues.

5.9 For the purpose of transferring resources to the States to cover non-plan gap, the Centre appoints a F.C. every five years over a period of five years many unforeseen liabilities might arise which the Finance Commission will not be in a position to provide for. Thereby the States are left to the mercy of the Finance Ministry and the Planning Commission. Besides each Finance Commission is required to take the levels of State expenditure obtaining upto a particular date as stipulated by its terms of reference. The choice of a date prevents the Commission from taking cognizance of any liability adopted by the States after that date. Such an approach is designed to curb the propensity of the States to rush ahead with fresh expenditure proposals along with the announcement of a F.C. Consequently, many pressing non-plan needs are either shelved or taken up with severe strain on State finances. There is, however, no genuine reason to feel that the appointment of a F.C. will ring a signal for the States to go ahead with fresh expenditure simply to take advantage of the award. Such short-comings of

the Five Year Finance Commission system can be averted by a permanent Finance Commission-type body with wide powers of annual allocation to the States. The plan is to be financial through any surplus on non-plan revenue account, additional resources raised by the States and plan assistance given through the Planning commission. Once the Finance Commission is made a permanent body freed from simple gap filling approach, the Planning Commission will be relieved of the burden of finding resources for bridging non-plan gap and can perform its role of investment, planning and decision-making in more effective manner.

5.10 Sound fiscal management is dependent among other things on economy in expenditure consistent with efficiency. The manner in which the States deploy the resources allocated to them so as to get the best possible results from the expenditure incurred gives an idea about the level efficiency and of economy exercised by the State. Each Finance Commission adopts certain norms on an all-India basis for maintenance and upkeep of assets. It is, very often, not possible for the States to adhere strictly to such norms due to localised factors and abnormal price escalation. However, the State Governments in their eagerness to conserve resources for the plan have been impelled by motives of economy in public expenditure very often have to curtail expenditure at the cost of essential services. Fiscal transfers from the Union have not so far been able to reduce significantly the disparities in the level of public expenditure among the States. Disparities between the States still persist particularly in backward States. In terms of essential administrative and social services. Imbalances also exist among different areas within the States. Far greater priority needs to be assigned in providing essential administrative and social services in the backward States. This calls for larger allocations for education, medical cares, public health and welfare of SC/ST and OBC. A beginning has been made in this respect by the Sixth Finance Commission, while the earlier Commissions had assessed the requirements of States largely on the basis of maintenance of administrative and social services at the level obtaining in the base year, the Sixth Finance Commission for the first time made a departure from this norm. They sought to raise the provision for some of the administrative and social services in backward States with a view to bringing them up to the national average and recommended grants for the purpose. The Seventh Finance Commission also adopted a similar approach and recommended extension of this benefit to some other selected services. Such an approach should be gradually be able to narrow down existing disparities in the standard of services and level of public expenditure among the States. The approach adopted by the Sixth Finance Commission and followed by the Seventh, if pursued with vigour, is likely to promote over a period of time efficiency in administration and remove disparities in this regard.

5.11 In India fiscal transfers from the Union to the States is performed mainly by two separate agencies, the Finance Commission and the Planning Commission. The Planning Commission is entrusted with the task of recommending plan assistance. While the role of Finance Commission is limited to making recommendations for meeting the fiscal requirements of the States arising from their Non-Plan revenue account, the grants-in-aid recommended by the Finance Commission under Art. 275 after considering the tax devolution to the States have been used to bridge the residual gap. A *view* is sometimes expressed that this has encouraged the States to exaggerate their revenue requirements in the hope of qualifying for the grant The elaborate terms of reference of the Finance Commission should be able to curb such propensities if any on the part of the States. If necessary the terms of reference may be suitably amended to secure this objective.

A distinction, however, need to be made here as between the weaker States and others. It will not be correct to say that the weaker States also exaggerate their revenue requirements ignoring all norms of financial discipline. In fact, in their bid to extend to their people the level of administrative and other services obtaining in the advanced States, the weaker States project their revenue requirements in a manner which may not satisfy certain norms. They, however, do so not because of a propensity towards financial indiscipline and improvidence but because of their anxiety to secure for their State a minimum level of service.

5.12 The State Government also feel that the Seventh Finance Commission has quite appropriately preferred the modality of devolution of taxes and duties to grants-in-aid for transferring resources to the States. This would enable the States to share the benefits or buoyancy in the tax receipts of the Centre and of additional taxes raised by it. But such an approach may work to the detriment of weaker States having a poor tax base due to low degree of urbanisation and industrial backwardness and tend to aggravate the existing disparities among the States. This hindrance can be overcome if grants-in-aid are relieved of gap filling approach to maintain the budgetary equilibrium of the States. Instead they may be used as a tool to reduce the level of disparities among the States and to ensure distributive justice.

5.13 The State Government is fully in agreement with the principles enunciated by the Seventh Finance Commission about the role of grants-in-aid in the scheme of fiscal transfers from the Union. First of all, requirements of the States may be assessed on the basis of maintenance of administrative and social services at the existing level and thereafter provision may be made for the improvement of administrative and social services. In backward States where marked deficiencies are noticed in terms of per capita availability of such services with a view to catch up with the national average. Lastly. weightage may be accorded on matters of national concern. In case of Manipur, the State has a special responsibility in the matter of border security being located on or near the country's international borders with Burma.

5.14 The decision of the Government of India to float Special Bearer Bond implies reduction in aggregate revenues from taxes on income. Similarly, raising of administered prices of items like petroleum, coal, etc. with a view to mobilising additional resources for the Centre deprives the States of any share of such accrual. Instead of raising administered prices had this been done through revision of rates of Excise duty on such items the States could get their due share. It is, therefore, in the fitness of things that yields from such levies should be brought under the divisible pool for distribution among the States.

5.15 The savings generated in the Indian Capital market are at present distributed between the Centre and the States in the shape of market borrowings, loans against share of small saving collection and negotiated borrowings from financial institutions and LICI. Under the present system the States can borrow funds only within the Country and subject to the limitations imposed under Art. 293 of the Constitution.

In recent years the total amount of marked loans have been allocated among the States broadly on the same principles as those adopted for distribution of central assistance for plan. However, the share so determined have been allowed to vary upward by 10% in a year to all the States. In other words market borrowings have been allocated to different States by the RBI on the advice of the Planning Commission and the Union Ministry of Finance. If this principle is substituted by allowing market loans to be floated by the States on competitive basis this will enable the richer States to get more funds offering competitive interest rates at the cost of the poorer States which would be extremely unfair. The State Government subscribe to the view that the economically weaker States should be assisted with more grants than loans therefore, more Central loan and market borrowings may be allocated to the richer States and more outright grants to the weaker States. At present two-thirds of the net collection of small savings is advanced to the States as loan. The State Government are of the view that such loan should be treated as loan in perpetuity. Institutional borrowings like State Governments borrowings from NCDC, RBI, IDBI, LIC etc. occupy an insignificant role in the schemes of public debt of States like Manipur. It is felt that such borrowings should be distributed on the basis of investment priorities for specific self-liquidating projects which should be able to take care of the obligations arising out of servicing and repayment.

5.16 The budgetary deficits of the States are no doubt growing at a much faster rates than that of the Centre. The combined budgetary deficits of the States in 1983-84 was Rs. 750.00 crores and that estimated for 1984-85 is Rs. 1,312 crores. In the same period of deficit of the Centre is estimated to grow from Rs. 1,695 crores to Rs. 1,762 crores. It is also true that inspite of a substantial increase in transfer of resources from the Centre in absolute terms, the percentage of the Centre's revenue receipts being transferred to the States is declining. This trend is partially reflected in the quantum of central transfers channelised through the Finance Commission. During 1974-79 transfer to the States on the basis of the award of the Sixth Finance Commission aggregated to Rs. 11,168 crores out of the total revenue receipts of the Union amounting to Rs. 43,976 crores or 25.4 p.c.

In terms of the recommendations of the Seventh Finance Commission the overall devolution of resources during 1979-84 is estimated to be Rs. 20,843 crores out of Rs. 80,126 crores, or 26 p.c. recording hardly any increase. While the needs of the States are growing fast in volume, the resources allocated to them lack the needed flexibility resulting in fiscal imbalance and growing indebtedness of the States. The total outstanding debt of the State Governments rose to Rs. 27,449 crores in 1981-82 from Rs. 8,718 crores in 1970-71. The situation warrants urgent corrective measures to bring about better correspondence between resources and responsibilities of the two tiers—the Centre and the States in our federal set up.

5.17 Over the years the problem of indebtedness of the States has attained enormous proportion as a result of economic planning. The outstanding public debt of the States has risen from Rs. 8,718 crores in 1970-71 to Rs. 27,449 crores. Considering the magnitude of the problem an annual review of indebtedness instead of a periodical one as at present might be undertaken. A permanent Finance Commission type body shall be able to look into the problem effectively. As observed by the ARC Study Team, among the various components of public debt of the States, the loans from the Central Government occupy a predominant place. An analysis of the debt position of the States as on 31st March, 1982 shows that of the outstanding debt of Rs. 27,449 crores loans from the Central constitutes Rs. 19,967 crores and accounts for 12.7 p.c. of the total indebtedness. Alongwith the growth of public debt, apart from repayment liability on the capital account the burden of interest charges on revenue account of the States has also become progressively heavier and is causing serious concern to the States. The average rate of interest on outstanding debt has also risen from year to year. This is evident from the debt servicing and repayment liability of Manipur. With the advent of economic planning public debt has assumed a serious proportion because loans prenominate over grants in the composition of central assistance for plan. The growth of public debt need not cause any concern so long as borrowed funds are utilised in self-liquidating projects. But under the compulsion of economic planning and priorities accorded large portion of the borrowed funds have to be utilised for building up economic and social over-heads. A shift in favour of grants in the pattern of central assistance for plan as well as removal of deficiencies in the present scheme of devolution is called for to remedy the financial instability of most of the States.

5.18 In India the States are given powers to borrow within the Country and external borrowing is reserved exclusively for the Union. The State's borrowings powers are also subject to such limitation as may be imposed by State Legislatures

and further a State may not raise loans without the consent of the Government of India if there is still outstanding any part of a loan which has been made to the State by the Government of India. Since all the States are indebted to the Centre in varying degrees, there cannot be said to be any freedom left with the States even in the matter of raising internal loans. These constitutional restrictions are placed on the States internal borrowing with a view to avoiding adverse monetary and fiscal affects arising from competitive and unbridled borrowing powers of the States. Under the present arrangements, the total quantum of public loans to be raised by the Centre and also its allocation between the Centre and the States is decided by the Government of India. Without affecting the basic principles of sound finance such decision can be taken in consultation with the States and having regard to their actual requirement in the context of development.

5.19 It is true that on foreign borrowings the Centre charges from the States a higher rate of interest than what it pays to the foreign lender. So far as this extra amount is charged to defray the expenses of handling such aid it cannot be said to be unjustified. In any case, the relending rate of interest should not exceed the expenses incurred by the Centre for contracting and relending such funds. Since the weaker States are not in a position to draw up projects which satisfy the specifications of the external agencies. Certain percentage of rupee equivalent of net external borrowings contracted each year may be disbursed to the States as special credit.

5.20 States cannot be allowed to borrow as much as they like from the capital market since the richer and more developed States would avail the larger proportion of available funds at the cost of weaker States by offering competitive rates of interest. The Centre would then have to enter the market on behalf of the Weaker States. Anyway, the case for larger volume of loan is not justified for the poorer States. Rather they deserve larger amounts of grants. Nevertheless, the idea of a loan Council appears to be a welcome step in the sense that it would be able to dispense with the misgivings in the minds of advanced States about the manner in which loans are being distributed at present between the Centre and the States. This council would recommend the maximum amount that can be borrowed by the Centre and by different States on the basis of the principles approved by the NDC.
